"Very beneficial; as it is calculated to soften down religious asperities and make the young think more kindly of each other. As far as I know, the popular feeling is in favour of the system. I am confident the Government can never adopt a denominational system of education without vastly increasing the expenditure and destroying the utility of the schools. Any system of education which will be under the control of the clergy of any denomination must be comparatively useless in Ireland."

2. The following ten clergymen describe the mixed system as beneficial, but make no statement concerning the popular feeling on the subject, viz. :—Revs. J. Bole (Ref. Pres.), Belfast; H. W. Carson (Pres.), Keady; W. Denham (Pres.), Duneane; T. Elliott (Wes.), Armagh; J. Forsythe (Pres.), Portadown; L. Hünges (Pres.), Carrickfergus; J. Mack (Pres.), Groomsport; D. Park (Pres.), Carrowdore; G. Steen (Pres.), Keady; J. Young (Pres.), Newtownards. Of these, the Rev. L. Hünges, who has "lived in many countries, and been examiner of lower and superior schools for the Chilian Government, and is well acquainted with the Prussian school system," says—

"Only a rank bigot will deny that, under the necessity of grown-up people to live peaceably together though professing various creeds, it should not be desirable for children to begin in the same social unity. There is not too much bigotry shown here in this respect, probably because many are completely indifferent."

3. Rev. H. M. Hamilton (Pres.), Templepatrick,
„ W. Patteson (Pres.), Bangor,
„ H. Stewart (Pres.), Toome Bridge,
„ W. Young (Pres.), Ballyeaston,
} Describe the mixed system as popular, expressing no opinion of their own as advantages.

4. Rev. J. Hughes (Wes.), Newtownards—

"National system is nearly denominationalized."

5. Rev. W. Bruce (Pres.), Belfast—

"System marred for want of fair play and by virulence of party feeling."

6. Rev. H. Hanna (Pres.), Belfast—

"Mixed system the best. Opinion, however, divided on the subject."

7. Rev. J. Gilchrist (Wes.), Carrickfergus—

"Beneficial, but if its practical working be an index of the popular feeling, that feeling is against it. This is a good deal owing to schools representing different denominations being established here."

8. Rev. J. Hutchinson (Pres.), Lurgan—

"Beneficial so far as it is purely secular; not in a religious point of view. Popular feeling against it."

9. Rev. J. Martin (Pres.), Belfast—

"Most beneficial. Popular feeling against it."

IV. From Laymen of Various Denominations (Established Church, Roman Catholic, and Presbyterian).

1. Lord Lurgan,
Mr. Theobald Bushell, J.P., Belfast,
„ J. Hancock, J.P., Lurgan,
} Describe the mixed system as beneficial and popular, except amongst the clergy.

2. The following thirteen gentlemen concur in describing the mixed system as both beneficial and popular, viz. :—Joseph B. Black, Randalstown; Samuel Broadbent, Cogrey Mills, near Doagh; John Campbell, Mossley, Carmoney; Sir Edward Coey, Bart., D.L., Belfast; Daniel Delacherois, J.P., Donaghadee; James Hamilton, Belfast; James Kennedy, Rosetta, Belfast; John Lowry, Director of Whiteabbey Flax Spinning Company; Thomas M'Clure, M.P. for Belfast; James Montgomery, Manager of Wolfhill Mill, near Belfast; Robert Patterson, Belfast; William Ross, Flaxspinner, Belfast; John Savage and Company, Flaxspinners, Belfast. From the above I select the following communications :—

(*a.*) Mr. J. B. Black, Randalstown, adds :—

"Taylorstown South National School, No. 54, and for which I am patron, is conducted on the non-sectarian principle. No religious instruction is given in the school of any kind. The pupils are mixed—Roman Catholics, Presbyterians, Methodists, Episcopalians, &c. The teachers (three in number) are Roman Catholic. I am a Presbyterian. The attendance at this school (which is the only one in the neighbourhood conducted as above stated) is nearly double that of any other of the surrounding schools, clearly proving the superiority of our system. In my opinion pupils should go to school to get a good sound mercantile education, and that their *parents and clergy are the proper parties to teach them religion.*"

(*b.*) Mr. John Campbell adds—

"Purely secular education is in my mind what the National education should be."

(*c.*) Mr. Kennedy says—

"If the clergy and laymen, that ought to know better, did not interfere, parents would send their children to the schools most efficiently conducted. Denominational education would make Ireland a still greater battle field for party, and prevent that social intercourse that ought to prevail among all professing Christians. I believe the direct teaching of religion ought not to have formed a part of our National system. The functions of a representative government are purely secular, to protect life, property, and industry, and in accordance with the public wish to enact laws for the improvement of our social and political condition. Our rulers are not famous theologians, and the discipline of a school-room is not calculated to impress the young mind with a love for the sublime truths of the Gospel. A knowledge of Christ is the most excellent of sciences, but the implanting that knowledge devolves upon the parent primarily, and next upon the Church. The more education prevails our people will be the better fitted to comprehend the truths of the Gospel, for education is, and should be, the handmaiden of religion."

(*d.*) Mr. Lowry adds—

"What is called denominational [education] would not suit a *manufacturing* district, where proprietors would have to see that a school was convenient to their works for each denomination, say Episcopal, Presbyterian, and Roman Catholics—three schools where one is now, or should be, sufficient. The only change I would suggest in the present system would be to make the instruction entirely *secular* (excepting what is contained in present excellent school-books)."

3. The following six gentlemen describe the mixed system as beneficial, without saying whether it be popular or not. Three of them add that it is not generally practised in consequence of clerical interference. Michael Andrews, Ardoyne Damask Factory, near Belfast; John Barbour, Flaxspinner, Ballymacarrett; T. M. Birnie, J.P., Carrickfergus; Robert Carson, Belfast; James Keegan, Belfast; J. Moore, J.P., Belfast.

(*a.*) Mr. Carson adds—

"The Government should provide secular education alone, leaving the religious education to be given *on the Saturdays and Sundays* by the parents and clergymen of the different persuasions to the children, but for which they should receive no Government payment."

(*b.*) Mr. J. Keegan adds—

"If any plan could be put into execution which would prevent the interference of all clergymen in secular education, a vast benefit would be conferred upon the community thereby."

4. Messrs. J. Faren and Company, Flaxspinners, Belfast,
Mr. H. L. Prentice, D.L., Armagh,
Mr. W. Shepherd, Belfast,
} Concur in describing the mixed system as popular, expressing no opinion as to its advantages.

5. Mr. S. D. Crommelin, J.P., D.L., Carrowdore—

"All Protestants here."

6. Mr. John Emerson, Ballysillan Mills, Ligoniel—

"No mixed education here—parents would not have it."

7. Mr. Peter Keegan, Belfast—

"I believe not beneficial. If I am to judge by facts I must say the denominational system is the popular system here. Nearly all the schools in and about town are under clerical patronage and management, and are attended by children of the same denomination, with few exceptions."

V. I received communications on this subject from three District Inspectors of National schools (two Protestants and one Roman Catholic):—

Two of these gentlemen described the mixed system emphatically as being, in their experience, both beneficial and popular. The third described it as beneficial "where the different creeds approve of it, and where the managers refrain from offensive polemical controversy."

APPENDIX E.

The following communication was made to me from the Non-Subscribing Presbytery of Antrim, representing the following twelve clergymen of that body in the counties of Antrim and Down, viz.:—

Rev. Samuel C. Nelson, Downpatrick, county Down.
" Hugh Moore, Newtownards, county Down.
" John Porter, 2nd Belfast, county Antrim.
" David Watson, Minister,
" William Napier, Assistant,
} Clough, county Down.
" John Hall, Ballyclare, county Antrim.
" R. A. Armstrong, 2nd Banbridge, county Down.
" William Hall, Greyabbey, county Down.
" John Jellie, Belfast, county Antrim.
" W. Orr Macgowan, Ravara, county Down.
" Leonard Hünges, Carrickfergus, county Antrim.
" David Thompson, Moneyrea, county Down.

To D. C. RICHMOND, esq., Assistant Commissioner, Primary Education Commission.

SIR,—In the letter accompanying the queries addressed to us, you state, that "While regarding an answer to one or all of these a favour, you will also be obliged if we will favour you with an opinion on any other point connected with the subject of primary education, which may not be specifically referred to in these queries." Availing ourselves of this liberty, and feeling that instead of answering in order the questions asked, we can best serve the Commission by following the course suggested by our own minds, we proceed to give you our views on some matters connected with the system of National education, which have frequently engaged our serious consideration.

In the original draught of the letter of the Right Honorable E. G. Stanley, Chief Secretary to His Excellency the Lord Lieutenant, addressed to His Grace the Duke of Leinster, we have enunciated the object of the system of education to be established, and the rules by which this end was to be realized. He gives us the instruction under which he was acting. "In 1828," it said, "a Committee of the House of Commons to which were referred the various reports of the Commissioners of Education, recommended a system to be adopted which should afford, if possible, a combined literary and a separate religious education."

We come now to the rules contained in the original draft of his letter bearing on this design of National education, and which were regarded by the founders of the system as calculated to promote the end in view already quoted—united literary and separate religious instruction:—

1. When noticing the subject of aid to schools, the intention is evident to secure, if possible, that in a mixed communtity the application for assistance should proceed not from one, but all the different religious denominations. The regulation is as follows:—"Applications for aid will be admissible from Christians of all denominations, but as one of the main objects must be to unite in one system children of different creeds, and as much must depend upon the co-operation of the resident clergy, the Board will probably look with peculiar favour upon applications proceeding either from—

"1st. The Protestant and Roman Catholic clergy of the parish; or,

"2nd. One of the clergymen and a certain number of parishioners professing the opposite creed; or,

"3rd. Parishioners of both denominations.

"Where the application proceeds exclusively from Protestants, or exclusively from Roman Catholics, it will be proper for the Board to make inquiry as to the circumstances which lead to the absence of any names of the persuasion which does not appear."

We request particular attention to this regulation and others to be noticed, so that persons may be enabled to judge for themselves how far the present regulations of the Board are in harmony with its original principles.

2. Mr. Stanley's letter proposes an arrangement of days and times for communicating literary and religious instruction, with the idea of keeping these matters within fixed limits, so as to prevent if possible the occurrence of any circumstance that might excite sectarian animosity, and prevent different denominations from mingling harmoniously in the same school.

3. All parties were placed upon a footing of equality, so far as opportunities were concerned for imparting religious instruction. This right was extended in an equal degree to every denomination.

4. Clergymen of all kinds were originally recognised in the different schools as ex-officio visitors.

5. When religious instruction is spoken of it seems to us plain that the Commissioners looked upon the clergymen of the different scholars, as the persons who should discharge the duty.

The various points now put forward seem to us all either implied or distinctly stated in the paragraphs which we quote from Mr. Stanley's letter. "They will require that the schools be kept open for a certain number of hours on four or five days of the week, at the discretion of the Commissioners, for moral and literary education only, and that the remaining one or two days in the week be set apart for giving separately such religious education to the children, as may be approved of by the clergy of their respective persuasions. They will

also permit and encourage the clergy to give religious instruction to the children of their respective persuasions, either before or after the ordinary school hours on the other days of the week."

6. A claim of power with regard to the books to be used in schools is put forward in the following clear and distinct language. Stanley's letter:—"They will exercise the most entire control over all books to be used in the schools, whether in the combined literary or separate religious instruction, none to be employed in the first except under the sanction of the Board; nor in the latter but with the approbation of the members of the Board of the persuasion of those for whom they are intended."

7. The authority to be exercised in reference to teachers is expressed thus:—"They will allow to the individuals or bodies applying for aid the appointment of their own teacher, subject to the following restrictions and regulations—

"1st. He (or she) shall be liable to be fined, suspended, or removed altogether by the authority of the Commissioners, who shall, however, record their reasons.

"2nd. He shall have received previous instruction in a model school to be established in Dublin. N.B.—It is not intended that this regulation should apply to prevent the admission of masters or mistresses of schools already established, who may be approved of by the Commissioners, nor of such as the Board may think fit to appoint, before the proposed model school may come into full operation.

"3rd. He shall have received testimonials of good conduct, and of general fitness for the situation from the Board, or the persons employed by them to conduct the model school."

8. The extent of the power given to the Board in legislation or framing new rules is expressed in the following way. Stanley's letter:—"A full power will of course be given to the Board to make such regulations upon matters of detail, not inconsistent with the spirit of these instructions, as they may judge best qualified to carry into effect the intentions of the Government, and of the legislature."

These rules seem to us just in their nature, calculated to promote co-operation among different sects, while the central authority provided for seems necessary in order to restrain those various agencies which if left free might interfere with the object of the system—united literary and separate religious instruction.

When the letter of Mr. Stanley was submitted to the original Commissioners some changes were suggested by individual members, and agreed to by others. It was then published in its revised form by the Board, as an explanation of the principles by which the system of education was to be regulated. To one alteration as the most important we shall refer. We admit that the change may have been prompted by laudable motives; but we believe that it was not wise in itself, that it was dangerous, especially as a precedent, and that it violated the suggestion of the Committee of the House of Commons, upon which the Board professed to act. The Committee finding by past experience the difficulty of uniting different parties in a combined literary and religious instruction, recommend that the object of the new system should be united literary and separate religious instruction. Warned by past failures, the original design seems to have been in every way to keep these two things as distinct and separate as possible. We shall quote the paragraph added at the suggestion of the Commissioners, in which the intention of blending to a certain degree literary and religious education is stated:—"Although it is not designed to exclude from the list of books for the combined instruction such portions of Sacred History or of religious or moral teaching as may be approved by the Board, it is to be understood that this is by no means intended to convey a perfect and sufficient religious education, or to supersede the necessity of separate religious instruction on the day set apart for that purpose." The history of this affair we take from Archbishop Whately, who was one of the original Commissioners. "When the Education Board was originally established," says Archbishop Whately, "it was at first a matter of doubt whether anything more could be accomplished than simply to provide a joint education purely secular, leaving all instruction in any way connected with religion to the care of the pastors of the several denominations. But some of the Commissioners suggested, and the suggestion was agreed to by the rest and adopted by Government, that it would be possible to introduce into the (common) education such portions of Sacred History and of Christian instruction as might involve no matter of controversy among Christians. Complete religious instruction, indeed, it was plain, could not be imparted in common to those of different persuasions. But it was suggested that, as there are some points on which all Christians are agreed, it would be desirable that in these the children should be instructed together, leaving a fuller religious instruction to be supplied to them separately, in conformity with the will of their parents. Accordingly, a brief summary was introduced into the reading books provided by the Board, and in addition to this the Scripture Lessons, comprising a large portion of the Old Testament and of the New Testament, were drawn up." Subsequently there were issued by the Board a Book of Sacred Poetry and Lessons on the Truth of Christianity. At first Whately was assisted in these matters by the Roman Catholic Archbishop Murray, as well as the Rev. James Carlile and the other Commissioners. Dissatisfaction, however, after a time arose in some schools with regard to the use of the Scripture Lesson, Book of Sacred Poetry, and Lessons on the Truth of Christianity, during the hours devoted to combined instruction. Diversity of opinion sprung up among the members of the Board upon the same matter. The Commissioners eventually passed such resolutions with regard to the use of these books, imposing certain limitations as to times of use, and confining them in a great measure to hours of separate religious instruction, so that the attempt made to realize in a certain degree combined religious instruction may be regarded as a failure. Archbishop Whately and two other Commissioners, dissatisfied with the rules adopted in these matters, withdrew from the Board. The history of this affair may be seen at length in the reports of the Commissioners for the time. Any person who ponders over the affair will, we think, feel that it would have been well had the Commissioners acted in accordance with the original draft of Mr. Stanley's letter, founded upon the recommendation of the Committee of the House of Commons, 1828, and confined themselves simply to a united literary and separate religious instruction. This course, although liable to be branded as irreligious by the advocates of denominationalism, would have promoted peace and goodwill, which all must admit to be one great object of Christianity, while the other has only produced strife and contention, feelings opposed to the spirit of true religion.

The Commissioners, in their nineteenth report on National education, publish a document explaining the sense of some passages in Mr. Stanley's letter, which, it is stated, had been misunderstood by different parties. The rule as to books already referred to, beginning, "They," the Commissioners, "will exercise the most entire control over all books to be used in schools, &c.," is referred to at length, and the sense given in which they always understood the language. It concludes thus:—"The Board wish to remark that they have never conceived it would be expedient to render the use of any book or books imperative." We cannot assent to the correctness of the interpretation of Mr. Stanley's language. We think also that in a matter of so great importance they should not have surrendered their right to local parties and the clergymen of various denominations. Supervision is necessary upon their part to secure uniformity of system and to prevent different sects from pursuing courses that might conflict with general interests, rights, and privileges. This is delivering the weak into the hands of the strong, instead of using their authority to restrain cases of local tyranny and injustice. If they are not to decide anything as to books who are? According to the explanation of the Commissioners the minority in every school is simply handed over to the rule of the majority.

We now come to consider the arrangements made by the Board in 1840 with the Synod of Ulster, and the conditions on which they extended aid to their schools. The nature of this agreement will be understood in the first place from the four propositions agreed to at the Synod in Cookstown, 1833, as the basis of application for aid to the Board, and in conformity with which they received support in the year 1840. The propositions are as follows:—"1. That the ministers and people of this Church, without the necessary concurrence of the ministers or members of any other Church, shall enjoy the right of applying to the Board of Education for aid to schools, by a statement of the constitution and regulation of the schools, accompanied with an engagement to adhere to them; but in this proposition we recognise the right of the Board to consider the regulations, and decide accordingly. 2. That it shall be the right of all parents to require of patrons and managers of schools to set apart for reading the Holy Scriptures a convenient and sufficient portion of the stated school hours, and to direct the master, or some other whom the parents may appoint and provide, to superintend the reading. 3. That all children whose parents and guardians so direct shall daily read the Scriptures during the period appointed, but that no compulsion whatever be employed to induce others either to read or to remain during the reading. 4. That every use of school-rooms be vested in the local patrons or committees, subject, in case of abuse, to the cognizance of the Board." There was also at the same time a form of application presented, the petition of which was accepted by the Board, and which is now known by the name of the Model Form, as having received the sanction of the Commissioners of Education. From this document we make one or two extracts:—"The times for reading the Holy Scripture and for catechetical instruction are so arranged as not to interfere with or impede the scientific or secular business of the school, and no child whose parents or guardians object is required to be present or take part in those exercises; and no obstruction shall be offered to the children of such parents receiving such instruction elsewhere, as they may think proper. . . . The school is open upon all days of the week to the public of all denominations, who have liberty to inspect the registry, witness the mode of teaching, and see that the regulations of the school are faithfully observed; but no persons except members of Committee and officers of the Board are permitted to interfere in the business or management of the school. The books used in addition to the Scriptures and the Westminster Catechisms are those sanctioned by the Kildare-place Society."

In these documents there is, we believe, a violation of the provisions which we have quoted from the original draft of Mr. Stanley's letter bearing upon religious instruction, and having for their object the promotion of united literary and separate religious instruction. That this was the feeling also of the deputation who conducted the negociations with the Commissioners will, we think, appear from their report to the Synod of Ulster at a special meeting at Belfast, 1840. We quote from the minutes of that year, page 9:—"Your deputation have thus the satisfaction of submitting to their brethren that aid has been obtained for their schools, not only without any compromise of principle, but in perfect harmony with the principles on which the schools of the Synod have hitherto been conducted. 1. Protestants can apply for aid to their schools without any reference to or union with any other denomination. This was not the case in the former rules of the Board, for though Protestants might have applied by themselves, the query sheet afterwards required the reason why reference to others had been omitted. 2. The query sheet, of which several of the questions and regulations were excedingly offensive to Protestants, has been totally withdrawn, and aid for our schools is granted simply on our own statement of their constitution and regulations. 3. The schools, as Protestant schools have ever been, are open to the public, but none except the applicants are recognised as *ex officio* visitors. This is a valuable improvement upon the former regulations of the Board, which empowered others to be *ex officio* visitors in every Protestant school, to which every Protestant applicant was required to submit. 4. The Bible is free during school hours, and the extent of its use subject to no control but the will of the parents, expressed through committees of their own free choice, and the greatest

convenience of the attending scholars. 5. The Westminster Catechisms are also free during school hours, a privilege not enjoyed even under the Kildare-place Society. 6. There is no concession of any day in the week for separate religious instruction as the former regulations of the Board in every case required. 7. No one has a right to demand admission to teach in our school-houses, as the former regulations of the Board required and enforced. 8. In return for aid to our schools we were neither required to make, nor have we made, to the Board, any concession of any Protestant principle or practice. In relation to other denominations we neither recognise, promise, nor guarantee instruction in their peculiar creeds, we barely stipulate that when parents object, we, acting upon the Protestant principles of liberty of conscience, and following the immemorial practice of our schools, will neither require nor compel their children to read our Bibles or commit our Catechisms, and that if the parents so direct we will not obstruct their seeking instruction elsewhere." The deputation seem to think that the arrangement involved a concession upon the part of the Commissioners—not only so but that the alterations were antagonistic to the purpose of the Board, united literary and separate religious instruction, and were calculated to promote a system which was directly its opposite. In proof of this point we quote the concluding remark in the report:—"9. We have secured for our schools and the children of the Protestant communion the great principle which our Synod, learning from the Scriptures, so early adopted, and has so faithfully maintained—viz., that religious and secular learning should form the united and inseparable parts of a Christian education." The precedent established by the Synod of Ulster has been followed by other denominations, so that the great majority of the ordinary non-vested National schools are in connexion with some one or other of the leading sects, and the cases of joint management are rather the exception. The nature of the arrangement referred to, and the employment of the teacher as the instructor in religion for a particular party, must in the nature of things counteract the original intention of the Board—united literary and separate religious instruction.

As so much is said with regard to the perfection of the system by which the National system affords protection to the faith of the minority in a school, and the complete manner in which the object of National education has been realized by the mixed attendance that prevails in so many National schools, we think it necessary to make a few remarks.

Where one religious denomination has the ascendancy, and the patron exercises the privilege granted by the Board, which he generally does, there is one form of religion which may be regarded as established, while all others are prohibited. The sole privilege which the others have during the period of religious instruction is to leave the place and obtain instruction as best they can elsewhere. We sometimes hear of the blessing of slavery, but we may be certain it is the master, not the slave, who utters its praises. So when we hear the changes rung upon this subject we can guess the position of the parties who indulge in these glowing encomiums. The majority have their pride flattered by the fact that their form of religion, and theirs only, is sanctioned by the law of the Board, the minority are galled by the thought that their peculiar mode of faith is under the ban of exclusion. In the nature of things can parents, without a painful feeling, send their children to a school where the brand of inferiority is stamped upon the religious opinions which they may conscientiously entertain. The case of the minority, it may be said, is a sentimental grievance. These, however, are the wrongs which of all others are the most severely felt. But it is a real wrong. The minority contribute their share of the money which supports the school. The master, the clergyman, the school-room, are at the service of others for the inculcation of their particular dogmas, but these are privileges which are denied wholly to them. It is idle to say that the rules of the Board afford a protection to individuals which is not secured by the conscience clause in England. Upon this matter we have not time to enter. Be this as it may, the question still recurs, Is the present rule of the Board in ordinary non-vested National schools fair? is it just? is it equal? is it in accordance with the golden rule of doing unto others as you would wish that they should do unto you, which has been pronounced by the founder of our religion as the law and the prophets? If children are to mingle in harmony in National schools, one thing, we believe, of all others, is necessary, that they should meet upon terms of perfect religious equality. Union upon any other terms we would say is neither devisable nor advantageous.

This arrangement of the Board has tended greatly to multiply and encourage schools of a denominational character. In certain localities where the numbers were few, they have been under the necessity of attending schools where the form of religion sanctioned was different from their own. This dislike of inferiority and desire of supremacy has, however, led each sect, where practicable, to establish a school where they may possess the privilege of regulating the faith to be taught in the place, and enjoy the satisfaction of belonging to the dominant party. This system of things has been gradually increasing the difficulty of holding different denominations in union, and prepared the mind for the demand that unsectarian education must be abandoned as impracticable, and that the denominational system must be established in its place.

Passing from this subject, we come to the consideration of another class of schools. We are informed that convent schools were among the earliest to obtain aid from the Board. In the rules of the Commissioners for 1866 we are told that "convent schools receive aid under the conditions applicable to non-vested schools, and that they are subject to the same rules and regulations." This is a statement which we cannot comprehend. In ordinary National schools a grant of money is made for the teacher and assistants. Here these parties receive no salary, but the aid is extended in the form of a subsidy to the religious establishment. In other schools the amount paid is determined by the qualifications of the teacher, but here it is regulated solely by the average number of children in daily attendance, according to a scale laid down by the Commissioners specially for this purpose. It is said in their rules for the same year:—"No clergyman of any denomination or member of any religious order can be recognised as the teacher of a National school. This does not apply to the teachers of convent schools, nor to those of any monastry schools which have been at any time previously in connexion with the Board." Looking at the concessions made to different parties, we cannot well see how the Board can consistently refuse any further changes unless they retrace their steps and return to the principles enunciated in the letter of Mr. Stanley.

In the vested schools the rules regarding religious instruction are formed upon the principle of extending equal privileges to all. The model schools it is said exhibit the system of National education in its purest state, and most in accordance with the intentions of its early founders. There is one point on which we are inclined to offer a remark. From Mr. Stanley's letter we think it is evident that clergymen were the parties to give religious instruction. There is certainly no intimation that teachers were the persons expected to discharge this duty. In model schools as well as others they, however, are the persons who as a general rule act in this capacity. A clergyman may not, according to the rules of the Board, act as a teacher, but then the person who is a teacher is expected for a portion of each day to discharge the duties of a minister. If the prohibition in the former case be necessary, lest it might connect the school in the eyes of the public with a particular denomination, we think the reason is equally cogent, that the teacher should be confined to his own special department.

The model schools and the ordinary National schools being conducted upon different principles, the one sanctioning a monopoly of power in religious instruction by one party, the other extending equal rights to all, they have in different places presented the appearance of rival or antagonistic institutions. This state of things exists in almost all the leading towns of Ireland where there are model schools. Alexander Macdonnell, esq., Resident Commssioner, states that, "The Commissioners have never refused to endow in the immediate neighbourhood of a model school a well conducted rival school." This mode of procedure so far from satisfying the opponents of united education, has only fostered the spirit which now demands the abolition of the model schools, and the remodelling of the whole education of the country, so as to render it universally denominational in its character. Considering the nature of Mr. Chichester Fortescue's proposals regarding model schools to the Commissioners, and the expression of their assent, most of us considered that the ruin of the system would soon be completed. Owing however to a change of Government, the negotiations were brought to a sudden close, and the question still remains to be decided. The times we believe are auspicious. In days past different religious parties have been treated in a different manner, some receiving no aid from the State, others a greater or less amount. If it be said that the convent schools are sectarian in their nature, and should not receive assistance, the Catholics may fairly reply, this is but a trifling set off against the endowments given to others for religious purposes. There is an inequality in one way which seems in treating with different parties to justify inequality in another. The refusal of demands made by others may be justified on the ground that, they already enjoy exceptional privileges. The spirit of the age seems to be that in religious matters, all parties must now be put on the religious footing of a perfect equality. If so then the same spirit must require that equality should be the law in education.

If the Parliament still believe that united literary and separate religious instruction should be the object of the system, we think that in this matter model schools, vested schools, non-vested schools, and all others must be regulated by one plan. We think that the explanations of Stanley's letter by the Commissioners, and that the complications arising from their negotiations and arrangements with different parties must be set aside, and Mr. Stanley's letter, if not the standard will, we think, be the best guide, in enabling them to fix upon some intelligible uniform and just principle of action in their rules regarding religious education. If united literary and separate religious instruction be not practicable upon the system of equal rights and privileges, the Presbytery are of opinion that instead of sanctioning the present unjust arrangement, the Parliament should confine the education in our National schools to subjects of a secular or literary nature, and that if all sects but one be compelled to seek religious instruction elsewhere than in the school, then that that one also should be under the necessity of acting upon the same plan. The State when it acts impartially gives itself the highest exemplification of practical Christianity, and fosters in the people a sense of equality which harmonizes with the essence and spirit of true religion.

We object to the denominational system of education, as a solution of the question. The carrying out of a scheme of this kind, so as to meet the wants of all sects, must be attended with an expenditure which must impress the mind of every thinking person with the idea, that the thing is an utter impossibility. In Munster there are 546 schools taught exclusively by Roman Catholics, in which 2,038 Protestants are in attendance; or an average of a fraction above three to each school. Is the proposal to erect a separate school-house for each one of those minorities, one that can be entertained by any reasonable mind. Professor Nesbitt in his paper at the Social Science Congress, Belfast, says, "What are you to do with the 25,000 Catholics attending 1,000 schools in Ulster, an average of twenty-five for each school, who are taught exclusively by Protestant teachers? Or, again, what are you to do with 24,000 Protestants attending some 2,400, an average of ten for each school, who are exclusively under Roman Catholic teachers. To provide separate schools for such minorities is out of the question. The starveling schools which in a few cases it might be possible to set up would be wholly worthless. It is evident then that these children must either go without education, or be brought up in the religion of the majority." The statement here we maintain is not exaggerated, it is on the contrary far within the truth. The Protestants are not a united body, some of us in schools belonging to our localities have Roman Catholics, and Protestants embracing the various classes of Episcopalians, orthodox

Presbyterians, Independents, Covenanters, two kinds of Wesleyans, two kinds of non-subscribing Presbyterians, and occasionally, perhaps, some other varities. If the spirit of sectarianism be fostered in the establishment of denominational schools, Government will have to provide school-houses, not merely for Catholics and Protestants, but also for each variety of Protestants.

In reply to statements of this kind, it is alleged that where minorities are very small, and Government assistance could not be reasonably expected, they (the minorities) could easily provide school-houses and education for themselves. Sects that are small could never in this way expect to obtain assistance. The fewer the numbers the greater the difficulty of establishing private schools. They must, however, according to this system, be first taxed to assist the majority in establishing a school, who less require assistance, and afterwards provide, out of their own resources, a place of education for their children as best they can. The alternatives alluded to in Professor Nesbitt's statement would, however, be in the majority of cases the only ones possible.

We are now come to our last argument in this case. Parliament is now seeking to secure religious equality by withdrawing endowments from different religious parties, and as a presbytery we have expressed our approval of the scheme. It is proposed by some to apply part of the money obtained in this way to purposes of education. If so, it must in consistency be appropriated to unsectarian schools. Should it be given to teachers who are engaged under others in the work of inculcating particular religious opinions, the State will only be giving, in another form, its sanction to a system of things which it is now attempting to abolish.

In the Commission of Inquiry, a subject proposed for consideration is, "Whether any improvement can be effected in the constitution of the Board, with the view to a more satisfactory administration of its affairs."

We are of opinion that, instead of the present Board, one Minister of Instruction should be appointed, as in France and some other countries. We believe that the plan of Commissioners, uniting in themselves the double power of administrating a system and also of framing new laws with the sanction of the Lord Lieutenant, is a bad one. We think that the Minister of Instruction should simply administer the affairs of his department, in accordance with an Act of Parliament passed for his guidance, and be responsible to Government. The power of altering, modifying, or framing new laws on the subject should, in our mind, rest entirely with Parliament. This provision is absolutely necessary to prevent the administrator from being constantly besieged by the importunity of different religious parties, seeking changes to suit their own particular purposes, but which, at the same time, clash with the rights and privileges of others. The rules of the Board, in order to become law, required merely the sanction of the Lord Lieutenant. This privilege encouraged a continual negotiation with the Commissioners, and facilitated the introduction of changes that have destroyed the benign tendency of a system which many of us, at its commencement, looked upon as an omen of good, and the inauguration of a new and better era for Ireland.

Having given the matter our best consideration, we think that Government should not adopt the scheme which is by some suggested of two, three, or more paid Commissioners. This system would naturally lead to the appointment of individuals connected with a few of the leading religious denominations. The first objection to such an arrangement is that the minor sects would have no representatives. The second rests upon the conviction that if a number of persons be appointed they will naturally look upon themselves, and be looked upon by others, as the represensatives of certain parties, and that they will carry something of this idea into their deliberations. If opposing sects be equally matched there is a dead lock, if unequally, one influence or another will probably prevail and turn the balance of justice on one side or another. We believe that by selecting one person eminent for his attainments in education, and as free as possible from sectarian bias as minister of instruction, the Government will adopt the course most likely to secure the impartial and satisfactory administration of affairs in this department. A judge upon the bench of every particular religion, as a general rule, administers the law fairly between man and man, and seldom is justice perverted by any feelings of a political or religious nature. A person of a similar stamp of mind placed in the other situation would, we think, act in an equal spirit of fairness.

We come now to offer a few remarks on the subject suggested to our minds by the question in your circular; "Do you consider the system of inspection as carried out by the National Board sufficient for its purpose?"

In our remarks we do not wish to cast any reflection upon the Inspectors, who are, we believe, in general a class of men well qualified for the office, and exemplary for the faithfulness with which they discharge their duties. The policy of the arrangements under this head is the only subject on which we express an opinion. Originally under the Board there was only one class of Inspectors, subsequently a change was introduced, and we have now in addition six Head Inspectors, and what is called two Chiefs of Inspection. The country is divided into sixty districts, and over them there are sixty District Inspectors. Each Head Inspector is appointed over ten districts which is his proportion, and the area of his operations will be something like the one-sixth of Ireland.

This extent is, we believe, too large for any useful purpose as regards the oversight of schools. A Head Inspector is a large portion of a lifetime before he can visit the different places of education under his superintendence. From the report of the Commissioners for 1866, we learn that John E. Sheridan, esquire, Head Inspector, was appointed to his circuit in 1858 which contains 1,013 National schools. There is, therefore, a space of eight years between the two dates. During that period in his report he says, "Visited 764. Of this number fully inspected and visited 698." There is therefore still a large number which will require some years to overtake. The visits, owing to the amount of travelling, are very expensive and fatiguing, and they are too few to answer any useful end. But then it is also to be remarked that the Head Inspector is engaged in doing the work which seems also assigned to the District Inspector. The latter visits each school in his district three times in the year. Even supposing that he is inferior to the former in ability, which may or may not be the case, will not the District Inspector from his superior opportunities of judging, be a better opinion on all matters relating to the school than the Head Inspector. The sufficiency of the District Inspectors for the inspection of schools, is an opinion which seems sanctioned by the statement of some of the Head Inspectors themselves. In the report to the Commissioners for 1866, Timothy Sheahan, esquire, Head Inspector, referring to his own return says, "The results thus furnished in a few schools in a district present no reliable data on which to form an opinion of the schools generally throughout it. The reports of the District Inspectors give full and accurate information on the points above stated in every district." There is another point which we would notice in this matter. The instructions of the Head Inspectors are occasionally at variance with those of the District Inspectors, and the teachers placed in the position of a man who cannot obey two masters.

The preceding observations will prepare the mind for the suggestion, that there should be a return so soon, as practicable to the original plan of one class of Inspectors. So far from additional reports being necessary from Head Inspectors, we believe that the written reports from the District Inspectors are too numerous, and that a diminution in the number would be an advantage.

We would now call your attention to another matter in reply to your query. There is, we believe, in the existing state of things much labour expended by Inspectors of both classes on monitors, pupil-teachers, and teachers, which, so far as the object in view is concerned, may be regarded as lost. It is a fact which may be taken for granted that a great number of these persons turn their attention to other matters, and give up the profession of teacher.

The remedy for want of well qualified teachers is thought by many to be additional training schools. In the Commissioners' report for 1866, Mr. Wilson, District Inspector, says that the "average income of a teacher is about ten shillings a week. A large proportion of the best of the pupil-teachers of our model schools, and of the monitors of our ordinary National schools, betake themselves to other occupations where better wages can be earned, and the more of these that are trained, and the higher their training, the more of them will go off, because the value of their services will be correspondingly enhanced." The qualification of the teachers at present is, we believe, equal to their remuneration. If we want a higher class the principal means must be an increase of salary. In order to a successful treatment of a disease medical men inform us we must look to the cause. Is there a want in the community of men equal in intelligence and character to fill situations where the average weekly pay is ten shillings? We believe that the very statement will show the absurdity of such a supposition. Take the case of examinations for the Civil Service, where the attainments necessary in many cases are of the highest order. We are told that on an average there are four candidates for every vacant post. The defeated in many cases are persons of respectable acquirements as well as the successful. If there be no want of persons to fill a higher office, should there be any scarcity to discharge the duties of a situation where the standard of attainment is so much less.

It must be admitted that in the present arrangement for training teachers there is a great waste of money and of power which contributes nothing to the object in view. Some, however, say—Increase the pay of the teacher, and then the present machinery will work well. In answer to this we reply—After expending money in the training of teachers you must still adopt the same arrangement to secure their services and hold them in their office, as if this previous outlay had never been incurred. Some of us think that the true plan of securing well qualified teachers would be to adopt the principle of the London University, which grants degrees to all persons wherever educated who possess a certain amount of knowledge. Acting upon this idea, a certain standard of qualification should be adopted, and a suitable or corresponding salary offered. The teacher exhibiting the necessary attainments could receive his appointment irrespective of the place in which he may have been educated.

There may be in our body some not prepared to go this length. We are all, however, of opinion that if we are to secure and retain a number of highly educated men as teachers we must rely more on an advance of salary and less upon expenditure in extending and perfecting our training machinery.

There is one more point which strikes upon the subject of the query. We believe that, according to the present rules of the Board, the Inspector is under the necessity of spending too much time on matters of a statistical nature. There is too great a multiplicity of forms, and many things contained in them unimportant in their nature. There is a repetition of reports of a similar kind, which cannot in the nature of things add much to the understanding of the subject. The length of time which elapses before the report is published deprives also of interest some things which might originally have possessed this quality. We are approaching the end of the year 1868, yet the latest report is for the year 1866. Is not its value greatly diminished as a source of information or ground of action for present purposes? This complication begins with the duties assigned to the teacher. Besides writing down the name of a child when it enters school, or erasing its name when it leaves, there are additions and conditions to be complied with which waste the time of the teacher and are not attended with any corresponding advantage. We have read of an experiment of throwing two shadows of the sun upon the wall in a particular way Instead of an increase of light there is total darkness. The Commissioners in a similar way by attempting to render their reports too full and minute, produce something of the same effect. The thing is so tedious that scarcely anyone buys the report, or would think of reading it, as when it is printed it is a matter of history, rather than of knowledge bearing upon the present time.

We have not had time to look over the matter so attentively as we could wish, but we think that with a little attention to the matter we could suggest a number of changes which would greatly simplify the transaction of business under the Board, without omitting anything really essential. If this could be done, and we believe it perfectly practicable, the time of the Inspector might be employed in a way more agreeable to himself, and more advantageous to teachers and scholars. There is but one point on which we would at present make a remark. The process of what is called checking the books occupies a considerable time, but then it is alleged this cannot be dispensed with, because a rigid scrutiny is necessary to prevent fraud upon the part of the teacher. We affirm however that this great temptation to dishonesty arises from a rule of the Board regarding numbers, which we do not believe to be politic or just. There is a change called for, which would lessen the motive for deception upon the part of the master, and which would lighten in a great degree the labour of the Inspector, in exercising the supervision necessary in this matter. This point we shall notice in treating of the subject which is next to claim our consideration.

We now come to the question of salaries, and mode of payment of teachers as employed in National schools.

The following quotations from the rules of the Board will give a general idea of the place given to numbers as affecting the remuneration of this class of officers. Rules for 1866, page 16—"As a general rule a school to be entitled to be taken into connexion, or to remain in connexion, must exhibit an average daily attendance of at least thirty pupils. Teachers cannot be admitted to the enjoyment of first class salary, nor allowed to continue in its enjoyment unless their schools command an average daily attendance of thirty-five pupils. Should schools of the ordinary class be retained in connexion after the attendance shall have fallen below thirty pupils, as in certain circumstances they may be retained, their teachers will be paid according to the provisions of the modified scale below." For our purpose it is merely necessary to say that the grant becomes less with the decrease of numbers, and when the attendance descends below fifteen all salary is withdrawn, and the aid is limited to inspection, books, and apparatus.

As an introductory remark to prepare the mind for a more generous treatment of teachers in poor and thinly scattered districts, we refer to the different system pursued with regard to model schools. From the last report 1866 we select the case of Athy Model school. Reckoning principals, assistants, and pupil teachers all as teachers, there are as we calculate fifteen scholars and a fraction opposite each teacher. If we count the six monitors in addition as we may do, the average number is nine. If it be said that liberality in this and other respects be necessary in reference to model schools in large towns, we say that liberality is at least equally necessary in places where want and wretchedness prevail. In the former places there are generally schools of other kinds where education is accessible, in the latter no opportunities of this kind exist. Changes are we believe necessary in the rules quoted. In case of islands off the Donegal coast, such as Tory, Inisboffin, Gola, and others, the average attendance must in the nature of things be very small. These are extreme cases, but there are other localities where the present arrangement presses hard upon the teacher. In our opinion, where as a matter of convenience a school is absolutely required, the smallness of the numbers is rather a reason for augmentation of salary, not diminution. The present arrangement at least is not the right one. In the cases referred to by the Commissioners of small attendance, we should consider attentively whether a school is necessary or not necessary. If necessary we must at least act towards the teacher with as great liberality as we do to persons placed otherwise in more fortunate circumstances. The grant is his sole support. In order to teach a man must have an income sufficient to provide a little clothing, and food of the coarsest kind which will support human life. Where the poverty of the teacher is at the extreme, according to the present rules, when he asks for a fish we give him a serpent, and when for bread we give him a stone. In cases where a school is adjudged not to be required, we would recommend that there should not be any interference with the existing teacher for his time, but that the vacancy should not be filled up after his resignation.

We object to the system of payment of teachers according to quarterly averages, as at present practised under the Board. In any new arrangement where the necessity for a school is to be considered, we believe that the plan of a yearly average would form a much better standard by which to judge. In country districts field operations affect the attendance for certain quarters, in towns the cold of winter exercises a similar influence. A year embraces those various causes of inequality, and is therefore the natural period of time to be adopted as a basis of calculation in these matters.

Disease, epidemics, changes in trade are also matters to be taken into account. Children are occasionally withdrawn from school on account of the former causes. In our own localities mills have been stopped for a time, owing to these temporary causes a diminution of attendance is the natural result, and this circumstance has led to a reduction in the salary of the teacher. In all the instances to which we have referred the teacher is punished for want of attendance whether he may be innocent or guilty.

We believe that efficiency and faithful discharge of duty are the things to be rewarded, but these are not to be determined solely by the questions of number and proficiency. There are some localities where a large number is an impossibility, but in others it is the reverse. In certain districts there is, owing to the position of parties, a regularity of attendance favourable to progress, while in others the case is exactly the opposite. In courts of law men are not condemned without an opportunity afforded of establishing their innocence, and if guilty of stating every circumstance which should palliate the offence or mitigate the penalty. We believe that if the teacher either by himself or through the patron, can show that the want of attendance does not arise from his own fault, but is attributable to circumstances, over which he has no control, he should not be fined. A few pounds are a trifling matter to persons in opulent circumstances, but the case is different with teachers whose incomes are small. A penalty should not be inflicted unless negligence be clearly established. Under existing circumstances certain numbers practicable or impracticable being necessary for the payment of certain salaries, the teacher is frequently tempted to practise fraud in the making up of his books. A change in the law is a pressing necessity.

In reply it may be said that if we dispense with the present rules, schools will multiply to an unreasonable extent. There is we admit a danger of this kind, but it arises from a different cause. We advocate the extension of aid to a school where that school is absolutely necessary, but we object to the increase of schools not needed which has arisen from the encouragement given under the Board to a denominational system of education, and we anticipate a great addition of a similar nature from a further advance in this direction. Professor Nesbitt in his paper at the meeting in Belfast of the National Association for the promotion of Social Science, speaks of the incalculable mischief attendant upon denominationalism, in setting up two or three comparatively worthless sectarian schools, where under a National school a single school might be maintained in efficiency." It appears from his statement that three years before the time in which he speaks, in 1,000 of the schools belonging to the Church Education Society in Ireland (two-thirds of the entire number), there were only 18,000 scholars, an average of eighteen for each school. We are approximating rapidly to a system which manufactures of necessity small schools, and no regulations of the Board can counteract the evil inherent in the nature of things. If, however, we return to the unsectarian plan, we can as a general rule have schools containing a sufficient number of scholars, and this state of things will enable us to act with a little more liberality to those exceptional cases, where in the nature of things the attendance of scholars must be small. As a general rule we may expect large schools under the latter system, whereas, if we adopt the denominational plan we will as a general rule have small schools.

Speaking of teachers in ordinary National schools, we as a presbytery are of opinion that in case of males the lowest salary should be £46, instead of £18, as at present; and that in case of females, the lowest should be £40 instead of £18, as at present. The literary qualification required for an officer of excise is inferior to that necessary for even a third class National teacher, yet the minimum salary of the former is £60 per annum besides two shillings per day for every working day, making in all about £90 per annum; and subsequently by promotion he has a fair prospect of increase to the amount of £250 or £300 per annum. We are all in favour of the increase specified. The only difference of opinion is as to whether those amounts should be given in the form of a grant entirely from the Government, or secured in part by local taxation. We have not been able to fix the highest sum that should be paid to a teacher, nor to determine the intermediate degrees. These matters and the salaries of teachers in other schools, we must for the present leave to the consideration of other parties.

We are all agreed that the present arrangement as to retiring gratuities requires change. The rule is as follows:—"In particular cases the Commissioners have the privilege of granting gratuities of reasonable amount to deserving teachers of long standing in their service, when from old age and infirmity they are obliged to retire." A sum equivalent to one, two, or even three years salary does not meet the case of persons who occasionally at a comparatively early period of life are worn out in the service. There are instances of this kind where life may nevertheless be prolonged for a great length of time. In all cases where a person has devoted his life to the office of a teacher, we would recommend that when unfit from age or infirmities for discharging their duties, a yearly pension should be granted equal to half their salary.

In our remarks we have dwelt upon the things of which we disapprove, and the changes of a beneficial kind that might be introduced. Our duty was best discharged by pointing out the evil rather than in passing encomiums upon what merited praise. Lest it might be supposed that we are actuated by hostility, we take the liberty of stating that we are not insensible to the good. The books under the Board are excellent. We like the variety which is introduced into the system of instruction. The teachers are men of a character deserving of respect, and from our conversation with them, we have formed a favourable opinion of their intelligence. The Inspectors are diligent in the discharge of their duty, and well qualified for the work. In many of the schools education of a very high order is imparted.

The Commissioners in the alterations we regard as unfortunate, were not actuated, we believe, by bad motives. These were made principally by a desire to please the clergymen of various denominations, but these concessions contrary to their expectations have only prompted the demand for changes, which would subvert the whole order of things. We are not actuated by any feeling of unkindness nor do we write in a spirit of bitterness. We are conscious, however, that a crisis has arrived in education in this country, and that one or other of two schemes must be adopted. Believing that the denominational system is expensive inefficient in its nature, and above all calculated to strengthen the feelings of political and religious hatred among the different classes in the community, we would regard a change in this direction as a great misfortune. In neighbourhoods where the system of united education has been carried out for any considerable time, many of us have had opportunities of witnessing its beneficial effects in cherishing a harmonious spirit among the rising generation, and again where that system has been subverted by the multiplication of denominational schools, we have seen an unhappy jealousy and bad feeling prevailing. We have every reason to believe that an overwhelming majority of the parents of all denominations in our neighbourhood, would prefer sending their children to non-sectarian schools, if not controlled by the interference of their religious

teachers. Convinced that the beautiful theory of united literary and separate religious instruction if carried out in the spirit of Mr. Stanley's letter, would be economical as well as favourable to intellectual improvement, and calculated to promote peace upon earth, and good will among men, a consummation so devoutly to be wished for, we are anxious to see such changes adopted as will perpetuate and extend the system in accordance with the intentions and designs of its wise, benevolent and patriotic founders.

We have the honour to remain, sir, your obedient servants,

JOHN HALL, Minister of the Old Congregation of Ballyclare, Moderator.

S. C. NELSON, A.M., Minister of 1st Downpatrick.

November 26, 1868.

By order of the Presbytery of Antrim.

APPENDIX F.

After my report was drawn I received from Mr. Vere Foster a copy of a pamphlet, which he has printed, containing the replies he collected with great labour from a large number of teachers and associations of teachers in different parts of Ireland, to whom he addressed a series of questions, including those which I had myself addressed to him as to other gentlemen interested in the subject. This pamphlet will, no doubt, be accessible to the Commissioners; and the views it contains, especially as expressed in Mr. Foster's introductory summary, will be found, I venture to think, of much interest.

I append that portion of the summary which relates to the subject of this Appendix, namely, the mixed system.

"Query No. 4.—Beneficial, and the success of the system is sufficient evidence of its popularity. The efforts of Parliament to provide for the education of children of different denominations in the same schools have been *remarkably* successful, as is proved by the fact that out of 175,478 Protestant children, attending National schools in 1867, 155,343, or 88·5 per cent., were in attendance in mixed schools, there being 3,821 such schools.

"I have appended in full all the replies which I have received from associations and from teachers of schools having a largely mixed attendance of Roman Catholic and Protestant pupils, being especially careful to publish all remarks contrary to as well as those in favour of my own views, so as not to be liable to a charge of partiality. A very few associations and teachers have expressed themselves in favour of the denominational system; the greater number strongly approve of the mixed system; while the remainder have courteously declined to answer this question, even though I promised that the replies should be published anonymously. The popular feeling, where not totally indifferent on the subject, which is generally the case—the people taking no part in the controversy on this vexed question—appears as a general rule to be in favour of the present mixed system, which is generally acknowledged to have been administered by the Board with the utmost impartiality. Active opposition to it is confined to clergymen, members of Parliament, landlords, and others who have no occasion to use the common schools. The feeling of the clergy of every denomination is in favour of gathering the children of their own flocks into separate schools, and this is fairly practicable in towns: for instance, in Belfast—where I reside, and which contains 150,000 inhabitants, of whom more than one-third are Roman Catholics, another third Presbyterians, and one-fourth members of the Established Church, containing, therefore, a more largely mixed religious population than that of any other town of its size in the United Kingdom—there are upwards of one hundred National schools, nearly all of which are and always have been denominational, in the sense of being attended by Roman Catholic pupils only or Protestant pupils only. Some members of Parliament and others have attributed the frequency of riots in Belfast in part to the mixed system, but I think it may rather in fairness be partly traced to the prevalent system of educating the children of different denominations in separate schools. It is not so practicable to maintain separate schools for each denomination in rural districts, and accordingly it is found that, in the county Tyrone, which is one of the most purely agricultural counties in Ireland, and whose population is more mixed in regard to religious denominations than that of any other county, more than two-thirds of the schools are mixed. In that county, and in the rest of the province of Ulster, there were, according to the last enumeration taken in 1859 (see Parliamentary Return, No. 105, 1861, Mr. Butt's), 914 schools, out of a total of 1,894, in which the pupils of the denomination, which was in the minority, amounted to from 10 to 49 per cent. of the whole attendance. There were at that time 2,898 mixed schools in all Ireland, which have since been increased to 3,821, or three-fifths of the total number, thus proving the increasing popularity of the system, notwithstanding the violent opposition of the advocates of denominationalism from opposite quarters.

"The Commissioners of National Education have, in deference to the wishes of clergymen, already allowed too great a multiplication of schools throughout these counties, and by the establishment of so many very small schools have greatly injured the cause of education. If the denominational system should be substituted by Act of Parliament for the present mixed system, small inefficient schools will be still further multiplied and party spirit encouraged, or the children of the minority in numerous cases will be without the means of education, or will be permitted to partake of secular instruction only on condition of taking part in religious exercises, and receiving religious instruction of which their parents totally disapprove, as is the case with the Roman Catholics and other Dissenters in England, and in a less degree in the United States of America.

"I trust that the foundation principle of the Irish National system of education, *combined secular and separate religious* instruction, will be maintained in its integrity, as laid down by the Earl of Derby, when Chief Secretary for Ireland, in the following words:—

"'They (the Board) will require that the schools be kept open for a certain number of hours on four or five days of the week, at the discretion of the Commissioners, for moral and literary education only, and that the remaining one or two days in the week be set apart for giving separately such religious instruction to the children as may be approved of by the clergy of their respective persuasions.'

"*The present rule permitting the interpolation of religious instruction in the midst of the ordinary hours of secular instruction should be abolished as soon as possible, or it may act as a wedge to split the National system.*"

APPENDIX G.

The following communication was made to me by a gentleman who has largely interested himself in the subject of—

NATURAL HISTORY IN SCHOOLS.

For nearly thirty years I have advocated the general introduction of such studies, as a regular branch of education in both schools and colleges. In 1867 I met in different publications, the expression of an opposite opinion. It was asserted that "natural history does the pupils no good." "The majority of the children must work for their bread; why trouble them with lessons about plants and animals? Teach them to read, to write, to do a simple sum in arithmetic, and all they need is accomplished." According to this restricted view of the functions of the teacher, the three "R's" of the old joke embrace all the subjects required.

Education to my mind was very different from this; and I could not get over the conviction that the thing taught though good in itself, might be less valuable than the healthy exercise of mental powers, which might otherwise exhibit but a feeble and intermittent action.

Being desirous of testing the truth of these opinions, I addressed myself to those who could speak from their own experience, as to whether natural history was an aid or a hindrance towards acquiring other branches of knowledge. My inquiries were directed to the model schools of Belfast, Newtownards, and Carrickfergus, and were responded to from each by the head teacher of the boys' school, the girls' school, and the infant school. A copy of the same set of questions was sent to each, and the answers when arranged and tabulated, gave the following results.

The natural history teaching had reference both to plants and animals. It was illustrated by books, diagrams, and by specimens when procurable. The number of weekly lessons, in the boys' school, one or two, occupying thirty to forty minutes; in the girls' schools, one or two, except at Belfast, where there are five and a lecture. In the infant school, Belfast, one lesson to each division; at Newtownards, five lessons weekly; at Carrickfergus, four. Total number of pupils, 1,457. Average age of boys, eleven or a little more; of girls, eleven to thirteen; of infants, six. The children take great interest in such lessons, especially in zoology—no other subject is so popular. Their interest is evinced by their great attention, by the diligent preparation of their lessons, and by the questions they ask. The success of the pupils of the Newtownards model school at the examination under the Department of Science and Art, is attributed by the master in a great degree to their previous knowledge of plants and animals. All regard such teaching as an aid to the acquisition of other knowledge. Pupils in geography remember the different countries in connexion with the animals and plants found in them. One master says, I believe the powers of observation of the boys have been much quickened by the lessons they have received on these subjects. They are constantly bringing me plants, shells, &c., to get me to name them. Even in an infant school, the teacher does not hesitate to say of her pupils, "the great interest taken in this branch, has the effect of brightening their general intelligence."

Such being the evidence of nine experienced teachers, having the charge of nearly 1,500 children, no doubt can exist, as to the beneficial effects of such studies in schools. Why then should not the teachers be trained under competent professors for the effectual discharge of this part of their duty?

ANALYSIS OF MR. SIDGREAVES' REPORT.

Paragraph

General view of the subject, ... 3, 4
Schools too numerous, ... 5
Attendance of children at school, ... 6
Poverty of parents, ... 6
Children's small earnings of importance, . . . 7
Non-attendance of *young children*, ... 8

National Schools.

Closing of schools in *vacation*, ... 10
Difficulty of ascertaining what schools were closed, 11–13
Attendance, &c., ... 14, 15
Number of children attending school mere infants, . 16
Want of control by teachers over their pupils, . . 17
Its causes, ... 17
Proposed remedy, ... 18
Causes which keep children from school, . . . 19
Night school at Derry kept by Sisters of Mercy, 20–2
Ages of children in the different classes, . . . 23
Table showing the *number* of children *on the Rolls*, the number *present at visit*, the *average attendance* and *capacity* of seventy-one National schools, . . 24
Table showing the *actual attendance* of pupils *in* the different *classes* in fifty National schools, . . 26
Table showing *number* of pupils *on Rolls* of twenty-five National schools *according to classes*, . . . 27
Ventilation, lighting, etc., ... 28
General *cleanliness* of the children, ... 29
Occasional carelessness in this respect, . . . 31
Schools in *Londonderry* district, ... 32–5
In the *Coleraine* district, ... 36
In the *Maghera* district, ... 37
In the *Raphoe* district, ... 38
State of *repair*, ... 39–41
Teacher sometimes has to pay for *repairs*, . . . 42
School furniture, books, &c., ... 43, 44

Examination of Schools.

Method pursued, ... 45, 46
General intelligence of children, ... 47
Their want of politeness, ... 48
Reading, ... 49, 50
Writing, ... 51
Neglect of composition, ... 51
Arithmetic, ... 52, 53
Habit of copying from one another, ... 54
Grammar, ... 55
Geography, ... 56
Needlework, &c., ... 57
Results of Examinations of different National schools in the Londonderry district, ... 58
Do. in the Coleraine district, ... 58
Do. in the Maghera district, ... 58
Do. in Raphoe district, ... 58
Do. in Letterkenny district, ... 58

Teachers.

Teachers, ... 59
Teachers trained in Dublin, ... 60
Previous occupations of teachers, ... 61
Teachers' *pay* inadequate, ... 63–6
Poverty of teachers in Donegal, ... 67
Want of a retiring *pension*, ... 68, 69
Uncertainty of the present retiring allowance, . . 70
Proposed *means for improving* the position of teachers, 71
School-fees, ... 72, 73
Landlords, ... 74
Appointment and dismissal of teachers, . . 75, 76
Monitors, ... 77
Teacher of mixed schools, ... 78

Paragraph

Religious Instruction.

Time given to *religious instruction*, ... 79–82
Checks against proselytism, ... 83
Doubtful value of the religious instruction, . . . 84
Teacher seldom qualified to give it, ... 85

The Mixed System of Education.

In Londonderry, ... 87, 88
In Coleraine, ... 89, 90
In Maghera, ... 91
In Raphoe, ... 92
In Letterkenny, ... 93
Opinions upon the *Mixed system*, ... 94–103
Has the present system a tendency to check *religious animosities*, ... 104, 105
Table showing the different religious denominations of the teachers and of the pupils on the *Rolls* of the National schools examined, ... 106

The Irish Society and the London Companies.

Return of the schools endowed by the Honorable the *Irish Society* in the Derry and Coleraine districts, . 110
Return of payments expended by the Worshipful *Company of Mercers* upon schools in connexion with their Irish estate in the county of Londonderry, . 111
List of schools assisted by the *Ironmongers' Company*, . 112
List of National schools which receive assistance from the Worshipful *Company of Clothworkers*, during the pleasure of the court, ... 113
Detail of schools on the estate of the *Salters' Company* in the town of Magherafelt, ... 114
Do. upon the estate in the country, ... 114
Schools maintained by the *Drapers' Company* on their estates in the county of Londonderry, ... 115
Subscription of *Grocers' Company* to schools on their Irish estate, ... 116
Schools supported and assisted by the *Fishmongers' Company*, ... 117
Observations on the estates of the Goldsmiths', Skinners', Vintners', Merchant Taylors', and Haberdashers', *Companies*, ... 119–23
District Inspectors, ... 124

Church Education Society's Schools, etc.

Schools of the *Church Education Society* in the diocese of Derry, ... 125, 126
Do. in the diocese of Raphoe, ... 127
Objects of the Society, ... 128, 129
Condition of those schools, ... 130–3
Erasmus Smith's Schools, ... 134–7
Private schools, ... 138, 139
Christian Brothers' schools, ... 140–3
Infants' schools, ... 144

Appendix A.—Summary of answers by several persons to queries addressed to them by Mr. Sidgreaves, . 27

Report of Thomas Sidgreaves, Esq., Barrister-at-Law, B.A., Lond., Assistant-Commissioner.

1. My Lords and Gentlemen,—I have the honour to lay before you my Report upon the state of Primary Education in those districts of Ireland, wherein you commissioned me to make inquiries, viz. :—Londonderry, Coleraine, Maghera, Raphoe, and Letterkenny.

2. My inquiry occupied eleven weeks, and during that period I visited and examined—

78 National schools.
13 Church Education Society schools.
5 Endowed schools—of which four, however, are included in the first two categories.
5 Infant schools—three being included under the first heading.
3 Private schools.
2 Ragged schools.
2 Erasmus Smith's schools.
1 Night school.

General view of the subject.

3. It is satisfactory to be able to state that in those districts the people are, at all events, alive to the importance of securing for their children, if possible, the benefits of education. A palpable effort is made to take advantage of the opportunities for it that are afforded them ; and in not a few instances that came under my notice, great sacrifices had been made by parents to enable their children to become what they proudly term "scholars." Recent events have quickened this perception and appreciation of the advantages of education. The vast exodus to America, which is still going on, though fortunately with diminished force, placing as it has, the Atlantic between different members of numerous families—has left them no means of communication except the post. Bitterly now do the parents who receive a letter from a son or daughter in America, deplore their inability either to read or answer it without assistance ; and a child from the nearest National school who has learned to read writing, and to overcome the difficulties of penmanship, becomes suddenly invested with an overweening degree of importance.

4. And, assuredly, if the people at large are desirous that their children should be educated, they have no reason to complain of the lack of opportunity. Schools abound in every direction. Not merely in towns and their immediate neighbourhood where they cluster thickly, nor in villages where at least there will be one, but in thinly-populated districts, where for miles around scarce a human being or a human habitation is visible, the National school is sure to be met with ere long. At times, after driving for miles along silent highways, through a country that seemed—for any sign of life there was—to be uninhabited, it was a positive relief to come upon one of these schools, on the slope of a mountain or the hollow of a glen, and to find oneself once more in the midst of life and activity.

Schools too numerous.

5. In some districts, especially in the neighbourhood of Coleraine, they are far too numerous, and the teachers complain that they are simply starving each other out. At one school that I was engaged at, about three miles from that town, I was assured by the teacher that I could not go a mile in any direction, except back to Coleraine, without coming across a National school. This, however, is very far from being the case in all districts ; but on a general bird's-eye view of the whole of my district, I am satisfied that the school accommodation is ahead of the requirements of the people.

Attendance of children at school.

6. And yet, despite the appreciation of education on the part of the people, and despite the peculiar advantages in that way that are afforded them, the attendance of the children at school is very far indeed from being what one would wish it to be. When I come to deal with this particular point, I shall have to go more fully into the various local causes that affect the attendance of the children at different schools, in different districts ; at present I will merely allude to the one great paramount obstacle which meets one alike in all districts, and that is—the Poverty of the people. This is really the one great difficulty, before which all others fade away in comparison. People talk glibly of compulsory education ; they are indignant at the shameful neglect of parents in not sending their children to school, and say that if they will not do their duty of their own accord, they should be compelled to do so by law. It would be a cruel injustice, however, to pass too hasty a judgment upon these poor people. During my run through the different districts assigned to me—districts by no means ranking among the poorest in Ireland—I have passed hundreds of wretched wayside hovels, inhabited by half-starved, half-clad wretches, who in all material requirements at least, seemed scarcely to have risen above the level of the savage. We who are accustomed to regard the primary essentials of life—food, clothing, and warmth—as matters of course, coming to us as naturally as the air we breathe, forget that where we begin these people often end. Life is with them one long and frequently an unsuccessful struggle for food, for clothing, and for warmth ; and when they do attain them, the food is of the coarsest, the clothing is of the poorest, and the warmth is obtained in an atmosphere of smoke.

Poverty of parents.

Children's small earnings of importance.

7. To people so situated, a few pence more or less daily are of the last importance—often, indeed, constituting the difference between starvation and sufficiency. These few pence their children are generally able to earn, even when very young, in the towns by the various employments which are there carried on, and in the country by the herding of cattle and other field work. Every occupation which admits of the employment of children is eagerly seized upon, and I invariably found the same causes operating in similar localities upon the attendance of children. In villages and country districts the schools are invariably thinned at harvest time, again in November, when the potatoes are dug up, and again in spring, when the sowing of the crops begins. Large numbers of children are employed in herding cattle the whole summer round. Farmers hire them usually for six months at a time, giving them from 30*s.* to £2 for the job, and finding them food and lodging during its continuance. The payment is not on a large scale, but it seems a large sum to a peasant struggling to maintain a wife and family on eight shillings a week. If he sent his child to school he would have to forego that sum, and support the child himself for the six months into the bargain. No doubt it is a sad thing that opportunities for education, which may never occur again, should thus be lost; but so long as the parents are in their present state of abject poverty, and the child's labour can do anything to relieve it, so long I fear will the state of things I have described continue. If the attendance of children at school were made compulsory, it might become a matter for consideration whether the parents were not entitled to compensation for their services ; and in any case I fear that it would have the effect of adding one more to a list of grievances of which, rationally or irrationally, they have so long and so loudly complained.

Non-attend-

8. Whilst, however, the children are too young to work, there is no reason whatever why they should not be

ance of young children.

sent to school, and the parents are responsible for much negligence on this score; but still the bulk of the school is always composed of very young children. The first class is generally larger than all the other classes put together, and is composed mostly of mere infants of five or six, learning the alphabet and words of one syllable. In the winter, however, when the more advanced children, who have been working in the fields all summer, begin to come back to school, the attendance of the younger children falls away almost entirely. The parents cannot find in their hearts to turn out the poor little things in their bare feet and their thin, scanty clothing, to walk—it may be a mile or two—through rain and mud, or frost and snow, to the National school; so they keep them at home till the inclement season is over; and I for one am not prepared to say that they do not exercise a wise discretion. In the Convent infant school at Derry, where there were 116 children present at the time of my visit in July, I was told that in winter the attendance fell away altogether. This is, of course, the same cause, Poverty re-appearing in a different form; and I dwell upon it thus early because I am convinced that it is the one great obstacle in the way of Education, from which almost every other takes its rise.

National Schools.

9. As will be seen from the analysis of the schools examined by me, the great bulk of them were National schools. Being instructed by you to inquire into the practical working of the system of National education in Ireland, and finding it impossible to visit more than a limited number of the schools in my district, I thought I should best attain the object in view by taking the schools haphazard, and avoiding anything like the selection of schools in any particular locality. I believe that by acting upon this principle, I have seen as much of the practical working of the National system as was possible in the time allotted to me for my inquiries.

Closing of schools for vacation.

10. My list of schools would have been larger had I not been met by a difficulty which I have no doubt was common throughout Ireland at the time, viz.:—the closing of schools for vacation. This entailed upon me a considerable loss of time. Often after examining one school I have travelled some distance to the nearest National school only to find it closed for the vacation; the then nearest school would probably be several miles off, and as they all close at three in the afternoon, the chances would be against my arriving there in time for examination.

Difficulty of ascertaining what schools were closed.

11. The District Inspectors, though courteous and obliging to the last degree, were frequently unable to give correct information upon this matter. Any teacher of a National school can take his annual holiday almost when he likes, and they do in effect take it just as it suits their own convenience. It is true that there are certain times specified in the Time-Table, but the teacher is at liberty to take his vacation at any other time that he likes, on giving "some days' notice" previously to the Inspector. Frequently, however, he does not make up his mind until the very day before, and either sends notice then, or considering that there is no particular hurry about it, sends his notice some days after instead of before the commencement of the vacation. Thus it happened to me to visit two schools in one day only to find them closed for vacation, although both of them had been reported to me as open, that very morning, by the District Inspector. Upon another day also I visited two schools, both of which had been reported to me by the Inspector the previous evening as still open, with a similar result. It would have been difficult, however, for the Inspector to have thought otherwise, and my visit to those two schools illustrates rather curiously the occasional looseness of the system, and the minor difficulties with which the Inspectors have to contend.

12. The master of the first school resided close by, and on finding his school closed I sent for him to inquire the reason. His answer was simple enough. He had re-opened his school on the previous day after a fortnight's vacation, but had only been honoured by the attendance of a single pupil. Fearing that this would have the effect of seriously diminishing his yearly average, he had determined upon closing his school for another week. This he had a right to do, being entitled to three weeks' vacation in the year, but it was incumbent on him to give notice of his intention to the Inspector. This also he had partially but ineffectually done; he had written a letter to the Inspector giving the requisite notice, but had forgotten to send it, and at the time of my visit had it in his pocket. Proceeding with all possible haste to the nearest school, some two or three miles distant, I was considerably perplexed to find that this was closed also. The master, a most respectable man, was sent for, and his explanation, whilst relieving himself and the Inspector from all blame, was, if possible, more ludicrous still. He had made up his mind on the previous Saturday—it was on Tuesday that I visited the school—to begin his vacation on the Monday following, and had sent a messenger some seven miles with a note for the Inspector to that effect. The Inspector was away, having got leave of absence till the following Monday, so the messenger having no specific instructions how to act in an emergency of that sort, instead of leaving the note where it could have been received by the Inspector on his return, brought it back to the master, who had it in his possession when I visited the school, and opened it to convince me that he really had done his best to give the notice that was required. It would be attaching undue importance to these matters, however, to lay any blame at the door of the National system on their account: their origin may be traced, I think, rather in the national character, which, as its own writers love to depict it, is at times distinguished by a charming dislike to punctuality and disregard of detail.

13. During the latter part of my visit in the districts of Raphoe and Letterkenny, there was a general closing of schools for the vacation. The splendid summer having caused an unusually early harvest, the teachers finding their schools diminishing, took their vacation at the period when the pupils were the least likely to attend, and it was no easy matter to find schools to examine. Those that were not closed had, as a general rule, a very thin attendance, and the more advanced pupils, being the ones also the most useful in the field, were almost invariably absent.

Attendance, &c.

14. From the last report of the National Board it appears that in Ulster one in six of the Protestant population, and one in 5·8 of the Roman Catholic population are pupils of National schools. This of course means the number of children on the rolls of the different schools, and not the actual number in attendance upon any one particular day—two widely different things. Taking it so, however, it shows a palpable increase since 1861, in the number of children attending school. In that year, according to the census returns, there was in Londonderry a population of 184,206, and on the 17th May of that year 13,092 children attended primary schools in that county. This gives about one in fourteen of the entire population attending primary schools in that county upon that day. In Donegal with a population of 237,390, there were upon the same day 14,237 children attending primary schools, or about one in 16·6 of the population. It must be remembered, however, that the average attendance of the children is little more than one-half of the actual number on the rolls, so that these figures do not by any means represent the actual number of children in the habit of attending school. As nearly as I can compute, the children attend the schools, especially in the country districts, for little more than six months in the year, so that these figures really represent an attendance at primary schools of about one in seven in Londonderry, and one in eight in Donegal.

15. The figures of the National Board, however, refer only to the schools under their own control, and not, as the census returns do, to the whole of the primary schools in the district, of which, in addition to others, there are in the diocese of Derry fifty-two, and in the diocese of Raphoe thirty-six belonging to the Church Education Society alone. It would seem, therefore, that if the rest of the province corresponds to these two counties, there is a satisfactory increase in the number of children, who are actually attending school, but I have strong doubts whether there is a corresponding improvement in the manner of their attendance.

Number of children attending school mere infants.

16. Another doubt will also force itself upon the mind of the visitor to these schools, and that is as to whether the number of children attending the schools represents anything like the actual number who are receiving instruction. A very large proportion of the children are mere infants, sent to school less I apprehend for the purpose of education than for the purpose of being taken care of, and being kept out of the way. However young they are the master is only too glad to receive them; everything depends on his keeping up his average, and as infants count just as much as lads of fourteen, he welcomes them accordingly. The first class, generally by far the largest class in the school—at times, indeed, outnumbering all the other classes put together—is composed of children whose average age is about six. They learn the alphabet, and to spell "cat," "dog," and such words from printed cards, but the school is to them a nursery more than anything else, and as a general rule the teacher was chiefly occupied, during my examination of the more advanced children, in constant, but fruitless efforts to keep the little ones quiet.

Want of control by teachers over their pupils. Its causes.

17. The fear, indeed, of diminishing his average is a great check upon that wholesome restraint which a master ought to be able to exercise over his pupils. The children are free to go from one National school to another, just as it suits the whim or the caprice of their parents, and in districts where the schools are thickly planted, they do in effect avail themselves largely of this privilege. I have been assured by teachers that a single word of reproof will sometimes deprive them of a pupil altogether. The child goes home in a pet, exaggerates the reproof administered, and the following morning is sent by its parents to another National school in the neighbourhood, where the teacher, with the laudable ambition of increasing his average, is only too glad to receive it unquestioned. An allusion likewise by the teacher to school-fees long unpaid, will frequently, also, I am told, end in a similar transfer of the child to some rival establishment. The children are quite sharp enough to see the advantage which this gives them over the master, and I can only attribute to this a laxity of discipline in the general management of the schools, which made the task of examination in a large school anything but a pleasant one. Generally, the children not actually under examination paid little heed to the master's repeated exhortations to be quiet, but talked and laughed together in a manner that convinced me they had long been accustomed to do so without much interference on his part. I use the term "master," because my remarks do not apply to the female schools. They were invariably well-conducted and orderly.

Proposed remedy.

18. The evils of this system are so great and the remedy apparently is so simple, that it seems a matter of surprise it should so long have been allowed to continue. There is no reason why the children should be allowed to leave one National school for another, just as it suits the humour or the whim of the parents. Even in cases where school-fees are paid, they are so small that the education may be considered as almost gratuitous, and surely something might be exacted from the parents in return. It seems to me only fair, that once they have sent their children to a particular National school, they should be precluded from sending them to any other, without assigning some reason for the change, and of the sufficiency of that reason the Inspector, or their own clergyman, might be the judge. I cannot help thinking that some such measure as this, would have the effect of ensuring a more steady attendance on the part of the children, whilst at the same time, it would relieve the teachers from a deal of little rivalries and jealousies which the present system inevitably engenders.

Causes which keep children from school.

19. To enumerate the different causes which keep the children of the poor away from school would be in effect to draw out a list of every employment in town or country which affords children the opportunity of earning a few pence per day. In the city of Derry, the shirt factories, which of late years have become very extensive, operate strongly against the educational chances of the children, especially the girls, in the city and neighbourhood. At thirteen years of age, the children mostly leave school to be absorbed in these factories, and it is obvious that the amount of education which can be instilled into them before that age, can neither be great nor lasting. To obviate this in some measure, at one of the largest establishments in the city—that of Messrs. Tillie and Henderson—a night school has been established in connexion with the National Board. This school unfortunately was closed for vacation at the time of my visit, which I regretted the more, as I was curious to ascertain, by personal inspection, what amount of proficiency and what amount of attention could be secured from children in school at night, who had been hard at work in the factory all day.

Night-school at Derry kept by Sisters of Mercy.

20. I was more successful in a visit which I paid to the night-school kept by the Sisters of Mercy, outside the walls of Derry. The night-school, unlike the day school, is not connected with the National Board, and is maintained by the Sisters, for the benefit of those who are engaged in the factories in the day-time, and of others who have been debarred from various causes, from attending school before. A great proportion indeed of those in attendance, and there were about a hundred present,—the average attendance being 150—were not children at all, but young women, who, from being sent to service or to work whilst mere children, had never learned, or forgotten how to read and write, and had only awakened to a sense of their loss when riper years had shown them its importance. There they were, however, on a lovely July evening, when to be indoors at all was a positive penance, working with a will at the first lesson-book, and at pot-hooks and ladles, under the superintendence of the never-wearying ever-patient Sisters, whose only compensation for this self-imposed trouble and labour lies in the consciousness of the good that they are doing. The programme is short—reading, writing, and religious instruction—but for those who attend it it is a complete one.

21. In Coleraine, the spinning and weaving mills operate in the same manner upon the attendance of the children at school, as the shirt factories of Derry. I have already alluded to the causes which militate against the attendance of the children in the country districts, but they are not so inimical to education as the town employments which continuing all the year round, winter and summer alike, cut off the children in great measure from education altogether.

22. The subjoined table will show at a glance, the mode of attendance at these schools, and the amount of accommodation that there is for children attending them. It contains the numbers on the rolls, the numbers present at the time of my visit, the average attendance, and the capacity of seventy-one National schools in my district examined by myself. The last item I have obtained by allowing eighty cubic feet for each child, being the minimum amount of space allowed in English schools. In a few instances where, from the fact of the roof being arched, I was unable to get the height correctly, I have taken the National Board's allowance of eight square feet per child.

Ages of

23. As I have already stated, the children begin to attend school at a very early age. It is not at all unusual to

children in the different classes.

find children of four years of age at school, and the number of children of five years of age or thereabouts must be considerable. At each school that I visited, I endeavoured to ascertain, with as much accuracy as possible, the average ages of the children belonging to the different classes, and I consider that, taking all the schools together, the average age of the first class is about six, or a little over; of the second class, about nine; of the third, about eleven, and of the fourth, of ages varying from eleven to fifteen. I only found four scholars in attendance, whose ages exceeded fifteen; but I have no doubt that in the winter a very much larger attendance of pupils over that age might be found.

24. TABLE showing the number of Children on the Rolls, the number present at Visit, the average attendance, and capacity of seventy-one National Schools.

—	Number on Rolls.	Number present at Visit.	Average Attendance.	School capable of holding	—	Number on Rolls.	Number present at Visit.	Average Attendance.	School capable of holding

* Convent school, having three separate school-rooms. I have given the aggregate of the three. † Two Workhouse schools.
‡ A second class-room used when school is crowded. § A second small room is used as a class-room.

25. I found a fifth class in operation in only a few schools that I visited, and the numbers present in each were so few, that it is hardly necessary to take them into consideration.

26. The subjoined table gives the number of children present in the different classes, in fifty schools, at the time of my visit.

TABLE showing the actual attendance of Pupils in the different classes in fifty National Schools.

1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.

Ventilation, lighting, &c.

28. As regards the Ventilation, Lighting, &c., of the National schools, I was agreeably surprised to find them, in this respect, far better than I had expected. After reading the reports of the Assistant Commissioners, appointed under the Schools' Inquiry Commission in England, upon the state of the Endowed Schools in Lancashire, it was with something like a foreboding of evil that I approached the National schools of Ireland. I was quickly undeceived. One of the very first schools that I entered—the Derry Female National School—was a very model of all that a school should be in the way of cleanliness, neatness, and spaciousness; in fact a private boarding-school for young ladies, conducted on the most fastidious principles, might have equalled it in those respects, but could hardly have surpassed it. It is true that the high standard maintained at that school, was hardly reached in more than two or three other instances, but still it was a pleasure to find that dirt was the exception; cleanliness the rule.

General cleanliness of the children.

29. In most of the schools that I visited, the clean and neat appearance of the children showed that no little pains had been taken with them before leaving home, to make them presentable at school. It is one of the rules of the National Board, that the teachers "should satisfy themselves, by personal inspection every morning, that the children have had their hands and faces washed, their hair combed, and clothes cleaned, and when necessary, mended. The school apartments too, should be swept and dusted every evening, and whitewashed at least once a year." This rule, as far as I could judge, appeared to me, in the great majority of cases, to be fairly carried out, and it is impossible to exaggerate its importance. If a love of cleanliness, neatness, and order, can by this means be instilled into the Irish peasantry, it will be a blessing second only to the education itself.

30. In but few instances did I find the ventilation and light defective. It is true, that my visits being made during a hot summer, I saw the schools, as far as the ventilation was concerned, under the most favourable circumstances; for as the windows and doors were generally open, there was no lack of fresh air. But, as will be seen by reference to the foregoing tabular statement, the number that might be accommodated is considerably in excess of the average attendance.

Occasional carelessness in this respect.

31. In some instances mere carelessness on the part of those whose duty it should be to look after those matters, prevents the requisite steps being taken to make the school what it should be. The teacher can do little, and the Inspector cannot do much more; but it is generally in the power of the Manager to get things set right if he will only give himself a little trouble. In some schools, large enough, if properly ventilated, to hold double the number of their usual occupants, and furnished with half a dozen good-sized windows, perhaps only a single pane in one or two of the windows will open, and in a few others the windows are not made to open at all. In the district of Maghera, I visited two schools in succession—Greenlough, and Brackadysart—the first one had nine windows, of which only one would open, and the second had six, none of which would open at all. The atmosphere of this latter school, crowded as it was with children on a hot day in August, was positively poisonous. The master, however, after some difficulty, managed to remove two of the windows bodily, fortunately without doing any damage, and a reasonable supply of fresh air was for the time secured. I was informed that the windows were shortly to be reconstructed, and I hope, for the children's sake, that by this time the intention has been carried into effect.

Schools in Londonderry district.

32. In the Londonderry district, the schools that I visited were, with three exceptions, clean, light, well-ventilated, and provided with suitable outbuildings. The exceptions were—

33. *Faughan-Bridge*, a gloomy little cottage, ill-ventilated, and unprovided with outbuildings. There seemed to be an expectation, however, that this school would shortly be struck off, and possibly by this time it may be.

34. *Greerstown*, where, with ample space and light, five large windows had been constructed, so that only a single pane in each would open.

35. *Waterside*, No. 2, a flourishing and well-conducted school, but dark and dingy to a degree, being built under a church, and partaking much of the nature of a vault. It is lighted by means of four of the old-fashioned diamond-paned windows, which appear to have been designed for the purpose of admitting as little light and air as possible.

In the Coleraine district.

36. In COLERAINE and neighbourhood, I found two schools unprovided with outbuildings, and two others that would have been better without those that they had. The roof of one of these latter schools—Collins—was in a dangerous condition, the windows were small and low, and the outbuildings were in a ruinous state. It was built on the grounds of a public company, and the master seemed to expect that during the vacation the company would put it to rights.

In the Maghera district.

37. In the MAGHERA district there were the two schools to whose defective ventilation I have already alluded; and with these exceptions, I found the lighting and ventilation well attended to. There were two schools in Magherafelt, however, the male and female school, which, although well-built, lighted, and ventilated, had each a serious defect, and that consisted in the unpleasant proximity of the outbuildings to the schools.

In the Raphoe district.

38. In the RAPHOE district I found six schools without outbuildings, and one that would have been better without those that it had. All the schools were well lighted and ventilated, one of them indeed, the school of Ballybofey, too much so; for in addition to four windows and two doors, there was a crack in the roof, through which the sky was distinctly visible. It was, indeed, a depressing place to visit—a wretched cottage with bare walls and rafters; one of the walls, indeed, being in a dangerous state, and an uneven mud floor upon which it was difficult to get a chair to stand upright. The crack in the roof lets in the water of course, in wet weather; and I was not surprised to hear that the last master died of consumption, and attributed his death to the school, and that the present master had a pain in his side last winter which laid him up for eight weeks. When I state that for this miserable hovel he has to pay 1*s.* 9*d.* a week, that his school fees amount to about 4*d.* a week, and that his whole salary is £24 a year, and that moreover the poor fellow is a cripple, I think it must be admitted that his lines have not fallen in pleasant places.

State of repair.

39. Out of sixty-six non-vested schools, forty-six were in good repair, fifteen others in tolerable repair, and five

were in bad repair. To three of these last I have already alluded; the other two were Ballyagan female school in the Maghera district, and Leighter in the Letterkenny district.

40. Out of ten non-vested schools all were in good repair except three, viz. :—Maghera (No. 1) mixed school, Greenlough, and Cloghan—the two former in the Maghera and the latter in the Raphoe district.

41. This last school appears to be peculiarly awkwardly situated. It was vested many years ago in local trustees, all of whom have been long dead, with the exception of an officer in the army, who has been a good deal in India during the last twenty years, and has never, I was informed, been near the school during that period. The probability is that he has not the least idea that he is the sole surviving trustee, or has long since forgotten that he is a trustee at all. The consequence, however, has been, that the school having no one to look after it, has been left very much to itself, and now, for the want of a little outlay, threatens shortly to be in ruins. The slates have been blown off the roof in some places;—the rain comes through, and one of the walls is in a damp and ruinous condition. The teacher, whose whole salary, including school-fees and a subscription of £4 a year from the landlord, comes to £29 per annum, told me that he had expended since 1851, when he first came to it, between £40 and £50 upon the school.

Teacher sometimes has to pay for repairs.

42. It seems hard that the teachers should ever be called upon to pay for the repairing, or even for the white-washing and cleaning of the school, out of their own pockets, yet in six instances that came under my notice the teachers had to do so. It may not come to very much—a few shillings now and again perhaps for white-washing or for repairing broken windows, but even the payment of a few shillings is often a serious matter to a teacher with a wife and family struggling from week to week to make all ends meet.

School-furniture, school-books, &c.

43. As a general rule the National schools are well supplied with school-furniture and school-books. In only three or four did I notice that the supply of books was scanty and the desks imperfect or insufficient. The want of maps, object-pictures, &c., was more general, and in ten of the schools I noticed a great deficiency in that respect. The being furnished with a good or a scanty supply of these requisites after the first "free-stock" is exhausted, appears to depend in great measure upon the manager. In several schools the teacher informed me that the manager would do nothing, and that if they wanted new maps or pictures they had to purchase them for themselves.

44. In justice to the great body of the managers, however, I must say that with those exceptions the schools were remarkably well supplied.

Examination of Schools.

Method pursued.

45. On visiting a school I had the different classes brought up in succession, beginning with the first, which in National schools is the lowest class. That class was almost invariably composed of mere infants engaged upon the alphabet or on words of two or three letters, and possessed only of a faint glimmering of addition. To spend much time over these was obviously useless, unless, as generally happened, in large schools, there were two or more divisions of the first class, in which case I examined all or most of the children in the higher divisions.

46. I examined, as a general rule, every pupil in all the higher classes in reading, writing, and arithmetic, and such of them as were learning geography and grammar, I examined in those subjects. In the National schools I followed the programme of the National Board, which prescribes the different subjects in which each class is expected to be proficient.

General intelligence of children.

47. I am sorry to be unable to report favourably upon the general intelligence of the children. Making all due allowance for their being examined by a complete stranger, I was yet very much disappointed at their want of smartness and intelligence. There were exceptions certainly, some of them brilliant exceptions, but as a general rule the children fell far short of my expectations in this respect; and I marvelled at this all the more, inasmuch as I found the parents of the children and the teachers fully endowed with their fair share of an intelligence which I had come to regard as a national characteristic.

Their want of politeness.

48. There was another point too, upon which I experienced some surprise, accustomed as I had been to look upon politeness as indigenous in Ireland, and that was the utter lack of it, the boorishness, in fact, of the generality of the children. Of course there were many exceptions to this, and I am speaking now only of general impressions. A gentleman in Coleraine, who has had much to do with primary schools of various kinds, writes to me as follows:—"I think in our National schools in country districts, some little attention should be paid to *politeness*. It has always seemed to me that no hint could ever have been given by the teacher as to how, in ordinary circumstances, a stranger should be answered. As the education given by the Board is to fit the scholar for passing through life creditably, some little attention to the matter I have referred to would smooth the pupil's path through life." I fully concur in these remarks, and I do not think that any stranger could visit the National schools—in my district at all events—without being convinced of their truth. I attribute the evil in great measure to that want of control over the pupils by the teacher to which I have already alluded; a want of control of which the children are perfectly conscious, and of which they take advantage accordingly. It was very seldom indeed that I noticed anything of this sort amongst the girls; on the contrary, in the female schools the children were almost invariably orderly, well-behaved, and mannerly.

Reading.

49. As I give in a compendious form the amount of proficiency displayed in the different schools, on the various subjects taught, it will not be necessary for me to make more than a few remarks upon each subject, and firstly as regards *reading*. On the whole I was very well satisfied with the reading and the spelling at the National schools. Feeling that this was a matter of paramount importance in primary education, I examined in reading and spelling, with few exceptions, the whole of the children in each school who had got beyond the alphabet. The spelling of the third and fourth classes I usually tested by their writing from dictation. In general, the reading of those classes was good, and the spelling still better—in fact the general accuracy of the spelling was remarkable. There were two drawbacks, however, which detracted very much from the otherwise satisfactory nature of the performance. The first was a disinclination to speak up, which generally defied all my efforts, and the teachers to boot, to overcome. It was quite refreshing to come, as I did occasionally, upon a school where all the children spoke out well and boldly; and strange to say, if one class spoke out well, all the others did the same. It hardly needed that to convince me that it lay entirely with the teacher whether the children were trained to speak out well or not. The only case in which I entertained any doubt about this was in the case of one of the best schools that I visited, a female school taught by a mistress, whose abilities had deservedly gained for her the highest classification of which a teacher is capable. The abilities and industry of the teacher were reflected, in a marked manner, in the satisfactory progress of the children; but, unfortunately, instead of making the most, they made the very least of their attainments. Nothing could induce the majority of them to speak up—entreaties were useless—the voice was raised one minute only to be dropped the next, and the work of examination instead of being, as it ought to have been with such well-instructed children a pleasing duty, was turned into a disagreeable task. The mistress assured me that she had tried every means in her power to induce them to get over the habit, but in vain.

50. The second drawback was an indistinctness of utterance, which made it frequently difficult to understand what they were reading without following with the book; this fault, however, was by no means universal, and again I noticed that if it prevailed in one class of a school it was almost sure to prevail in all the others. I think there can be very little doubt but that the teacher alone must be looked to for the cure of both these defects.

Writing.

51. The *writing* receives a very fair share of attention, and generally the children in the higher classes write very well, the girls, in this respect, being much superior to the boys. In nearly every school that I examined I found that the fourth class, and generally the third, or some portion of it, wrote from dictation. This I invariably called upon them to do, and the result showed that they were well practised in this most useful exercise. With many exceptions, the writing and spelling were on the whole very creditable, indeed I was much struck with the correctness of the spelling, especially as I accidentally discovered that some of the teachers themselves were not by any means proficient at it. The art of letter-writing however, and indeed of composition generally, appears to be almost entirely neglected; in only a very few instances did I find that any attempts were made to teach the children how to express their thoughts upon paper, and yet, one would suppose that if the writing was to be of any practical use hereafter, this is a matter of very great importance. The parents, too, look to some substantial results from their children's schooling, and if at the end of four or five years spent at a National school a child is unable to write a letter without considerable difficulty, the parents naturally begin to think that the being a "scholar" is not such a very great advantage after all. The mere mechanical formation of letters and words is one thing, but the art of putting them together so as to express the thoughts in a clear and natural way, is another and a very different thing. I suspect, however, that in many instances the teachers will have to acquire the art of letter-writing themselves before they can manage to impart it to their pupils. Some of their letters, which have accidentally come under my notice, betray at once a hand that has been more accustomed to the heading of copy-books than to correspondence. It would seem as though the writer, as soon as he saw a sheet of note-paper before him, lost all confidence in his own powers of expression and betook himself in despair to the "Perfect Letter-writer." He cannot allude to the simplest matter without adopting a stilted style totally foreign to that which he would employ were he in conversation with the same person, and it would seem as though the fear of not adopting the exact expression suitable to the occasion almost deprived him of the power of expressing himself at all. Still I think it would be wise to make the attempt, and to exercise the children in the higher classes in composition as well as dictation.

Neglect of composition.

Arithmetic.

52. It would be difficult to give any general opinion as to the amount of proficiency attained by the different classes of the National schools in arithmetic. The degree of proficiency varied very much in different schools; in some, arithmetic was the chief staple of instruction, in others it was comparatively neglected, and if there were a certain number in a class who had made some considerable progress therein, there were sure to be a number of others whose ignorance materially reduced the average proficiency of the class.

53. And here particularly the effects of irregularity of attendance make themselves felt. A boy who has got into the third or fourth class returns to school after a five or six month's absence, his mind being more or less a *tabula rasa* as far as a knowledge of arithmetic goes. He objects, however, to descending into a lower class, and the master is unwilling to force him, so he remains along with a number of others a perpetual dead weight upon the class he belongs to. I attribute to this circumstance the fact that I so frequently found pupils in the higher classes supposed to be working at practice, interest, profit and loss, &c., and yet utterly unable to do correctly a sum in the compound rules or long division, and sometimes even deficient in numeration. In one school I found a boy in the fourth class supposed to be in commission and insurance, but when I asked him to write down a million in figures, he was utterly unable to do it. I then made him write down 1,000, and asked him to make that into a million: he added one more cipher, and explained that his idea of a million was ten thousand.

Habit of copying from one another.

54. It was no easy task, however, to discover the proficiency of the different pupils examined together in classes, for the habit of copying from one another seemed all but universal. In but very few schools, indeed, did I find any real attempt made to check it on the part of the teacher: generally the children did it openly and without disguise, and even where it was done more furtively, I constantly found that if a trifling error in the working out of a long sum had been made by the quickest boy in the class, it was pretty sure to be reproduced upon all the slates in the neighbourhood. In one instance, indeed, I was very much amused by the vagaries of the teacher himself in his efforts to prompt the boys without attracting my attention. He got behind the class that I was examining, cane in hand, as though to control the rest of the school, and close to the boy actually under examination. When the boy hesitated for an answer, the master gave it him in a very audible whisper, and then turning rapidly round made a sudden and violent whack, either at a desk or at some unfortunate urchin inconveniently near, as though to enforce silence, apparently under the impression that the noise he created would drown his voice before it reached me, or that it might pass unnoticed in the bustle.

Grammar.

55. Grammar is not much attended to, as a general rule, although in the higher classes the parts of speech are fairly known. I am not sure, however, that a very accurate knowledge of grammar is indispensable for the class of children who attend the National schools. It has, however, been very much simplified for them, for in the grammar published by the authority of the Board two tenses only are allowed to English verbs, the "present" and the "past," the "future" being ignored altogether, except by construction. As history, that great battle-ground of opposing sects, is banished from the National schools altogether, the rising generation stand a fair chance of having the "past" eliminated from their minds as well as the "future."

Geography.

56. Great facilities appear to be given in the National schools for the proper instruction of the pupils in geography. Nearly all the schools have large maps of the world, the continents, and the principal countries of Europe hung round the walls, and are mostly supplied with globes split in two and connected by a hinge, so as to show the difference between the hemispheres as they actually are and as they appear upon the map. The geographical knowledge of the pupils, however, varies very much in different schools: in some the readiness and the accuracy of the answering was remarkable, and places were pointed out on the maps with a readiness which showed that they were constantly in use. In others, however, the pupils know next to nothing about geography, and in not a few an apparent knowledge turned out upon investigation to be of the most superficial description. Thus in one school in which there were twenty-six children present, not one could tell me what country was to the north of England or what river London was on; a second school, composed of twenty-one children, failed bodily to make out the position of Scotland in regard to England; whilst in a third school, composed of thirty-four children, the highest class could neither answer any of the above questions, nor tell me the boundaries of Ireland. An instance occurred in one school of the value of learning off by heart the names of a number of places. The children repeated with great fluency and correctness the names of the bays and rivers of Ireland and the English counties. After a little while I asked where Cumberland was, and not one in the school could tell me, the boy who a few minutes before had repeated it among the other English counties, saying that it was in Ireland. In another school, in which there were forty-one children, the second and third classes were unable to tell me the capital of Italy. There was only one boy in the fourth class, so I appealed to him to settle the difficulty and he replied "Greece." The determining which of the five great continents

Ireland is situated in, was a frequently-recurring difficulty. In one case a girl of thirteen, the oldest in the class, first guessed "Africa" and then "Asia."

Needlework, &c.

57. So far as I could judge, there seemed to be a fair share of attention paid to needlework in female schools and in mixed schools, which had either a principal teacher or an assistant a mistress. From forty minutes to an hour seemed generally to be devoted to it. I think the importance of plain sewing for girls in that class of life, destined, for the most part, to be the wives of labouring men, cannot be over-estimated. I was led to infer, however, more from what I heard than from anything that I saw, that plain sewing is frequently neglected for ornamental work, and I was informed that it was no uncommon thing for girls to go into service from the National schools who were able to do crotchet work and embroidery, but who were of very little use as far as actual plain sewing was concerned. The mistresses whom I questioned upon the subject, however, all assured me that they invariably paid particular attention to the plain sewing of the girls, and generally produced a large bundle of half-made shirts, &c., in proof of their assertion, so that I am in hopes that the practice is, at all events, not a general one.

58. I now proceed to give the results of my examinations of the different National schools, premising that the examinations were based upon the programme of the National Board, and that the remarks upon the proficiency of the pupils in the different schools in the various subjects taught, must be taken as used with reference to that programme.

Results of Examinations of different National Schools.

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.
LONDONDERRY:						
Derry male (N.V.*), in connexion with Presbyterian Meeting-house.	Master appointed October, 1862. Grade I.[2] A Presbyterian. No residence.† Costs him £12 a year.	Third and fourth classes very good; lower classes not so good.	Very good. The writing from dictation, of the two higher classes, admirable.	Pretty good, . .	Higher classes good in elements of grammar.	Good.
Derry female (N.V.), as above.	Mistress appointed May, 1866. Grade II.[1] A Presbyterian. No residence. Lives with her parents.	Exceedingly good, especially in the higher classes. Children bright and intelligent, and spoke out well and distinctly.	Exceedingly good. Copy-books clean and neat. Fourth and fifth classes taught composition.	Fourth and fifth classes very good; lower ones very fair.	Good, . .	Very good.
St. Columb's (Convent), N.V. (No. 2);‡ 2nd and 3rd schools.	Sisters of Mercy, . .	Mostly very good; some of them indeed remarkably so.	Exceedingly good, great pains being evidently taken with it. The writing from dictation was admirable.	Pretty good, . .	Not much, .	Pretty good.
St. Columb's male (N.V.), built on a part of R. C. Chapel ground.	Master, probationer. A Roman Catholic. No Residence. Costs him £12 a year.	Exceedingly good. The boys spoke out well and distinctly, and showed much intelligence.	Exceedingly good. The copy-books were kept remarkably clean and neat.	The lowest class knew their tables well, and were ahead of the requirements of the N. B. programme. The higher classes also good; the fourth learning a little algebra.	Very little, .	A little.
St. Columb's female (N.V.), (as in male school.)	Mistress appointed ten years ago. Roman Catholic. Grade III.[2] Has a residence, but only a poor one.	Exceedingly good,	Very good, and the writing from dictation of the higher classes admirable.	Very little, . .	Very little, .	Very little.
Glendermott (N.V.)	Master appointed November, 1858. Grade I.[2] Roman Catholic. No residence. Costs him £5 a year.	Third and fourth classes admirable; others very fair.	Second, third, and fourth classes, all exceedingly good; the third pretty well, and the fourth very well from dictation.	Not far advanced; but knew what they had learned.	Higher classes very fair.	Very fair.
Lismacarroll (N.V.)	Master appointed to this school in October, 1866. Under Board since 1859. Grade III.[1] Presbyterian. A very good residence.	The fourth class were all absent; the other classes, with a few exceptions, very good.	Good on the whole; second and third from dictation, and mostly very good.	Good; but not far advanced.	(I find no entry upon this subject.)	Poor.
Faughan Bridge (N.V.); lease under which school held has expired.	Mistress appointed in beginning of 1868. A probationer. Presbyterian. Lives with her husband, who is master of Lismacarroll school.	All very young children, the oldest being eleven; very fair.	Five of them wrote very fairly.	Second class very fair in simple rules.	Only three present, who were learning it, and they had not got far.	Very little.
Gortnessy (N.V.); built on property of the Grocers' Co., and belongs to them.	Master appointed in May, 1867. Under Board since 1859. Grade II.[1] Presbyterian. Has residence.	Very good, . .	Mostly very good; three higher classes, ditto, from dictation.	Each class fully up to the requirements of the N. B., and very accurate in their knowledge.	A little, . .	Fourth class very good; but the lower classes not good.
Greerstown (N.V.).	Master appointed in 1857. Under Board since 1860. Grade II.[2] A Presbyterian. Has a small residence.	Mostly very good; but rather a sing song style of reading.	Good.	A few were good; but the majority not up to the mark.	Poor, . .	Poor.
Waterside male (vested in Local Trustees).	Master appointed twenty-three years ago. Grade III.[1] Roman Catholic. No residence. Costs him £4 10s. a year.	With few exceptions, very good.	Mostly very good; twenty transcribed, and did so very well.	The fourth class very good; the others rather behind.	Fourth class good; others poor.	Good.

* Non-Vested. † By residence is meant a rent-free residence.
‡ There were also an infant school and a night school, of which I shall treat under their respective headings.

RESULTS of EXAMINATIONS of different NATIONAL SCHOOLS—*continued.*

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.
LONDONDERRY—*continued.*						
Waterside female (vested in Local Trustees).	Mistress appointed twelve years ago. Grade II.[1] Roman Catholic. (Husband teaches Glendermott school.) No residence.	Very good, . .	With the exception of six in the second class, the writing was very good, and from dictation pretty good.	Not far advanced, and only pretty good.	Fourth class good; others knew very little.	Third and fourth classes very good.
Waterside (No. 2), (N.V.)	Master appointed thirteen years ago, and been teaching over thirty years. Grade II.[1] Presbyterian. Has residence.	Mostly very good,	Mostly very good; twenty wrote from dictation; one half very well.	Third and fourth classes very good; second pretty good.	Poor, . .	Poor.
COLERAINE:						
Cranagh Hill (N.V.), belongs to Cloth Working Co.; condemned; a new one being built.	Master appointed in 1840. Grade I.[3] Presbyterian. Residence attached, but has to pay £4 10*s.* a year for it.	Reading of three higher classes mostly very good; but the spelling of the second class was bad.	Very fair from dictation. Third class pretty good; fourth very good.	Good, . . .	Fourth class very good; third not so good.	Fourth class very good; second and third pretty good.
Knockantern (N.V.), held by lease.	Mistress recently appointed. Grade II.[1] Presbyterian. No residence. Lives with her father.	Second class pretty good; third class very good.	The third and part of the second class wrote from dictation; third very good. . .	Very good, . .	Good, . .	The children seemed well instructed in this branch.
Coleraine workhouse female (N.V).	Mistress appointed twenty-six years ago. Grade II.[1] Presbyterian. A residence.	Mostly very good; in the third class all being so.	Very fair. Second and third classes from dictation very good.	Very fair, . .	Third class good.	Good.
Coleraine workhouse male (N.V).	Master appointed beginning of 1868. Grade III.[2] A Wesleyan Methodist. A residence.	Third class very good; lower classes fair.	Third class very good. Ten in second good; the rest not. From dictation, third very good; second pretty good.	Pretty good, . .	Third class good.	Very little.
Castleroe (N.V.), set apart by bequest for educational purposes.	Master appointed twenty-one years ago; under Board since 1841. Grade III.[1] Presbyterian. No residence. Costs him £6 a year.	Third and fourth classes very good; second not good.	Three higher classes wrote from dictation. The writing of the two higher classes was good, but the spelling of all three was indifferent.	With the exception of the solitary member present of the fourth class, who was well up to his work, the knowledge of this branch was very limited.	Second and fourth class very good; third poor.	Pretty good.
Killure (N.V.), belongs to the Ironmongers' Company.	Master appointed five years ago. Grade II.[2] A Presbyterian. Pays about £4 10*s.* for residence.	Mostly very good. Very young children.	Mostly very good. Eight wrote from dictation (nineteen present) very well.	Good, . . .	Very fair, .	Good.
Cullyvenny (N.V.)	Master appointed December, 1854 (twelve years at this school). Grade III.[1] Presbyterian. No residence. Costs him about £6 per annum.	Mostly very good,	Very fair, . . .	Good and quick at mental arithmetic.	Good, . .	Very good.
Bohill (N.V.), belongs to the Irish Society.	Master appointed to this school twenty-five years ago. Under Board since 1841. Grade II.[2] Presbyterian. A good residence. . .	Good; but the reading of some was indistinct.	With the exception of three in the third class, the writing was bad. A sequel class and the third class wrote from dictation; both writing and spelling of sequel class bad.	Second class bad; sequel class fair; third class very good.	Good, . .	Good.
Ballyrashane (N.V.), on Presbyterian meeting-house ground.	Master appointed July, 1853. Grade II.[2] Presbyterian. No residence; costs him £6 a year.	Very good, . .	Pretty good. Second class transcribed pretty well. Third, from dictation, ditto.	Poor, . . .	Pretty good,	Very poor.
Macosquin (N.V.), belongs to landlord. No lease at present; but one is about to be given.	Master appointed to this school seven years ago. Under Board since 1855. Grade II.[1] Established Church. A Residence.	Mostly very good,	Pretty good. Third class wrote on slates pieces from memory. The writing was good, but the spelling was bad. Fourth, from dictation, good.	Not far advanced, and mostly poor.	Pretty good, .	Very poor.
Killeague (N.V.), belongs to Ironmongers' Co.	Master appointed in April, 1840. Grade I.[3] Presbyterian. No residence; costs him £5 2*s.* per annum.	Good, with the exception of the spelling of the second class, which was indifferent.	Second transcribed pretty well. Third and fourth, from dictation, very good.	Poor, . . .	Pretty good,	Very little.
Collins (N.V.), belongs to Ironmongers' Co.	Master appointed seven years ago. Under Board since 1849. Grade II.[2] Presbyterian. No residence; costs him £5 a year.	Mostly good; but some very indistinct.	Second wrote on slates from a book—one-half well, and the rest indifferently. Third and fourth, from dictation, pretty good; but the spelling of all three classes was bad.	Third and fourth class pretty good; second class not at all good.	Very poor, .	Second and fourth classes pretty good: third bad.

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.†
COLERAINE—*continued.*						
*Aghadowey female (N.V).	Mistress appointed in January, 1865. Grade II.[2] Presbyterian. No residence. Lives with her parents.	Very good, . .	Mostly very good. The third and fourth from dictation very good.	Second and third classes fair; fourth very good.	Pretty good, .	Good.
Killowen-st. male (vested in trustees). Held by lease.	Master appointed April, 1866. Grade III.[1] Roman Catholic. No residence. Costs him £8 a year.	The senior division of the first class were pretty good; the second and third classes very indifferent both in reading and spelling.	Only two in the second class seemed to have copy-books, the rest writing on slates, pretty good; the third from dictation, but neither the writing nor the spelling were good.	Poor, . . .	A little, . .	Only a superficial knowledge. Names of places learned by heart.
Killowen-st. female (vested in trustees). Held by lease.	Mistress appointed in 1862. Grade II.[1] Roman Catholic. No residence. Costs her £6 a year.	Fourth very good; the other classes very good.	Fourth very good in writing, and also from dictation; second transcribed pretty well; third pretty good from dictation	First and second classes pretty good; third and fourth very good.	Very poor, .	Poor.
Coleraine male (N.V.), on Roman Catholic chapel ground.	Master appointed to this school in April, 1866. Under Board since 1853. Grade I.[2] Roman Catholic. No residence. Costs him £10 a year.	Very good, especially the third and fourth classes.	Pretty good on the whole. Third and fourth classes from dictation, good.	The second class did not know the pence tables. The third were mostly in the simple rules. The fourth were not up to the mark.	Poor, . .	Poor.
Coleraine female (N.V.), on Roman Catholic chapel ground.	Mistress under Board since 1846. Grade II.[2] Roman Catholic. No residence. Costs £7 a year.	Good, . . .	Third and fourth good; second poor.	Not far advanced, but good as far as they had gone.	Second class not much, but third and fourth very good.	Pretty good.
‡Honourable Irish Society's male (Coleraine) (N.V.), sole property of the above society.	Master§ appointed to this school thirty-three years ago. Been engaged in teaching forty years. A Methodist.	There being 129 pupils present, I was only able to examine a portion of each class. The result, on the whole, was satisfactory.	Judging from the copy-books, the writing, on the whole, was not particularly good. The fourth and fifth classes, however, who transcribe and write from dictation on alternate days, were very good.	The first and second classes rather behind; the higher classes good.	All poor, except the higher drafts of the second class, who were very good.	Pretty good.
‡Ditto female as above.	Mistress. One principal teacher, Presbyterian. Two assistant teachers, one Presbyterian and one Roman Catholic. Two monitresses, both Presbyterians.	Good. The third class recited pieces from memory very well. The fourth were particularly clear and intelligent in their reading.	Exceedingly good, the writing of the third and fourth classes from dictation being admirable, and the spelling perfect.	Very good, .	Fourth class pretty good; others not far advanced.	Ditto.
Dam-Head (N.V.), built by people, landlord giving site; no lease.	Mistress appointed February, 1853. Grade II.[2] Presbyterian. No residence. Lives with parents.	Second pretty good; third and fourth good.	Second class mostly beginning in copy-book. The third and fourth very good in dictation; they changed slates and corrected each other's errors in spelling.	Fourth very good; the other classes rather behind.	Third and fourth classes very good.	Good.
MAGHERA:						
Garvagh female (N.V.), held from year to year; property of Lady Garvagh.	Mistress appointed to this school in June, 1866. Under Board since 1855. Presbyterian. No residence. Costs her £8 a year.	The fifth class very good, the other classes, on the whole, being pretty good.	Fourth and fifth nearly all very good; the other classes not so good. *From Dictation*—third poor; fourth and fifth very good.	Rather behind, .	Third class good; others behind.	Bad.
Garvagh mixed (N.V.), held by lease.	Master appointed to this school in November, 1866. Under Board since January, 1863. Grade II.[2] Presbyterian. No residence. Costs him £7 16*s.* a year.	Pretty good, on the whole.	Second not good, on the whole; third and fourth, from dictation, all very good, except six (out of eighteen) in the third.	Fair, . . .	Pretty good, .	Third and fourth classes very fair.
Milltown male (N.V.) belongs to the Ironmongers' Co.	Master appointed in 1854. Grade I.[2] A Presbyterian. No residence. Costs him £5 a year.	Good, . . .	The second class wrote from memory; the writing was pretty good, but the spelling was not. Third and fourth, from dictation, very good.	Fair, . . .	Not much, .	Second class pretty good; third and fourth poor.
Milltown female (N.V.) belongs to the Ironmongers' Co.	Mistress appointed in April, 1865. Under Board since 1863. Grade II.[2] A Presbyterian. No residence. Lives with her parents.	Second class good; third and fourth very good.	From dictation—second class, writing pretty good, spelling very good; third and fourth, very good in both.	Good, . . .	Third class fair; fourth very good.	Second not good; third and fourth pretty good.

* The Male school was closed on account of the illness of the teacher.

† Drawing is also taught, and the specimens shown to me were exceedingly creditable.

‡ These schools were founded by the Society in 1705, and though large and commodious, are shortly to come down, new and handsome schools having been built close by, which were opened in August last. There is also an Infant school, of which I shall treat under the heading "Infant School." These schools were placed by the Society under the National Education Board four years ago, in order to have the advantage of the Board's Inspectors.

§ There were also two assistant teachers and three monitors.

RESULTS of EXAMINATIONS of different NATIONAL SCHOOLS—*continued.*

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.
MAGHERA—*continued.*						
Ballyagan male (N.V.) belongs to Ironmongers' Co.	Master appointed February, 1855. Under Board since 1840. Grade I.[2] A Baptist. Pays £2 a year rent for residence to Ironmongers' Co.*	Very fair, . .	Pretty good, with the exception of the third class, which was not.	Second class mostly beginning; third all very ignorant except one; fourth good.	Fourth good, .	Third class: only one knew anything about it. Fourth good.
†Ballyagan female (N.V.) belongs to the Ironmongers' Co.	Mistress appointed two years ago. Grade III.[1] A Presbyterian. No residence. Lives a mile off with her mother.	Fourth class very good; rest fair.	Fourth class very good; second and third pretty good. The third and fourth, from dictation, with same result.	Very much behind, .	Poor, . .	Ditto.
Maghera female (N.V.) leased by landlord to trustees.	Mistress appointed one and a half year ago. Grade II.[2] A Presbyterian. No residence. Costs her £12 a year.	Third and fourth classes very good; rest fair.	Third, fourth, and half of second class, very good; same in writing from dictation.	Pretty good, . .	Third and fourth classes good.	Pretty good.
Maghera (No. 1), vested in Trustees.	Master appointed in October, 1863. Under Board since 1845. Roman Catholic. No residence. Costs him £10 a year.	Third and fourth class very good; rest fair.	Second class mostly beginning. Third and fourth from dictation, with five exceptions, very good.	Fair, with the exception of the last ten in the third class, who were particularly stupid.	Pretty good, with the exception of the third class.	Fourth class pretty good; rest not much.
Tobermore (N.V.), leased by landlord.	Mistress appointed January, 1867. Grade III.[1] Presbyterian. No residence. Lives with her parents.	Good, . . .	Second class pretty good. Third and fourth, from dictation, very good.	Very much behind, .	Poor, . .	Ditto.
Brackadysart (N.V.); landlord gave site, but no lease.	Master appointed in June, 1844. Grade II.[2] Roman Catholic. No residence. Said he could get a cottage for £2 a year.	Third and fourth class good; second not good.	Pretty good, . . .	Pretty good, . .	Poor, . .	Not much.
Greenlough, vested in Local Trustees; leased.	Master appointed in 1840. Grade III.[2] Roman Catholic. No residence. Could make no estimate of cost. Lives with mother and family.	Third class, and part of first, very good. Second class indifferent; only one reading well and distinctly.	A great scarcity of copy-books, and the few that were produced were not good specimens; the third class, however, were very good from dictation, but the second not.	Third very good; second poor.	Quite unknown,	Only one pupil (a girl) seemed to have any idea of it.
Tamlaght O'Crilly (N.V.); private property of R. H. Dolling, esq.	Master appointed in May, 1864. Under Board since 1859. Grade II.[2] Established Church. A residence.	Fair, . . .	A few in the fourth class very good, but the rest mostly indifferent; third and fourth class from memory, not very good.	Second class poor; third and fourth fair.	Second class pretty good; third and fourth poor.	Pretty good.
‡Ampertaine male (N.V.); belongs to the Mercers' Co.	Master appointed August, 1863. Grade II.[2] Established Church; a very good residence.	Pretty good, .	Pretty good, from dictation; third pretty good; fourth good.	Very good, . .	Fourth class pretty good; rest poor.	Third and fourth pretty good; second poor.
Drumagarner, vested in local trustees; leased.	Master appointed twenty years ago, been twenty-five under Board. Roman Catholic. Grade II.[1] No residence; costs him £6 a year.	Fourth class and about one-half of second and third classes very good, rest indifferent.	Fourth pretty good; second and third not good.	Very much behind, .	Very little, .	Ditto.
§Magherafelt female (N.V.); belongs to the Salters' Co.	Mistress appointed eight years ago. Grade II.[1] Roman Catholic. No residence; costs her £6 a year.	Pretty good, .	Second class pretty good; third, from dictation: the writing was fair, but the spelling was indifferent.	Not far advanced, .	Ditto, . .	Ditto.
Magherafelt male (N.V.); belongs to the Salters' Co.	Master appointed in 1864, under Board since 1857. Grade I.[3] Roman Catholic. No residence; costs him £8 a year.	Very good; the reading of the third and fourth classes being particularly good, clear, and distinct.	Second pretty good; third and fourth from dictation, pretty good.	Third and fourth very good; second behind.	Poor, . .	Third and fourth good; second poor.
Castle Dawson (N.V.) Teacher rents it as yearly tenant.	Mistress appointed to the school in January, 1863. Grade III.[1] Presbyterian. No residence; costs her £4 a year.	Fair, . . .	Pretty good, . . .	Fourth class good; rest behind.	Very little, .	Ditto.
Moyola Park (N.V.) property of the Honorable Mrs. Dawson.	‖Master appointed 6th July, 1868, probationer. Established Church. No residence; costs him £10 a year.	Fourth class very good; rest fair.	Second, only a few had copy-books and were just beginning; third and fourth from dictation, very indifferent both in writing and spelling.	Fourth fair, rest behind.	Very little, .	Ditto.

* They allow him, however, £12 a year.

† The children who attended this school were mostly wretchedly poor, and the mistress not only got no school-fees from many of them, but paid for their school-books, &c., herself. For want of a little timely repair this school was in a damp unwholesome state, the maps on the walls being spoiled by the damp.

‡ The Female school, taught by the sister of the teacher of the Male school, was closed for the holidays. Both schools are handsome and commodious, and there is a separate residence with a plot of ground for each teacher.

§ This was the first day after the vacation, and most of the pupils belonging to the higher classes were away.

‖ The master of this school had gone to Dublin to be trained, and his father, who had formerly been a teacher under the Board, was supplying his place.

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.
RAPHOE:						
Castlefin (No. 1), (N.V.), on chapel ground. Lease for 999 years.	*Master appointed ten years ago. Grade I.[2] Roman Catholic. No residence; costs him £15 per annum.	Very good, many of them being remarkably clear and distinct.	Second pretty good; third and fourth from dictation, one in each class very good, the rest not.	Third class very good, rest behind.	Third class good, rest not.	Second and third good, fourth not.
Castlefin (No. 2) (N.V.) Held by Wesleyan Society in perpetuity.	Master (17 years of age at date of my visit) appointed October, 1867, probationer. Established Church; is leaving shortly to join the Constabulary.	There were only seven very young children present, all learning the alphabet or to read from cards.	—	—	—	—
Ballybogan, vested in Local Trustees. Leased to Board in perpetuity.	Master appointed May, 1860. Grade III.[1] Roman Catholic. No residence; costs him £10 a year.	Good, . . .	Second class, books not clean, and writing slovenly; third, from dictation, pretty good.	Fair, . . .	Good, . .	Pretty good.
Stranorlar Male (N.V.); permanent lease.	Master appointed, September, 1852. Grade I.[2] Roman Catholic. No residence; costs him £6 a year.	Exceedingly good.	Mostly very good.	Third class good; second pretty good.	Very good, .	Very good.
Stranorlar Female (N.V.); permanent lease.	Mistress appointed October, 1865; under Board since 1856. Roman Catholic; a residence.	Fourth class very good, rest pretty fair.	Second and third class, indifferent from dictation; third poor; fourth very good.	Third and fourth class good.	Fourth class good, rest very little.	Ditto.
Ballybofey (N.V.); master holds it on a weekly tenancy.	Master appointed November, 1865. Grade III.[1] Roman Catholic. No residence; costs him 9*d.* per week.	Very fair on the whole.	Second class mostly beginners; third and fourth from dictation, the spelling particularly good, and the writing of some very good.	Pretty good, . .	Second class pretty good, rest poor.	Third class good, rest pretty good.
Sessigh O'Neill, vested in manager; lease in perpetuity.	Master appointed in 1854. Grade II.[1] Roman Catholic; a residence.	About one-half of the second and third classes very good; the others pretty fair.	Second class fair; third and fourth from dictation, mostly very good.	Good, . . .	Good, . .	Very fair.
Donish, vested in Local Trustees; lease.	Master appointed October, 1847. Grade III.[1] Roman Catholic; a residence.	Pretty good, .	Second class pretty fair from dictation; fourth good; third, better in the writing than the spelling.	Rather behind, .	Fourth class good, rest pretty good.	A little.
†Cloghan, vested in Local Trustees; lease.	Master appointed August, 1851. Grade III.[1] Roman Catholic; a residence.	All beginners except three, who were very good.	Poor, ...	The solitary member of the third class was good, the rest have scarcely begun.	Two were pretty good.	Very little.
Raphoe Town (No. 1) (N.V.), held in fee by parish.	Master appointed January, 1868. Under Board since 1857. Grade I.[3] Roman Catholic. A residence with new school which is being built.	Second and third classes good; fourth very good.	Second class nearly all beginners. From dictation: third and fourth classes very good.	Not far advanced, .	Second and third classes fair; fourth poor.	Poor.
Robertson's Parochial (N.V.); endowed. (Put under Board in 1860).	Master appointed to this school in 1845. Grade III.[1] Established Church. A residence.	On the whole good.	They nearly all wrote too small a hand; otherwise it was very fair. From dictation: third and fourth nearly all very good.	Each class well up to the requirements of programme.	Mostly good, .	Fair.
‡Treanboy (N.V.); land given by landlord, but no lease.	Master just appointed to this school. Under Board since 1841. Grade II.[1] Roman Catholic. No residence. Costs him about £2 10*s.* a year.	Beginning, . .	Ditto, ...	Ditto, . . .	Ditto, . .	Ditto.
§Glennaquin (N.V.); built by landlord, and given by him, but no lease.	Master appointed January, 1866. Grade III.[1] A Presbyterian. No residence. Costs him about £5 a year.	First and second classes pretty fair; third class indifferent.	Pretty fair. Four wrote from dictation. The writing of two was good, but the spelling of all was bad.	Second class pretty good; third knew very little.	A little, . .	Ditto.
LETTERKENNY:						
‖Leighter (N.V.), lease.	Master appointed in 1852. Under Board since 1848. Grade III.[2] Presbyterian. No residence; costs him £3 a year.	Pretty good, .	All on slates except one, who was beginning in a copy-book.	Very little, . .	Only one knew anything about it.	Ditto.
Kilmacrennan, one of the Robertson's endowed schools.	Master only just appointed. A probationer. Established Church. There is a residence attached to the school.	Fair, . . .	Pretty good, . .	Behind, . . .	A little, . .	Ditto.

* There is also a mistress (sister to the master) who has been at this school since 1841. In this, as in many other schools, the best scholars were away at the time of my visit.
† There were only nine pupils present at this school at my visit.
‡ Only seven small children present at my visit.
§ Eleven present.
‖ There were only seven present.

RESULTS of EXAMINATIONS of different NATIONAL SCHOOLS—*continued.*

National Schools.	Teacher.	Reading and Spelling.	Writing.	Arithmetic.	Grammar.	Geography.
LETTERKENNY—*continued.* Ramelton female (N.V.), a fee-farm grant.	Mistress appointed August, 1866. Under Board January, 1862. Grade I.[1] A Presbyterian. A residence.	Second class mostly beginning; third and fourth good.	Second class pretty good; third and fourth very good, especially the senior division of the third class.	Very good, . .	Good, . .	Fair.
Letterkenny, (No. 2), (N.V.), lease.	Master appointed in 1860. Under Board, 1858. Grade III.[1] A Presbyterian. No residence; costs him £9 a year.	Pretty good, .	Second mostly beginning from dictation; third pretty good; fourth very good.	Fourth class very good; rest behind.	A little, . .	Ditto.
Letterkenny female (vested).	Mistress appointed in 1838, and been at this school ever since. Grade II.[2] Roman Catholic. No residence; costs her £9 a year.	Good, . . .	Second fair; third, from dictation, nearly all very good.	Second pretty good; third good.	About one-third of school good in this.	Second class, pretty good, third not.
Ellistrine (N.V.) Lease to tenant of land, who gives it free.	Master appointed February, 1868. Probationer. Established Church. No residence. Costs him £5 a year.	Pretty good, .	Pretty good, . . .	Third class all good, except one. Rest fair.	Not much, .	Ditto.
Ballyare (N.V.) On Glebe-land, the property of the rector.	Master appointed in 1866. Grade III.[1] Established Church. A residence.	Second and third class mostly good; fourth very good.	Second class beginning on copy-books. From dictation, third poor; fourth pretty good.	Pretty good, . .	Very little, .	Ditto.
Bridge-end (Ramelton), (N.V.) Held under a yearly tenancy.	Master appointed in 1861. Under Board since 1849. Roman Catholic. Grade III.[1] No residence. Costs him £4 10*s.* a year.	Second, and a few in first class, pretty good; third and fourth class very good.	Second class fair. Third and fourth, on slate from memory, good.	Not far advanced, .	Fair, but third class weak.	Ditto.
Ednaharnon (N.V.) Lease.	Mistress appointed in 1862. Grade III.[1] Roman Catholic. No residence. Costs her £3 a year.	Third class very good; rest pretty fair.	Second pretty good; third good.	Third very good; rest fair.	Fair, . .	Ditto.
Legnahoorey (N.V.) Held under a yearly tenancy.	Master appointed in 1867. Under Board since 1862. Grade III.[2] A Presbyterian. No residence. Cost him* £12 to £15 a year.	Pretty good, .	Only two had copy-books. Master was expecting them from Dublin. The second and third wrote very fairly on slates.	Very much behind, .	Very little, .	Ditto.
† Treantagh (N.V.); title by prescription; built on common ground.	Master appointed June, 1867. Under Board twenty years. Grade II.[2] A Presbyterian. No residence. Lives with his father.	The reading on the whole was not good, and the spelling was indifferent.	Third class good; second pretty fair.	Not far advanced, .	Only one knew much about it.	Second class good; third very good.

* So the teacher states, but if so, he must be living in a far more sumptuous style than the other teachers in the neighbourhood.
† I have reason to believe that the master of this school was singularly unfortunate in the absence of his best pupils at the time of my visit.

TEACHERS.

Teachers.

59. Fourteen teachers of the National schools that I examined were in the first class, and of those two only—both female teachers—were in the first division of that class. The rest of the teachers, as will be seen from my analysis, are pretty evenly divided between the second and third classes. I think there is no doubt that in point of general efficiency the teachers of the first class are, as a rule, superior to the others, and that the second class are in a perceptible degree superior to the third, but this rule, like most others, must be taken with exceptions. Having already given a table containing the grades of the different teachers, and the degree of efficiency in which I found the different schools—from which inferentially the efficiency of the teachers may be deduced—it will not be necessary for me to dwell at any length upon this point. I may state, however, that the efficiency of the teacher appears to me to depend as much upon the amount of emoluments to be derived from the school, as upon anything else, and that where the teachers are well-paid, they are invariably of a higher type than where they are ill-paid. This applies, of course, in some degree to the different classes, for each step in advance is attended with a corresponding increase in salary, but where, in addition to that salary, a certain sum is thrown in yearly for the teacher, as in many schools in Londonderry, in the region of the great London companies, there the best qualified and most intelligent teachers are certain to be found.

Teachers trained in Dublin.

60. All of the teachers, except nineteen, had been trained in Dublin; five out of the nineteen I considered fully equal to the best of the trained teachers, the rest, however, were inferior.

Previous occupations of teachers.

61. With but few exceptions, they had all been teaching from their youth, indeed the general plan appears to be to select the teachers from the best of the monitors and pupil-teachers at the National schools. Five only that I met with had been at other employments before undertaking the duty of teachers, and not for a very long period at those. Four had been engaged in farming pursuits, and one in the capacity of clerk to a Board of Public Works. A rule of the Board prohibits them from following any other avocation which would be likely to interfere with their usefulness as teachers. Only three admitted that they did follow any other avocation at all; two being parish clerks, and one being engaged at the Post Office, in labours which must have commenced early, as they finished in the morning at seven, though they occupied him also from five to seven in the evening. That a teacher should take to some such avocation as the latter, however, should be considered, I think, rather in his favour than otherwise. It shows him to be a man of energy and determination at all events, and such qualities are invaluable in a teacher. Indeed I have sometimes wondered how the teachers, especially in remote country districts, manage to employ their leisure time. Schools close at three in the afternoon, and the teacher has then nothing further to occupy him, in the way of school business, till half-past nine or ten the following morning.

62. On the whole I found the teachers very fairly qualified for their duties; they appeared as a rule very intelligent, and quite competent for the work they had in hand; indeed, considering the smallness of the pay, and the monotony of the occupation, it surprised me that the Board had managed to get together so efficient a class of teachers as they had.

Teachers' pay inadequate.

63. Great dissatisfaction, however, prevails amongst the teachers in respect of the remuneration which they get for their services, and the consequence is that great numbers of those who would otherwise be turning their attention towards teaching as a means of livelihood, are taking to anything else that they can get in preference, and if they can get nothing else to do in Ireland, they go across to America to see what they can do there. Teachers complain that they cannot keep their monitors for any length of time; just as they are beginning to be tolerably efficient, a place in a shop or a counting-house is offered them, and they are only too glad to give up teaching for an occupation which puts them in possession at once of a larger income than they would obtain as a schoolmaster at the end of twenty years.

64. In order to ascertain what the real receipts of the teachers were, I obtained from the teacher of each school that I visited, the amount of the school fees, and the local subscriptions which they received in addition to their salaries, these I have added together, including of course the Board salary, and the following is the result:—

Teachers.						
4	were receiving	under	.	.	£20	per annum.
14	,,	over	£20	and under	30	,,
21	,,	,,	30	,,	40	,,
12	,,	,,	40	,,	50	,,
6	,,	,,	50	,,	60	,,
5	,,	,,	60	,,	70	,,
5	,,	,,	70	,,	80	,,
1	,,	,,	80	,,	90	,,

65. The Irish Society's schools in Coleraine, and several schools taught by probationers, are not included in this list.

66. I am dependent partly upon the teachers themselves for the accuracy of the above figures, but the amount of school fees I generally saw myself in the book reserved for such entries, the amount of local contribution being entered therein as well, so that I have reason to believe the return to be as nearly correct as possible. It must be admitted that the profession of teaching does not appear to be a very lucrative one, and yet there are some who are in a comparatively comfortable position. Of the 68 teachers in the above list, 31 were in the receipt of sums varying from £20 to £5 a year, from the Irish Society, and the other great London companies, with the addition sometimes of a rent-free residence and a plot of ground. If these extraneous means of assistance were withdrawn, the position of most of these teachers would be poor indeed.

Poverty of teachers in Donegal.

67. The teachers in Donegal have no such assistance to fall back upon; the landlords there being private individuals and not public companies, do not expend their revenues principally upon the soil, and, indeed, it is only in rare instances that they give anything substantial towards the support of the school or the teacher. They do indeed, occasionally give sites for the building of schools upon, but seldom give any active support to them after they have been established. It requires no argument to show that the 4 teachers receiving less than £20 a year, and the 14 receiving less than £30 a year, must be miserably off indeed. I was not surprised to find in four or five of these poverty-stricken schools that the teacher was a cripple, for certainly one would have imagined that no human being who had the use of his limbs, as well as of his senses, would have thought of remaining there so long as manual labour could be resorted to, even if that manual labour consisted in breaking stones.

Want of a retiring pension.

68. In one respect I think the teachers of the National schools are very hardly used, and that is in their being unable to look forward to a retiring pension, when long years spent in the service of the Board, or sickness, shall have broken them down and incapacitated them from work. It is quite true that under certain conditions a retiring allowance for two years is granted, but this is very seldom, I fancy, of much permanent benefit, especially if the teacher's constitution happens to be a tough one. A teacher finding himself disabled by old age and increasing infirmities from further work, makes an application to the Board for his retiring allowance. It is not invariably granted, but if it is, the recipient comes in at once for what is to him a large sum of money, viz., two years' pay. This sum of money, however, especially if the teacher have a wife and family to support, soon melts away, for he has to live upon the principal, and in a very short time the unhappy man, after all his toil and trouble, sees nothing before him in his old age but the workhouse. A retiring pension for life, which would secure the teacher from absolute penury and from the workhouse, would be welcomed, I have been assured by some of them, as a greater boon even than an increase of pay. It would "put a heart" into them, as a teacher remarked to me, and enable them to go through their duties with cheerfulness, knowing that their future was provided for.

69. It would have another advantage also, which I think ought not to be lost sight of, it would give the most experienced teachers under the National Board, those who had been some ten or a dozen years in their service, an inducement to remain. They would have a vested interest in the service which they would not be disposed lightly to give up. At present there is nothing to induce them to forego the temptation to quit the business of teaching for anything better that turns up, except the remote prospect of two years' retiring allowance. Assure them, however, of a retiring pension when age and work shall have superannuated them, and the longer they have been engaged in teaching the less likely will they be to abandon it.

Uncertainty of the present retiring allowance.

70. The two years' retiring allowance is not always a matter of certainty, however long a period the teacher may have spent in the service of the Board. He has first of all to make his application, and then the Board have to consider it. Sometimes they take a long time in considering it, and occasionally the teacher dies before they have finished. In that case the two years' retiring allowance is saved by the Board; the teacher may have left his family utterly destitute, indeed, the probability is that he will, but not one farthing of the money which should have been his goes to them. A gentleman in Raphoe told me that a very short time ago, the widow of a schoolmaster, who had been more than thirty years teaching under the Board, came to beg at his house. Her husband made his application to the Board for a retiring allowance, but died before it was granted, and his widow, whom he had always maintained respectably in his lifetime, was reduced at once to actual beggary. I do not think that retiring pensions would add materially to the present cost of teachers; the probability is that they would work on then as now, as long as they had any life worth speaking of left in them; it becomes, however, an important question to consider how the teachers' position may be improved without calling on the Government to increase their already ample grant.

Proposed means for improving the position of teachers.

71. In the first place it appears to me that something might be done towards this end if the quality of the schools were looked to rather than their quantity. The idea of bringing education almost to every man's door, as would seem to be attempted in some districts, has resulted in a number of little starveling schools being taken into connexion by the National Board, which, while they help to fritter away the resources

of the Board, are rather an impediment than anything else in the way of genuine education. One good school in a neighbourhood, taught by a thoroughly competent teacher, with a fairly remunerative salary, would be of far more use than three of the schools of the kind that we sometimes meet with. It is a great mistake to suppose that education is progressing because a great number of schools are scattered all over the country. The people seem to appreciate more that for which they have to make some little sacrifice than that which they can get for nothing, and parents who now hesitate about sending their children to a school half a mile off where they can be educated for nothing, would have little difficulty in sending them to a school some two or three miles distant, and where school-fees were insisted on, if the teacher or the school had some sort of a reputation.

School-fees.

72. In the second place, I think that a great deal more might be paid towards the support of the teachers in the way of school-fees than is paid at present. Opinion is somewhat divided upon the subject of gratuitous education, but the great majority of gentlemen who have favoured me with their views upon the subject, consider that, except in the case of the very poor, some payment by way of school-fees should be made by the parents of the children. At present the fees are on the very lowest scale, but of those who are quite able to pay them if they choose, not one half pay anything at all. The teacher is afraid of insisting upon payment, for fear, as I have already explained, of losing his scholars, and the parents are quite satisfied to leave the matter alone, and so substantial farmers, small tradesmen, and others, who have no excuse at all for not paying, go on from year to year without paying a farthing, or if they do occasionally give the teacher a trifle, consider that they are making a present rather than discharging a debt. Under a tightened and more rigid system, a very much larger return indeed ought to be made under the heading, "school-fees." And yet I would certainly not cut off the children of the very poor from the benefits of education, merely because they were unable to pay the school-fees. I would take care, however, that it was clearly ascertained who the children of the very poor were; that, however, is merely a matter of detail, and presents no overwhelming difficulty. A gentleman who is the patron and manager of several schools, told me that he himself determined who were entitled in his schools to gratuitous education, and that he always made an arrangement with his teachers that those children whom he selected were not to be called upon for school-fees, the others all having to pay. Some such arrangement as this might be easily made; at present there seems to be a strong tendency on the part of the parents to shirk payment altogether. Such fees as are obtained, and they vary from a penny to twopence or threepence a week, according to the age and class of the child, go towards the support of the teacher, and if they were only paid by all who ought to pay them they would form a very satisfactory addition to his now-limited income.

73. In addition to this solid advantage to the teacher, the attendance of the children at school, now so deplorably irregular, would, I have little doubt, become much better. All whom I have consulted upon the subject consider that the education of the children is more valued by the parents when they have to pay something for it. That which is got for nothing is often valued at the same price. If the small weekly payment were also made in advance, it seems to me that the parents would be still more ready to insist upon their children receiving the benefits of a schooling for which they had already paid.

Landlords.

74. In the third place, I think that something more might be done towards the education of the children of their tenants by the owners of the soil. It is perhaps too much to ask that private landlords should give as much support to education on their estates as the Irish Society and the other great London companies; but at all events I think they might do something a little more approaching it than they do at present.

Appointment and dismissal of teachers.

75. I do not find that any particular change has taken place of late years with regard to the appointment and dismissal of teachers. Out of eleven teachers appointed within the last three years, in my district, seven had been previously engaged as monitors and pupil-teachers. Two only had been trained in Dublin, but most of the others, who are at present getting only a probationary salary, are about to be so trained. So far as I could judge the appointments so made have been satisfactory, and indeed there is little use in the Patron or Manager appointing an incompetent person, for the preliminary examination by the Inspector, or if that be got through, the subsequent one by the Board, would infallibly insure his dismissal.

76. No complaints were made to me with regard to the dismissal of teachers, and I have every reason to suppose that so long as the teacher conducts himself properly, he runs no risk of losing his place. Seven of the above-mentioned teachers had been appointed in the place of others dismissed for various causes—three for incompetency—two for non-attention to their duties, and three for habits of intemperance.

Monitors.

77. With regard to monitors the principal difficulty appears to be in retaining them; they are always the picked scholars of the school and as such come to their duties with an ascertained character, and seldom leave except of their own accord, or for the purpose of becoming principal teachers. So far as I could judge they seemed fairly competent for the work upon which they were employed.

Teacher of mixed schools.

78. In the case of children of both sexes attending one school, the popular feeling appears to be in favour of the head-teacher being a master. If the school be an infant or preparatory school however, then I think the superiority of a female teacher must be admitted. Up to a certain age—ten or thereabouts—women seem to have more power of instilling the elements of learning into both sexes alike, and up to that age boys are more readily amenable to discipline. After that age, however, it becomes difficult for women to exercise proper control over them, and they seem to fall more naturally under the rougher supervision of men.

Religious Instruction.

Time given to it.

79. In all the National schools that I visited, except two, religious instruction was given. In the great majority half-an-hour was set apart for that exercise each day, and from an hour and a-half to two hours on Saturday mornings. In nine schools, an hour each day was set apart for this purpose in addition to the Saturday morning's instruction. In six schools it was given on Saturday mornings only, and in three upon two days in the week.

80. The recommendation of the Commissioners that the religious instruction should be given immediately before the commencement or immediately after the close of the ordinary school-business seems to be attended to, for in every instance that came under my notice the first or the last half-hour of the school-time was devoted to it.

81. The religious instruction is given by the teacher, sometimes with the assistance of the monitors or the elder children. In schools under Protestant or Presbyterian management it generally consists of Scripture-reading and catechism, and in schools under Roman Catholic management either of catechism alone or with Scripture-history, or the reading of books of devotion.

82. I made particular inquiries as to whether the following rule of the National Board was observed or not:—

"No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction, in case the teacher giving such instruction is a Roman Catholic; and no pupil who is

registered by its parents or guardians as a Roman Catholic is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any religious instruction to which its parents or guardians object."

Checks against proselytism.

83. The result of my inquiries convinced me that it was. Although in constant communication with persons of all classes and of different religious beliefs, I never heard even an insinuation against a teacher on the subject of proselytism. In fact they are too well watched to be able to attempt it, even if they were so disposed, with impunity. If any child at school were compelled to remain against the wish of its parents, to hear religious instruction from a teacher belonging to a different creed, or if any attempt were made to undermine the faith in which the child had been brought up, the parents would inevitably hear of it before long, and they have only to communicate with the nearest clergyman or the District Inspector to insure the suspension and ruin of the teacher. If such a tendency exists at all, which I very much doubt, the certainty of detection seems to hold it under complete control.

Doubtful value of the religious instruction.

84. With very great diffidence, however, in my own judgment upon such matters, I have great doubts as to whether the religious instruction given in the National schools is of any material or lasting advantage to the recipients. It must be remembered that it is given exclusively—for the exceptions are so rare that they are not worth taking into consideration—by the teacher. That of itself appears to me to constitute a serious objection to the system, and upon this point, I was very much impressed by what was said to me by a Presbyterian teacher, who had been teaching under the Board for between thirty and forty years. He said that the religious instruction which was given in the schools, could hardly be called religious instruction at all—that for his own part he looked upon it as a very solemn matter, and that after working at secular instruction all day, he did not find himself in a proper frame of mind to inculcate it. He considered that the clergymen and the parents of the children were the proper persons to give religious instruction, and added, that if the clergymen would do more in the way of religious instruction themselves, and talk less about it, it would be very much better for all parties. I cannot help thinking that there is a deal of truth in the former portion of his remarks, at all events—children insensibly, but inevitably, associate the teaching with the teacher; the schoolmaster is a disagreeable necessity to which they are compelled to submit—he is the person authorized to make them spend a certain number of uncomfortable hours each day in a school-room, which they would far rather devote to play. The disagreeable associations connected with tasks, in every way are not discontinued, when the teacher substitutes the catechism, or the Scriptures for the grammar, or the arithmetic book, but all go in the child's mind together as disagreeable subjects to be got rid of as soon as the school-room has been left behind. A Presbyterian minister told me that it took him years in after life to overcome an unpleasant feeling which invariably associated itself in his mind with the Bible, in consequence of his having been made to read it as a task-book whilst at school.

Teacher seldom qualified to give it.

85. It may be fairly questioned too, I think, whether the teacher is, as a rule, a person qualified to give religious instruction as it ought to be given. It is a subject probably upon which he has received just as much, or as little instruction himself, as his pupils will have received when they quit his hands. The children see him every day; they know all his little weaknesses—sure to be brought out in the most unfavourable light by the irksome nature of his duties—and when he comes to enunciate grand religious truths, and tell them of the perfection to which they ought to aspire, they are probably more engaged in thinking how far he himself falls short of the standard he holds up, than of concerning themselves much about endeavouring to attain to it themselves.

The Mixed System of Education.

86. In order to ascertain how far the mixed system prevailed in my district, I made it a rule never to ascertain beforehand whether the schools that I was about to visit were mixed or not, and accordingly I believe that my list presents a fair illustration of the extent to which mixed education prevails in the district. It would seem that when the people congregate together in large numbers, as in towns and large villages, the tendency is towards the denominational system, but that in country districts, where the population is thin and scattered, the mixed system is all but universal.

Londonderry.

87. In the city of Londonderry I visited two schools under Presbyterian management, and situated on the Presbyterian meeting-house ground. There were no Roman Catholic children in either. Similarly, on visiting two schools in the same city under Roman Catholic management, and built on ground attached to the Roman Catholic chapel, I found the children in both exclusively Roman Catholics. In the Convent school, as might be expected, the children were all Roman Catholics. Just across the river Foyle is a populous district, bearing about the same relation to Derry that Birkenhead does to Liverpool, and there I examined the Waterside male and female schools, both under Roman Catholic management. The female school was composed exclusively of Roman Catholic children, and the male school had only three Protestant children and four Presbyterians on the rolls. Within a few hundred yards, however, from these schools was another National school under Presbyterian management, and at the time of my visit there were twenty-two Presbyterian, eleven Roman Catholic, and nine Protestant children present, the numbers on the roll being—Presbyterians, thirty-two; Roman Catholics, thirty-eight; Established Church, twenty; and I mention this more particularly because it formed a very marked exception to the general rule of the denominational system prevailing in town schools.

88. In all the schools that I visited in the country district I found the mixed system prevailing, the number of children belonging to the different religious denominations varying very much according to the prevailing religious denominations of the population in the neighbourhood.

Coleraine.

89. In the town of Coleraine I examined a male and female school, and in Killowen, which is almost a part of Coleraine, another male and female school, all under Roman Catholic management and all attended exclusively by Roman Catholics. The principal schools of the town, however—the splendid schools founded and maintained by the Irish Society—are frequented by children of all denominations, though, in a proportionally small degree, by Roman Catholics.

90. In the country districts about Coleraine the Roman Catholic population seems to be thin and scattered. In five of the schools that I examined there were no Roman Catholic pupils at all, and I was assured by the teacher in each school that there were none in the neighbourhood; five other schools that I examined contained altogether an aggregate of only twelve Roman Catholic pupils; and in four of those schools the teacher informed me that there were no other Roman Catholic families in the neighbourhood, except the families to which those children belonged. In some parts of this district also the Protestants appear to be very scarce. At the two National schools, male and female, at Miltown, with Presbyterians teachers, there were only five Protestants altogether—a fact attributable, solely, I am informed, to their scarcity in the neighbourhood.

Maghera.

91. In the Maghera district I met with three unmixed schools, one in the town of Maghera itself, and the two others in the town of Magherafelt, all under Roman Catholic clerical management.

92. In the Raphoe district, as will be seen from the list, I found five or six schools practically under the denominational system. The Roman Catholic element was very much stronger there, and accordingly, the schools under the control of the Roman Catholic clergy were much more numerous. As a sort of counterpoise to the school under Presbyterian management at the Waterside, Derry, to which I recently alluded, I found a school at Castlefin under Roman Catholic management largely attended by children belonging to different religious denominations. There were thirty Protestant and thirty-eight Presbyterian children on the roll, although there were three other schools taught by Protestant teachers within a very short distance. If left to themselves, the people almost invariably look to the efficiency only of the teacher, quite irrespective of the creed to which he belongs; it is only when they are stimulated thereunto by their clergy that the latter point becomes a question of serious consideration. Raphoe.

93. In the Letterkenny district I met with two unmixed schools only, both in the town of Letterkenny itself. Letterkenny.

94. From the tenor of the replies to my inquiry, as to whether the system of educating children of different religious denominations together is beneficial or not, it will be seen that there is a very great divergence of opinion upon this point. The Presbyterians as a body, lay and clerical, thoroughly approve of the present mixed system of education, and they are very energetic indeed in their efforts to maintain it. I have been favoured with a number of opinions from ministers and gentlemen belonging to their body upon this subject, and they all unite in urging strongly the necessity of maintaining the system as it is. I am indebted to the Rev. F. Petticrew, Presbyterian minister at Eglinton, Derry, for a very elaborate reply to my question upon this subject, which will be found in the appendix;* it appears to me to exhaust all that can be said in favour of the mixed system. I regret that no champion of the denominational system has favoured me with an equally elaborate exposition of his views on the subject, so that the two might be fairly pitted together. I publish however, the gist of the replies which have reached me on the subject. Opinions upon the mixed system.

95. The Roman Catholics, as a body, and more especially the clergy, would be glad to see the mixed system abolished altogether, and the denominational system substituted in its stead; and this is also the feeling of a considerable section of the clergy belonging to the Established Church. When I say a considerable section, I do not mean a majority—for without being able, of course, to speak with accuracy upon the subject, I believe that the majority of the clergy of the Established Church look with favour upon the present mixed system of education. That there is a difference of opinion amongst them will be seen from the two following answers to the same question, each answer being given by a rector of the Established Church:—

96. 1. "No other system, in my opinion, is so well suited to Ireland and is liable to so few objections as the National system. It has never had fair play from the clergy of the Established and the Roman Catholic churches, nor has it been strictly carried out by the Commissioners. Amongst thinking men of every denomination, there is a growing conviction of its value. In my opinion, any departure from it would be the greatest misfortune to Ireland."

2. "I altogether object to children of different persuasions being forced into the same school, as its tendency is infidelity, as is evident by the present National system; its great error being the not distinguishing between sectarian and non-sectarian teaching in religion. The Scriptures are non-sectarian, so there should be no limit to their use. Books written by man may be looked on as sectarian, and may fairly be confined in their exercise. There are several other causes why the present National system, in my opinion, tends to evil."

97. A third Protestant rector writes as follows:—

"I certainly and decidedly approve of educating children of various religious denominations *together*—but God's Word should be the BASIS, and the only sound basis of all school teaching. Why should the Bible be excluded from any school? I wish there was not one National Board school in Ireland. They have been *the ruin* of the education of the youth of our country. I speak from experience."

98. There is a serious difference between them too, upon another subject, and that is as to the alleged exclusion of the Holy Scriptures from the National schools. The Reverend gentleman, whose answer I first quoted, was kind enough to send me a paper upon this subject, which was published some years ago. It is as follows:—

99. DECLARATION BY ESTABLISHED CHURCH PATRONS, &c., RESPECTING SCRIPTURAL INSTRUCTION IN NATIONAL SCHOOLS IN IRELAND.

"We, the undersigned Patrons, Managers, and Catechists of National schools in Ireland, members of the Established Church, having had our attention frequently directed to the misrepresentations which have been made concerning the National system of education, that children frequenting National schools are precluded from receiving religious instruction, and being aware of the misapprehensions which consequently prevail on the subject, come forward to state that in National schools under our charge, careful religious instruction is given to Church children in the Holy Scriptures, and that ample opportunities are afforded by the National Board for the same.

"It is true that we do not use these schools as instruments of proselytism, that we do not force our religious instruction on any children who entertain conscientious objections to receiving it; but we are glad to be able to state that our Church children have availed themselves of the Scriptural instruction which we give, and that with the best results.

"We make this statement because the present appears to be a time of crisis, attempts being made by two opposite and influential parties to overthrow the National system, on the alleged ground of its being deficient in facilities for religious instruction, and to introduce in its stead a system of denominational grants, which, in our opinion, would be attended with the most lamentable consequences to this country."

This is signed by two bishops and forty-one clergymen, including five deans and an archdeacon, in addition to nine peers, and seventy-six magistrates and gentlemen. My informant adds, that "the signatures at the present time to such a document would be much more numerous."

100. On the other hand we have the fact that a number of clergymen and others, members of the Established Church, are so convinced that the children have not proper opportunities for instruction in the Holy Scriptures, in National schools, that they have instituted and supported at a considerable expense, for a number of years, the Church Education Society schools in opposition to the National schools.

101. Whatever decision may be arrived at in regard to the mixed or denominational system of education, it will be sure to cause dissatisfaction to one party or the other. The opinions held are diametrically opposite, and apparently irreconcilable, the matter itself being regarded from totally different points of view. I doubt much whether that middle course we are all advised to steer would hold good in this case, and whether anything like a compromise could be effected.

102. Without entering into the pros and cons of the matter myself, and considering that my mission was to reflect the opinions of others rather than to give my own, I may yet venture to draw attention to one or two points, with regard to my own district, which forced themselves upon my attention.

103. In the first place then it appears to me that in towns and large villages the denominational system is already practically carried out. Whether it is a good system or a bad system, the people have taken to it them-

* Since this was in print I have been informed that Mr. Petticrew has been examined at considerable length before the Commissioners; I have deemed it therefore unnecessary to retain his reply in my report.

selves, and if their decision be ratified by the Government, the change, so far as they are concerned, will be but a slight one. With regard to the country schools, however, the case is very different. The denominational system, if carried out there at present, would result in the exclusion of a large number of children from education altogether. The great drawback to the efficacy of the country schools consists now in their being too numerous and too small. As I have already stated, the teachers complain that they are starving each other out. A school of a certain size, and with a certain attendance is absolutely necessary to enable the teacher to carry on at all. Multiply the present schools indefinitely, as would have to be done, if each child could only go to a school conducted by members of its own faith, and the term "starveling," which I have already heard applied to some schools would be applicable to nearly all. In many districts the members of a particular creed are so few that it would be utterly impossible to think of carrying on a school for their benefit alone, and, of course, under the denominational system, they would have to go, so far as the National system is concerned, without education altogether.

Has the present system a tendency to check religious animosities?

104. There is another question, too, arising out of this matter which certainly ought to be answered before any final solution is arrived at, and that is whether the system of educating together children of different creeds has the effect of toning down and finally checking those religious animosities which at present are the cause of so much mischief in the North of Ireland. The general impression would appear to be that it has, indeed I only heard one opinion to the contrary, an opinion indeed entitled to high respect, for it came to me from a clergyman, a Roman Catholic priest at Coleraine, who paid more attention to the schools under his management than any other clergyman that I met with, and he expresses himself as follows :—

"The system of educating children together of different religious denominations does *not* prevent religious controversy. It gives those educated under it the opportunity of commencing in early life the conflict which under other circumstances would be deferred for years—perhaps, would never take place."

105. On the other hand the Rev. Mr. Petticrew says, and his opinions are corroborated by many others :—

"Trained up together, children learn to respect each others conscientious convictions, and to avoid whatever is calculated to hurt each others feelings. When school days are over, they go forth to exercise in their respective neighbourhoods an influence much needed, in behalf of charity, mutual forbearance, peace, and good-will. It is understating the case to say that those educated in common are, at least, as peace-loving and as free from party bitterness as any other portion of the community. Bad as we may be, the state of Ireland would undoubtedly have been worse in the matter of religious feuds, but for the healing influence of united education. I have made inquiry from teacher after teacher, but no one knew a case of a quarrel among the children at school traceable to diversity of creed; and it is certain that, in many cases, friendships begun at school have lasted through life. If the union of her people be an object aimed at by the State, to educate the young together is eminently conducive to that end; but it would be indefinitely postponed by a return to the system of separation and exclusiveness."

106. TABLE showing the different Religious Denominations of the Teachers and of the Pupils on the Rolls of the National Schools examined.

* Present at visit. Could not get the number on Roll. † Two assistant-teachers; both E.C. ‡ Two assistant-teachers; one E.C.; one Pres.
§ The master of this school had only just been appointed. I got a return, but subsequently discovered that it was inaccurate; not, however, from any fault of his.

The Irish Society and the London Companies.

107. The county of Londonderry is so peculiarly affected by its relations with the Irish Society, and the great Livery Companies of London, and the assistance which those Companies give to education throughout the county is so great, that no report upon the state of primary education in Londonderry which did not take into account the amount of influence which they bring to bear on it, could be considered a complete one.

108. It will be remembered that early in the seventeenth century occurred the "Plantation of Ulster." Taking advantage of an escheat to the Crown, James I. caused the entire county of Londonderry (then called Coleraine), along with five other counties in Ulster, to be sold to twelve London Companies, on condition that they would plant English and Scotch settlers, to the entire exclusion of the native Irish. An undivided residue was retained by the Irish Society, as trustees. At the end of two-and-a-half centuries—although the primary object of the settlement has not been effected—they still remain lords of a great portion of the soil. In order to get a more precise account of the assistance given by them to education, I put myself in communication with the agents of the Irish Society and the different Companies which still retain their lands, and from one and all received ready and courteous assistance.

109. Through their kindness I am enabled to give a list of the different schools supported and assisted by the great London Companies, beginning with the chief—the Honorable the Irish Society.

110. The schools in the following list are all primary schools, with the exception of the first three :—

Return of the Schools Endowed by the Honorable the Irish Society in the Derry and Coleraine Districts.

	Annual Allowance. £	s.	d.
1. Diocesan School or Lough Foyle College,	425	0	0

Note.—The five school-houses marked thus * were built at the expense of the Clothworkers' Company.

The Company also subscribe £10 annually towards the Killowen parochial school, which is under the Church Education Society, and this payment is also made during the pleasure of the Court.

The Company also have given a grant in perpetuity of the ground for the Coleraine model school rent free, and a grant of five acres in perpetuity to the Coleraine Academical Institution at a rent of 1s. 3d. a year, besides contributing £710 towards the building funds. They have also founded two scholarships of £25 a year each, for pupils of the last-named institution entering any of the universities.

Salters' Company.

114. Salters' Company.—Detail of Schools.

In the Town of Magherafelt.

Parochial schools for boys and girls.
Presbyterian mixed school.
Roman Catholic schools for males and females.
Infant school.

Upon the Estate in the Country.

Ballinderry, mixed.
Coolshiney, mixed.
Ballyronan, male and female (two schools).
Wood's Church school, mixed.
Aughrim, mixed.
Ballynenagh, mixed.
Gortasilly, mixed.
Aghagaskin, mixed.
Ballymulderg Beg, mixed.
The Loup, Roman Catholic, mixed.
Killyboggin, mixed.
Drumrainey, mixed.
Ballylifford, Roman Catholic, mixed.

On the books of these twenty schools are 1,329 pupils.

Since the expiration of the lease in 1853 (which had been held up to that time by members of the Bateson and Londonderry families), this Company has expended the following sums, viz.:—from 1853 to 1868 in the erection, repairs, and maintaining of school-houses and residences for masters and mistresses the sum of £3,928 10*s.*

The amount paid in aid of the salaries to the masters and mistresses of the above schools, during the same period, is £3,389 8*s.* 4*d.*

A further amount also of £294 7*s.* 5*d.* has been paid by the Company for books and school materials.

The Company have also rebuilt at a cost of £1,688 0*s.* 3*d.* Rainey's Foundation School in the town of Magherafelt. At this school a sound classical and commercial education is offered to the scholars, thirty of whom are educated and clothed free of cost. The Company have contributed since 1865 upwards of £100 per annum in addition to the endowment, towards the support of this school.

It will be seen by the above statement that for the fourteen years the expenditure by the Company for educational purposes on their estate has amounted to the sum of £9,600 6*s.*

115. Schools maintained by Drapers' Company on their Estates in County Londonderry :— Drapers' Company.

Money, male; Ditto, female; Cranny, male; Iniscarn, female; Blackhill, mixed; Carnamoney, mixed.

The above schools are entirely supported by the Company, being supplied with books and all other requisites, fuel, &c., and residences for the teachers. There are three male teachers at £50, and three female teachers at £35 per annum, besides six assistants at £10 per annum. A yearly sum is distributed in premiums. The teachers and assistant of the Moneymore Infant School receive salaries of £35 and £10 per annum respectively, and a classical school in Moneymore is endowed with £50 per annum.

The Company grants an annual sum of £10 towards the support of the following schools :—

Sixtowns, Derrycrummy, Ballyforlea, Coltrim, Draperstown, Derryloran, Desertmartin, Cloughoy.

116. Grocers' Company of London subscribe to Schools on their Irish Estate :— Grocers Company.

117. Schools supported and assisted by the Fishmongers' Company :— Fishmongers' Company.

Schools on Estate.

Ballykelly boys' school, Ballykelly girls' school, Dunbrock, Gortalea, Mulderg, Firglorson.
These six schools, wholly supported by the Fishmongers' Company, including requisites of every description.
Grested School, under National Board, supplemented by an annual grant of £15 and £20 per annum, together with requisites.

Schools not on Estate but adjoining.

	£	s.	d.
Slaughtmauns Schools, annually to teacher,	5	0	0
Fenny ditto,	5	12	0
Eglinton National School, girls, £5; boys,	5	0	0
These two schools on Grocers' estate.			
Cumber Sunday School,	3	3	0
Derry and Raphoe Diocesan, for Deaf and Dumb,	3	0	0

118. The other Companies have either parted with the lands they held, or are only nominally interested in them.

119. The estate belonging to the *Goldsmiths' Company* was leased in perpetuity, and sold in lots, in the Incumbered Estates Court, in 1850. Goldsmiths' Company.

120. The estate belonging to the *Skinners' Company*, is held under the Company by lease which will expire on the death of Mr. K. L. Ogilby. Skinners' Company.

121. The *Vintners' Company* either leased in perpetuity, or sold their estate about the year 1737, still receiving a nominal rent for it. The present proprietors are the Earl of Strafford, Lady de la Poer Trench, and Sir Thomas Bateson, Bart. Vintners' Company.

122. The estate belonging to the *Merchant Tailors* was leased in perpetuity to the Richardson family. Merchant Tailors' Company.

123. The estate belonging to the *Haberdashers* was sold about the year 1686, and is now the property of the Marquess of Waterford. Haberdashers' Company.

District Inspectors.

124. I cannot conclude my notice of the National schools, without expressing my sense of the great courtesy and the great assistance which I received from the five District Inspectors, whom it was my lot to meet with—Messrs. Dugan, Bole, Irvine, Nesbitt, and Barrett. They rendered me every assistance in their power; they never obtruded advice unasked upon me, and if all the District Inspectors are on an intellectual par with those five gentlemen, the Board may fairly be congratulated on its admirable staff of Inspectors.

Church Education Society's Schools.

Church Education Society's Schools.

125. Next in number and importance to the National schools, though at a long distance in both respects, come the schools belonging to the Church Education Society. There are fifty-two schools of this Society, in connexion with the Derry Diocesan Society, and thirty-seven in connexion with the Diocesan Society of Raphoe. Through the kindness of the Rev. Mr. Battersby, the Secretary of the former, and of the Rev. Mr. Smith, the Secretary of the latter Society, I have been favoured with full particulars respecting both.

Diocese of Derry.

126. From these I gather that in the Diocese of Derry, there were in 1867, 3,361 children on the rolls of the fifty-two Church Education Society schools, and dividing them into the different religious denominations, there were Established Church, 1,426; Dissenters, 1,324; Roman Catholics, 611. The average attendance for the year was 1,386. The amount of local contributions for 1867, was £944 13*s.* 9*d.*, and the amount of aid afforded by the Diocesan Society came to £114 16*s.*

Diocese of Raphoe.

127. The number of children on the rolls of the Church Education Society schools of the Diocese of Raphoe for the year 1868 amounted to 1,533, and their religious denominations were as follows:—Established Church 863; Dissenters, 337; Roman Catholics, 333. The average attendance for the year was 881; the amount of local contributions came to £554 6*s.*, and the aid afforded by the Diocesan Society, £129 9*s.* 8*d.* It will be seen therefore from the above figures, that these schools are mainly supported by local contributions, the actual aid afforded by the Diocesan Society being comparatively small.

128. The objects for which these schools are established, are set forth in the Report of the Derry Diocesan Church Education Society for 1867, as follows:—

Objects of the Society.

The object of this Society shall be to establish and assist schools within the diocese, in which religious instruction shall be imparted out of the Holy Scriptures to all the children in attendance who are capable of receiving it, and to all church children in the catechism and other formularies of the church, under the superintendence of the parochial clergy.

The schools of the Society shall be open to all children whatsoever belonging to the parish in which the school may be situated, and having the parochial minister's approbation for attending it; and no child shall be excluded on account of the inability of its parents to pay for its instruction.

129. The schools indeed are avowedly established and maintained upon the supposition that the National schools do not afford a proper opportunity to the children attending them for instruction in the Holy Scriptures. I have already shown that this idea is not universal, even amongst the clergymen of the Established Church. The National Board requires four hours to be devoted to secular instruction upon five days in the week, leaving the clergymen one hour upon each of those days, at school, and the remainder of the time at home for Scriptural and religious instruction, if they choose to avail themselves of it. This, however, is regarded as a grievance; they want the teacher to be allowed to make free and unrestrained use of the Scriptures during the four hours devoted to secular instruction, and because this is not permitted, the Bible is said to be banished from the National schools. One clergyman, a rector of the Established Church, told me that he himself never entered a National School. "If the Bible is banished from any place," he said, "I consider that I ought to be banished from that place too."

Their condition.

130. The last Report upon the Endowed schools of Ireland, described the Church Education Society schools as being in a state of "miserable inefficiency." That term, however, could not now with justice be applied to the Church Education Society's schools of Derry and Raphoe. It is true that they are mostly behind the National schools in every respect—many of them a long way behind—but still they do manage to impart a certain amount of instruction to those who attend them. I examined thirteen of these schools, besides visiting several others, and with two exceptions, found them very much below the standard attained at the National schools.

131. The first of the exceptions was the Killaloe Church Education Society in Lower Cumber, Londonderry. So far from this school being behind the National schools, it was much superior to the great bulk of them. The fourth and fifth classes were more advanced than the corresponding classes in the National schools, and were well grounded in the matters in which they had been instructed. The fourth class showed great proficiency in arithmetic, and the fifth had got as far as division in algebra, and were working problems in the second book of Euclid; those two classes showed also a more than usual acquaintance with both geography and grammar. The other classes were quite equal in all respects to the average run of the National schools; indeed although there is a National school taught by a Presbyterian teacher within a mile from this school, there were yet present at the latter at the time of my visit, 44 Presbyterian children, in addition to 11 children belonging to the Established, and 8 to the Roman Catholic Church.

132. The other exception was the Willsborough Church Education Society school in Faughanvale, Londonderry, which was conducted in an exceedingly creditable manner, the pupils showing a very fair proficiency in the subjects taught, with the exception perhaps of a little weakness in arithmetic. This school, however, is favourably situated, being under the fostering care of Major Scott and family, who reside close by, and to whose assistance much of the successful management of the school must be attributed.

133. Several of the remaining schools were little more than nurseries, and in scarcely any had the children attained to anything beyond a pretty fair proficiency in reading and writing—arithmetic, geography, and grammar being all at an exceedingly low ebb.

Erasmus Smith's Schools.

134. There are two Erasmus Smith's schools in Derry—male and female, and one in the Raphoe district, all of which I visited. The latter one, which appeared to be a very good school as far as appearances went, and, judging from the books, which were submitted to me by the master, to be well kept up, was closed for the vacation.

135. The male school at Derry, had 105 boys on the rolls, and an average attendance of about sixty, there being seventy-three present at the time of my visit. I had no time, however, for examination. The boys appeared to me to belong to a lower class than I generally met with in the National schools, and were mostly very ragged. They are supposed to pay a penny a week towards their schooling, about ten or twelve, however, being free on the books. Children who absent themselves from school for a month at a time are struck off the rolls. The school-room was large and well lighted, but excessively dingy, and the school apparatus did not seem particularly good.

136. The teachers of these schools, who are all Protestants, are appointed by the Governors of the Foundation, and trained by the Church Education Training Society. The schools are inspected twice a year; they are open to

children of all denominations, but there were only two Roman Catholics on the rolls of the male, and none at all on the rolls of the female school. A portion of Scriptures is read for half an hour every day, and explanation given by the teacher. The Church Catechism is taught, but only I was informed, to Church children.

137. The female school was more numerously attended, there being ninety-one children present, the number on the rolls being 121, and the average attendance eighty-two. I had only time to examine some of the more advanced pupils, but I found that they had evidently been well and carefully instructed. In both schools the children seemed to have the advantage of having able and intelligent teachers over them.

Private schools.

138. Of the private adventure schools, *i. e.*, schools in which the teacher is supported entirely by the fees paid by the pupils, there seems to be scarcely a vestige now remaining. Of course, I am speaking now only of primary schools, not of scholastic and collegiate institutions for the children of the middle and upper classes. It would, indeed, be surprising if the extension of the National schools throughout Ireland had not driven away the schools belonging to the class of the old hedge-school. That people should continue to pay for an inferior education for their children when they can get a far superior one for nothing, or for next to nothing, would indeed be an anomaly. One private school of this class, however—not a hedge-school, but a school supported entirely by school-fees—I did visit and examine. In accommodation it was lamentably behind the National schools, being indeed nothing but a garret, and in the method of instruction and proficiency of the pupils, it could stand no comparison at all with the National schools.

139. In the neighbourhood of Coleraine there are a few poor schools, maintained by the landlords upon their estates—there may be also in other districts, but they did not come to my knowledge—and one of these at Laurel-hill, Coleraine, maintained by Mr. Kyle the landlord, I visited. The education is entirely gratuitous, all the expenses being defrayed by Mr. Kyle. The school-rooms, of which there are two—one for the boys, and another for the girls—were clean, light, and cheerful, and the attendance seemed very good, there being forty-four boys, and about twenty girls present. The education, however, hardly extended beyond reading and writing, for of arithmetic, geography and grammar, they could hardly be said to know anything at all. The reading was almost entirely from Scriptures, a practice of which the Church Education Society does not approve, for in its programme the using of the Scriptures as a text-book in the schools is forbidden.

Christian Brothers' School.

140. The Christian Brothers' school at Derry deserves a more special notice. It is a large and commodious building, situated in such a quiet and peaceful spot, that one is almost startled on coming out of the grounds to find oneself on the very walls of Derry. In addition to the infant school, there are three school-rooms, each under separate superintendence; and although on the day of my visit the attendance was rather below the mark, on account of its being the eve of a general holiday, there were 211 boys present in those three rooms. The education is entirely gratuitous, and beyond an annual collection at the Roman Catholic chapel, the Brothers receive no extraneous assistance. The fourth school is a ragged school in all but name, but the boys in the second and third schools were many of them the sons of shopkeepers and small tradesmen. The schools are well supplied with all the requisite apparatus for teaching, and each room is provided with an abundance of large and good maps. The second school, in which there were 75 boys present, were mostly very young, but they were well-grounded in reading, spelling, and writing, and showed great readiness in answering questions upon the simple rules of arithmetic.

141. The third school, in which there were sixty-seven boys present, were more advanced, both in years and learning. The reading and spelling were exceedingly good, the writing being simply admirable. They are peculiarly favoured in this respect however, for their teacher is a perfect master of the art of penmanship—in fact, I mistook the head-lines which he had written in the boys' copy-books for copperplate. With such a standard of excellence before them, the boys have made very considerable progress, and there are but few amongst them who would not be fitted at once, as far as writing is concerned, for the office or the counting-house. The more advanced boys indeed, with some such object in view, are taught to write mercantile papers, and initiated into the mysteries of book-keeping. In arithmetic I examined them in simple proportion, practice, and interest, and in all three they acquitted themselves creditably. They parsed with ease, sentences which they had read, and answered readily to general questions in grammar. Upon the study of geography great pains is evidently bestowed. Map after map was brought forward at my request, and the boys without hesitation, pointed out the principal towns, rivers, mountains, &c., almost as quickly as they were asked for.

142. The fourth school, from the extreme poverty of the boys, which renders every chance of casual employment an irresistible temptation, has a very irregular attendance. Many of the children were extremely young, but still the reading, writing, and what little knowledge of figures they had, showed that a deal of pains had been taken with them.

143. From twelve to half-past twelve each day is devoted to religious instruction, each teacher giving it to his own class.

Infant schools.

144. In each of the three largest establishments that I visited, the Convent school at Derry, the Christian Brothers' school, and the Irish Society's school in Coleraine, there was an infant school. In addition to those, I visited two others, one in Derry, the other in Letterkenny.

Convent Infant school at Derry.

145. The Convent Infant school at Derry was the first I visited. There I found 116 little ones gathered together, whose average age came to a very little over five. One would think that the difficulty of keeping so many babies quiet would be a sufficient task upon the patience of the sisters, without attempting anything further—but they do manage not only to keep them quiet, but to impart such instruction as their tender years are susceptible of, in a pleasant and amusing manner. They mostly manage to get through the alphabet, and then the more advanced are promoted to the honour of reading very big words of one syllable, prominently displayed on large cards. About twenty had commenced writing upon slates, and the whole school were able to count as far as a hundred, at all events whilst they kept together in doing so. To fix their attention and keep them occupied, they are taught to make use of their hands as well as of their heads, whilst engaged in counting—and all twirl their hands in unison, in a different way for each decade, so as to impress each more forcibly upon their memories.

Christian Brothers' Infant school.

146. In the Infant school of the Christian Brothers, I found eighty-one children, all boys—the average attendance being about 100. This may be called a sort of a preparatory school, for as soon as they get somewhat initiated into reading and writing, and the elements of arithmetic, they are drafted off into the higher school. The more advanced children are taught to read from cards, illustrated with pictures of the different objects referred to in the text, and thus a clearer knowledge is conveyed to them of the subjects about which they are reading.

Irish Society's Infant school.

147. In the Irish Society's Infant school at Coleraine, there were 150 children present, viz.:—seventy-two boys and seventy-eight girls, their ages varying from three and a half to six. They were looked after by one principal teacher, two assistant-teachers, and a mistress. They were divided into two classes, the first learning the alphabet and easy words of one syllable; the second, however, being more advanced, for they not only read from the Second Book remarkably well, but were able to spell the words that occurred in it with great accuracy.

148. All were taught writing—seventeen in the second class being provided with copy-books, and the writing of some of them was very creditable indeed.

149. In arithmetic the second class had got as far as simple division, and answered readily to questions in the pence-tables. Their knowledge of geography, so far as the outlines of the principal maps was concerned, was remarkably good, and indeed such as would have put the higher classes in many other schools to the blush.

Deanery Infant School at Derry.

150. The Deanery Infant School at Derry, is a large and spacious school, supported entirely by the inhabitants of Derry, with the exception of school-fees to the amount of a shilling a quarter each, paid by about two-thirds of the children. There were 125 children present when I visited it, and they were superintended by a very able mistress. The entire school was divided into seven drafts, several of the higher drafts using the books supplied by the National Board. I did not make any prolonged examination of this school, but it seemed remarkably well conducted, and the children were neat, clean, and evidently well cared for.

151. I was accompanied to this school by the Very Reverend the Dean of Derry, who is indeed almost a daily visitor to it; and I take this opportunity of expressing my sense of the assistance which he afforded me, and of the kindness and courtesy which I received from him.

Letterkenny Infant School.

152. The Infant National School at Letterkenny, at which there were seventy-one boys and fifty-two girls present at my visit, was presided over by a mistress who had attained to the highest grade of the National Board. There was a third class in this school, consisting of seven boys of about eleven years of age, whose presence at the infant school was accounted for by the fact that the National male school at Letterkenny was closed for want of a teacher. Seven more intelligent boys in one class I never met with; in fact if they had been a little more advanced in arithmetic, they would have been fully equal, if not superior, to the fourth class of any other school that I examined. Their reading was admirable, their writing from dictation was very creditable, and they were well grounded in arithmetic, up to and inclusive of compound addition. They parsed with ease and accuracy, and in geography the quickness and correctness of their answering were remarkable. The first class, consisting of eighty-three babies, had to be amused in various ways, but they were much too young for any serious attempt at instruction; the second class, however, had made considerable progress, and the reading of the higher division from the Second Book, was admirable, the lower division, indeed, not being very far behind. The whole of this class, too, were provided with copy-books, and their writing was mostly very good. In the first two simple rules of arithmetic, they were well grounded and accurate. To this school also I was accompanied by one of its most constant visitors, the Right Rev. Dr. M'Gettigan, Roman Catholic Bishop of Raphoe, who spared no pains to give me all the assistance, and show me all the kindness in his power.

Ragged Schools.

Londonderry Ragged and Industrial School.

153. There were two Ragged schools in my district—one in Derry, the other in Coleraine, both of which I examined. In the "Londonderry Ragged and Industrial School," as it is called, I found twenty-four pupils present, twelve of each sex; the average attendance however, for the past year, was said to be forty-eight. No doubt in winter, when warmth is appreciated, and work and food are scarce, the attendance is considerable, for in addition to receiving an entirely gratuitous education, each child that attends is provided with two meals a day, consisting either of bread and milk, or bread and broth. The school was divided into three classes, the first-class being mere infants; but the reading and writing of the second and third classes were very good, some of them displaying much intelligence. Both classes were learning to write, the third, and a portion of the second, writing in copy-books, and the rest on slates, in a manner that showed that a good deal of attention was bestowed upon this important branch of their education. They were well grounded also in the simple rules of arithmetic.

154. The Institution is entirely supported by local contributions. No questions are asked as to the religious denomination to which a child belongs; in fact the teacher told me that he himself did not know to what religious denominations the different children belonged. The teacher gives the religious instruction but once a week or so, a Church of England Clergyman attends and reads the Scriptures to them. None, however, I was informed, who do not wish, are required to remain during this instruction.

Coleraine Ragged School.

155. The Coleraine Ragged School is also supported by local subscriptions, and it, too, not merely supplies food for the mind, but also for the body. The children are provided every day with a substantial meal of either rice and milk, bread and milk, or beef—the latter being given twice a week during the winter months. Such schools as these, which not merely instil the principles of education and religion into the outcast street-boy, but save him at times from actual starvation, must surely be classed among the most meritorious of Institutions. The present school-room, though not by any means a bad one, is shortly to be replaced by a better one, built principally at the expense of the Irish Society.

156. There were only nineteen children present when I visited the school, the smallness of the attendance being attributed to the fact of the holidays being just over, and to the fineness of the weather affording the children a chance of out-door employment. The average attendance is from thirty-eight to thirty-nine, and in the winter it mounts up to fifty. The room was well supplied with maps, cards, and other vehicles of instruction. Most of the advanced pupils were absent, and not very many of those present could read, but all were learning writing and the elements of geography. The girls are instructed in needlework, and the elder ones are taught practical lessons of cleanliness, by having to take it in turns to clean the school-room, and certainly from its appearance they had learned their lesson well.

Colonel Robertson's Schools.

157. In the diocese of Raphoe there are thirty-one schools—one in each parish, called the Colonel Robertson Schools. They were founded and endowed by Colonel Robertson, who died about the year 1795, leaving £15 a year each to thirty-one parishes, for one school in each parish. The alteration of the currency in the year 1826 diminished the value of the endowment by £1 3*s*. 2*d*. for each school, and now each master receives £11 1*s*. 6*d*. a year for himself, and £2 15*s*. 4*d*. for books. Of these thirty-one schools, seven are now in connexion with the National Board, and three with the Church Education Society, the remaining twenty-one being unconnected with any society. Of these schools I examined five, two of them being in connection with the National Board, and two others with the Church Education Society, and of these I have already treated—the fifth I saw at a great disadvantage, for the old school-house had been recently burnt down, and the school was being carried on, pending the projected erection of a new one, in temporary and most inconvenient premises.

158. This concludes my list of the Primary schools examined by me, and brings my report upon them also to a conclusion. The time allowed for examination and for pursuing inquiries into the working of the educational system in Primary schools, was very short, but it has at all events been long enough, I trust, to enable me to get a fair insight into their working, and to form something like a just idea of the different subjects upon which you instructed me to report.

I remain, my lords and gentlemen, your obedient servant,

Thomas Sidgreaves.

Appendix.

I caused the following printed queries to be extensively distributed amongst clergymen of all denominations, and gentlemen of influence in the district:—

1. Are there sufficient means in your opinion in this district for the education of the poorer classes?
2. Do the poorer classes avail themselves as much as they might of the existing means of education? If not to what causes do you ascribe their neglect to do so?
3. Can you suggest any plan for inducing a better and more regular attendance by the children at school?
4. In your opinion is the system of educating the children of different religious denominations together beneficial or not? What other system or modification of the present system would you suggest?
5. Is the system of payment by school-fees satisfactory? Do you consider gratuitous education beneficial?

With regard to the first question the great majority of gentlemen who favoured me with replies were of opinion that the means afforded for education were amply sufficient, but there were a certain number who entertained a contrary opinion. My correspondents, however, in the Coleraine district were unanimously of opinion that in that neighbourhood there were ample means provided for the education of the poorer classes, two of them, both gentlemen of great influence and of great experience in school matters, stating that the means were more than sufficient. I append answers to the second and third queries, having selected them as much as possible to illustrate the different views upon the subject without repeating the same opinions too often.

2. They do not. I assign this mainly to three causes—1st. The parents are uneducated, and do not know the value of education. 2nd. Children are taken from school too soon for the sake of their earnings. 3rd. Intemperance of parents renders them careless to the welfare of their children.
3. I am in favour of a compulsory system of education. Much may meantime be done by clergymen and influential persons taking an interest in educational improvement. As temperance prevails and the state of the poorer classes is raised, they will give more attention to the education of their children.

2. They seem in general desirous to avail themselves of these means, but in some cases extreme poverty and the want of sufficient clothing prevent their doing so.
3. I should be glad to see the poorer classes so improved in their condition and circumstances as to be able to take advantage of the education provided for them, and then I should be glad that it were compulsory with them to do so, on the principle that ignorance, like filth, was a public nuisance engendering evil to society.

2. The poorer classes avail themselves to a great extent of the existing means of education, and I ascribe their not doing so more fully, principally to the want of clothing and the fact of so many being employed herding cattle.
3. I could not suggest any practicable remedy. The system of herding in this country arising from the want of proper fences is a great evil; poor children without covering or shelter are allowed to sit out in all seasons, and disease is thereby engendered, ruinous to their constitutions in afterlife.

2. The Roman Catholic priests are averse to education, and prevent children going to schools, unless they (the clergy) have supreme control.

2. They do not avail themselves of school opportunities as much as they might do. The parents are more anxious to avail themselves of the children's earnings (in more cases than necessary) than to provide for their education.

2. No; partly from the distance to the school in some cases, but more generally from a desire to employ children of very early age in some form of labour. The parents in many cases being very ignorant people themselves are unable to appreciate the advantages of education for their children.
3. In my opinion, the education of every child should be made compulsory by the State, and regular attendance by the children would in that case be enforced.

2. The poorer classes do not avail themselves as much as they might of the existing means of education, this I attribute in a great measure to the great rise in wages; the result being that the children as soon as they are able to earn anything are taken away from school to be employed either in the fields or in the factories in Coleraine.
3. I am of opinion that education should be compulsory within certain limits. Payment of fees in advance, suggested in my answer to question 5, would, I think, improve the attendance.

2. They do not. The causes are—1st, the general perversity of human nature; 2nd, the severe struggle for life in many cases takes from the classes in question all thought of education. The necessaries of existence occupy all their thoughts.
3. More zeal on the part of the clergy and others interested in education; but nothing short of compulsory education can be thoroughly efficient.

2. No. As soon as their daughters are old enough they are put into the factories, and the children that should be at school are kept at home to care the younger ones.

2. The poorer classes do not avail themselves as much as they might of the education within their reach. Causes—apathy of parents; want of active sympathy on the part of the better classes; children sent too early to work; many passing themselves as older to enter mills, &c.; the teaching in schools not made sufficiently attractive.
3. I tried in the town putting some clothes on ragged boys on condition of their attending school. They did so, though irregularly; but they drove away a higher class. Since the diminution of the population (*i.e.* from 1847) several teachers have told me there were not young people enough for all the schools. Some have been permanently closed. The schools partake the condition of the country. Now, in Donegal the "large farmers" in general are flourishing—the middle, and especially the lowest, declining. No measure will raise the primary schools if the condition of the poorer class remain the same; or if the schools be too many. Competition between religions and patrons have too much increased the National schools.

2. The poorer classes do not avail themselves, in my opinion, of the means of education; and I can only attribute their neglect for the most part to thoughtless indifference and the non-appreciation of the benefits of a sound primary education. Of course, poverty prevents some parents from sending their children to school.
3. I know of no plan. I would recommend that the clergymen of the various denominations should attend to this matter; or better still, that all parents should be bound by law to keep their children at school up to a certain age. I consider such compulsory education to be the duty of the State.

2. I am sorry to say that there might be some who do not avail themselves of these privileges from poverty, and being thereby compelled to hire out their children from a very tender age as herd servants; and the small farmers take their children away whenever they can do anything on the farms, long before they have received even an ordinary education.
3. I cannot say I can, though I would be very much inclined to advocate compulsory attendance at school up to a certain age.

2. I think that during the winter months the poor are very desirous of availing themselves of such means of education as may be within their reach.
3. I think the schools ought to be permanent, and not fluctuating as at present in country places.

2. They don't; being poor they want the labour of their children on their small patches of land.
3. None, except compulsatory attendance by an Act passed for the purpose.

2. They do not; this is to be accounted for by many parts of the county being destitute of proper fences, and the children are consequently kept at home to herd cattle and sheep. This system is most destructive in Donegal.

2. The attendance of children is most irregular—1, arising from the ignorance of the parents, from the mischievous custom of employing the children in herding sheep and cattle; 2, and from the insufficient clothing.
3. I am an advocate for the compulsory attendance of children, at least for a short time in each day. Night schools ought to be an essential part of their work, and the female children should always have instruction in needlework.

2. They do not. Causes are (*a*) poverty, which compels the children to go to service as soon as they can find an employer to give them food and a little wages. (*b*) In remote agricultural and non-improving districts like this, the people are generally prone to retain old habits, and do not place a sufficient value on education. (*c*) The people see but a comparatively small number remunerated by their education.
3. The plan which I suggest as regards this query, is to adopt a system of distributing premiums at certain periods of the year—proficiency and regular attendance to be the qualifications for obtaining them.

2. They do not avail themselves of the existing means as much as they might. I ascribe this to carelessness on the part of patrons or managers, who take very little trouble in looking after their schools. In any case where the manager is active the attendance is good.
3. More care in the selection of patrons or managers.

2. The poorer classes do not, so much as they might, avail themselves of these means. I would ascribe this chiefly to two causes—1. Parents, being themselves for the most part uneducated, do not know the value of education for their children. 2. Very poor parents are often unable to feed and clothe their children, and pay for their education, and so they send them out to work when very young.
3. For the very large class of careless parents nothing but compulsory education will secure the attendance of their children. Night-schools (or evening classes) might secure the attendance of many young people, whose parents require them to work during the day.

2. In some cases they do not. In most instances, however, the parents are under the necessity of employing their children from almost their infancy, to assist them in the cultivation of their small farms, and of hiring them out when they are sufficiently strong to earn wages, so that they are unable to avail themselves of the existing means of education though willing to do so.
3. I cannot, except one which would be impracticable, that of supplying the children with food.

2. Not quite so much as they might. I ascribe this principally to their extreme poverty. On the one hand, they cannot, in many instances, provide suitable clothing for their children. And on the other, they are forced to put them to some employment as soon as they can earn anything, and often before they are fit. In some instances, the poor who received no education can scarcely comprehend the advantages, and are therefore indifferent about it.
3. Not any. Unless to supply food and clothing for the children, as is done at convent and some other schools; but that is impossible for us under present circumstances.

The following answers relate to the fourth question, and I give them nearly in the order that I received them. I received also many others, but they were either mere repetitions of some of those that I give below, or short statements, "Yes" or "No." I have already stated in my report that as an almost universal rule the Presbyterians were in favour of the mixed, and the Roman Catholics in favour of the denominational system, whilst the Protestants were more or less equally divided upon the subject.

The answers to the fifth question have been treated of in my report.

4. The united education of children is decidedly beneficial, nor should I suggest any modification, but that Holy Scripture should be part of the system, with inspection and examination therein as in other things, only that those objecting should not be compelled.

4. In answer to this query, my opinion is that a deal depends on the composition of the locality. Where the majority are Catholic, I should say denominational, but where Catholicity is in the minority, I should say the mixed system should be preferred, taking care that no infringement be made or attempted on their faith or morals.

4. There is in truth no united education in Ireland. The present system is a total failure, and cannot be modified. The composition of the Board precludes united education.

4. Most beneficial. I should prefer a purely secular system to that at present in force, giving, of course, the various denominations all reasonable facilities for religious instruction by means of authorized agents. The present religious instruction I look upon as a farce.

4. In answer to the first part of the query, I say no; and in answer to the second, I say the denominational system.

4. I think it is beneficial; but the exclusion of the Holy Scriptures is the cause of great mischief to all, for it is the only book which speaks with authority, so as to improve the will, the imagination, and the feelings (Matt. vii. 28, 29), and if these be left unimpeached, the education of the intellect may prove mischievous, making the young "more accomplished devils."

4. Beneficial, but cannot be carried out as the priests object to the children of their own flock going to any but their own schools, but formerly all denominations attended my school.

4. On the whole, I am favourable to it. But I think the National system as administered fails in practice. I would have no non-vested schools. Such schools are worked in this country for one religion, and with as much exclusiveness as if they were private schools. The vested schools depend on the rules being enforced by a fair-minded Inspector. Here religion comes into play. "Denominational" grants would please most patrons, especially clerical.

4. I consider the present system to be the very best for Ireland under present circumstances, and it might be just as well that religious instruction was removed altogether from the time-table, and each denomination permitted to provide for the religious training of their own children in whatever way they think right. I think the Board should have nothing to do at all with religious instruction for certain obvious reasons.

4. I believe that the children of all religious denominations should be educated together. Denominational education would be most baneful, or tending still further to estrange the different classes, and to promote religious and political discord, already too rife in Ireland.

4. Most decidedly I consider mixed education as the most beneficial, as not only creating a spirit of brotherly love among the various denominations, but as otherwise sustaining schools that if the denominational was in existence must undoubtedly cease.

4. In my opinion the system of educating the children of different religious denominations together is highly beneficial where the National education is strictly carried out, as the children thereby form friendships, which generally last during their future lives.

4. I consider that there should be a grant from Government to each body or persuasion, leaving out none—Roman Catholics, Protestants, Presbyterians, Methodists, &c. No number or numbers of a committee should be biassed in their opinion by the Government, which are supposed to be the representatives of the people, by a grant being given to one body and not to another.

4. In my opinion the system of educating the children of different religious denominations together is not beneficial. I would suggest the denominational system. The clergymen of each will then be likely to take more interest in the schools, and vie with each other in having their respective schools in the highest state of efficiency, both as regards the instruction and attendance of children.

4. I believe the system of educating together different religious denominations to be beneficial to the scholars, and that if it have fair play, from the influences which have latterly been at work in antagonism to our National system, it will ultimately soften the asperities which unfortunately have so long been manifested by all denominations.

4. Such a system is, no doubt, beneficial, inasmuch as it tends to impart and promote kindly feelings in the minds of the children towards each other, which intercourse with the world in after years does not entirely eradicate.

4. I think it is not beneficial, and this seems to be the opinion of all parties and denominations in this part of the country; for although the National system, which professes to do so, is generally adopted, it is in such a way as to be practically denominational, as every denomination have provided schools for their own children, under their own management, as far as it is in their power. I would therefore suggest the denominational system, which would give full freedom to all in religious training, and would be more satisfactory and more popular.

4. In my opinion the system of educating children of different denominations together would be attended with the best results, but unfortunately is not carried out in this locality, the Roman Catholic children, with very few exceptions, attending the National schools, which are generally patronized by the clergymen of their denomination; the Protestant and Presbyterian children attending the schools of the Church Education Society or Erasmus Smith's.

4. United, secular and separate religious instruction I consider most beneficial to the country. It is one of the means which the State may use to allay the bitterness of party spirit, and to draw together the sympathies of the various religious denominations.
Most of the changes made in the National system since its establishment have tended to denominationalize it, and thus destroyed one of the greatest boons the State has ever bestowed on Ireland. Except to return to the principles on which it was originally founded, I would deprecate any change at present.

4. I think it most beneficial, and I would strongly object to all further tampering with the present system. I must also express my regret that the system has been so interfered with of late, and that so much of the denominational element has been imported into it.

ANALYSIS OF MR. LAURIE'S REPORT.

Paragraph

Field of inquiry, ... 1, 2
Embracing all kinds of *public schools*, . . . 3

First Branch of this Report.

"National schools," equivalent to State-aided schools, and of two kinds, ... 4, 5
(1) *Vested schools*, ... 6
(2) *Non-vested schools*, ... 7
The *radical principle* of both being unsectarianism, . 8
Results attained in a district where the two religious elements are on a par in regard to, . . . 9
(1) *Unmixed* schools, ... 10
(2) *Mixed* schools of Ulster, ... 11
Contrasted with those of the Limerick district; showing different conditions but corresponding results in regard to, ... 12, 13
(1) The favourable feeling of *Protestant parents* towards the National schools, . . . 13
(2) And an exhibition of moderation on the part of the *Catholic parents* when untrammelled, 14
Which is not always the case, . . . 15
Even the unmixed schools which are theoretically free, are inapplicable to the wants of all in all places, 16, 17
The present *plan* is therefore *unobjectionable* on the ground of expediency and economy, . . 18
Whilst its mode of working shows that the *clergy* are empowered to *control* it, though they *decline* to do so, ... 19–22
Their reasons for this, ... 23
And the answer, ... 24, 25
Inconsistency of both parties practically exhibited, 26, 27
On the one hand, by means of *Church schools*, . . 28
On the other, *Christian Brothers' Schools*, . . . 29
Which are both capable of self-maintenance, . . 30
National schools, nevertheless, largely prevail, . . 31
Although under protest, and with the proprietary safeguard, ... 31
Substantial form of *opposition to schools* not immediately controlled by Roman Catholic patron, . . 32
Examples of its partial efficacy, ... 33
Additionally illustrated by a correspondence on the question at issue between Mr. E. W. O'Brien, and the Right Rev. Dr. Butler, Roman Catholic Bishop of Limerick, ... 34
Case of the *Kilscannell National School*, the Manager of which is Mr. Edward William O'Brien, . 34
Success of its commencement, ... 34
The Roman Catholic Bishop's disapproval, . . 34
Catholic pupils are withdrawn in consequence of which the school is closed, ... 34
The bishop's *objections*, ... 34
(1) General 34
(2) Special, ... 34
Answer to the first class, ... 34
Answer to the second class, ... 34
Apparent ground for alarm on the part of the Roman Catholic clergy, ... 34
Real fidelity in the management, ... 34
Catholic masters always appointed, ... 34
Proposed concessions of the manager, . . . 34
(1) Control at first hand, ... 34
(2) Obnoxious interference to be discouraged or prevented, ... 34
(3) Clergy to be consulted in the choice of masters, 34
Hopes of success from the promised co-operation of the local clergy, and the want being felt by the people, ... 34
Reply of the bishop to Mr. O'Brien, ... 34
The Bishop considers the school in question dangerous, 34
Because the appointment of the teacher does not rest with the priest, ... 34
General ground of objection to mixed schools, . . 34
Alleged *objection of Protestants* to National schools, 34
And the unreasonableness of coercion, . . . 34
Consent to remove the ban refused, ... 34
Corresponding objections to the central normal school, 35
Threat to extinguish *training* unless otherwise provided for, ... 36
The priests individually not always responsible, . . 37
Example in illustration, ... 38
Denominationalists' plea on the ground of *equality with England*, ... 40

Paragraph

Which, if correctly apprehended, they would by no means desire, ... 40
Besides, the sectarian features of the two cases are different, ... 40
And the *conscience clause* of the one is inapplicable to the other, ... 40
The late Count Cavour's view of the subject, . . 41

Second Branch of the Report.

Second leading *feature* of the Irish school system, . 42
(1) *Maintenance* of the school by the Board.
(2) Dependence of the teacher on the *patron*.
How the patron utilizes the public money, . . . 43
And how the Board deals with it, ... 44
Despite of the "Rule" to the contrary, . . . 45
Which is a dead letter, in regard to *local contributions*, 46
Limerick and Clare contrasted with Devon and Somerset, ... 47
Presumed reasons for *Irish shortcomings*, ... 48
(1) Permissiveness of the rule.
(2) Indifference of managers.
(3) Apathy of upper class.
This last mentioned explanation is unaccountable, . 49
Unless on the ground of ignorance, ... 50
The prevalence of which is so surprising, . . . 51
As almost to exceed the bounds of belief, . . . 51
Six examples illustrative of the spirit of inactivity and *apathy among the better class*, ... 51, 52
Remaining local resources limited to *school-fees*, 53, 54
Which contrast unfavourably with those of England, . 55
The causes are not impecuniosity, nor want of appreciation of education, ... 56, 57
But sheer parsimony, based on a shallow pretext, . 58
Other ancillary causes, ... 58, 59
These however yield to the first mentioned, . . 60
Which is fostered by a spirit of pauperization, . . 61
Of a remedial character, ... 62, 63
Relations of the *teacher* to the *patron*, ... 64, 65
Objectionable on two grounds, ... 66
(1) Generally objectionable inasmuch as it cuts at the root of the first law of life, . . . 67, 68
As illustrated by an example, ... 69
(2) Specially objectionable on account of its liability to *abuse*, ... 70
As illustrated by examples, ... 71–8
Case of the dismissal of Mrs. Lynch, late head mistress, of the National school, Kilkee, ... 71–7
Relations of the *teacher* to the *Board*, which officially ignores his existence, ... 79
And sanctions the employment of incompetent substitutes, thus polluting the market supply . . 80
Deficiency of local contributions represents *pro tanto*, the teachers' loss, ... 81
For the Board's grants were intended to be supplementary, ... 82
Which object has proved fallacious, ... 82
Further pecuniary drawbacks render the present condition of the teacher hard, ... 83
And his future is unpromising, ... 84
Justification of their *discontent* attempted, . . . 85
Summary of leading *recommendations* for the improvement of the teacher's condition, ... 86

Third Branch of this Report.

School premises, scholars, methods and results, teaching staff, Government inspection, . . . 87, 88
I. Description of the *buildings*, ... 89
The bulk of which are generally *unsatisfactory*, . . 90
And specifically so, in regard to deficient accommodation and ventilating apparatus, . . 91–3
Coupled with ignorance of the laws of health, . . 94
Easy *remedies*, ... 95
Playground, &c., ... 96, 97
School appliances, ... 98
General character of the *scholars*, ... 99
Typical examples of the constituents of small ordinary schools, ... 100
Example 1.—A boys' school.
Example 2.—A mixed school for boys and girls.
How these are affected by *irregularity of attendance*, 101–2
What is the cause? 103
Does it lie with the parent or the teacher? . . 103

	Paragraph
Query satisfactorily answered by Mr. Paterson the Head-Inspector of the district,	103
And the results of Mr. Laurie's experience accord with his,	104
The bulk of the profession should at least adopt mechanical expedients for securing *parental co-operation*,	105
How parental co-operation should be encouraged and facilitated,	106
As to the National school proper, the object is partially attainable on the *Revised Code* plan,	107
The application of a *compulsory measure* would be premature and inexpedient,	108, 109
But not so in regard to the *pauper and vagrant class*,	110
Example of the Limerick workhouse,	111
Concluding observations on the *position of the Irish teacher* as affecting his work,	112
Example of a late exhibition of professional energy,	113
The teacher's prime faults are a too exclusive attention to the highest class,	114
And a defectiveness in the art of teaching a lesson,	115
In other respects satisfactory,	116
"*Results*" of instruction,	117
Summary of schools examined *individually*,	118
Criteria of such examination,	119
Reading,	120
Writing,	121
Arithmetic,	122
Dictation,	123
Geography,	123
Sewing,	123
Deficiencies, as to home lessons, and history,	124–6
School libraries,	127
Night schools,	128
Convent and other exceptional National *schools*,	229
Model schools of Limerick,	130
Coora Clare National school,	130
The teaching staff,	131–3
Assistants redundant in supply and unsatisfactory in quality,	134, 135
Government *inspection*,	136
Limerick *Middle-class schools*,	137
Benevolent *institutions* with schools attached,	138
Poor schools connected with the Church,	139
Hedge schools,	140

Appendix B. Convent of the Good Shepherd, Limerick,	304, 305
Appendix C. Poor schools connected with the Church,	305
Appendix D. Hedge schools,	305

Report to Her Majesty's Royal Commissioners on the Primary Schools of Ireland, as to the State of Popular Education in the Limerick and Clare District, by James Stuart Laurie, Assistant Commissioner, formerly one of Her Majesty's Inspectors of English Schools, and now Director of Public Instruction in Ceylon.

1. My Lords and Gentlemen,—I beg leave to present my report on the elementary schools of the district you did me the honour to assign to me. My instructions did not extend to the entire number of schools at present in operation in the counties of Limerick and Clare, but were limited to the following "Constabulary" districts :—*Limerick* (city), *Newcastle*, *Ennis*, *Kilrush*, *Rathkeale*, and *Kilfinane*. Field of inquiry.

2. I accordingly paid special attention to the sample centres thus selected; but, at the same time, I ventured to interpret the spirit of my instructions with a reasonable degree of freedom. For, by prosecuting my inquiries here and there beyond the prescribed boundaries, I was enabled to collect additional information, and thus to compare, to supplement, and to correct the data furnished from my own district.

3. Presuming on your courteous forbearance, I therefore propose treating the entire group of schools visited, irrespectively of the Constabulary districts, and as if they all belonged to my legitimate field of operations. They naturally fall under the following classification :— Embracing all kinds of public schools.

	No. of Schools visited.
1. National Board,	92
2. Church Education Society's,	16
3. Christian Brothers',	6
4. "Hedge,"	12
5. Private and Endowed,	14
6. Institutions (partly educational),	4
Total,	144

4. The question, *What is a National school?* first of all demands solution; for, with the exception of such institutions as the model school of Limerick, I failed to meet with a *bona fide* "National school," that is to say, in the sense of being not only entirely national property, but also under the exclusive control of the Government. The public schools of Ireland are up to a certain point not more entitled to be called "National," than those of England. So long as the principle of local proprietorship and local management is conserved, they cannot be styled otherwise than *State-aided* schools. National schools equivalent to State-aided schools, and of two kinds:

5. Those built partly at the public expense, are called *vested*, and those in receipt of only annual grants *non-vested* schools.

6. In regard to *vested* schools, the Board of course exercises a proprietary claim, nominally reserving the right of appointing the teacher, and stringently requiring that the religious lesson be free to be given in *person* by the clergy or ministers of any denomination to scholars belonging to their own particular creed. (1), Vested schools.

7. In regard to non-vested schools, as being private property, the Board, of course, declines to authorize direct interference of any kind except through the patron, but the rights of conscience are shielded by the compulsory requirement that scholars of a different creed shall be dismissed before the religious lesson begins. (2),Non-vested schools.

8. Lest these arrangements should prove an insufficient protection (as it would be quite competent to the teacher to blend his or her specific dogmas with secular information), an additional safeguard is provided by the enforced *separation* of the religious from the secular department of instruction; and to facilitate this arrangement, the religious lesson is restricted to a specified time, namely, the commencement or the close of the day's work. The radical principle of both being unsectarianism.

9. Before proceeding to describe the operation of this remarkably conciliatory and well-guarded measure in my own district, I trust I shall be permitted to record the results attained in the province of Ulster, which happens to present the easiest and fairest criterion, by reason of the peculiarity that the Protestant and Catholic elements are there pretty equally balanced. Results attained in a district where the two religious elements are on a par in regard to

10. "The general acceptability by Protestants and Roman Catholics alike of the National system may be gathered from the fact that in Ulster 50·5 per cent. of the population are Roman Catholic, whilst 51·8 per cent. of the National school pupils are Roman Catholics, and 49·5 per cent. (of the population) are Protestants, whilst 48·2 per cent. of the National school pupils are Protestants."* (1), Unmixed schools;

11. In the same province the per-centage of Roman Catholic pupils under *Protestant* teachers is 25·0, and of Protestant pupils under *Catholic* teachers 19·3.† These facts suffice to establish two important points. First, that the existing system has hitherto found favour with the functionaries of both creeds; and, secondly, that the population at large has freely availed itself of it, even without scruple in regard to the denomination of the teacher. (2), Mixed schools of Ulster.

12. It remains for me to show how the system has operated in a district of a widely different character.

13. In Limerick and Clare the Protestant element is insignificant, the per-centage of Roman Catholics to the entire population of the former county being 96·4, and of the latter, 97·8. The total absence of Protestants in most of the villages fully explains the apparent anomaly that, out of the 92 National schools visited by me, 60 were frequented by Catholics exclusively. In regard to the remaining cases, I have to report that wherever a Church Education Society's school was not provided, the Protestants freely availed themselves of the National school; and that, where the former existed, a fair proportion preferred the latter, where its superiority was manifest. In short, in so far as Protestant parents themselves are concerned, there can be no doubt that—while they naturally prefer a special school of their own type—their choice is mainly regulated by the quality of the instruction offered. For example, I found nine Protestant *juveniles* in Kilmallock N.S., and but eleven *infants* in the Church school of the same town; and in the Limerick Boys' and Girls' Model School 196 Protestant pupils under Roman Catholic teachers, while *five* schools, directly or indirectly connected with the Protestant Church in the same city exhibited an aggregate attendance of only 73. Contrasted with those of the Limerick district; showing different conditions but corresponding results in regard to (1),the favourable feeling of Protestant parents towards the National schools.

14. Nor do Roman Catholic parents personally object to the intercourse of their children with the children of Protestants. For example, I found, even in a Church Education Society's school, twenty-six Roman Catholics being taught along with 53 Protestants—the reason being that no National school was accessible. This exceptional instance suffices to show that, in the absence of intimidation, the popular desire for instruction is so strong as to ignore the alleged risk of proselytism. I do not dispute that, supposing a National school were established in the locality alluded to, the Roman Catholics would adopt it—and with good reason; but I believe that if it (2), and an exhibition of moderation on the part of Catholic parents when untrammelled,

* XXXIII. Report of the Commissioners (1866), page 16. † *Ibid.*, page 15.

proved to be a better school than the Church one, the majority of the unbiassed Protestants would also not hesitate to avail themselves of it, in preference to their own. The fact that, in the case of the Limerick Boys' and Girls' Model School, formerly cited, we find so thin an attendance of Catholics, namely, 22 against 196 Protestants, appears to be at variance with my deduction; but I purpose elsewhere to show that the Roman Catholics of Limerick would fill that school to repletion, provided they were free to do so.*

which is not always the case.

15. It may be assumed, however, in a general way that both bodies prefer their own separate schools, where the numbers of each are sufficient to render the establishment of separate schools practicable. Two pairs of schools, very near each other—the one pair being in a country, the other in a town parish—are examples:

{ Adare, National School (Protestant).
{ Adare, Convent (Catholic).
{ Limerick, Villiers National School (Presbyterian).
{ Limerick, St. Mary's (Roman Catholic).

Even the unmixed schools, which are theoretically free,

16. Each of these schools is practically denominational, in the sense of being unmixed. Yet they are *not* sectarian, as the pupils of the one are admissible to the other, on the Board guarantee (combined with the patron's pledge) of non-interference with their religious belief. In neither case, therefore, would the possible extinction of one or the other of those pairs of schools damage the educational facilities of either sect.

are inapplicable to the wants of all, in all places.

17. Again, the practicability of unmixed schools, is, in my district, excessively rare, and exceptions can hardly be recommended as a basis for a general measure. For, under any less comprehensive arrangement than the present one, what, for example, would become of the average of three Protestant pupils in attendance at the ninety-two National schools visited by me? The establishment of separate schools for their benefit would obviously be the climax of absurdity.

The present plan is therefore unobjectionable on the ground of expediency and economy,

18. Even where a reasonable number of children of a particular religious body can be brought together so as to form a school, the fact, if ascertained, that adequate accommodation is already provided in a neighbouring school maintained at the public expense, would not, under present circumstances, justify the Board in awarding a separate grant. But, in the absence of a "Conscience Clause" accompanied by its incidental restrictions, the only alternative would be, a concession involving not only the imperial sanction of schismatic and therefore unwholesome rivalry, but a squandering of public money in support of two or more schools where the machinery of one is sufficient.

whilst its mode of working shows that

19. The actual working of the present plan is as follows:—The Board as it were suspends its functions at 3 P.M., when in the case of Roman Catholic National schools, for example, the Protestant pupils are dismissed.

20. The religious instruction, which commonly lasts half an hour, consists of the usual catechetical and other expositions of the faith, and is carried on in separate classes, but under the exclusive direction of the head teacher. The priest is at liberty to conduct the lesson, but he rarely avails himself of that privilege. The Protestant parson has access to his flock *within* a vested school, and in the case of non-vested schools, he can readily make arrangements for meeting them elsewhere from 9 to 10 A.M., or after 3 P.M., but, he too, is not less remiss in the discharge of this important function, which even on Sunday is generally performed by deputy.

the clergy are empowered to control it, though they decline to do so.

21. It will be observed then, that, while the National Commissioners *scrupulously* and, as I have ascertained, *effectively* prevent the one denomination from tampering with the faith of the other, the control of the spiritual instruction is assigned to the clergy themselves, and if this plan fails to stimulate them personally to exercise their prerogative, the Board is surely not chargeable with the responsibility.

22. Nevertheless, both the Protestant and Catholic clergy entertain views that are hostile to the plan in its integrity.

Their reasons

23. They protest against a device which is styled by the one party "godless;" by the other, an incentive to apostasy. They therefore object to a comprehensive mode of administering the public funds, and claim specific grants awarded on an unmixed, sectarian, and denominational basis. They demur to the present plan on the ground that religious instruction is forbidden during specified hours, and hold that the teacher should not be restrained from inculcating his religious views at every suitable opportunity.

answered.

24. In other words, while holding themselves aloof from the exercise of their privileges as spiritual instructors of youth, they do not scruple to throw the burden of the responsibility on the very department which presents them with every facility for the discharge of their functions. They decline to make due allowance for the merits or the expediency of a measure which is substantially based on economy and justice, as serving to restrict the wasteful multiplication of schools, to provide for the educational wants of insignificant minorities, and to meet the actual demands of the public immediately concerned. Again, in regard to the religious as compared with the secular branches of instruction, the one seems to have no necessary *dogmatic* bearing upon the other; and the difficulties apprehended in connexion with the practical requirements of discipline, appear to arise from a misconception of the distinction between "religious" and "doctrinal" instruction. For example, I do not imagine the Board would regard a reproof administered by a teacher to his pupil, however well fortified it might be by illustrations borrowed from a common Christian code, as a violation of its rules. In point of fact, the clerical interpretation of religious instruction has reference to the inculcation of peculiar tenets. If so, then religious instruction becomes technical; if it is technical, the only possible resource is the assignment of a separate time for imparting it; and, if a separate time is assigned, why should it not, as a matter of public convenience, be *specified* for every day as well as Sunday?

25. The interruption of the secular lessons by religious and ceremonial exercises is certainly viewed by some strict Catholics as all-important; and, on one occasion, I heard peculiar stress laid on the hardship of prohibiting National school children to cross themselves every time the clock strikes the hour. But I have seen nothing to justify the assertion, that the vast majority of Catholics hold such extreme opinions, or, at least, that they rate them as being worthy of standing in the way of an efficient primary-school measure.

Inconsistency of both parties

26. Nor am I able to reconcile the extreme dislike which the Irish Church clergy entertain for a universally applied denominational system, with their resolute maintenance of denominational schools; while on the other hand, the Catholic clergy urgently demand a denominational system, on the contradictory plea that the present results are practically denominational.

practically exhibited:

27. It may not be superfluous to note here the special organizations by which the two religious bodies compete with National schools, namely the so-called Church Education Society's schools on the one hand, and Christian Brothers' schools on the other.

on the one hand, by means of Church schools;

28. I visited in connexion with my district a total of fourteen Church schools, and I found them existing wherever the Church party was fairly strong; and not unfrequently in close proximity to a National school. With the exception already alluded to, they were attended solely by Protestants, belonging, for the most part,

* In one other Church school, adjoining a *good* National school, I found six Roman Catholics. These I understood to belong to the *superior* farming class, who prefer the higher *social* standard of the Protestant schools. The priests do not apply any pressure to the more independent classes.

to the farming class of a well-to-do type. They impressed me as being similar to a co-operative arrangement, organized by a few families, in lieu of the more expensive system of private tutorship. The fees paid generally amounted to 5*s.* per quarter, on an average attendance of about twenty scholars. The master's salary being ordinarily augmented by emoluments for services as organist or clerk ranged from £25 to £40 per annum, besides a dwelling-house; the funds sometimes being derived from endowments, but never from money-grants of the Church Education Society. The premises were, as a rule, satisfactory; while the results of the instruction, in so far as I tested them, as well as the general characteristics of the teachers, did not exhibit any marked difference from those of the National schools. Finally, they are systematically inspected by one of the Society's officers.

29. The Christian Brothers' schools are exclusively frequented by Roman Catholics. These schools likewise are professedly sectarian; but they differ from the Church schools in this respect, that the instruction is gratuitous —the pecuniary resources being local contributions, supplemented by the proceeds of bazaars or charity sermons. These schools are, with one exception out of the six with which I came in contact, confined to towns, and they are largely attended. The premises are excellent—not only in regard to commodiousness, but also sanitary and all mechanical arrangements. The furniture is good, the supplies of materials ample and a somewhat exceptional attention is paid to cleanliness, and all matters of taste and comfort. The fraternity consists of a body of cultivated men, deservedly esteemed for their devotedness and self-sacrifice, who have obviously made education an object of special study.

on the other, Christian Brothers' schools,

30. Such are the general features of the two groups of schools that are understood to rival those connected with the National Board; and the fact that they are worthy rivals would seem to call for an acknowledgment of the service which their supporters do to the country at large, by relieving it from the necessity and expense of supporting schools that are clearly capable of sustaining themselves.

which are both capable of self-maintenance.

31. The above remarks and examples would convey an erroneous impression if they were viewed in any stronger light than as an exhibition of partiality for special schools. National schools I found scattered over my district at short intervals, hardly ever exceeding three miles, and the distribution of little less than 7,000 schools over the length and breadth of the island is incontestible evidence that the scheme has found favour with at least the Dissenting section of the community, and with the Roman Catholic body as a whole. That the Roman Catholic clergy have co-operated, and continue to co-operate with the Board, does not, however, affect the fact of their disapproval of the mixed principle, in the abstract. Their attitude towards Protestant pupils is so far from being distinguished by a proselytising spirit, that they would much prefer not to see them at all; their resistance to the scheme is altogether of a passive and self-protective description, and is, accordingly, confined to the retention of the maximum of control allowed by the law. This assumes two shapes: first, carefulness to avoid the surrender of their proprietary rights; and secondly, coercive prohibitions in regard to schools not in their own hands, whether the teacher belongs to their own persuasion or not.

National schools, nevertheless, largely prevail,

although under protest, and with the proprietary safeguard.

32. Accordingly, I found that, where a demonstration was convenient, *vested* schools were opposed and, in some instances, supplanted by *Christian Brothers'* schools, whilst others, under lay patronage, were either simply tolerated, under protest, or were fast merging into Protestant denominational schools, or, where that element was weak, had become extinct.

Substantial form of opposition to schools not immediately controlled by R.C. patron.

33. For example, in Rathkeale and Charleville, the National school languishes by the side of a Christian Brothers' school, and in Newcastle and Ennis, the *vested* premises of the former have actually been appropriated for the use of the latter! Again, the Model School of Limerick is under the ban of the Catholic hierarchy, although, as I formerly noted the teachers are Roman Catholic. No sooner is it ascertained that a Catholic has sent his child to this school, than the parent or guardian is visited by the priest, and, in various ways, induced to withdraw his support,—an inhibition that derives additional force from the fact that the school is largely frequented by Protestants. At the time of my visit, one of the most promising pupils was seized with an illness and the priest declined to give her absolution unless on condition that she would, in case of recovery, cease to attend the school in question.

Examples of its partial efficacy:

34. I am indebted to Mr. O'Brien, of Cahirmoyle, and the Right Rev. Dr. Butler, the Roman Catholic Bishop of Limerick, for permission to use the following correspondence, which sets forth, on the one side, the difficulties liable to be met with by a philanthropic and conciliatory Irish squire, even when disposed to exert himself for the educational improvement of his tenantry; and, on the other side, a clear and authoritative statement of the causes of the obstruction customarily offered by the Roman Catholic clergy.

additionally illustrated by a correspondence on the question at issue.

October 28, 1864.

Kilscannell Nat. School; Manager, Mr. E. W. O'Brien.

My dear Lord Bishop,—You may remember that about two years ago a National school was set up at Kilscannell, of which I, having given the site, became manager. The school being provided with an efficient master, drew at first a large attendance; there were about eighty pupils on the average, of whom about fifty were Catholics.

Success of its commencement The Bishop's disapprobation.

Your lordship, however, during my absence on the Continent, expressed disapproval of the principles or the conduct of the school, and in consequence of your censure the Catholic pupils were withdrawn. On learning this, I conferred with Dr. O'Connor, hoping that I might make some arrangements which would satisfy him and you. He, I believe, laid the case before you, but did not obtain the withdrawal of your censure.

Finding that the school had practically become one for Protestants only, I closed it for a time on the resignation of the last teacher, on the 30th July last. I now propose to open it again; and it is because I wish it to be re-opened under such auspices as that it may be of the utmost possible benefit to the neighbourhood that I now write to your lordship.

Catholics withdrawn: in consequence of which the school is closed.

Your objections to the school were, as I understand, partly of a general, partly of a special nature. You disliked *bona fide* "mixed" schools on principle, and you thought there were special circumstances in this case which rendered it unadvisable that Catholics should attend it. With reference to the first objection, I will only say that all National schools are, in theory at least, mixed, and that managers who allow them in practice to become denominational are guilty of a dereliction of duty. Yet I am not aware that your lordship has seen fit to forbid the attendance of Catholics at the National schools throughout the diocese generally. With regard to the second objection, I admit that there was some apparent ground for it. The school was situated near the house of the Protestant clergyman, and was frequently visited by him, and during my absence communications relating to the school passed between the Board and him. Both he and I now think that I was wrong in countenancing such frequent visits on his part, and still more in allowing the management to be to some extent conducted by him. Had we sufficiently considered the probable effect of such proceedings, we might have foreseen that they would alarm the Catholic clergy. There was, however, no breach of faith whatever in the management. Mr. Richardson never taught in the school except after school-hours on certain days of the week, when he gave religious instruction to his own parishioners; and in order to avoid any suspicion of proselytism, Catholic masters were always appointed.

The Bishop's objections: 1. General. 2. Special.

Answer to No. 1.

Answer to No. 2.

Apparent ground for alarm on the part of the R. C. clergy.

Real fidelity in the management.

Catholic masters always appointed.

As I am most anxious for the success of every project which would benefit the Catholic population, I am willing to go as far as I can to remove your objections to the school. For this purpose I intend in the first place to take the management of the school entirely into my own hands, my brother acting for me in my absence. In the second place, should any objection be made by the clergy of either denomination to one of the two visiting or giving instruction, secular or religious, whether in or out of school-hours, I will discourage such visiting, and prevent such giving of instruction, and shall only insist that the members of both denominations shall be treated with perfect equality. In the choice of a master I am willing to consult the clergy interested in the school, reserving to myself, however, the power of appointment. If your lordship is satisfied

Proposed con-

cessions of the manager: 1. Control at first hand. 2. Obnoxious interference to be discouraged or prevented. 3. Clergy to be consulted in the choice of masters. Hopes of success, from the promised co-operation of the local clergy, and the want being felt by the people.

that these guarantees are sufficient to insure the Catholics against any undue influence, and if you accordingly authorize their attendance, I have no doubt that the school will be successful and of great service to the neighbourhood. I have conferred with the clergymen located here, and think I may reckon on their co-operation in case your lordship sees fit to withdraw your censure. That the school is required is clear from the fact that it is situated in the centre of a populous district, and is distant between two and three miles from the nearest school, and that in consequence of the distance of the nearest Catholic school (Rathkeale) some Catholic children are in the habit of attending the Wandesford school, which is conducted on purely Protestant principles.

Your lordship will understand that I by no means wish that your sanction, if given, should be given as a personal favour to me, and that my sole motive for establishing the school is, to provide for the Catholics as well as the Protestants of the neighbourhood (comprising several tenants of my own) the means of education, the loss of which is, I understand, now much felt.

I remain &c.,

EDWARD WILLIAM O'BRIEN.

THE BISHOP'S REPLY.

Park House, Limerick,
November 11, 1864.

The bishop considers the school in question dangerous,

MY DEAR MR. O'BRIEN,—In reference to the school at Kilscannell, I wish to say first, that it was reported to me by the priests chiefly concerned, as one of very dangerous tendency; and that any directions given by me in the matter were founded entirely on this report. The clergymen who communicated with me on the subject have not, so far as I know, altered their opinions of the school, nor does it seem to me, from the account given of it by yourself, that I could safely recommend it for Catholic children.

because the appointment of teacher does not rest with the priest.

One of the most important points to be considered is the appointment of teachers, who should be not only beyond all suspicion of tampering with the faith of the children, but who should be able to give to the Catholic children religious instruction; for, situated as that school is, it would be only seldom that the priests, burdened with so many other professional duties, could attend personally to give the religious lessons. Now, you give no guarantee, nor seeing that the school is to be largely attended by Protestants, could you give any, that the teachers should be always such as to leave no ground of objection to the priests. You reserve the appointment to yourself, only promising to consult the clergy concerned of *both denominations*. I am quite sure you would act impartially, and with the strictest honour towards the Catholic children, but in the circumstances you could not possibly adopt a course that would give us the security we are bound to require. You should have one of the teachers a Protestant, and that of itself, considering the class of children that frequent the school, would be a capital objection.

General ground of objection to mixed schools.

Alleged objection of Protestants to National schools,

It is quite true, as you were informed, that I dislike *bona fide* mixed schools. I consider them very dangerous to the faith and morals of Catholic youth. Indeed, it is only because the National schools of the country are in practice denominational and not mixed, that they are at all tolerable to Catholics. Every one knows, for it has been fully brought out in a Parliamentary report that mixed education in National schools is a mere fiction. You say that "managers of National schools who allow them to become in practice denominational are guilty of a dereliction of duty." That is a hard saying, but so many are condemned by it that it is easy for individuals to bear it. You seem to forget that there are many parishes where there are no Protestants to be found—young or old; still more parishes where, though there are some Protestants, there are none that would go to a National school. What are the managers in such localities to do? You are not perhaps aware that there are several schools of which the National Board is itself the patron, and which, nevertheless, are exclusively Catholic. How could it be otherwise in a Catholic country where Protestants are so few? It seems to me that a manager acquits himself well if he conducts the school in accordance with the rules of the Board.

and the unreasonableness of coercion.

A National school under the management of a Catholic priest or layman should be open to Protestant children if they choose to enter; but the manager is not bound to compel them to come, nor is he guilty of any dereliction of duty by allowing Catholic children to fill the school, if they alone present themselves, or if there are none but Catholics in the locality.

Consent to remove the ban refused.

It would seem then that your school must share the fate of all National schools in the south of Ireland; it must become practically denominational—for either the management, appointment of teachers, &c., will be in the hands of Protestants, and the Catholics won't come, or it will be managed by Catholics, and then the Protestants will keep away.

I am glad you have taken this question entirely out of the region of personal favour to yourself, for, were it otherwise, my great desire to oblige and compliment you would embarrass me very much in discussing the matter.

Believe me, &c., &c.,

✠ Geo. BUTLER.

Corresponding objections to the central Normal school

35. The spirit of these objections affects not only the scholars of institutions not directly subject to the priest but also such members of the teaching staff as may be desirous of a professional training in the Normal school of Dublin. The result is displayed in the extremely small proportion of trained teachers in my district, and, failing some modification of the present arrangement accompanied by a restriction in regard to the required standard of qualification for the office, it is safe to affirm that the recognised essential of special training for the profession will shortly be extinguished altogether.

threaten to extinguish "training," unless otherwise provided for.

36. An extract from a letter, lately addressed to one of the Inspectors of my district by a lady benevolently interested in the teacher affected, will serve as an example of cases of frequent occurrence:—

"The female teacher in the———National school has been summoned for training, but the Rev.———(the patron) has refused to give her a certificate for good conduct. He says his Bishop has forbidden all priests to give such certificates. This has put the girl in a great dilemma, but she is still most anxious to go to the Normal school, and her preparations are made. I have written to the Board, stating the circumstances, and vouching for the girl's good character. I hope my guarantee will be accepted, as it would be most unfair if the patron's refusal should prove an impediment to her advancement."

The priests individually not always responsible.

37. The result may be that the central authorities will feel justified in declining to admit the candidate on account of the non-production of the usual certificate of character, and the girl, whether successful or not in her praiseworthy object, will certainly have to look elsewhere for patronage. And yet I could adduce sufficient evidence to exonerate the clergy, as a body, from much of the responsibility—indeed, their personal sympathies with their people are so strong that, even apart from the desirability of maintaining peaceable relations with all, they would, of themselves unconstrained, good-naturedly consent to a trifling compromise. Although aware that I am touching on delicate ground, I feel tempted to furnish an illustration:—

Example.

38. The master of a National school desired to give himself the usual six months' training in Dublin. A substitute was found, and the temporary consent of the patron secured; but before he had been three months at the Normal school he received a peremptory order to return to his duties. This he ventured to resist, on the plea that his training was incomplete. Having finished the curriculum, the master returned and claimed his school; but the patron refused, or feigned to refuse. The master complained to the parents, who declared they would support his claim, and forcibly eject the *locum tenens* from the premises. On consideration, however, they decided merely to obstruct his access. The doors were accordingly nailed up and barricaded, so that neither the pupils nor their temporary teacher could gain an entrance in the morning. This state of affairs

continued until the priest thought proper to send for the lawful master, and request him to resume his duties. I have no doubt the master abstained from any unseemly demonstration of triumph, "Because," said he "the priest was himself at the bottom of the whole manœuvre." It was enough for the priest that he could furnish his Bishop with the feasible excuse furnished by the exercise of external pressure.

39. Such are the shifts and artifices engendered by the hierarchical objection to the Normal school, on the ground that it is under the Board's supervision, and notwithstanding the fact that its staff of teachers is apportioned among Catholics and Protestants fairly and equitably.

40. In concluding this branch of my report, I feel bound to notice the more general arguments that were constantly urged on my attention by the advocates of school denominationalism. I refer especially to the plea for equality with the existing school system of England. The plea is distinguished by an air of plausibility, but the special exigencies and circumstances of the case require to be taken into consideration. It is on this ground, for example, that Scotland is in the habit of resisting the extension even of approved English measures, and that Ireland itself claims, in other respects, an exceptional rather than a uniform method of legislation. Above all, the Irish school system must first be proved to have failed in its main object—namely, the education of the people at large—before the question of a change in its structure can be seriously entertained. A due consideration must also be paid to the opinion, which is strongly maintained by a respectable proportion of the educated and thoughtful laity, Catholic and Protestant, that their country is on this head in advance of England, and that, therefore, any change would be of a retrograde character. Besides, in a more specific sense, the features of the two cases are widely divergent—first, in respect to the maintenance of the schools; secondly, in regard to the sectarian elements of the two Kingdoms respectively. Both points are relevant to the salient question at issue:—

Denominationalists' plea on the ground of equality with England,

1. Although non-vested schools, at the outset of their affiliation with the Board bear a close approximation to the so-called "annual grant cases" of England, it is equally true, as will be fully explained in the sequel, that with such preliminary steps all resemblance ceases. In English schools the current cost of maintenance, to the extent of at least two-thirds continues to be borne by the managers and the pupils jointly; but in Ireland the expenses fall almost entirely on the Board. Now, as the cardinal condition of both departmental grants-in-aid presupposes local resources, which, in turn, are the sole ground for the conservation of local control, it follows that, where the former element is wanting, the latter prerogative is logically forfeited, and accordingly, on every such occasion, the Committee of Council withdraws its grants. The Irish Board, on the other hand neither suspends its grants nor claims the forfeiture of local management. If placed on the same footing as England, I presume the Irish advocates of equality would be prepared to renounce the exceptional advantage thus enjoyed under the present system.

which, if correctly apprehended, they would by no means desire;

2. In regard to the sectarian peculiarities of the two cases, it may fairly be advanced, on the one hand, that in England the various religious bodies are each numerically strong enough to make it generally practicable to establish separate schools; and that when this is not the case the temptation to incur a separate expenditure is largely restrained by the comparative slightness of the dissimilarity between the different phases of Protestantism. Moreover, the schools of the British and Foreign Society are, in principle and practice, undenominational and unsectarian, while the proselytizing capacity of strictly denominational schools is limited by the "conscience clause."

besides, the sectarian features of the two cases are different,

3. Further it appears that a denominational system, *plus* a "conscience clause," would not give satisfaction to the Roman Catholic hierarchy, or prove suitable to the requirements of the country. The bishop's manifesto is, on this point, explicit and conclusive:—"All restrictions upon *religious teaching to be removed;*" "*the fulness of distinctive religious teaching to be permitted to enter into the course of secular instruction;*" "*full liberty to be given to the performance of religious exercises, and the use of religious emblems,*" &c., &c. Not only would this be impracticable under a "mixed" system, but the tone of the demand is obviously discordant with any practical solution short of the maintenance of the existing scheme. For, it should not be forgotten that, even in England, a conscience clause of a practically permissive character is not to be regarded as an infallible specific against proselytism, since it is quite possible to contrive a variety of sufficiently tangible pretexts for the dismissal, or, at least, the exclusion from special schools, of children belonging to an objectionable creed.

and the "conscience clause" of the one is inapplicable to the other.

41. Finally, the opinion of the late Count Cavour—himself a Roman Catholic—is worthy of record. "I have already spoken of the laudable efforts of the Whig ministry to found a vast system of National education, on a plan eminently tolerant and reasonable. That plan, which has been received with favour and sympathy by the Catholics, has succeeded beyond the hopes of its founder. The National schools have multiplied rapidly, and their number, already very considerable, is daily on the increase. The good they do is immense, for they are conducted on a system and by methods which leave nothing to be wished by the most exacting advocates of popular instruction. The existing system is based on the complete absence of proselytism, on a spirit of absolute impartiality among the different creeds. The men who direct it are justly reputed as the most intelligent, the wisest, and the most moderate of the clergy—Catholic and Protestant—along with the most eminent laymen of the country. Would it remain unchanged if the power were allowed to pass into the hands of a Catholic democracy? Assuredly not. It would certainly be disposed to place under the sole direction of the clergy the National schools,—all those at least which exist in the provinces, where the Protestants are an imperceptible minority. Such a result will be regarded as certain by all those who, relying on the lessons of history, reflect on the tendencies of religious parties when they have all the political power in their own hands. Now this would be a *great misfortune* to the country, an obstacle to the progress of instruction."*

The late Count Cavour's view of the subject.

42. I now beg leave, my lords and gentlemen, to draw attention to the second leading feature of the Irish school system, under the twofold head of the dependence of the school for its maintenance on the Board, and of the teacher on the patron. It is important, first of all, to notice the circumstances that affect the establishment of National schools, and more especially those of a non-vested description, which almost exclusively prevail in my district. I will therefore briefly explain the relation of the school to the patron and to the Board successively.

SECOND BRANCH OF THE REPORT.

1. Maintenance of the School by the Board.

2. Dependence of the teacher on the patron.

43. Inasmuch as the bulk of the population consists of Roman Catholics, it follows that, especially in the rural districts (where there are frequently no Protestants at all), the priest is the only possible local representative, and therefore the patron of the school. Animated as he is with the professional zeal to confer substantial benefits on his flock, he is fully aware that he cannot do so in a more acceptable form than by the provision of a good and easily accessible school. It becomes his object to adopt a measure which will enable him to retain the maximum of personal control at the minimum of pecuniary risk. He accordingly secures this object by inaugurating at first hand a school of his own (*non*-vested), and then by connecting it with the

How the patron utilizes the public money,

* "THOUGHTS ON IRELAND: *its Present and its Future*," by the late Count Cavour. Translated by W. B. Hodgson, LL.D. London: Trübner and Co.

Board. Thenceforth his pecuniary responsibilities are, as I shall presently show, virtually at an end, while his right of control remains intact.

and how the Board deals with it,

44. In regard to the Board, endowed as it is with imperial authority, and intrusted with the grave duties attending the administration of public funds, it is, of course, legitimately entitled to specify and determine the conditions on which grants are contingent. For example, it is at liberty to adopt the principle of requiring an equivalent proportioned to its own grants to be locally raised, or that of dispensing the public moneys with regard to the preliminary, but not the continued, fulfilment of certain conditions. The Board's plan is *in principle* the former, *in practice* the latter; and as this involves a departure from the original scheme, the point is deserving of record.

despite of the "rule" to the contrary,

45. Satisfied—and as I sometimes thought too easily satisfied—with the preliminary conditions, the Board confines its grants (exclusive of a first supply of books, &c.) to the teaching staff; and these payments are declared to be dependent "on some local provision being made in aid of the teacher's salary, in addition to the school fees" (Rules: part iii. 3, and vi. 2.) But of the 92 National schools visited by me, and continuing in receipt of annual grants, the accounts of no less than 77 exhibit no local contributions whatsoever. The remainder stands as follows—5 endowed, total amount £85: 10 aided by the voluntary contributions of only *three* individuals, total amount £45.

which is a dead letter, in regard to local contributions.

46. In point of fact, the "rule" of the Board has become so signally inoperative that the distribution of the public money is unaccompanied by the faintest allusion to local effort. Apart from the general demoralizing effect of a fictitious obligation, the material loss accruing to the profession itself from so wholesale a subversion of an admirable safeguard is seriously to be deprecated. Whether or not the extension of the system depended on the rule becoming obsolete, the practical result is, that the scholastic profession has been thereby placed in an anomalous, undignified, and socially degraded attitude towards the community at large.

Limerick and Clare contrasted with Devon and Somerset.

47. The following table exhibits details of the schools under review, contrasted with those of an English group selected at random from a portion of my former district, a region presenting industrial phases as nearly as possible corresponding to those of Limerick and Clare—namely, Devon and Somerset:—

92 Schools of Limerick and Clare.		92 Schools of Devon and Somerset.	
Average Attendance,	7762	Average Attendance,	7764*
Local Subscriptions,	£45 0 0	Local Subscriptions,	£3,562 15 10
School-fees,	£1,052 5 0	School-fees,	£2,513 17 7½
Government Grants,	£4,854 15 6	Government Grants,	£3,546 14 4
Incomes of Teachers, (Board Grants and School-fees,)	£3,501 8 10	Incomes of Teachers,	£7,028 17 3†

Presumed reasons for Irish shortcomings:

48. This remarkable discrepancy between the voluntary exertions of two classes of people, possessing the same, or nearly the same means, and actuated by an equal desire to obtain a kindred object, appears to call for some explanation, however conjectural it may be. The causes, so far as I was enabled to judge are:—

1. Permissiveness of the rule.

1. The mere permissiveness of the Board's rule, inasmuch as the Committee of Council's provisional and *ex post facto* requirement has brought about a very different result in regard to the maintenance or development of voluntary effort in England.

2. Indifference of managers.

2. The indifference or inactivity of school patrons, as this is everywhere evinced by their disregard of even the indispensable desiderata of instruction. For example, maps are allowed to rot on the walls and apparatus to fall into decay, unless renewed at the expense of the teacher or the pupils.

3. Apathy of upper class,

3. The blindness of the upper classes to the obvious need of help which a distinctly auxiliary system demands, and the deep-rooted belief pervading high and low that "the Government" is bound to do everything.

which is unaccountable,

49. In regard to the last-mentioned explanation, it is difficult to reconcile the pecuniary remissness of the upper class, or, indeed, of the educated laity in general, with the favourable view they, as a whole, entertain of popular education and of National schools in particular. These they regard with that degree of enthusiasm which is ordinarily inspired by the contemplation of an institution of home growth; but they, at the same time, too lightly forget the fact that the system is a supplementary one like that of England; for, unlike the latter, it is supplementary to *nothing!* They point triumphantly to the National school as to a national bulwark and tower of strength, reared by their own craft, throwing into the shade every system elsewhere established, but their personal interest even in the school of their neighbourhood has not sufficient intensity to carry them over the threshold of the door. However strongly their proverbial freehandedness may be manifested in connexion with other objects, I regret to say that the poverty of local resources under which their highly prized National schools and teachers are permitted to languish, seems to be strongly at variance with this well-known national characteristic.

unless on the ground of ignorance;

50. The only plausible excuse I can devise, by way of extenuating the above unwilling reproach is, that the more opulent classes are possibly ignorant of the actual state of the case; and I confess that the interest of the corresponding grade of society in England requires to be constantly aroused to the exigencies of a partially voluntary system. In regard to the latter, a crumb of comfort is afforded by the fact, that in the most secluded hamlet the formation of a school committee is nearly always practicable, and, whether individually or by deputy, the financial duties are duly and, on the whole, efficiently executed; but in the west of Ireland school committees are as yet unheard of, and the patron has other work on hand than to beg for subscriptions, which the Board has substantially pronounced superfluous. Nevertheless, I have no reason to suppose that he would not gladly accept the services of a lay volunteer, were such to be found, willing, as he would require to be, to perform the task, *not* perfunctorily or by fits and starts, but resolutely and systematically.

the prevalence of which is so surprising

51. Not to mention the duties which those "whom God hath prospered" owe to their poorer brethren, I have simply to express my surprise that, in so enlightened a section of the realm, the so-called superior class should have refrained from making a spontaneous effort to understand the nature of the education system, and thus to comprehend the aid of which it stands in need. When, for example, I had occasion to deprecate the existence of essentially local deficiencies, I was, at first, misled by the cordiality with which my strictures were accepted. But no sooner was it perceived that my drift was to show how the existing state of affairs reflected personal discredit, than my Irish friends essayed to rebut my statements of matters of fact with allegations so unfounded, as almost to exceed the bounds of belief. or to explain them away by palliations so irrelevant, that I became at length convinced of the futility of reasoning with them on the subject. I have to express a hope that their self-complacent supineness will, in time, give place to juster and more comprehensive ideas or lines of action than the following characteristic illustrations may serve to exemplify:—

Examples.

(*a*) A highly educated landed proprietor (Protestant) was, after sufficient explanation, so powerless to conceive

* The schools were selected with the view of striking a corresponding average with the Irish schools.

† 61 Dwelling-houses (rated at £10 rental each) must also be allowed for.

the purpose of my inquiries that he confined himself to repeatedly urging the following point, "that the *spelling* of the scholars belonging to the National school adjoining his property demanded the special attention of the Royal Commissioners!"

(*b*) An intelligent and successful city merchant (Catholic) argued long and strenuously to prove that the absence of Roman Catholic pupils from the Limerick Model School (already referred to) was a shame on the part of the "Government." On pointing out to him that Catholics were deterred from entering that school by their own clergy, I was assured that I had used the best argument in his favour; "for it was clearly the business of the Government to do what the priest wanted," namely, to deliver the control of a vested Board school into the hands of a special body, to the exclusion of all others! Example 2.

(*c*) Out of fifty of the circular list of questions which I distributed, according to instructions, among the *élite* of the district, only two have been returned (and these by personal friends). Being particularly anxious to secure the answers of a certain dignitary of the Church, I called for the circular five weeks after delivery. He begged a month's further delay, desiring me then to repeat my request and to be sure to "put a little pressure on him!" Example 3.

(*d*) Even in the cultivated city of Limerick it was not my good-fortune to meet with a single instance of a committee of lay gentlemen or ladies associated for the purpose of advancing the educational or social interests of the working classes. In a central and conspicuous part of the city, my attention was directed to a rickety and unsightly tenement, bearing the legend "Night School." This I found frequented by mechanics, who were contentedly smoking their pipes, but not a whit the less eager to receive such instruction as any stray philanthropist might feel disposed to impart. The meagrely furnished rooms were, however, adorned with a "library," the contents of which could scarcely fail to damp the ardour of the most enthusiastic votary of knowledge. Example 4.

(*e*) The *effete* condition of the five Church schools, hereafter to be described, is at least suggestive of the pleasing hypothesis that even sectarian rivalry has no existence in Limerick. The only *Church* school, worthy of the name, is a ragged school in connexion with a flourishing *voluntary* Church of England! In short, the Roman Catholic communities have alone redeemed the city, and that only to a very limited extent, from the reproach of being a hotbed of vice and ignorance. Example 5.

(*f*) Lastly, the poverty of the National teachers, and above all, the heart-rending necessities of the "Hedge" schoolmasters, referred to in the sequel, would not have remained so long unheard of, or unsatisfied in any other country with which I am acquainted. Example 6.

52. These, my Lords and Gentlemen, are a few samples of the *numerous* evidences that force themselves upon me, of the prevalence among the well-to-do, superior stratum of society of a spirit of apathy and inactivity, such as I venture to say is elsewhere unparalleled, and against which I respectfully submit any scheme essentially dependent on voluntary help, is long destined to contend in vain.

53. The only remaining local resources comprise endowments and school-fees. In regard to the former, the foregoing remarks on the characteristics of that class from which, elsewhere, bequests commonly spring sufficiently indicate that in the west of Ireland, so far as National schools are concerned, they are not to be looked for. Remaining resources limited to school fees,

54. I am enabled, therefore, to devote my remaining space to that most wholesome of all education resources —*school-fees*.

55. A glance at the three columns in my tabular view (Appendix A), headed *Average Attendance, Fees*, will convey the requisite information in detail. I will here contrast the averages of the respective groups of Irish and English inspected schools formerly alluded to:— which contrast unfavourably with those of England.

	Average Attendance.	Fees. £	*s.*	*d.*
92 Irish Schools, ...	7,762	1,052	5	0
92 English Schools, ...	7,764	2,513	17	7½

56. Finally, while in the former case considerably above one half are free scholars, in the latter there are hardly any; and where they do exist, they are generally paid for by philanthropic persons. What are the causes of this difference? Persons imbued with the notion that the lower classes of the rural population of Ireland are steeped in squalid poverty, will, doubtless, be disposed to ascribe the meagreness of the school fund to that cause. But, first, it is freely acknowledged by experienced persons that the insignificant item of expenditure of a penny or two pence per week is *not* the real obstacle in the way to attendance. The grounds of detention from school are sometimes indifference, but most commonly the advantage accruing from children's earnings or home work, and as the earnings of the older children may amount, say to half a crown per week, it may easily be understood that this is a consideration of no little importance in the eyes of a poor family. Secondly, the peasantry of Clare and Limerick being, as I fully ascertained, better off than that of Devon and Somerset, poverty is scarcely admissible as the cause of the former's shortcomings. The causes are not impecuniosity,

57. The alleged want of appreciation of education is an equally feasible, but, in my opinion, an equally untenable explanation. For, bearing in mind that the profit derivable from juvenile labour is the grand obstacle in the way of attendance at school, the very fact that free scholars exist at all fairly proves the willingness of parents to forego, to a considerable extent, a material addition to their own means, for the sake of the ulterior advantage of their offspring. The additional fact that a large majority of the free scholars are of the poorer type obviously strengthens an opinion which I have other more general grounds for holding. nor want of appreciation of education,

58. But the no less well ascertained facts that a fair proportion of the free scholars belongs to the well-to-do section of the farming class, and that the parents of those who pay fees (ranging from one to five shillings per quarter) do so irregularly and grudgingly, point, with most unsatisfactory definiteness to the radical causes:— but sheer parsimony,

(*a*) The erroneous notion which appears to have quickly penetrated from the upper to the lower class, that the "National" are absolutely "Government" schools, and the unfailing faith in the capacity of the imperial treasury. Hedge schoolmasters (where they happen not to have been extinguished by the establishment of a National school) made no complaint of the difficulty of procuring their fees (one penny to three pence weekly) from the very poorest; and in several National schools where the free scholars were insignificantly few, the explanation given was that they had but lately supplanted the hedge school, and the parents had therefore not yet lost the habit of paying there acquired. based on a shallow pretext.

(*b*) The existence *in towns* of rival institutions, such as the Christian Brothers' schools—a cardinal principle of which is gratuitous education. Other ancillary causes.

(*c*) The privilege exercised by the patron of recommending cases for free admission to the school, often without the desirable degree of discrimination.

(*d*) A want of system and energy on the part of the teacher in the mode of exacting his legitimate dues.

(*e*) A moral deficiency, on the part of parents, of that commendable pride in paying "for what they get," which is characteristic of the industrious poor of England.

59. On the last-mentioned head I beg to offer a few remarks—first, as to the fact; next, as to its cause:—

These, however, yield to the first mentioned.

60. The reluctance evinced by even well-to-do people to pay the small school-fee is everywhere notorious, and the testimony of teachers, who are for the most part intimately acquainted with the circumstances of the parents, is on this point uniform. Frequent instances were related to me of parents threatening to withdraw their children from the school should the customary fee be asked for a second time; and even of capitalist farmers and others enjoying a satisfactory competency from freeholds and otherwise, who sometimes viewed the fee as an extortion, sometimes absolutely refused to pay it, justifying their refusal to the calmly protesting teacher by the ever-recurring reference to the "Government, that is rich enough to pay them and him." In various parts of England, on the other hand, I have met with numerous instances of poor persons who, rather than feel their indebtedness to the public, struggled to pay the school-fee, and who, if they were made aware that their payments were far from covering the actual cost, would, I am confident, strain every effort to meet any specified demand. The agricultural poor of either country cannot of course be expected to make pecuniary sacrifices amid the hardships with which they have to struggle; but even that class in England, to a fair extent, considers an exception in its favour—in the absence of corrupting influences, and where the school-fee is the generally received rule—as a personal stigma akin to that of pauperism. The lower classes of the Irish, on the other hand, show a pliant disposition not only to shirk payments altogether, but also to accept gratuitous benefits without compunction; and even some of those who are tolerably well off have been known to feign distress for the sake of securing a share of any charity within their reach.

which is fostered by a system of pauperization;

61. I have ventured to lay exceptional stress on the deficiency of the school-fees in my district, because of its intrinsic importance—not so much in a financial point of view, as in its bearing on the development of the character of the people under any scheme of popular education. The *habit of paying* (even say, a halfpenny per week), would tend to foster the germs of that species of moral pride in which I found the people of the west of Ireland lamentably deficient. Not only are the poor systematically demoralized by a wide-spread practice of promiscuous alms-giving, but the entire industrial class is impregnated with an unwholesome trust in eleemosynary institutions of every description. And, so far from attempting to counteract by means of counsel or the encouragement of self-supporting organizations this baneful result of an epoch of genuine distress long since extinct, the upper section of the population is imbued with an indiscriminating sentiment of wholesale "charity," that serves only to perpetuate the evil. To this even the teachers, poor as they themselves are, form no exception: inasmuch as the majority of those I conversed with on the subject appeared incapable of appreciating the question of the school-fee in the light in which I have above endeavoured to place it. They prefer to forego the personal advantage of fees to hazarding the cruel charge of "extortion," and, swayed by purely imaginary scruples, are, even in the most warrantable circumstances unaccustomed to strain their efforts to exact dues that are elsewhere cheerfully paid.

of a remedial character.

62. Utterly hopeless as I confess myself to be in regard to the possibility of local contributions being raised in aid of the school on any other principle than that of rating, I do not altogether despair of the school-fee becoming the rule instead of the exception, if judiciously stimulated and popularly acknowledged. Its practicability appears to be sufficiently proved by a few examples of tolerable success on the part of *good* and energetic teachers, who have the common sense to regard their toil as being worthy of a direct reward:—

	Average Attendance.	Fees. £	s.	d.	Free Scholars.
Kilmallock, Boys' and Girls' N. S., . .	279	51	7	9	141*
Ardpatrick, ...	145	59	0	0	48
Glenroe, ...	139	40	0	0	35
Mahoonaghmore, *Mixed* N. S., . . .	149	23	0	0	10†

63. I have merely to remark in concluding this division of my subject, that every teacher readily avowed, what is corroborated by universal experience, that the *attendance* and *progress* of the paying pupils bore a close correspondence to the amount of the fees actually paid.

I. Relation of the teacher to the patron.

64. I now proceed to consider the relations of the teacher to the patron and to the Board.

65. The patron's power over the teacher is rendered absolute by the customary form of engagement which is terminable without notice; or, in other words, the teacher is liable to be dismissed at any moment, and without explanation of the cause. Now, the Irish mode of land tenure (so loudly condemned, and by none more strongly than the class constituting school patrons), presents a favourable contrast to the teachers' tenure of office; for whilst the one presupposes a six months' notice, the other is simple tenancy at will. Moreover, the former is additionally protected by the force of a widely-expanding public opinion; the latter from the mere fact of isolation, and the natural disposition of the public to stand aloof from disputes in which the patron is embroiled, necessarily precludes the existence of any local safeguard to the individual interest of the scholastic profession. Consequently, all the arguments commonly adduced against the one form of tenure apply with increased force to the other. I refrain from any attempt to explain the partiality of the patrons for a species of contract of which, when applied to the wants of the agricultural population at large, they profess the utmost abhorrence. I have simply to report that the general sense of the insecurity of their tenure of office, galls and frets the profession to an incalculable extent, and that the mildest modification—securing to them even the rights and privileges enjoyed by domestic servants would be hailed with gratitude.

Objectionable on two grounds.

66. The existing form of engagement, terminable as it is at a moment's notice, is objectional on two grounds—the first general, the second special. These I shall specify and illustrate in their order.

1st. Generally objectionable;

67. The general ground is the constant state of apprehension on the part of the teachers, that they may be suddenly turned adrift on the world with blemished reputations, and consequent hopelessness of earning the barest means of livelihood. For they are fully aware that their dismissal by one patron will be held to be a strong ground for their rejection by another.

68. If, as is fortunately the rule, school patrons seldom stretch their authority to the utmost limits, or even, as is frequently the case, evince a spirit of cordial appreciation and co-operation with teachers, the fact remains that, they carry in their hands the doom of individuals composing a profession that rests its authority on dignity and independence. Is there any conceivable justification for the fact that the Irish teacher is at a disadvantage, when compared with the tiller of the soil, or even with a domestic drudge? Encouraged in his youth, as a

* The disproportion between respective numbers for the boys' and girls' schools—35 in the former and 106 in the latter—is accounted for by cause (*d*) above mentioned.

† The master of this school has, with characteristic energy, bestowed special attention on this as on every department of his work. N.B.—The school being a *mixed* one presents the maximum of difficulty.

monitor, to join the ranks of the profession, at a time when reflection is crude, and the judicious choice of a career appears to depend on his immediate surroundings, he has been debarred the chances of success in any other sphere of activity. Instead of being incumbered with material obstructions and restrictions, he clearly merits an altogether exceptional method of treatment, which will enable him to enjoy a fair proportion of immunity from the cares of life. For this the first essential is, I need hardly say, assured means of living, and this the Irish teacher is denied. The inevitable effect is, that he is constrained to demean himself towards his patron with obsequiousness, and to submit to conditions at once intolerable and humiliating. For example, none of the teachers visited by me is in receipt of any local salary; many are required to keep the school premises in efficient repair, and a few have no option but to pay an annual rent or resign. The shape this exaction is capable of assuming is illustrated by the following case :— inasmuch as it cuts at the root of the first law of life.

69. Acting on previous information, I visited a certain school, the master of which, according to rumour, paid a rent of £4 for the school premises. His income amounted to a total of £37, composed of his Government stipend of £24, and school-fees of £13. On putting the question categorically to the master, I was surprised and pleased to find that I had been misinformed. Presently, however, he admitted that he paid £4 per annum for his dwelling; this, as I at length discovered, consisted of what had formerly been a single-stalled stable—door, rafters, and flooring in their original condition, and not in any sense fitted up or decently adapted as a human home. A farmer subsequently told me that "15*s.* was a fair rental, but that *he* would give no more than 5*s.* for it as a piggery." In point of fact, the £4 represented the valuation of the entire premises, including school, stable and coach-house used by the patron, and the aforesaid "dwelling." Here arises the question,—*Why did the master equivocate?* For the simple reason that he was afraid of losing his situation by a betrayal of his private arrangement with the patron. The same natural apprehension—amounting, indeed, to a moral cowardice, fatal alike to personal and professional dignity—oppresses more or less all teachers of non-vested schools; and their evidence was accorded, generally, with fear and trembling, sometimes with a superfluity of daring that revealed a high resolve to be prepared for the worst consequences. Example.

70. Liability to abuse constitutes a special reason against the existing form of tenure, and, rare as cases of personal hardship fortunately are, tells strongly in favour of a change in the present system. By way of example, I cite one of the cases that fell under my notice :— 2nd. Specially objectionable, on account of liability to abuse.

Mrs. Lynch, late Head Mistress, National School, Kilkee.

71. Mrs. Lynch had been teacher of the above school for about fifteen years. She had achieved a high local reputation, attracted a large attendance, and earned the repeated encomiums of the Government Inspectors. Father Breen, lately deceased, was the patron of the school. His professional and general character stood high, and up to the date of the unfortunate collision now to be described, he evinced every mark of appreciation of Mrs. Lynch's services. Example 1.

72. It appears that Miss M'Cowan, one of the monitresses, took a fancy to a particular fashion of dressing and arranging her hair; this excited either the appreciation or curiosity of Miss Devine, assistant teacher, who during the usual interval of work, on a certain fatal day, proceeded to practise an imitation of Miss M'Cowan's *coiffure* on the tresses of one or two of the elder scholars. Instead of feeling flattered by so distinguished a mark of her superior's approval, Miss M'Cowan appears to have viewed the infraction of copyright as a breach of *caste*, for she forthwith reported the insult to her father, who happened to enjoy the friendship of Father Breen.

73. Mr. M'Cowan represented the grievance to Father Breen, and solicited the worthy priest's intervention. He at once proceeded to the school and expostulated with Mrs. Lynch, who now for the *first time* heard of the affair; she appears to have protested against any implication or responsibility in a matter that was, in her opinion, entitled to be classed with the innocent doings of her subordinates out of school-hours; and here the dispute might have come to a timely and deserved end, had not a fresh source of perplexity arisen.

74. Mr. M'Cowan, ex-coastguardsman and plaintiff in the case, committed, at this stage of the proceedings, a breach of the etiquette commonly expected of clients. He supplemented Father Breen's advocacy, out of court and in the public ear, by personal denunciations of Mrs. Lynch, construed by her as being injurious to her reputation, and therefore libellous.

75. At this critical point Mr. Lynch, invalided ex-constable, and husband of the defendant, naturally comes upon the scene. He, as a deliberate man, distasteful of verbose or other wrangling, confides his cares to an attorney, who, in the style of the profession, firmly but courteously demands of Mr. M'Cowan retractation and apology, with the alternative of action at law.

76. Mr. M'Cowan on receipt of the cogent missive, delivers it to Father Breen, who immediately repairs to the unfortunate victim, Mrs. Lynch, and, after the usual kind of altercation, dismisses her on the spot. In other words, she, who had no professional concern with the entire transaction, is discharged from a school that had virtually been created by her individual efforts.

77. Her feelings were so overwrought by the personal annoyance attending the various circumstances of the case that she was seized with a paralytic stroke, from which she is now barely convalescent. Greatly as she has been commiserated by the public of her neighbourhood, she has received no substantial help, and, now that her health is shattered, her hopes of procuring another school are faint in the extreme.

78. Other cases of similar hardship came within my knowledge. Of these I need simply allude to one, in which the schoolmaster is represented as being met, while on his way to his school, and accidentally informed that his place had been supplied by another. He was, so far as I could judge and learn from his inspector, a qualified and good teacher, and the only reason that could be assigned for his dismissal was his refusal to repair certain windows and doors damaged in his predecessor's reign. His place was supplied by a master who had thrice been dismissed for drunkenness—one of the offences having been committed while in charge of the school in question. Example 2.

79. In regard to the Board, the teacher, although virtually its paid functionary, not only does not enjoy its protection, or even recognition, but is exposed to the injurious reaction of certain regulations which on that account appear to me to call for some modification. "The Commissioners do not correspond with teachers of National schools" (*Rules*, pt. iii. s. ix. 4). In other words, the Board, by a *fiat* of its own, renders itself powerless to redress the wrongs or punish the delinquencies of its own staff. The apparent motive is, the respect due to proprietary claims (in the case of non-vested schools), combined with the trouble that would attend any interference with the relations between teacher and patron. The point is, I confess, surrounded with exceptional difficulties which arise mainly from the partial nature of the National scheme, and which I should imagine were quite unforeseen by its first projectors. A non-vested school, being in fact private property, confers on its patron the right of appointing, and therefore that of dismissing the teacher, and any interference with this right would appear to be an infringement of law or custom. On the other hand, with the view of checking possible abuses such as I have above recorded, the Board is competent to administer its grants in accordance with the best interests of the community at large, and of the scholastic profession in particular. And I need hardly say that the *right* II. Relation of the teacher to the Board, which officially ignores his existence,

of appeal, so strenuously urged by the teachers as a body, would go far towards remedying the evils complained of. Sensitive as the English schoolmaster is on the same head, the reasons for a corresponding concession by the Committee of Council are less cogent; for, on the one hand, the teacher in England, is not a directly paid functionary of the State; and, on the other, he is protected by a strong public opinion, and the personal influence of his Inspector, and comparatively unrestricted in his alternative resources.

and sanctions the employment of incompetent substitutes, thus polluting the market supply,

80. If, however, the Board is powerless to aid the schoolmaster directly, it is reasonable to expect that it will at least refrain from interposing obstacles in his way, and more especially such as are calculated to deteriorate the present staff of trained or classed teachers, if not to extinguish them altogether. In this light I venture to regard the existing provision of "probationers," by means of which the patron is enabled to supply vacancies without inconvenience and with persons of unapproved qualifications. Such *substitutes*—for the most part grossly incompetent—are, it is true, required to submit to a *literary* examination within the year; but neither does this furnish any guarantee of capacity to teach or to conduct a school, nor if they fail—having inferentially damaged the school meanwhile—is the patron precluded from supplying their place with others of corresponding qualifications. The operation of this permissive rule, by paving the way for the inroads of unqualified men on the *bonâ fide* profession, becomes tantamount to a tampering with the market supply, and produces an overwhelming amount of discontent which is, of course, felt with peculiar keenness by those in want of situations. I may here mention that the November number of the *Irish Teachers' Journal* contains no less than thirty-seven advertisements for schools—the applicants being almost entirely trained or "classed." While, then, a Normal school training as formerly noted, is no longer regarded as a *sine qua non*, the profession as a whole is freely allowed to be contaminated by the intrusion of quacks and imbeciles—to the serious detriment of a qualified and superabundant staff, which the Board itself has systematically fostered, and formally sanctioned.

Deficiency of local contributions represents, *pro tanto*, the teacher's loss: for the Board-grants

81. It remains for me to indicate the mode in which the position and prospects of the Irish school-teacher are affected by the state of matters which I have endeavoured to describe. The deficiency of local contributions and school-fees represents, to the extent of that deficiency, a *bonâ fide* diminution of the teacher's income.

82. The annual grants of the Board take the form of personal stipends, payable to the teaching staff, male and female, in ordinary National schools, as follow:—

	Males.	Females.
Head Teachers, . .	£15–52	£14–42
Assistants, &c., . .	15–24	14–20
Monitors, : . .	2–10	2–10*

These are awarded on a graduated scale in accordance with the standing and qualifications of the recipients, and it cannot be denied that the rate of remuneration is, so far as the Board is concerned, both liberal and judicious. But the position of the head teacher—whose stipend averages £24 for males and £20 for females—is altogether singular and exceptional. The grant was intended merely as an augmentation to salaries to be provided from local resources, which, as I have already explained, amount to *nil;* so that the Board-grant (plus a trifling sum raised in school-fees) constitutes in reality the entire salary of the teacher. The plain result is, that the emoluments of the office are at least one-third lower than the standard originally pronounced by the Board to be reasonable and fairly adequate. Thus (excluding the convent and model schools), taking 78 teachers on my list, the incomes of—

were meant to be *supplementary*,

which object has proved fallacious.

	£	*s.*	*d.*		
20 average	21	10	2,	or 8	shillings per week.
40 „	37	0	7,	or 14	„ „
18 „	62	7	2,	or 24	„ „

Further pecuniary drawbacks render the present condition of the teacher hard,

83. Again non-vested schools have seldom a dwelling attached to them, and the teacher is burdened in many instances with the expense of executing repairs, or, in a general way, of making good the effects of tear and wear. When this peculiar exaction embraces, as it not unfrequently does, the items of a pound to thirty shillings for whitewashing the walls, or £5 to £6 for thatching the roof—a repair which is rendered all the more costly from being naturally postponed to the last moment—the exasperation of the teacher becomes, from a human point of view, perfectly well-grounded. Is it even to be wondered at that, under such circumstances, numerous complaints reached my ears of the hardship of being constrained to present their Easter and Christmas offerings to their clerical patrons; or that they have sometimes occasion to feel aggrieved at these doubtless necessary levies being primarily deducted by the patron from the Board's quarterly instalments of their stipends? It is a mistake to suppose that commodities are cheaper in Ireland than in England—a mistake which the slightest reflection on the equalization of market prices produced by the ready dispersion of goods by rail or steam-boats, will at once rectify; and I may also add that, unless the teacher chooses to live in a mud hovel, the rent he pays for a reasonably good dwelling-house is nearly on a par with the English rate. If incumbered by a large family (which is far from being an unusual contingency) the wonder is not so much how he is enabled to maintain his professional rank on labourer's wages, as how he contrives to exist at all; and, in point of fact, he is bound to live in semi-starvation wherever his wife happens to be unemployed in connexion with the school.

and his future is extremely unpromising.

84. Stern as his present lot is, the future has worse terrors in store for him. He looks forward with gloomy apprehensions to the day when he will become physically disqualified, by disease or old age, for the duties of his office. In the limited area over which my observations extended I found four *quondam* National schoolmasters, now disabled, eking out a scanty subsistence in hedge-schools. It was, for example, a melancholy spectacle to see a stone blind octogenarian, once the valued teacher of a neighbouring National school, seated on a stool on the mud floor of a wretched cabin, and labouring at the irksome task of driving the rudiments of "learning" into the heads of a handful of ragged urchins. Another octogenarian, nearly deaf (and, although single and alone, whose cottage and person were the perfection of neatness and cleanliness), assured me that his sole ambition was to have a glass of milk every morning—a luxury which the foreign demand for butter tempted the adjoining dairy farmers to withhold from local consumers. On other occasions, when favoured by the companionship of Dr. Potterton, the able and genial District Inspector, the impression created by the aspect of the veteran teachers, "severe and stern to view," of Larkin's Cross and Lemonville, and of the stout-hearted but consumptive youth of Castleconnel, will not soon be erased.

Justification of their discontent attempted.

85. Such being the only possible future resource open to the superannuated teacher—a resource which, owing to the wide extension of National schools, is daily dwindling to insignificance, can it excite surprise that I found him wofully discontented? The more youthful, it is true, are hopeful of a change (which can hardly be a change for the worse), but the more advanced in years, trammelled by local restrictions and foiled, as they have too often been, in the expectation of some amelioration, I found enshrouded in a chronic gloom, which no encouragement such as I felt justified in offering, could even momentarily dispel. It would indeed be "creditable" if under such hardships they retained even a moiety of their native elasticity and cheerfulness of temper, and it would be scarcely fair to expect them to entertain an exceptionally logical and rational view of the relation between

* First class monitors have from £15–17 per annum.

cause and effect. Bewildered as they have every reason to be by their position, and harassed by the exigencies of abject poverty, they are naturally impatient of reasoning at all. In my attempts to convince them of the fact that the failure of voluntary effort—and not the Board—was the radical cause of their pecuniary difficulties, I was listened to with an absent air, and sometimes calmly asked if I really had any faith in the development of local resources. In short, the profession as a body bluntly lay the whole burden of their miseries on the "Government," and thus the question is made to assume an additional importance in a political not less than in an educational sense.

86. Having thus freely, however imperfectly, portrayed the evils of the existing state of things, it would be presumption on my part, my Lords and Gentlemen, to prescribe the remedies. But I may perhaps be permitted to summarise, in so far as the teacher's prosperity is strictly concerned, the reforms to which the facts that have come under my observation seem to point :—

Summary of leading recommendations for the improvement of the teacher's condition.

1. Increase of salary in the shape of a capitation grant, administered on the principle of the *Revised Code*, by way of *supplement* to the present stipends.
2. Personal recognition, through the medium of the Inspector, of the teacher by the Board.
3. Abolition of the present so-called "probationary" system, and the limitation of appointments to teachers already "classed."
4. Some provision for superannuation allowances.
5. The compulsory payment by parents or guardians of a school-fee, *however small.*

THIRD BRANCH OF THIS REPORT:—

87. Thus far, my lords and gentlemen, having reported with a freedom and fulness, for which I trust to be excused, on the groundwork of the Irish school system, and the drawbacks besetting the position of the teachers, I am now enabled to draw attention, without reserve or constraint, to the actual state of the schools visited by me. I purpose briefly noticing the condition of the premises and appliances, the character and attendance of the scholars, the methods and results of instruction, the teaching-staff, and the agency of Government inspection.

School premises, scholars, methods and results, teaching staff, Government inspection.

88. The ninety-two National schools represented by the table annexed (Appendix A), embrace the following so-called departments under separate teachers :—

Boys.	Girls.	Mixed.	Infants.
34	34	19	5

In rural districts, the National school ordinarily consists of two departments for the separate sexes, unless where poverty or a deficiency of accommodation necessitates their amalgamation (*mixed* schools). Infants' schools I found only in the city of Limerick—one in connexion with the model school, two in convents, and two on "National school" premises, but, nevertheless, superintended by members of the "Sisterhood."

1. Description of the buildings:

89. The buildings are of two descriptions, the one similar to labourers' cottages (the wings being respectively appropriated to the two departments), the other constructed with an upper room (accessible by an outside staircase), which is almost invariably devoted to the girls' department. Buildings of the former kind—being the prevailing style in the more remote districts—are, in my opinion (chiefly on account of facilities for ventilation), preferable to the latter, provided only they were more spacious, and constructed of better materials. Mud floors and walls, and thatched roofs, are their general characteristics, though, here and there, I found substantial wood floors that had been generously provided—*not* by local magnates, but by Mr. Le Neve Foster, who has gained the hearts of all Irish teachers.

90. Perhaps both descriptions of buildings are, on the whole, as good as private property assigned at some personal sacrifice for a public object can, under the disadvantageous circumstances formerly portrayed, be fairly expected to be. Nevertheless, it is beyond question that, even supposing wood floors were universal, a larger proportion than a third of the schools visited by me, would, if in England, be unhesitatingly condemned by the Committee of Council. The majority of the buildings are radically objectionable in point of educational utility as well as style, for the simple reason that they have been designed either originally as dwelling-houses or with the contingency of being, at some future time, converted into dwelling-houses ; and double ends nearly always notoriously fail. Hence, where such premises appear sound and substantial, they were, in my opinion, not the less unsatisfactory, and where they proved to be rickety, mouldy, and decayed, the conspicuous board, labelled "National School," impressed me as being an eyesore and a mockery.

the bulk of which are generally unsatisfactory,

91. But not a few of these schools are liable to the more specific objection of deficient accommodation and inadequate ventilation.

and specifically so in regard to

92. When I ventured at times to suggest the propriety of enlarging the accommodation (particularly in the shape of a class-room for the infants) I was met by the invariable rejoinder—the *wherewithal?* For this and all other imperfections the patron is of course hypothetically responsible, but if he is himself without means, what inducement is presented to his raising any, so long as the Board-grants continue to be forthcoming? Then, although the Board would largely contribute towards the improvements, he would, in that case, endanger his proprietary rights. Things accordingly remain *in statu quo*, and without any present prospect of amelioration.

deficient accommodation

and ventilating apparatus,

93. Ventilation is too important a matter to allow of the most specious palliation of its defectiveness or to admit of excuse for postponing to remedy it, on any pretext whatever. On this head, I have to report that, unexpected as my visits were, I was presented with the most favourable opportunity for testing the quality of the atmosphere of Irish schools, and I take leave to record that I have no wish to repeat the experiment. Ventilating apparatus there is none, and the ordinary arrangements for securing a constant supply of fresh air are remarkably defective. Not only is the upper sash of the window, as a rule, fixed, but the window spaces are at no distance from the floor, while in size they are of the small cottage type. The facts that heated air ascends, and therefore demands exit *above*, and that a current can only be established by means of *opposite* apertures communicating with the outer air, in order to purify a room, have not yet been realized by the Irish teacher. Even where some devices for replenishing the atmosphere were practicable, it was generally stifling ; and as in nearly every case, the mechanical facilities for ventilation are extremely imperfect, the accumulated foul air of many days is securely imprisoned in the entire upper space of the school-room. A thin, permeating thatched roof is then a positive blessing, and, in ceilinged rooms, the occasional opening of the door doubtless proves, oftener than might be credited, the salvation of the sweltering inmates.

coupled with ignorance of the laws of health.

94. Seemingly concluding that "heat" is the cause of his uncomfortable sensations, the master not uncommonly contents himself with laying aside his coat ; never for a moment considering that fresh air alone is capable of relieving the entire school—feverish, depressed, and lethargic as it too often appeared to me—from the oppression occasioned by slow suffocation. So stealthy, subtle, and weakening are the effects of a deficiency of oxygen that none seemed competent to summon up enough of energy to open windows and doors. It is true that on hot days the windows were sometimes open, but few were prepared to admit that the exalations were,

during temperate and cool weather, so abundant as to demand every possible avenue of egress from the room. In short, this partiality for a fœtid atmosphere can only be classed with the disease, elsewhere also not unknown, which was happily styled by Benjamin Franklin, *aërphobia*.

Easy remedies.

95. Every school should be provided with *opposite* windows, made to open *at the top*, and both gables of such buildings as have them should be perforated with a permanent hole, merely shielded above by a projecting shelf to prevent the admission of the rain.

Play-grounds, &c.

96. Play-grounds are rarely to be found in connexion with National schools: nor are they much needed in rural districts. But the state of the privies is, as a rule, open to considerable improvement. Surrounded as we are by the best of all deodorizers—common earth, it seemed to me a standing marvel that so indispensable an adjunct to a school should be permitted to exist in the usual condition in the midst of a community of enlightened educators. The moral dignity accruing to a neighbourhood from the possession of a school is, I venture to say, largely dependent on the architectural and æsthetic features of the premises and the completeness of the appurtenances thereof. This principle is, as I have previously mentioned, fully appreciated by the Christian Brothers, and the utter absence of it from the average National school of Ireland fairly explains the perplexing and peculiar anomaly that increased knowledge and prosperity have not materially affected the popular standard of household comfort.

97. In regard to school appliances, viz., desks, blackboards, maps, and other apparatus, with an unsatisfactory minority of exceptions, the schools I entered were lamentably deficient. At the date of its inauguration as a "National" school, a first supply of essential materials is granted by the Board. This grant, however, not being subject to renewal, the managers are thenceforth thrown on their own resources which, as I have already intimated, equal *nil*. The result is, that, unless where the teacher happens to be particularly enthusiastic or to feel warranted in relying upon the generosity of the pupils, the aforesaid supplies are seldom or never replenished. Hard chalk, meanwhile, indents, and friction mars, the blackboard; mildew rots the maps, boys' knives and knocking about damage and diminish the desks, frequent or rough usage disjoints and lames the easels, and the hand of time abrades all things; so that, in a given number of years, not a shred or patch will remain. Nor is there any security for, or likelihood of, a fresh stock being supplied.

School appliances.

98. Books and other daily consumable materials are procured by the teacher from the Board, with a nominal profit to those who can afford to advance the money to store them, of twenty-five per cent., or an average of something like ten shillings per school. The books are, for the most part, a monopoly of the Board, which, like all similar restrictions, is decidedly obstructive to the spread of education.

General character of the scholars.

99. The general character of the scholars attending Irish National schools differs from that obtaining in English schools in two respects, which may be worthy of remark. First, the various grades of society—farmers, peasants, small tradesmen, and mechanics, are, to a greater extent, blended together in the former, partly from the absence of all distinction of *caste*, partly from the want of any other provision for education in the shape of reasonably good "adventure" schools. Secondly, a considerable sprinkling of adults from fifteen up to twenty-one years of age may frequently be observed. This pleasing peculiarity, I was informed, originated in the prevailing conviction that "education" is the best preparative for emigration. Irish settlers in the colonies, and in the *United States* particularly, are largely accustomed to assist their relatives in joining them; but to the younger section this aid is often proffered conditionally on a knowledge of reading, writing, and arithmetic being first acquired, "without which they will be of no use." The improved circumstances of the small capitalist farmers furnishes an additional reason of a no less gratifying description.

Typical examples of the constituents of small ordinary schools.

100. Not to lay undue stress on the intermixture with all the classes of the comparatively few scholars of a more advanced age (though naturally of more backward attainments), I may give two typical examples of the ordinary elements that constitute a *small* village school—the one being a *boys'* school, the other *mixed*:—

	Branches taught.
Example 1—Boys' school. Fourth (or highest) Class, 7 about 13 years of age,	Fourth Reader, Dictation, Parts of Speech, General Geography, Practice, and Rule of Three.
Third Class, 14 about 11 years of age,	Third Reader, Dictation, Geography of Europe, and Compound Rules.
Second Class, 11 about 10 years of age,	Second Reader, Transcribing, Geography of British Isles, and all Simple Rules.
First Class, 20 about 7 years of age and under,	First Reader, Spelling, Addition, and Multiplication, and one-third Penmanship on paper.
Example 2—Mixed school. Fourth Class, 2 boys of 13, and 3 girls of 14½,	Fourth Reader, Practice, Parts of Speech, Dictation, and Geography.
Third Class, 1 boy of 9, and 2 girls 13 and 14,	Third Reader, Simple Division, a little Geography, and Dictation.
Second Class, 3 boys and 3 girls about 8,	Second Reader, Simple Addition and Multiplication, and Transcribing.
First Class, 10 boys, 10 girls, at 7 and under,	One-half in First Reader, remainder Reading Sheets, and (all collectively) Geography of the World.

How these are affected by irregularity of attendance.

101. Given the above number of pupils, presumed to be systematically taught on the subjects mentioned every lawful day of the year, the results ought to be highly satisfactory. But the following brief statistics will sufficiently indicate that the numbers given rarely represent the same individuals, so that apparently justifiable anticipations must be greatly modified in view of the evils arising from a fluctuating attendance:—

	On the Roll.	Average Attendance.
Example 1,	89	53
,, 2,	76	41

Or, comparing the corresponding statistics of the entire group of ninety-two National schools on my list the numbers stand thus:—

On the roll,	13,281
Average attendance,	7,762
Actually present,	6,428

102. That is to say—taking the latter as the authoritative standard of attendance—the proportion of actual as compared with hypothetical scholars is nearly as 1 to 2, or 50 per cent.

What is the cause?

103. Fully convinced as I was, in the course of my tour, of the prevalence of a genuine desire for education among the population at large—a desire prompted, it may be, not so much by the moral and intellectual advantages which education confers as by more mercenary considerations—I confess my own surprise at the results here exhibited. In what way can so marvellous a shortcoming be reconciled with the favourable popular senti-

ment? To ascribe it to the commonly alleged cause—indifference—would involve an obvious inconsistency. It arises, in my opinion, from nothing less than simple ignorance of the direct bearing of regularity of attendance on scholastic proficiency. This is indeed, abundantly proved by the change for the better that a good teacher, in displacing an inferior one, is able to effect within a comparatively brief period of time. The following vivid illustration, taken from the Report of Mr. Patterson, the Head Inspector of the district assigned to me, will serve as an instance :—

Does it lie with the parent or the teacher?

"On the 27th June, 1864, I inspected the Roscrea Male School, the only National school for boys in the town. The master was fifty-four years of age, and was in the first division of second class. The recorded *average attendance of pupils was* 39; the number present the day of my visit was 37, of whom 29 were of ages between eight and fifteen years. Of these 37 only 16 had read a few lessons in the Second Book (the old Second Book), and even these had not attained the proficiency appropriate to their class. The attendance of the scholars was *most irregular*, the average number daily present being in the proportion of only *forty-one per cent. of the average number on rolls*, even reckoning in the number present numerous loiterers who did not make their appearance till near noon, when the best part of the school business ought to be over. Discipline was equally faulty in other respects: the class reading could scarcely be heard, owing to the noise made by the unoccupied children, and the master, in endeavouring to subdue the tumult, made more disorder than all. This school was evidently doing no good; the teacher, of course, imputed its defects to the rudeness of the children, *the apathy of their parents, the disregard of the people generally for the education of their offspring*, and to the insufficiency of local support. His salary from the Commissioners was £32; the local endowment, £10; the amount of fees paid by the children, £2 per annum.

Query satisfactorily answered by an Irish Inspector,

"On the 3rd August, 1866, I visited the school again. The house was the same; the town and neighbourhood had undergone little or no alteration except a *diminution* of population; but the schoolmaster was changed. The new teacher had not the advantage, or disadvantage, of being a native of the locality: he was an Ulsterman. He had been specially trained in the Commissioners' central training establishment, and had gained experience of school system as assistant master in the Galway District Model School. The *average daily attendance of scholars exceeded* 170, *being in the proportion of* 70 *per cent. of the number on the rolls.* On the day of my visit, the attendance being smaller than usual in consequence of an epidemic, and of the school having been just re-opened after vacation, 143 pupils were present, *all punctual to time.* Order and discipline were so perfect that, although business was going on in four separate school-rooms under the principal teacher and his assistants, the head master's presence was felt everywhere. Instead of 16 boys barely able to read the Second Book, there were now over 100 well able to do it: instead of 48 being the gross number of marks obtained by all the pupils under my examination, the number now amounted to 620: instead of £2 paid by the scholars to the former teacher, £55 *per annum* were received from them by his efficient successor, although the poorest of the population were admitted to the school on whatever terms they could afford. The teacher who effected this marvellous change was only one grade higher in classification than his unsuccessful predecessor, being in the third division of first class: he was aided by an able staff of assistants who, however, had been appointed one by one, as the attendance of children had increased through the exertions of the head master."*

104. My opinion is so precisely in harmony with Mr. Patterson's view that, in scanning the tabular list (Appendix A), I am enabled at once to fix upon those schools which impressed me with their superior efficiency, by a glance at the rates of comparative attendance. For example :—

and the results of my experience accord with his.

	On the Roll.	Average Attendance.
Limerick Model School, boys, . .	113	106
,, ,, girls, . .	105	88
,, ,, infants, . .	117	103
Kilmallock Boys' National School, .	196	136
Ardpatrick Girls' National School, .	106	80

105. While it is of the utmost importance that the salient cause of irregularity of attendance should be clearly ascertained to be, to a considerable extent, removable by the indirect or direct agency of the teacher, allowance must be made for the fact that the bulk of the profession cannot, under their multitudinous discouragements, be expected to put forth their full strength with the view of achieving so desirable an object. Under every circumstance, however, the teacher is bound to avail himself of approved mechanical expedients to secure parental co-operation; and I regret to say that in this respect, the Irish falls short of the English teacher. It would be superfluous to specify in detail such common expedients as those of making systematic inquiries as to the cause of absence, sending weekly or monthly reports of a pupil's progress (showing the number of days or hours lost through absence), &c., &c. The difficulty does not arise from not knowing what to do, but from individual indifference or want of method.

The bulk of the profession should at least adopt mechanical expedients for securing parental co-operation.

106. I freely allow, on the other hand, that the present condition of popular darkness is such as of itself to interpose considerable obstacles in the way of parental co-operation, but I can confidently affirm that, at the present rate of progress (*provided the system is left undisturbed* and the suggested improvements are effected), the people of Ireland will be, at no distant date, on a par with the best educated nations of the world. The result of my conversations with numerous parents convinced me that foremost among the remedies at present applicable is the inculcation by the teacher of correct ideas on the subject of regularity of attendance. Next in order of importance is an alteration in the time of opening school, from 10.30, or rather 11 o'clock, to that elsewhere in vogue, namely, 9 A.M. The plan of beginning the daily lessons at a time when the partially employed pupils of German schools are ending them—for 7 A.M. is there the hour for opening—not only fully accounts for the looseness and unpunctuality of the attendance in Ireland, but is ruinous in its effects on domestic discipline, and retards the growth of the right kind of parental co-operation. It is only after having obtained a secure grasp of just ideas on this subject that they can be expected to make serious personal sacrifices for their children.

How parental co-operation should be encouraged and facilitated.

107. The *bona fide* industrial poor, however, who frequent the National school proper, ought, I venture to say, to be stimulated and encouraged rather than coerced; and this opinion is borne out by their eager desire for instruction, in a general sense, combined with their special appreciation of really good schools. I have only to add to my former suggestions, that the stimulus to attendance presented by the *Revised Code* scheme of grants would go far to meet the more urgent necessities of the case, but, on account of the peculiar inequality of ages in the various classes, a slight modification would be desirable.†

As to the National School proper, the object is partially attainable on the *Revised Code* plan.

* Thirty-third Report of the Commissioners of National Education in Ireland (year 1866).

† For the sake of convenience I annex details of average individual attendance for each quarter, selected from the rolls of three National schools, exhibiting the general conclusion that the lowest attendance prevails at seed-time and harvest, that is, about April and September respectively :—

	(1)	(2)	(3)
1st Quarter, ...	56	46	42
2nd ,, ...	41	28	35
3rd ,, ...	49	16	38
4th ,, ...	57	52	56
No. of attendances, . . .	203	144	171

The application of a compulsory measure

108. Inasmuch as the thorough and complete instruction of pupils actually enrolled is of infinitely greater moment than the extension of superficial advantages to outsiders, the introduction of fresh measures with the view of directly constraining a larger and more regular attendance becomes a question of paramount importance. The obvious expedient is a sweeping compulsory enactment, which is favourably viewed by various sensible persons with whom I came in contact, and even by some parents who seemingly felt the want of having their too fickle and feeble wills strengthened by external pressure.

would be premature and inexpedient;

109. But, while the question itself fairly continues within the arena of learned debate, and the security for its effective operation is conspicuously inadequate, the policy of such an innovation would appear to be excessively dubious. Besides, it is worth while to consider that the needier section of the community is precisely the class requiring to be brought within educational influences, while the fact that they *are* needy imparts a colour of harshness to a proposal which, if carried, would rob them of a certain proportion of their means of subsistence. For it cannot be too emphatically affirmed that gratuitous schooling does *not* meet the difficulty, as that would be no compensation to parents for the deprivation of the fruits of children's earnings, which are sometimes eight pence per day. Where, then, such earnings happen to be demanded for the wholesome maintenance and ordinary exigencies of a young and numerous family, I am fairly entitled to ask on their behalf,—What are they to do in the long and distressing interval in which the children, instead of earning their bread, are compelled to be at school? The advocates of compulsion are in the habit of picturing a "rare and radiant" *future* for the educated sons of toil, but—without dwelling on the possibility that the material prosperity of the lower strata may not be seriously altered when the dead level of universal culture has been reached—I have to put the relevant query,—How are they to subsist in the present? Chiefly through over-population, both Ireland and England suffer under an incubus of poverty among the lower ranks, such as the Education Departments of Germany and Switzerland, and America had not the misfortune or embarrassment to contend against: but even there (as Mr. Arnold has proved in the one case, and Mr. Fraser in the other) compulsory measures are either superfluous, or, in the most needful direction, have been found wanting.

but not so in regard to the pauper and vagrant classes.

110. In regard to the indolent poor, the confirmed or professional paupers—whose name is "legion"—the case is totally different. Here the law is already sufficiently potent to secure the education of their vicious, and therefore unemployed, progeny; for it is competent to the ratepayers, if so minded, to grant parents relief, both in-door and out-door, conditionally on their surrendering their children for the purpose of being rescued from hereditary associations. The deterrent policy practised by Poor Law Guardians is doubtless based on reason and common sense; but so far as the west of Ireland is concerned, the existing state of corruption among the adult population is beyond the reach of remedy. Every effort should therefore in my opinion be strained to improve the juvenile paupers—even to the extent of boarding, educating, and sending them abroad. A definite system favourable to the eradication of an evil, on a steadily reducing scale and with permanently advantageous results, is surely preferable to staving it off till it acquires gigantic and unmanageable proportions.

Example: Limerick Workhouse.

111. The inmates of Limerick Workhouse amounted, at the date of my visit, to 1,450, comprising about 340 children in the respective departments for boys, girls, and infants; and my notes were as follow:—

"Premises being whitewashed, but the pupils specially convened. Very little appears to be attempted in the shape of instruction, and the salient drawback—against which, indeed, the best system would contend in vain—is the interruption of the attendance, occasioned by the withdrawal of the children, for varying and uncertain periods, along with their parents. The inculcation of good habits must therefore be, from the almost certain evanescence of the results, a dreary and hopeless task. Assuming that the *re*-production of paupers is an evil over which the State has no control, it seems to me that the ever-accumulating 'consequences' might be mitigated by the application to juvenile paupers of a wholesome measure of compulsory attendance. A 'ragged school' with a definite and practicable aim, would then become part and parcel of every so-called '*work*house.' I imagine the majority of ratepayers would have no objections to this mode of utilizing part of their assessment."

Concluding observations on the position of the Irish Teacher as affecting his work.

112. In connexion with what I have already stated with regard to the position of the Irish teacher, I now add that the mode in which the Irish schools are conducted presents a reflex of those professional characteristics which abject dependence and inadequate remuneration naturally develop. The few teachers who enjoy a comparative immunity from these depressing influences are fully equal to the better class of trained English teachers; but the larger proportion of them, even in the midst of active duty, impressed me as being physically incapable of casting aside the burden of bondage and poverty, and indulging in that full, ingenuous freedom which the true enjoyment of work for its own sake, devoid of all self-consciousness, alone can inspire. Not a few of them I also found imbued with a morbid love of approbation, displaying itself in a restless impatience of suggestions, and with a still more morbid craving for sympathy, which, when reciprocated, found vent in copious, and often somewhat wild outpourings of feeling. For all this there is, as I have already fully explained, abundant reason, and as nothing can be, professionally speaking, more lamentable, the application of the right remedies is all the more loudly demanded. I will here add that the majority of the female teachers bear their evils with a braver and prouder heart than the men.

Example of a late exhibition of professional energy.

113. United by the bond of common misfortune, the Irish teachers, I was glad to observe, are animated by an *esprit du corps* of which the English profession is singularly innocent. It matters not whether the organized form of this manifestation dates its birth from the present inquiry; for, from every point of view, it is a decided token of earnestness. Associations of the description I allude to are, if conducted with moderation and good sense, sound bulwarks of national strength. By some they may be thought "dangerous," which is equally true, if justice is withheld. Yet—like all co-operative combinations—they are institutions of a kind that ought to be superior to all external supports and independent of applause: for if incapable of rising by intrinsic native force, they are unworthy to rise at all. Should these "teachers' associations" fall into abeyance, and fail to get into their legitimate track of professional improvement, when the present stimulus has been withdrawn, I shall despair of Irish teachers and Irish schools.

The teacher's prime faults are a too exclusive attention to the highest class,

114. To re-enter the school, I have to report that, while the teachers were always (unless when the dwelling-house adjoined the premises) found by me at their post, and engaged in active work, they seemed pervaded with the notion that their chief business was the care of the highest class. Indeed I feel convinced that this is a rule with remarkably few exceptions. In this respect, the resemblance to the state of matters in English schools anterior to the introduction of the *Revised Code* (which enforces attention to the school as a whole, or to the classes alternately) is tolerably complete. It is true that a good teacher, animated with genuine professional instinct, may devote much of his time to his highest class with impunity, and even with advantage; but, in the majority of cases, the working of the entire school machinery is apt to suffer, and the majority of the pupils are in danger of being altogether neglected. At all events I am certain that the prime law of school management, displayed in a head teacher's faculty of having his eye everywhere, and of knowing what is going on at various places, at one and the same time, does not, to a satisfactory extent, obtain in the Irish schools visited by me.

115. Nor can I conscientiously say that the samples I had of special teaching approximated, either in matter or form, to the almost stereotyped English model. On the one hand it was bookish and mechanical, and painfully monotonous; on the other, it lacked ease and grace, and, I may add, that kind of self-possession which is the surest guarantee that the subject has been thoroughly mastered. and a defectiveness in the art of teaching a lesson.

116. I am happy to be able to speak more favourably of the classification, discipline, and above all, the reciprocal "understanding" that seemed to subsist between the pupils and their teachers. In other respects satisfactory.

117. In regard to what is technically styled "results," it would be superfluous here to dwell upon the details which I have collected—which, my lords and gentlemen, are in your hands. A tolerably long and extensive acquaintance with elementary schools will, perhaps, justify my boldness in hazarding the assertion that the aggregate character of the instruction given in the schools on my list shows a marked inferiority to that of kindred schools in England. In point of *quality*, the instruction is on a par with that of the lower type of English rural schools; in point of *quantity* (if the period before the application of the *Revised Code* is considered) much below that standard. If the system itself, including the teachers, had enjoyed fair play, I do not doubt that the comparative result would have been precisely the reverse; more especially if the Board had been armed with so cogent an instrument as the *Revised Code* to enforce the original and elaborate "Programmes of instruction for the pupils of National schools, or *minimum* amount of proficiency required for each class." "Results" of instruction.

118. I examined various schools *individually* in accordance with the schedules supplied, which I herewith forward duly filled up.* The summary is as follows:— By individual examination:

Name of School.	Per-centage				
	Above Standard III.	Above Twelve years of age.	Passed in Reading.	Passed in Writing.	Passed in Arithmetic.
Knockea Female National, ...	7·9	4·8	73·0	74·6	50·8
St. Patrick's National School, ...	18·1	6·0	66·6	72·7	45·4
Balgaden Girls' National, ...	23·8	2·4	47·6	76·2	61·9
Donaghmore National, ...	19·1	4·2	75·0	57·4	60·7
Kilkee Church Education Society, . . .	·0	8·0	85·6	71·4	35·7

119. It is, however, important to explain that my criterion of *reading* was simply intelligibility, of *writing* legibility, and of *arithmetic* accuracy in two sums out of three. Criteria.

120. As a general rule the reading is monotonous, strongly provincial, and betrays every indication that the subject-matter is imperfectly, or not at all, understood. The lower classes can very often say their books by heart—a fair argument for the necessity of introducing greater variety. In some schools I found that the pupils had been occupied for two months in reading and re-reading less than thirty, and never more than forty pages of the Second Reader. Reading.

121. The penmanship, I was surprised to discover, is in every sense, bad, and the copy-books are too often blotched and crumpled. This is to be accounted for partly by the want of individual attention on the part of the teaching staff, but chiefly by the fact that, until lately, books with lithographed head-lines have not been in use. Mr. Foster has now remedied this deficiency, and I anticipate a rapid improvement. Writing.

122. Arithmetic has received a somewhat special attention from teachers in Ireland; but more attention has been paid to quantity than to quality. Accurate working, however, is a merit to which they may lay claim, when the sums are of the unvaried, stereotyped description. Principles are not in the least understood; nor did I observe a single attempt to explain them. Arithmetic.

123. Writing to dictation is, on the whole, persistently taught, and the results are satisfactory. Geography is, as a rule, meagre and imperfect. As to the sewing in girls' schools, I cannot say I was very favourably impressed, and I noticed a largely prevailing tendency to ornamental, rather than useful, work. Dictation, Geography, and Sewing.

124. The above remarks embrace the sum and substance of the secular instruction in Irish schools. I now propose briefly to advert to some of the more manifest deficiencies.

125. I made numerous inquiries as to the existence of a system of home-lessons, and the replies were almost uniformly unsatisfactory. Exercise-books, in the shape of dirty and unhandy copy books, combining dictation, parsing, and arithmetical tasks (performed for the most part with surprising accuracy, combined with slovenliness), are to be met with in most schools; but they form part and parcel of the daily work. Now, apart from the technical advantages directly accruing from home-lessons, the moral effect, on pupil and parent alike, of the elsewhere ordinary requirement of set preparatory work, is so self-evident, that I was astonished to find that this auxiliary to school machinery was almost universally neglected. Deficiencies. Home lessons.

126. History, as a special branch of instruction, is entirely excluded from the course of study, for reasons which will be easily understood, if I designate them as "national." Though much may no doubt be said on the subject of "grievances" long since redressed, I take the liberty of questioning the wisdom of so important an omission. I freely grant that a history, to be worth anything at all, must be a faithful record of facts, and I can readily appreciate the reluctance of the Legislature to place in the hands of the Irish public an unvarnished account of a policy of ancient misrule. Nevertheless, as the first section of a school-book is generally the only portion read, while to dwell on the painful details of the past is a practical superfluity that can serve no useful object, it seems to me that a History of Ireland written, so to speak, *backwards* (either according to years or decades), would fill up a most exceptionable gap in school literature. That something in this direction ought to be done is sufficiently patent to the most casual observer; for not only is the sad story of the past handed down *viva voce*, from generation to generation, but the memory of the Irish is, from time to time, refreshed, and their feelings are wantonly aggravated and embittered by publications in the form of "chap-books,"† which not only misrepresent or exaggerate the facts of the case, but conveniently pause before the era of equalization begins. I here venture to hazard the seemingly bold assertion that the "masses" in Ireland continue to believe that former wrongs are still unredressed, and not even acknowledged, by the Imperial Government. History.

127. A deficiency of even greater consequence (which is by no means palliated by the existence of a corresponding blemish in connexion with English schools) is the absence of lending libraries. So far from being surprised at the universally deplored fact that children, after leaving school, sooner or later forget their former attainments, I am incapable of imagining any more natural result. But, partly owing to their larger colonial correspondence, partly to their superior fondness for newspapers, this sorry consummation is not realized at so early a date, or to the same extent, by the Irish as by the English peasantry. I can safely say that nothing connected with the entire subject of popular instruction has ever struck me with greater astonishment than the School libraries.

* See Appendix A.

† Among others, I allude to those published by Warren, 21, Upper Ormond-quay, Dublin.

reckless waste of energy in producing illusory and evanescent results, which, by a comparatively slight additional effort, might be rendered fixed and permanent. A good collection of *interesting* books, available, on fairly paying terms, for the entire neighbourhood, and subject to the control of the teacher, should form an indispensable adjunct to every school.

Night schools.

128. Night schools are, on the same ground, not less to be encouraged. But in the district traversed by me, I found records of only three efforts, on the part of the teachers, to establish them. It is important to note that, numerically, they had proved an invariable success, and that their failure was ascribed by the teachers themselves to personal exhaustion of strength already expended in the day school. An erroneous notion prevails that night school duties demand a smaller exercise of toil and tact than is required in day schools, whereas the actual state of the case is precisely the reverse. Until it is distinctly understood that the duties of the night school do not admit of being perfunctorily performed—until the idea is got rid of that either an inferior man or the residue of a head master's physical energy ought to suffice for the purpose—this important auxiliary institution will not take root in Ireland or anywhere else. It is beyond dispute that the day schoolmaster is quite unequal to the satisfactory discharge of the duties of both departments. The Board might by way of experiment, grant the services of *assistant* teachers, of whom there is an ample supply, conditionally on their alternating the afternoon and evening duties, in the day and night school respectively, with the head master. Under any plan, the one department should be, to a certain extent, auxiliary to, and interwoven with, the other; but under the *Revised Code* plan, attendance at the night school of boys or girls *above ten years of age* should be allowed to count in the claim for the capitation grant, as complementary to the required numerical standard of day-school attendances.

Convent and other exceptional National schools.

129. Before leaving this section of my subject I feel constrained to make some reference, however brief, to convent schools, of which I had the pleasure of seeing six samples. These are, of course, confined to girls' and infants' departments; they are held within the convent walls, and they are managed by the Roman Catholic Sisterhood exclusively. Having accepted the Board principle of separatism, in regard to the religious instruction, they are virtually National schools, and a signboard outside (not always in the most conspicuous place) publishes the fact. Referring to those visited by me, viz., St. Mary's and Presentation Convents of Limerick city, Adare, Newcastle West, Ennis, and Rathkeale—I may state that they are not made use of by Protestants; but, inasmuch as they are limited to towns, this is a matter of no moment. The Sisterhood, being a self-supporting institution, and, for excellent reasons, strictly unmercenary, the Board grants are awarded, as a help towards the school expenses, in accordance with a fixed scale of per-centage on the average attendance. I may here state, once for all, that, notwithstanding their special character, these schools are doing a good work, and amply justifying the Board's concession in their favour. The general character of the premises, the management, the prevailing tone of the pupils, the self-sacrificing and well-directed zeal of the Sisterhood, and the aggregate results of instruction—all gave me the utmost satisfaction. Even supposing I had all the required data at hand, I should probably decline to institute any comparison, in respect of technical proficiency, between these and other more general schools. I will merely record that they are free from the blemishes of the ordinary National school, to which I have already adverted. The points of superiority—which is, after all, a proof of *culture* on the part of the managing staff—are:—manners and discipline, organization, cleanliness, ventilation, sprightliness, and cheerfulness. All branches of hand-work, such as sewing, drawing, penmanship, and, particularly, exercise-books, &c., are carried out on the most correct plan, and with the most gratifying proficiency.

Model schools of Limerick, and Coora Clare National school.

130. Such also are the general and specific features of the Model School of Limerick. The best *ordinary* National school visited by me was that of *Coora Clare.**

The teaching staff.

131. I conclude with a few remarks on the general character of the subordinate teaching-staff, namely, monitors and assistants, whose rates of stipend I have already mentioned. The number of the total staff in the Board's pay and engaged in the 92 schools on my list stands thus:—

Principal Teachers,	92
Assistants,	54
Monitors,	142
Total,	288

132. This shows an average of 1 teacher to 21 pupils in average attendance (as against the Committee of Council's required *minimum* of 1 teacher to 40 pupils). Not including a variety of incidental grants, the result indicates an average cost per scholar to the Board of twelve shillings and five pence per annum, as against nine shillings and one penny given, as payment for *actual* results, by the Committee of Council to the schools of Devon and Somerset, to which I have already referred.

133. The question to be raised, but which I cannot discuss in the necessary detail, is, whether this large teaching staff is worth the money expended on it. I hope, therefore, to be permitted to give my general conclusion, which is decidedly in the negative, in so far as the didactic proficiency of the monitors and the present positive utility of the assistants are concerned.

Assistants redundant in supply, and unsatisfactory in quality.

134. Unless the assistants can be separately utilized in accordance with my previous hint respecting night schools, I should be strongly disposed to recommend their abolition or limitation to schools of an average attendance of not less than 140. Nothing can be more unsatisfactory than the general character of this division of the teaching-staff; as a rule, they seemed to have no specific work to do, to wander about with a vague and uninterested air, to lack the most simple information in regard to the school, to be always in the way, and seldom to work in harmonious unison with the head teacher. While they are from two-thirds to one-half more expensive than monitors, their working power is not one whit higher; while their collective stipends represent a heavy item of the Board's expenditure, these are individually inadequate for the suitable maintenance of a respectable adult; and, while they are professionally on a footing of equality with the head teachers, they are, from want of practice and from a habit of constant dependence, incapable of conducting the school single-handed. I am speaking the sentiment of numerous head teachers when I state that (although they gladly avail themselves of this publicly-paid form of help) they would prefer, for example, in lieu of an assistant, an efficient monitor, provided the pecuniary difference reached their pockets, even by the avenue of "*payment for results.*"

135. Assistant "workmistresses" in girls' schools, who are in receipt of £8 per annum for duties that the schoolmistress herself is able and willing to perform, represent another institution of a still more anomalous and indefensible type.

* The master of this secluded village school has earned the highest rewards granted, not only by the Board, but also by the Science and Art Department; the number of his successful candidates at the last examination being in excess of that of any other master. N.B.—However admirably this governmental department is conducted, I must take this opportunity of calling attention, first, to the extent to which the mode of working acts as a counterpoise to the *Revised Code* measure; and secondly, to the extravagance of the special awards.

136. Lastly, in regard to the machinery of the Government inspection, I have to report that it works efficiently and smoothly. The District Inspectors' visits to schools, although unexpected and frequent—occurring at least three or four times in the course of the year—are, as far as my personal opportunities for judging extended, hailed with pleasure. The *miscellaneous* visits do not necessarily refer to examinations, but all matters connected with the school are discussed or settled, the rolls are minutely scrutinized, and a word of reproof or approbation administered, as occasion serves. It is by this agency alone that the general scheme acquires an efficient and practically "national" character. Government inspection.

137. Thus far, my lords and gentlemen, I have endeavoured to convey the salient points of the information I was enabled to gather regarding the National school system as it affects the district assigned to me, and the special features of the schools themselves. With the exception of the Church Education Society's, and the Christian Brothers' schools, already described, the efforts made by private bodies or individuals (especially in the direction of "adventure" schools for the middle, or lower-middle, class), are surprisingly small. The following list embraces the more important:—

LIMERICK: MIDDLE CLASS SCHOOLS.

Roman Catholic:—

1. Jesuit College for Males.
2. French Convent for Females.
3. Philomine School for Females.
4. Branch of French Convent School, *Bruff*.

Protestant:—

5. Villiers Institution (Endowed).
6. Classical and Commercial Academy, Catherine-place.
7. " " " *Ennis*.
8. Presbyterian (Middle-class) "
9. Erasmus Smith's College (Endowed), "
10. Incorporated Society's (Middle-class), *Newport*.*

138. Of benevolent institutions with schools attached, the following are the most noteworthy:— Benevolent institutions.

1. Roman Catholic Orphan Asylum.
2. Protestant " "
3. Convent of the Good Shepherd (vide *Appendix B*).

139. The schools for the poor for which the Church is more or less responsible, are briefly described in *Appendix C*. Poor schools connected with the Church.

140. In *Appendix D* will be found a copy of my notes on some of the hedge schools, which excited my cordial commiseration. Hedge schools.

I have the honour to be, my Lords and Gentlemen, your obedient servant,

JAMES S. LAURIE.

* To this will probably be shortly added, Leamy's Institute, Limerick (endowed); the endowment, like that of the two last mentioned schools, having been originally intended for the "poor."

Also, the Model School contains a considerable number of well-to-do Protestants. The same remark applies to the Agricultural department, which ought to be abolished.

† Accidentally omitted from this list:— Limerick, Saint Patrick's National Schools, (2); " Workhouse National Schools, (3); " Barrack School, (1); Kilkee National Schools, (2). Showing a total of 100 National Schools visited.

Appendix B.

Convent of the Good Shepherd.

Female Reformatory, Limerick.

This establishment is one of those belonging to the same religious order, established in various parts of Europe and America, and with a kindred object in view. The "community" here consists of 26 nuns, who devote their sole attention in their various departments to the reformation of 36 children and 82 "penitents"—the former convicted thieves, the latter reclaimed prostitutes—to whom they impart moral, religious, industrial, and general instruction.

The premises consist of a substantial pile of buildings, standing in about three acres of ground on the outskirts of the city. Every available space is utilized, with the utmost regard to economy and health; while the interior of the chapel is the most tasteful of any in the modern style I have ever seen. The accommodation for the inmates is insufficient, and the recreation ground and garden are of too limited an area.

The ostensible object of the institution being religious, much in the way of secular instruction, beyond the "essentials," is not aimed at; but an air of comfort, cleanliness, good feeding, and good training pervaded the whole. It is regularly inspected by Mr. Murray, and the Government allows a capitation grant; besides which the only pecuniary resources are the proceeds of an annual charity sermon and of a bazaar, together with the profits accruing from the "washing" of about a hundred Limerick families, and proceeds of needlework. Exclusive, therefore, of the Government grant, and of the cost of maintenance and service of the "community" (whose labours are strictly gratuitous), this institution is practically self-supporting. Situations as domestic servants are sometimes found for the inmates, but the

unfortunate scruples entertained by the public in reference to this class of persons have a most discouraging effect. The result is, that a considerable number are *permanent* residents, who might, if employed outside, or sent abroad under some special system of emigration, conveniently make room for others equally in need of purification and training.

The reverend mother of the "community" superintends all the operations with a remarkable degree of calm zeal, dignity, and intelligence.

At *Upton*, Cork, there is a branch establishment for males, while the juvenile offenders of Limerick are taken in exchange for a corresponding number of females.

Appendix C.

St. John's Parochial School, Limerick.

This school has just been convened after the vacation. Present, 11 boys in male department, and 12 girls and 8 boys in female department, which is under the master's wife. Salary £45, in addition to a house. No fees. Master belongs to the cathedral choir; was trained at Cheltenham, but displays none of the fruits of his high culture. Premises, gloomy and dirty.

Dr. Jeremiah Hall's Endowed School.

Present, 17 boys, 5 girls, under an aged, good-natured master, who evidently does his best. Salary (from endowment), £33, and residence. Premises, furniture, and apparatus, very moderate.

Blue-coat School.

Present, 5 boys, dirty, ragged urchins; whether Protestant or Roman Catholic unknown. No copy-books and few supplies of any kind but Readers. Teacher aged and incompetent. Salary (from endowment), £40.

Cathedral Choir School.

Thirteen lads belonging to the choir, and taught in a comfortable room in the tower by Dr. Mangin. He has voluntarily devoted his attention to the school for six and a half years.

General Observation.—*The above four schools should be merged in one, and provided with a thoroughly efficient trained teacher.*

Appendix D.

Hedge Schools.

Larkin's Cross (Clare), three miles from Limerick.

1. *Premises*, &c.—A tottering hut, with mud floor and rickety thatched roof. Furniture, a long table and a few low benches; master's bed and domestic appliances occupying one extremity of the room. A fetid pool opposite the door, and the atmosphere unwholesome.

2. *Master.*—Vigorous for his age; apparently about 65. Dirty and ill fed, depending for a good meal on the charity of neighbouring small farmers. For the rest, subsisting on school-fees of 1*d.* and 2*d.* per week per child. Formerly teacher of the National school.

3. *Pupils.*—15 boys and 15 girls, about the age of seven. Provided with a few National Irish Readers and slips of dirty ruled paper for writing, with here and there a slate. Little girls of seven and eight reading fairly in No. II. Book; two boys of about ten in No. III., and able to write legibly, and to work compound rules. The remainder read and spell fairly from No. I., or various primers.

Garryowen, Limerick.

1. *Premises*, &c.—Cottage in one of the poorest, but sufficiently open parts of the town. Rent 1*s.* per week. Master's sleeping compartment partitioned off. Furniture, table and low benches; no copy books, and such primers and readers as the children happened to have bought.

2. *Master.*—Wretched, miserably clad, and starved-looking young man of about 28. Had received some education in R. C. seminaries, and was apparently designed for the priesthood. Want of self-control and general disinclination, prevented his following up that vocation. His ambition is to teach classics; and he professes to be well versed in a Latin "Institutes of Philosophy." Subsists on fees that amount only to four or five shillings per week.

3. *Pupils.*—About fifteen young children, all looking very miserable. Good *gratuitous* education given in well-conducted schools within three minutes walk.

Lemonville (Limerick), four miles from the city.

Premises resembling case A. Master about seventy; thoroughly self-satisfied, and "severe and stern to view." Clearly does the work assigned to him by Providence in his own peculiar routine style. Had sixty pupils up to the date of the establishment of a neighbouring National school; they now number twenty, of both sexes, all young children.

Kilfinnane Hedge School.

1. *Premises.*—A small cottage of the usual bad type; used also as a smithy. On entering I found the children ranged in front of the forge, intently witnessing the chastisement of a girl of about eight years of age. The din and clatter of the smith's operations being suspended, the master emerged from a dark recess and greeted me with a welcome.

2. *Teacher.*—A man of about fifty years of age, very dirty, and very excitable. He cherished great hopes of having his merits recognised by the Royal Commission, and complained bitterly of his unrequited labours. Conducting me behind a partition, on the plea of showing me something highly important, he deftly dived into a species of coal-box or "bunker" which I assumed to be his bed, although it contained a *rudis indigestaque moles* of rags, boxes, books, &c. On reappearing, he desired me to read from a pamphlet he had fished out, a portion of a well-written satire on the insensibility of the public to the importance of the schoolmaster's calling. It was with some difficulty that I released myself from his interesting entertainment; and he reciprocated my regrets at my inability to remain and examine his school of eighteen children of the average age of seven.

Hedge School near Ballygran.

Here I found an aged schoolmaster, stone blind, who in earlier years had been teacher of a National school, but was now engaged with about twenty pupils, of the ordinary description, in a well situated mud hut. He was above eighty years of age, and seemed much depressed by his melancholy position. The so-called "Golden Vale" appeared to have brought but little wealth to his door; for he was just able to "keep soul and body together" by dint of necessarily toilsome efforts. Nor was he ever visited or assisted by the priests or neighbouring gentry. Nevertheless, he was not querulous, having probably got beyond even that stage. He was intelligent, and perfectly competent to do the work he had assigned himself.

Report of P. le Page Renouf, Esq., Assistant Commissioner.

1. My Lords and Gentlemen,—I have the honour to lay before you my report on the schools, which, in accordance with your instructions, I visited in the course of last summer, in the counties of Waterford, Wexford, Tipperary, and Kilkenny. My tour of inspection began on the 21st of June, and lasted till the 21st of September. I was unavoidably absent on official duty in England during the first fortnight of July. The district assigned to me includes the constabulary districts of Clonmel, Thurles, Kilkenny, Castlecomer, Portlaw, Waterford, New Ross, and Wexford. Of these districts I was compelled for want of time to leave Thurles and Castlecomer unvisited. I examined the schools of the town of Wexford, but I found the country schools of that neighbourhood closed in consequence of the harvest. In all I visited 120 school-rooms, 69 of which are in receipt of aid from the Board of National Education, the others are parochial schools of the Established Church, Christian Brothers' schools, convent schools, and private schools of various kinds. With reference to each of these, I have collected such information as appeared interesting or important. There are two classes of schools on which I have no report to make. Only one or two night schools exist in my district, and I had no opportunity of seeing any of them at work.* The model schools were specially reserved for the inspection of two of the Royal Commissioners, who in certain towns were also to examine and report upon the convent schools, and the schools of the Christian Brothers.† With a view to collect evidence from all quarters, I have seen and conversed with a very large number of persons, both lay and clerical, of different classes and denominations, and I am bound to express my deep sense of the extremely kind and warmhearted reception which I have invariably met, but the amount of positive information which I received is, in fact, very small. In towns like Waterford, Clonmel, or the city of Kilkenny, the only kind of evidence which was likely to be of any value, almost exclusively regarded the model schools, and so fell beyond my province; in the country districts, the only persons who take the least interest in education are the parochial clergy, and those I have seen have but few practical suggestions to make. There were of course persons ready enough to volunteer information, but quite unable to authenticate it, and who when cross-questioned turned out to have no real knowledge of what they were talking about, or were unwilling to take upon themselves the responsibility of their statements. I heard a great many assertions merely based upon *a priori* grounds, as when I was told that the education given by the Christian Brothers was bad, the only proof given being that the brothers were monks, or sweeping generalizations, as when an opponent of the National schools assured me that geography was grossly neglected in these schools, because in *one* school that he had seen, such was the case. Of theoretical principles too, I heard a great deal, but it was not necessary to travel at the public expense to learn that some persons conscientiously believe that all education is bad which is not based upon the reading of Holy Scripture; and that others not less strongly assert that the bishops of the Catholic Church have alone received the mission to teach, and that every national system of education of which they have not the control, is in fact sacrilegious. Most of the advocates of denominational education whom I met had merely considered the question in immediate reference to themselves; they would like to have a denominational school of their own, aided, if not entirely supported by Government, but they had not considered, or had at least very superficially considered the advantages which their theological opponents would derive from the establishment of the denominational principle. In reply to the printed questions which I circulated very extensively I received very few answers; those I received were of little or no importance. On one of the most momentous questions, viz., that of plans for securing increased or more regular attendance, I have not received a single answer. I have received very valuable assistance from some of the National Board Inspectors, particularly Mr. Lane at Waterford, whom I accompanied on several visits of inspection, and Mr. Harkin at Kilkenny. Mr. O'Hara at Clonmel, Mr. Brown at Tipperary, and Mr. Fitzgerald at Enniscorthy, I have only had the pleasure of meeting once. I have also to record my obligations to Mr. Sheahan and Mr. Sheridan, Head Inspectors. My intercourse with these gentlemen has not, I trust, warped my own judgment on the state of primary education in Ireland, the practical working of the system of National education, and the measures to be adopted for extending more generally to the people the benefits of education. On these points the conclusions I have arrived at have been derived almost entirely from the results of the examinations of the various classes of schools which I have visited.

District visited.

Information received.

2. On some of the questions to which my instructions referred, I was unable to obtain the necessary information, but the Commissioners will, I believe, obtain it through other sources. One of the most important questions connected with the present inquiry regards the average period of attendance of each child. The teachers could only guess at this, and that of course with extreme inaccuracy; they did not know how to

* Just before my departure from Clonmel, I ascertained that the vacation of the Mechanics' Institute evening school was over. I called accordingly, and found one or two young men waiting for the teacher, who, however, did not make his appearance.

† In consequence of this reserve, I abstained from examining the convent schools, and the principal Christian Brothers' schools of Waterford.

find it out from their registers, and if I had attempted to find it out myself in each school, the whole time at my disposal would have been taken up with this one question. I intended therefore to get a form printed, containing certain returns to be filled up by the teacher, and forwarded to me after my departure. But just as I was on the point of carrying out this intention, I found that the District Inspectors were circulating very similar forms to that I had thought of, and that in consequence of a demand made by the Royal Commissioners to the National Board. I was present on more than one occasion when the Inspector verified the returns which the teacher had made for him, and each case proved that such returns could not be relied upon previous to verification. The returns made through the National Board will have the immense advantage of being made with deference to the totality of schools in connexion with the National system.

3. It was seldom that I was able to obtain accurate information about the tenure of school buildings. This information is hardly ever to be obtained upon the spot. This, again, is one of the questions which have been asked of the Commissioners of National Education, and which they have asked of the District Inspectors. I have been witness of the pains which one of the Inspectors took in obtaining information, but altogether without success—on the day that I was present at least. But an Inspector who lives within a short distance of a school has at least some chance of discovering who the person is to whom he can write for information. An utter stranger to the place would have no such chance.

Population chiefly Roman Catholic. The town schools chiefly under "religious."

4. In those parts of my district which I have visited the great bulk of the population is of the Roman Catholic religion. Primary education in the towns of Clonmel, Waterford, Wexford, New Ross, and the city of Kilkenny is almost entirely in the hands of the Christian Brothers and nuns of different orders. Roman Catholic children are forbidden under pain of excommunication to go to the model schools, and the penalty is rigorously enforced. For those who do not belong to the workhouse or the gaol there is, besides the model schools, only one National school in Waterford, and this, I am told, is a mere feeder for the schools under the teaching of "religious." The female National schools in New Ross and Wexford are taught by nuns. The largest National school in Kilkenny is a convent school. In Clonmel there is no National school but the model school. In New Ross there is no male National school. There is one at Wexford consisting of two departments, but it can hardly be said to compete with the neighbouring establishment of the Christian Brothers. Kilkenny is the only place in which I found male and female National schools flourishing under secular teachers. The country parishes are supplied with National schools. Protestants are very seldom to be found in these country National schools. In towns they attend the model schools—very often under a protest from their own clergy—or they have parochial schools of their own, generally in connexion with the Church Education Society. A few private primary schools, aiming at a certain degree of respectability, are to be found in the towns, but they are not very flourishing. In most places the proprietors complained that their children were carried off by the Christian Brothers or the nuns. One flourishing and well-conducted dame school is to be found in the suburbs of Wexford. In another town I visited a hedge school, conducted by a master enjoying a rather equivocal reputation. In Waterford and New Ross a large number of children are kept from mischief and prepared for the more advanced schools by poor people under the auspices of the Society of St. Vincent of Paul.

School premises.

5. There is, as might be expected, a very considerable difference between the premises of these various schools. The convent schools and those of the Christian Brothers have almost invariably spacious and lofty rooms, well lighted and ventilated, and provided with desks and apparatus. They are all of them sufficiently large, and if their floors are often inconveniently crowded the true remedy lies in the construction of new schools, not in the extension of the present ones. The National schools, as far as I have seen them, are always well supplied with desks and apparatus; but their premises exhibit every degree of goodness and badness, from the magnificent rooms of the model schools, or even those of Mayfield, down to the cottage and cabin chambers of some of the rural schools. The parochial schools of the Established Church in Waterford, Wexford, New Ross, and Clonmel have very respectable premises. In Kilkenny I found the boys' school sufficiently large, but badly lighted. The private schools are naturally kept in the rooms of dwelling-houses, and their supply of apparatus is very limited. One of the private schools in Waterford is kept in a spacious room, but it is quite unprovided with apparatus. The schools provided for poor children by the Society of St. Vincent of Paul are mere cabin kitchens, perhaps not more than three paces in length or breadth, sometimes without anything to sit upon but the floor. Here I have seen thirty or forty children packed together as close as herrings in a barrel.

6. I cannot find that the National schools are too numerous in any part of the country I have gone through. There is only one place in which I have heard of the interests of a school being affected by the neighbourhood of other schools; but the master who made the complaint was not an efficient teacher, and I am not suprised that his school should be deserted for schools possessing greater attractions.

Actual attendance.

7. The number of children actually present in the primary schools of my district on the 25th of June, 1858, was as follows :—

Constabulary district of Castlecomer,	1,788	Constabulary district of Thurles,	1,275
,, ,, Clonmel,	2,124	,, ,, Waterford,	3,082
,, ,, Kilkenny,	1,547	,, ,, Wexford,	2,292
,, ,, New Ross,	1,242		
,, ,, Portlaw,	1,780	Total number,	15,130

8. If the number of school children in each district be compared with the total population of the district according to the last Census, it will be found that the ratios are as follow :—

In the district of Castlecomer,	1 in 7·3	In the district of Thurles,	1 in 13·2
,, ,, Clonmel,	1 ,, 7·9	,, ,, Waterford,	1 ,, 7·8
,, ,, Kilkenny,	1 ,, 10·9	,, ,, Wexford,	1 ,, 6·1
,, ,, New Ross,	1 ,, 6	And in the entire district under examination,	1 ,, 8·2
,, ,, Portlaw,	1 ,, 9		

9. The district of Thurles has a much lower ratio than any other, but this may be partly owing to the fact that several important schools belonging to it happened to be closed when the constabulary return was taken; and from the fact that the vacation had already begun in some of the schools it is not improbable that the attendance had already fallen off in others.

Ratio to population.

10. It would of course be most desirable to compare the number of scholars with the entire population in 1868; but in the absence of a general census we are obliged to be content with such landmarks as we can get. The question is whether the population has increased or decreased since 1861. I do not think there can be a doubt on the subject. In 1861, throughout the constabulary districts enumerated the number of children between one and five years of age was very considerably less than the number between five and ten, and this again less than the number between 10 and 15. In the district of Wexford, for instance, there were 1,073 children between one and five, 1,295 between five and ten, 1,464 between ten and fifteen. An immense number of infants die, as it is well known, before they have completed their first year. It is evident therefore that in 1866 the number of children

in the district between ten and fifteen cannot have *exceeded* 1,295, but the deaths in five years must have greatly reduced it below that amount. The population above fifteen years of age has been diminished by deaths and other losses which cannot possibly have been balanced by the births during the same period. It is therefore in the highest degree probable that the rates of school-going children to the entire population is higher—perhaps considerably higher—than would appear from the calculation based upon the Census of 1861. Now, in 1858 the proportion of week-day scholars to population was 1 in 7·7 in England, 1 in 9·0 in France, 1 in 8·11 in Holland, and 1 in 6·27 in Prussia, where elementary education is compulsory. In some of my districts the proportion would at first sight appear to be as high as in Prussia, or even higher; but it must be borne in mind that the constabulary return of the 25th June, 1868, does not represent the average attendance of the schools, which is, in many instances that I have examined, somewhat lower. And this leads me to speak of another source of evidence bearing on the same question.

Average attendance.

11. I have everywhere been struck by the enormous disproportion between the number of children whose names appear on the rolls of the National schools and the average daily attendance. But this disproportion is not peculiar to my district, but extends throughout the whole of Ireland. I find from the thirty-third Report of the Commissioners of National Education in Ireland that the number of children on the rolls in December, 1865, was 922,084, and that the average daily attendance for the same period was only 321,209. At the close of the year 1866, the total number of the children on the rolls within the year was 910,819, and the daily average for the year was 316,225. This seems to imply a most extraordinary irregularity of attendance. In England, in 1858, the centesimal proportion of scholars in average daily attendance to the total number belonging to the school was, in public week day schools, 76·1, and in private week day schools, 84·8. But throughout Ireland scarcely more than one-third of the children on the books of each school are in average daily attendance, and in many schools the proportion is even lower. The following returns, which I have taken at random, follow consecutively at p. 510 of the Report for 1866 :—

No.		Rolls.	Average.
134.	Traceystown,	78	23
135.	Tacumshin,	80	36
136.	Tomhaggard,	80	28
137.	Ballycullane, m.,	69	22
138.	,, f.,	80	22
139.	Dunmain, m.,	134	33
140.	,, f.,	117	26
141.	Templetown, m.,	78	22
142.	,, f.,	83	22

12. In a large convent school, at Wexford, of 812 children, the average attendance returned is only 271. On turning over a few pages of the blue book, I find Mullingar Convent school, with 637 children on the rolls, but only 184 in average attendance ; and, on the same page, Moate Convent school, with 367 children on rolls, but with only 130 as an average ; Rathowen, with 225 children on rolls, and an average of 59 ; and Loughagar, with 135 children on rolls, and an average of 23.

13. In St. Patrick's National school, Waterford, the returns for the last three years have been as follow :—

	On rolls.	Average.
1866,	260	52
1867,	270	61
1868,	252	45

The mistress of the school assured me that she regularly gave bread to a number of children, and it is probable that without this the average number of children in the school would be lower than it is. Now, one cause of this disproportion between the average and the number on the rolls is, unquestionably, owing to the fact that many children's names are kept on the rolls of the National schools long after they have ceased to have any real connexion with the schools ; and it is not improbable that were the regulations* now in force throughout the English schools, in receipt of Government aid, carried out in Ireland, the centesimal proportion of the average to the total number of children at school would appear much higher than it does at present. The registers of the Christian Brothers' schools do not retain the names of the children so long after they have ceased to attend, and I have no doubt this is one of the reasons why their averages exhibit a centesimal proportion more nearly resembling that in England. According to their returns, the Christian Brothers have 26,871 children on their rolls, with an average attendance of 19,301, or 71 per cent. These returns include those of six schools in England, but the centesimal proportion would not be much altered by their omission. The existing method of keeping registers in the National schools has this advantage for our present inquiry—that it reveals the very large proportion of children in the educational age who are not at school, or who at least are there very seldom. It is not improbable that in large towns the same child's name occurs on the rolls of two or even more schools, but the cases of double return cannot be sufficiently numerous to affect the enormous disproportion in numbers between those who are and those who ought to be at school. The irregularity of attendance, which this disproportion implies as existing throughout the country, is chiefly owing, as far as I can discover, to the indifference of parents. They have no positive unwillingness to send their children to school, the schools are always sufficiently close at hand, religious scruples are out of question, except as regards the model schools, gratuitous education is plentifully offered to those whose parents cannot afford to pay even a penny a week, and the parents would readily and cheerfully assent to any proposition magnifying the importance and use of education, but *vis inertiæ* is the most powerful influence affecting them. They do not require to be convinced ; "*vident meliora probantque;*" for a time their enthusiasm might be roused through the efforts of persons in whom they have confidence; but unfortunately no one seems as yet to have thought of any plan by which this enthusiasm, if once aroused, might be made to produce permanent results. But though the apathy of parents is the principal and most universal cause of irregularity in attendance, I do not mean to say that it is always the only one. When the child's help can be of any use to the parent the education of the former will infallibly be sacrificed. The venerable parish priest of Tramore, in the county of Waterford, assured me that a very great number of small farmers, who formerly employed men servants, can no longer afford to do so ; they therefore employ their own children or others who would otherwise be at school. I have been assured of the same fact by other authorities. It is also certain from the registers of

Causes of irregularity of attendance.

* "No child's name should be kept on the Admission Register after a fortnight's continuous absence without inquiry from the parents *whether the child has been withdrawn.* The names of children withdrawn (*whether they are so, the answer of their parents will decide*) should be cancelled at once in the registers, and not included in the returns of *age* and *stay at school ;* but the attendance (if any) opposite to such names in the Class Registers, must be counted under Rule 11., *supra,* and the whole number of such names must be counted for the return 'left last year.'" Supplemental Rule 11.

country schools that during the times of tillage, and about the harvest time, the attendance is particularly low, not merely with reference to the elder children but even as regards infants, who cannot work, but whose schooling is little thought of at such seasons by their parents. There are indeed places (though I have not come across any in my own district) in which, during these seasons, entire families leave their homes, and remain away for a considerable time.

14. Putting together the two facts—first, that on the 25th June, 1868, more than 1 out of every 8·2 of the entire population of my district was actually found at school; and secondly, that the average daily attendance is not much more than a third of the children who *sometimes* go to school, it follows, even though 1÷8·2 does not accurately represent the average daily attendance, that nearly all the children go sometimes to school.

Discipline.

15. I am thoroughly satisfied with the cleanliness, neatness, and orderly behavour prevailing very generally in the schools I have visited, and particularly in the country schools. In very many of these not a single child had shoes or stockings, but their feet and legs, like their hands and faces, were scrupulously clean, their hair was combed; rags and dirt were found only in the "charity" schools of the towns. In other respects the discipline varied according to the abilities and influence of the teacher. There is one point in which the *inspected* schools appear to me to have a great superiority over the uninspected, and this is with reference to copying. In general throughout the National schools the children took down their sums from my dictation, worked them without looking to the right or to the left, and then turned down their slates in such a way that no one could see what they had done until I came up. This was the result not so much of better moral instruction than is given in the uninspected schools as of better drill. In one National school I detected a good deal of copying; but this was a school in which the premises were quite insufficient for the number of children present, and wherever this defect exists it is impossible that discipline can be well carried out.

16. I am enabled to bear witness to the strictness with which the Time Table is observed in the National schools. On almost every occasion of my entering one of these schools, I ascertained, by actual inspection, what the children were doing in each class, and then compared this work with that prescribed by the Time Table. I can only remember one case in which the Time Table was not strictly observed. With method and regularity even inferior teachers are able to accomplish much. The best of methods and the most efficient teachers, on the other hand, are powerless against such an evil as irregularity of attendance. Not only do many of the children come to school at irregular intervals, but many of those who come often are extremely careless as to the hour at which they make their appearance. If the rolls were called, as in the English schools under inspection, at an early hour in the morning and afternoon, the average attendance resulting from the registers would, in most schools, perhaps, be very much lower than it is rated at present. I have constantly found children coming in at eleven o'clock in the morning, or even later; at one school which I visited in company with the District Inspector, the master told us that *many* boys only came in at twelve.

Gratuitous education.

17. The number of children who are educated gratuitously is very considerable. This is not wonderful considering the market price of education in the towns. The Christian Brothers professedly teach gratuitously, although the boys who can afford it pay one penny weekly towards keeping up the supply of maps and other apparatus. The convent schools give as gratuitous an education, even when connected with the National Board of Education. In the Carmelite Convent school, for instance, at New Ross out of 445 children only about 50 pay one penny weekly. In the convent school taught by the Sisters of Mercy in the same town the children are supposed to pay one penny weekly, but although there are 242 children on the rolls, the fees seldom produce eighteen pence in the whole week. In a convent school at Wexford, taught by Sisters of Mercy, and in connexion with the National Board, out of 269 children 208 were reported to me as free, the other children paid a weekly fee of one penny. In the male National schools of Wexford the education was reported to me as being simply gratuitous. In most of the Protestant parochial schools which I have seen the children are admitted without paying fees, although well dressed and evidently belonging to a wealthier class than that to which the National school children generally belong. The advantages held out in some places, as at New Ross and Kilkenny, to children who complete their course in these schools are extremely great. They are freely apprenticed on leaving school. Boys at Kilkenny, I was told, get £36 or may be admitted into the Pococke Institution. Girls have similar advantages, and I was assured that they even received £50 as a marriage portion. In the country National schools the usual fees asked are from 1*s.* or 1*s.* 1*d.* per quarter to 4*s.* or 5*s.*, "according to class and circumstances." In some schools the highest fee does not exceed 2*s.* per quarter. There are some schools, but very few indeed, in which payment is compulsory. The highest fees are rarely paid except in special cases; as, for instance, when a boy sixteen or seventeen years old comes for the purpose of learning mensuration. In two or three cases I have found the total amount of the school-fees rising as high as £18 or £20 per annum, but it is very seldom that they rise even as high as £10. On an average they do not exceed £3: a very insufficient supplement to a teacher's salary.

18. The following table gives a view at once of the classification of fifty-nine teachers in National schools which I have visited, and of the salaries which they enjoy. The table contains no return connected either with convent schools or with workhouse schools.

1st class	2nd division,	1	male teacher, salary	£44; 2 females, salary	£36.
,,	3rd ,,	3	,,	38; 4 ,,	30.
2nd class	1st ,,	9	,,	32; 2 ,,	26.
,,	2nd ,,	5	,,	28; 8 ,,	24.
3rd class	1st ,,	12	,,	24; 5 ,,	20.
,,	2nd ,,	1	,,	18; 7 ,,	16.
Probationers,		2	,,	15.	

Income of teachers.

19. Of these 59 teachers 18 have their residence free, 3 others are wives of schoolmasters having their residence free; 8 of the teachers live with their parents; another is the wife of a scholmaster who has not his residence free. The cost of residence varies greatly according to the locality and other circumstances. Some teachers are married and have large families. The lowest return made to me for cost of residence is four pence per week (at Dunhill, in the county of Waterford), the highest is £15 per annum. Between these two extremes returns have been made of 1*s.* and 2*s.* weekly, or of £1, £2 10*s.*, £3, £4 10*s.*, £5, £5 10*s.*, £6 6*s.*, £8, and £10 10*s.* per annum. The local contributions which come in aid of salary and fees are so rare as but very slightly to raise the average emolument of a teacher, so that it may safely be affirmed that teachers in general are wretchedly paid, and out of their wretched income some of them are bound to keep the premises painted and whitewashed, and to repair the roof and floors. It is not surprising that the cleverest of them leave this profession as soon as they can find an opportunity of so doing.

20. In the Protestant denominational schools the pay of the schoolmaster is often eked out by his being clerk or organist. One had as much as £70 per annum, but £40 was a more usual income. The pay of the female teachers varied from £20 to £25. Half of the teachers I saw had their residence free. The others gave returns of the cost of residence, varying from £4 to £12.

21. In judging of the efficiency of the schools by the examinations which they underwent several extenuating circumstances have in fairness to be borne in mind. The season of the year in which the examinations were for the most part held was extremely unfavourable. The Assistant Commissioners came to the schools either just before the vacation, when perhaps the best scholars had already gone to work, or just after the vacation before the children had all returned, and before the children had had time to refresh their memories, and recover the losses which every vacation necessarily entails upon school children. Very shortly after I had examined one of the Christian Brothers' schools, I received a note from the teacher informing me that he had examined his children after my departure, and discovering a great many failures, argued that I had made the same discovery. In extenuation of these failures he pleaded the fact that the boys were only just back after the holidays, during which they had forgotten a great deal which they had known before. The plea is a perfectly good one, not only for that school but for many others examined at the same time; and equivalent if not identical pleas must be offered for nearly every school which I saw. The standard by which I judged of the goodness of a school was that which I am in the habit of applying to the schools under my inspection in England. But in applying such a test I have ever been careful to bear in mind the great difference between the circumstances under which the English and Irish schools were respectively examined. An English school is never examined for annual grants under the Revised Code without having received notice of the day and hour on which the examination is to be held, the month of inspection has been known for a considerable time beforehand, and there has generally been an entire year's preparation for the examination. In Ireland the schools were all taken unprepared, and I examined every child present, whereas in England the individual examination is confined to the children who have made 200 attendances in the year, by which limitation the number of failures is very considerably diminished. All this, I repeat, has been taken into consideration, and it must not be supposed that I ever examined children by a higher test than that by which their own inspectors examine them. The "Programme of Instructions" or "minimum amount of proficiency required" for the second, third, and fourth classes of National schools is far beyond what I required of those classes. Examination of schools.

22. The first grave fact which struck me, was the comparatively small number of children who had risen above the third class. This was particularly striking in the country districts, but in some parts much more than in others. In 13 (country) schools of the county of Kilkenny, 9·1 per cent. of the children present were above the third class, but this is the highest per-centage I have seen in all my district. Eleven country schools in Tipperary gave a per-centage of only 4·4. Fourteen schools (both town and country) of the county of Wexford give a per-centage of 8·1; but 21 schools (town and country) in the county of Waterford give a per-centage of only 3·6. If we leave two infants' schools out of the calculation the last per-centage will be raised to 4·2. In the National schools of the county of Waterford, 56 per cent., and in the county of Wexford, 59 per cent. of the children I saw were below the second class; and in the whole course of my inquiry I did not see more than one or two schools in which the senior division of the first class satisfied, even approximately, the requirements of the Programme of Instruction. Now, the season of the year had, I have no doubt, a great deal to do with the absence of children above the third class. The returns given in the last Report of the Commissioners of National Education give quite different proportions, whether we look to the counties in which my inquiry has been conducted, or to the grand totals for the whole of Ireland. The per-centages for all Ireland, given by the Commissioners, are 7·13 for pupils above the third class, and 45·39 for those below the second. It must, however, be remembered that these per-centages are calculated upon a return of 659,340 children on the rolls for the last quarter of the year 1866, and that this return is more than twice as large as the average daily attendance of the year. It would be interesting to know what the per-centages would have been had the English plan of cancelling the names after a continuous absence of a fortnight been carried out. The per-centages would assuredly have been raised in the first class and lowered in the fourth. In National schools few children above third class, at least half of them below the second.

23. I have already said that the senior section of the first class very seldom came up to the requirements of the "Programme of Instruction." The children of this division are expected—

1. "To read with correct pronunciation the lessons of the first four sections of first book.
2. "To spell correctly the words of those lessons, and to understand their meaning.
3. "To know the Addition Table.
4. "To write and read any number of three digits, and to add three such numbers.
5. "To write words of three letters."

Nothing that I have seen or heard in the course of my inquiry has tended to shake my opinion that the fourth of these requirements would be more in its place in the programme of the second class. On the other hand, there is no reason why children in this section of the first class should not be required to write down from dictation any capital or small letter of the alphabet, or any monosyllabic words which they are capable of spelling. The most advanced children of this section I have seen were seldom able to write the letters from dictation, and the only word of three letters which was readily written was "man." I wish the Irish managers and teachers who are satisfied with their schools could have seen the writing of the lowest standard in the very first two schools I inspected on my return to England, in each of which a large number of children under seven years of age produced writing such as I have only seen in the highest classes in Irish schools. I am not here contrasting the attainments of Irish with those of English children, for most of the children, if not all, in St. Patrick's Roman Catholic girls' and infants' schools, at Walsall, are Irish. And their reading and arithmetic were equally superior to the reading and arithmetic in the corresponding class in the Irish National schools. I may, perhaps, be reminded of what I have said as to the comparatively favourable conditions under which schools are examined in England. But making all possible allowances for the difference of conditions, I assert that no teacher I have seen in any Irish school (whether it be called "National," "Christian Brothers'," "Convent," or of the "Church Education Society") appeared to have a true notion of what a whole class of children under seven years of age could, without any extraordinary efforts, be made to produce. Having spoken so unfavourably of the senior section of the first class in the National schools, I am obliged to add that I was seldom able to satisfy myself that the children in the lower section of this class knew anything. This may in part, and particularly in out-of-the-way spots, be accounted for by the shyness of village children; but shyness only accounts for silence, not for wrong answers. And in many places the children were decidedly very far from shy. Instruction of lowest class.

24. On looking through the "Observation Book," which is kept in each National school, I have not unfrequently found the following entry made by the Inspector in his record of an examination:—"First class not examined." I have witnessed several of these inspections, and in more than one district, and have noticed that the Inspector always began his examination with the highest class. In almost every school that I entered the teacher presented his highest class first, so that (contrary to my own intentions) I almost invariably observed the same order, as being that to which both teachers and pupils were most accustomed. There is a good deal to be said in favour of this method of examination; but the advantages of the other method—viz., that of beginning with the lowest class, appear greatly to preponderate, and particularly with reference to the effect produced Present system of inspection.

upon the mind of the teacher. In each of the inspections at which I was present the examination was very strict; but after having borne the brunt of the Inspector's severity and displeasure with reference to his most advanced pupils, and that, perhaps, during a couple of hours, the teacher was almost indifferent to what was said about the first class, and seemed to consider it as a necessary and inevitable corollary of what had gone before. I am quite sure that if the reverse order of examination were habitually adopted very beneficial results would ensue.

Changes suggested.

25. Whilst on the subject of inspection I will venture to make another suggestion. The principle of inspection without preliminary notice is a very valuable part of the Irish system, and one which, so far from wishing to disturb, I should like to see introduced into the English system. But unlike English schools, which have only an annual inspection, the Irish National schools are inspected several times in the year. It appears to me most desirable that *one* of these inspections should occur at a fixed date for each school, and that at this inspection each child should be examined and his proficiency noted down in reading, writing, and arithmetic, according to a programme more or less resembling that prescribed by the English Revised Code, and its Supplementary Rules. This programme appears to me at once more real and more simple than the existing programme of the National Board.

26. One of the immediate advantages of the substitution of the programme of the Revised Code would be a better classification of the children than exists at present. Children who are learning such different rules as subtraction and division ought not to be in the same class. I was surprised to find the greatest diversity in the attainments (or supposed attainments) in arithmetic of children who were presented to me as being taught together.

Attainments of children above first class.

27. With the exception of those who had recently been promoted from the first class, the reading and writing of the second and higher classes were generally at least fair; so also was the spelling. The reading of the second class was indeed most frequently confined to the first part of the Second Book, but the difference between the attainments of the first and second class was almost everywhere so striking as to furnish another proof that the first class had not that attention paid to it which it deserves. The word *fair*, as used by English Inspectors, implies "that *reading* is intelligible though not quite good; *dictation*, legible and rightly spelt in all common words, though the writing may need improvement, and less common words may be misspelt." I am bound to add that the reading in the National schools, as far as it goes, is not only intelligible but intelligent. There certainly were cases in which the children read the words fairly without understanding the meaning of the more difficult expressions, but in general I found that considerable pains had been taken to impress upon them the sense as well as the sound of words. The spelling of ordinary words is also well taught. I am not sure that too much importance is not attached to the penmanship exhibited in the copy-books, as compared with transcription and writing from dictation. It is chiefly from the two latter kinds of writing that I judged of the attainments of the children, though I invariably examined their copy-books. It happened not unfrequently that the writing done in my presence was very much inferior to the writing done from set copies. On the whole, however, I do not think that either the writing or the reading in the National schools can be considered unsatisfactory. Dictation is sometimes very good in fourth and fifth classes. Reading with correct taste and expression is exceedingly rare under any circumstances, and we have really no right to expect it under conditions implying a far higher degree of intellectual culture than is ordinarily to be attained by children at the age and of the social position of those attending elementary schools.

28. The attainments in arithmetic are far less satisfactory. Yet the sums I gave out to be worked were anything but difficult, and no child was asked to work a sum which the teacher considered above its powers. I never gave out a sum in simple subtraction with more than four figures in the minuend. In compound multiplication 145 was I think the highest multiplier. Sums in other rules were equally easy. But I always insisted on the sums being taken down from dictation, and the result was that notation turned out to be very imperfectly known. I do not think I can do better than give the following extracts from my notes on the arithmetical part of the examination undergone by various schools.

"1. Sixteen children tried compound subtraction, only three were right. In the third class only one (out of six) correctly worked a sum in simple subtraction. Six in the fourth class (out of nine) did sums in proportion and practice.

"2. Only one in the school (out of eleven above the second class) was able correctly to divide £20 by twenty-one. Notation is bad in every class.

"3. (Five children in the second class; eleven in the third; two in the fourth). All can do the simple rules correctly, but only three were right in compound rules of money.

"4. Out of twenty-nine in second class six passed in simple division, twenty tried subtraction but failed. The third class (four) had their sums wrong. The fourth and fifth classes had theirs right (in practice).

"5. (Forty-two children above first class; five above third). Arithmetic bad throughout. At the first trial only one sum right (proportion). On a second trial, lower rules being chosen, ten sums were right in simple division and one in compound subtraction.

"6. (Thirty-four above first class.) Five passed in subtraction, six as far as simple division, three in compound multiplication, eight in compound division, one in proportion.

"7. (Forty-six in second class; nine in third; six in fourth). In second class eighteen passed as far as simple subtraction, four as far as short division. In the upper classes four passed in compound division, two in proportion, one in practice.

"8. (Ballygunner, female, county Waterford. First class, twenty; second, twenty-eight; third, seven; fourth, nine). One of the most satisfactory schools I have visited, . . . In the first class five children had some elementary notions of arithmetic. . . . The notation is good throughout. In the second class eighteen children out of twenty-eight passed in arithmetic (twelve of them in short division). The third and fourth passed without a failure (twelve in the compound rules of money, four in weights and measures, proportion, and practice).

"9. In the second class six out of sixteen passed; in the third and fourth (five children) one passed in compound multiplication of money and one in practice.

"10. Arithmetic weak throughout the school. In the second class two out of fourteen passed. Only one passed out of ten above the second class.

"11. (Second class, 117; third, thirty-nine; fourth, twenty-four; fifth, twenty-six). In the second class forty-one passed as far as simple subtraction, nine as far as short division. In the higher classes seven passed in short division, six in multiplication of money, eight in division of money, sixteen in proportion, and nineteen in practice.

"12. (Second class, seventeen; third, nine; fourth, two). No boy in the school could do a compound multiplication sum. Only one boy did a simple short division, five could do addition and subtraction. Throughout the school the multiplication table is very moderately known.

"13. (Second class, thirty-five; third, eighteen; fourth, nineteen). Only one girl failed in the fourth class, but all failed in the third and all but three in the second.

"14. (Second class, sixteen; third, twenty-one; fourth, fifteen). In the second class three girls passed, in the third twelve, in the fourth seven. The fourth class would not attempt any sum above the compound rules in money.

"15. Out of thirty-eight in the second class thirteen passed as far as simple subtraction. Half of the class knew their multiplication table. Out of sixteen in the third class five did a sum right in simple division, eight others had a sum right in simple subtraction. In the fourth class out of twenty-one, one girl had a sum right in weights and measures, eight had a sum right in compound division of money."

29. I stop here, because further extracts would only tell the same, not a different tale. Those I have given have not been selected for the purpose of exhibiting the more unfavourable side of the picture. The impression which is conveyed by them would not be modified by the study of my notes on the other National schools which I visited.

30. Considerable pains are taken in teaching grammar and geography (particularly of Ireland). Success in these studies varies of course in different schools.

Workhouse schools.

31. Among the National schools there is one class quite distinct, though taught according to the same method, viz., the workhouse schools. They are in general very efficiently conducted. I was particularly pleased with the teaching of the infant classes in the female departments of the workhouse schools at Clonmel and Kilkenny. And among the schools of every description which I have visited in the four counties of my district I consider the male department of the Clonmel workhouse school one of the best.

Convent schools.

32. The convent schools in connexion with the National Board chiefly differ from other National schools in two respects. Their principal teachers are not required to pass an examination, and the public grant depends solely upon the average attendance. I am not acquainted with the reasons which induced the Commissioners to dispense with the examination in the case of "religious" teachers. The common reason given to me, that "religious" could not be expected to submit to a public examination, is manifestly untenable. In England, Irish as well as English nuns submit to examination without the least hesitation,* and the same rule is found in Catholic countries abroad. That the public grant to a school should depend solely upon the registration kept by the school teachers is a principle which in England would find but few advocates. I shall perhaps be asked whether the "religious" who have not passed an examination are not quite as efficient teachers as those who have been examined. My examinations of the convent schools certainly do not prove this. It is often argued that because many of the ladies who teach in the convent schools belong to good families, and have themselves received a highly refined education, they are more likely to teach well than persons in the condition of ordinary National school teachers. I cannot think that any persons acquainted with the practical working of schools can possibly favour such a delusion. Teaching is an art which, like all others, requires to be learnt, and the most zealous dilettantism under the most favourable circumstances is as little likely to be successful in this art as in that of baking. One or two of the very best teachers in my English district are nuns; but their success is not owing in any way to the accident of their being "religious," or better born than their fellow-teachers, some of whom are quite as successful, but to natural abilities and good training, besides complete devotion to their work. I do not think it is possible to converse with more delightful persons than the "religious" teachers I have seen in the convent schools of Ireland. Their devotion to their duties is beyond all praise, and their meekness and gentleness must win hearts far more stubborn than those of the little ones whom they train up to piety and virtue. The civilizing influence which they exert is certainly immense. I have no doubt that if I had merely passed through these schools in the necessarily superficial way of ordinary visitors, I should have seen no side but the bright one; but individual examination is a severe but salutary check upon mere inspection, however carefully conducted. And tried by this test of individual examination, the convent schools do not exhibit that superiority over other schools which their panegyrists assert. I do not find that their children read or write better than other children—their per-centages of failures in these subjects are greater—and in the uninspected schools arithmetic is decidedly much inferior. Out of 108 girls, for instance, in the *highest* department of a convent school, 2 passed in proportion, 3 in compound multiplication, 5 in short simple division, 8 in subtraction, and 7 in addition of three numbers of not more than three digits. In this school-room only 30 girls were able to transcribe from a reading-book. In another convent school, out of 94 girls in the upper department only 1 had a sum right in practice, 1 in simple multiplication, and 13 (several of whom, I am sorry to say, were guilty of copying) in a little addition sum.

Christian Brothers.

33. The Christian Brothers, as I have already said, almost monopolize the teaching in the towns. It is easy to understand why, even without reference either to the question of mixed education or to the great reputation which the Brothers have won, the Catholic clergy should show a preference to them above any secular teachers. Each Brother, by the mere fact of his being a member of an approved religious community, necessarily appears to them to offer the best possible guarantees of Christian sentiment and virtuous conduct. "Above all things, the Brothers are to recollect that the instruction of the children in piety and religion is the great and main end of their institute. This is to be their first and principal care in regard to their pupils." Such is their rule, and there can be little doubt that it is most thoroughly and successfully carried out. I have heard persons of all classes and denominations speak enthusiastically of the "Christian" schools, as they are called. My own personal impressions of the teachers are quite in keeping with the popular feeling. My duties, however, as an examiner did not permit me to be satisfied with mere impressions, and on subjecting these schools to the same tests which I was in the habit of applying to the National and other schools, I arrived at conclusions which I am confident would be confirmed by any examiner familiar with school management on a large scale. The Christian Brothers have excellent and most devoted teachers, but the supply is unequal to the demand. The floors of their schools are crowded, sometimes most inconveniently. In one of the schools at Waterford I found the passages and even the staircase incumbered by classes of children. It is quite impossible that the Brother who has the charge of the room can attend to so many children at once, and the inevitable consequence is that the great majority of the pupils must be left to the care of monitors, many of them very young, and requiring themselves to be looked after quite as much as their little charges. The highest class, generally large in numbers, and containing boys of fourteen, fifteen, and even sixteen years of age, requires the constant supervision of the brother, and the lower classes cannot possibly have as much of it as they really require. As a rule, the highest class in the "Christian" schools which I have seen is well taught; the others in a very inferior degree. Before I became familiar with their system I thought the failure even greater than it was in fact; for many of the children who had made some progress in reading had received no instruction whatever in either writing or arithmetic. This was not the result of neglect, but of system. A Brother tried to persuade me that it was impossible to teach the rudiments of reading, writing, and arithmetic at the same time to children like those who pass in our First Standard in England; and he appeared very sceptical when I told him of such a standard.

34. Of the three elementary subjects, I have found writing to be most successfully taught in the highest classes. Some of the writing done from dictation was very good indeed; the reading was not so good. Indeed in classes below the highest the failures in reading were far more numerous than I should have expected in schools where this subject is made so determining a principle of classification. But in these, as in other schools, arithmetic is the great failure. In one school-room, for instance, every boy who was reading the Second Book failed in arithmetic; and among those reading the Third Book only 4 out of 28 had their sums right. In another school, out of 23 boys attempting practice 12 were right; 8 boys tried proportion—all were wrong; 2 tried compound division of money with success; 8 tried compound multiplication, and were all wrong; 5 out of 10 were right in short division; 9 boys who tried multiplication failed; and 2 who tried subtraction failed.

* I think it well to add that they do not feel the least repugnance in passing their examination in presence of a Protestant Inspector.

In a third school, out of 75 boys present the passes were as follow :—8 in practice, 5 in proportion, 4 in compound division, 1 in simple division. Here it will be noticed that the passes decrease in inverse ratio to the difficulty of the sums. In a fourth school, out of 31 presented for examination in proportion 14 lowered their pretensions down to compound subtraction—of these 11 had their subtraction right. The remaining 17 were forced to come down to short division ; but not one of them was able to write down 19,506. In the same school, out of 14 boys presented in simple subtraction 1 had his sum right. I then tried these 14 boys with a little addition sum, but only 3 were able to work it.

35. In grammar the boys of the highest class generally parsed easy sentences very decently. In geography they did not answer very well when I examined them, but they got on well enough when I asked the teacher to put them some questions. On repeating this process in different towns I found that different teachers asked the same questions, which were clearly part of their usual programme. There can be no doubt that the efficiency of these schools would be immensely increased by inspection.* The attention of the teacher would be called by it to defects which he does not even suspect, and which are liable to escape even the eye of the Brother who is appointed to the office of visitor.

36. The number of school-rooms taught by Christian Brothers which I have visited is 21.

Protestant denominational schools.

37. Of denominational schools under the management of the Protestant parochial clergy, I have only seen 12 ; but none of them under conditions which enable me to speak very highly of their efficiency. Some indeed of the schools were closing for the vacation, and most of the children gone. Others were just opening, after the vacation. One of the boys' schools was under the charge of a female teacher ; but she was ill, and her place was occupied by her husband, a "missionary Scripture reader." Most of these schools have a low average attendance. One of the most flourishing is the female parochial school at Clonmel, which is taught by a mistress educated in the model school of that town. At the Clonmel boys' school, which is one of those connected with the "Incorporated Society," one boy offered to translate "Xenophon's Anabasis." I tried him at the beginning of the first book, but his efforts were not crowned with success, his knowledge of the grammar being extremely moderate. An attempt at the "Æneid" was not more successful. This is the only instance I have met in my inquiry of a language other than English being taught in elementary schools.

Private schools.

38. Of the private schools there is little to be said. The schools in Waterford patronised by the Society of St. Vincent of Paul can hardly be said to discharge any other function than that of keeping children out of the streets and away from mischief. That at New Ross is rather better provided with teaching apparatus, and the mistress is an intelligent person. At Wexford there is, I have already said, a well-conducted dame school. I found 69 children actually present, of all ages between 3 and 13. All the children are neat and clean ; the 12 of the first class read and write very nicely ; two or three of them work sums in practice. But the second floor of a small house is severely put to it for the accommodation of so many children. A ragged school in Waterford has the reputation of being used for proselytizing purposes, and the mistress, who was trained at St. Luke's, Dublin, told me that the principal subject taught was "controversy." I asked what method she followed, and she replied that the children learnt "texts of Scripture, with their application." Another ragged school is patronized by members of the Society of Friends. I called several times before I found the teacher. There were several rooms provided with desks, but no children ; there was, however, I was told, a large attendance in winter. All the children are Roman Catholics, and the religious instruction given is "elementary, not controversial." In another town, I found a school taught by a master who had been dismissed for misconduct from a National school, and he was well known to the police. He professed such extreme deafness that it would have been impossible for him, according to his own showing, to hear a child's lesson. There were 28 well-dressed children present, of all ages (amongst them two boys and one girl of sixteen), and in every stage of learning up to mensuration. On examining the children, I found that whatever knowledge each possessed had been acquired in some other school. Ten children above the infant class passed a good examination at Lady Donoughmore's school, near Clonmel. The school is a Protestant one, and four Roman Catholic children in it are taught "Scriptural truth," but do not read the Bible. This curious arrangement, I was told, was adopted "to satisfy the priest." Most of the other schools I saw were very small, and without any organization.

Ages of children.

39. I collected as accurate information as it was possible to obtain in each school about the ages of the children. In almost all the country schools the school age ranges from three to fifteen. I seldom found more than one or two children in the same school who had reached fifteen. At the large National school at Mayfield the eldest boy was fourteen and a quarter. Exceptionally, however, I have found two boys of fifteen and two of sixteen in the same school (at Ballyclerihan, in the county of Tipperary). Three of them were in the fifth class, and were learning Algebra. One of those who had passed his sixteenth year was only in the third class. Such cases are not unfrequent on the school registers ; but the attendances of children of such an advanced age are extremely irregular. At one school in the county of Wexford I found a youth in his twentieth year ; but he had come for the purpose of learning mensuration. In Christian Brothers' schools at Wexford, Clonmel, and Kilkenny, I have found boys in their seventeenth year ; but not more than two in the same school. In the convent school at Kilkenny (connected with the National Board), I found in the third class one girl in her nineteenth year ; in the fourth class, two girls in their sixteenth and two in their seventeenth years ; in the fifth class, one in her sixteenth and one in her seventeenth year.

How far is the knowledge acquired at school retained in afterlife.

40. It would be interesting to know how far the knowledge acquired at school was retained in afterlife. In the hope of getting some information on the subject I called upon a great many persons who employed labouring men and women. The information I obtained was certainly very unfavourable. I was told, for instance, at one place, "Of 200 men whom we employ, not one half can read or write, and not one is capable of making the simplest bill." It was added that the older the men were, the more ignorant they were. I was anxious to obtain more authentic evidence than statements which might be based on very erroneous impressions, and I received a good many promises of evidence derived from some kind of examination ; but the only two records of examination which I received were the following :—

"1. Of 71 hands at ————
"50 can read or write,
"25 can cipher,
"9 cannot read nor write."

"2. Hands employed at ————

"Read, write, and calculate, . . .	92
"Read and write only, . . .	27
"Neither read, write, or calculate, . .	83
"Total, . .	202

"Calculation merely means the four simple rules of arithmetic."

* Not necessarily Government inspection, to which the Brothers appear to be averse.

41. Employers were unanimous in asserting that their labourers did not take the least interest in reading, except, perhaps, sensational articles during the time of the Fenian agitation. I am obliged to say that the booksellers' shops in the towns of my district do not afford a very favourable evidence of any extensive demand or taste for literature among the classes which consider themselves very superior to the labouring class.

42. On the vexed question of "mixed education," as far as it relates to elementary schools in Ireland, it is not without extreme diffidence that I venture to express an opinion. The conclusions to which I have been led, in the course of the present inquiry, are but recently formed; and I was very far indeed from suspecting at the commencement of the inquiry that I should ever adopt them. These conclusions are merely formed from a very limited range of data, and on one most essential part of the general question—I allude to the model schools—the information I possess is necessarily most imperfect. On these schools, and on their connexion with the general system, I have no judgment to give. Mixed and denominational education.

43. Before my recent visit to Ireland my predilections were in favour of the denominational system, with which I was familiar in England. I had always heard it spoken of as an injustice that the Irish should be debarred from a privilege which is conceded to the English; but the circumstances of England and Ireland in this matter are utterly different. The denominational system in England exists, not by any means as the best possible system, but as the only one which was possible at the time that it was created. Half of the funds by which the schools are supported are raised by voluntary contributions, almost entirely by the clergy of the various denominations; and this is an essential part of the system, which has but little chance of being accepted in Ireland. In England the adherents of the various churches and sects are in many places so numerous as to provide a supply of children for the denominational schools. Wherever this is not the case, the denominational system is at fault. In a country parish where the majority belong to the Established Church, it is quite impossible to provide efficient separate schools for Baptists, Wesleyans, Independents, and Roman Catholics. Yet these minorities have a right to be educated, and that in such a way that their religion should not be tampered with. Cases like these are met by the National system in Ireland; they will have to be met sooner or later by a similar system in England. To adopt the denominational system in Ireland would be taking a retrograde step for which that much-injured country would have little reason to thank us.

44. I am, of course, aware that there are many persons worthy of the highest respect who consider mixed education as not only inferior in other respects to denominational, but as religiously and morally *wrong;* but they have not succeeded in proving this to other members of their own communion, who are quite as good and wise as they. Nor are these extreme views generally accepted; the great majority who advocate a change admit that the present system is perfectly lawful, but they prefer the denominational system as right in principle, and offering very superior advantages in a moral and religious point of view. Many of them also appeal to the fact that mixed education, properly speaking, hardly exists in the ordinary National schools, and they demand that as these schools are practically denominational, they should be recognised as such.

45. The returns of the 25th June, 1868, show how very limited in fact is the extent to which "mixed education" prevails in the National schools of my district. Putting aside the model and workhouse schools, and counting up the National school-rooms, in which there are any Protestants at all, I find that there are in the Constabulary districts of

Castlecomer,	4	Portlaw,	3
Clonmel,	1	Thurles,	2
Kilkenny,	0	Waterford,	1
New Ross,	4	Wexford,	6

Of these, the schools of Waterford and Clonmel are the night schools of Mechanics' Institutes. In each of the two schools of the district of Thurles there was only one Protestant. The three school-rooms of Portlaw are the boys', girls', and infants' departments of the large school attached to the factory of Messrs. Malcolmson. In the eight Constabulary districts there are not more than six schools in which the total number of Protestants exceeds three. Of these six schools three are the Portlaw schools, and they are the only ones I have seen in which no kind of religious instruction is given. There are, on the other hand, no less than nine parochial, or otherwise decidedly denominational, Protestant schools containing Roman Catholic children, in five of which the number of Roman Catholic children exceeds three, besides other schools, of which I have seen two, in which all the children are of Roman Catholic parents, but the management and teaching are exclusively Protestant.

46. The fear of proselytism in the National schools of the district ought, according to these statistics, to be limited to the Protestant part of the population, but there is not the least evidence that this fear is felt, or that the least occasion for it has ever existed.

47. The question, therefore, which is suggested by the overwhelming majority of National schools, in which the children are without exception Roman Catholic—under a teacher of the same religion, appointed by the parish priest, and liable to be dismissed by him at will—is this: Are not these schools in fact as truly denominational as the English schools which receive Government grants? And if so, why should they not be recognised as denominational? Why should the manager or teacher be hampered by rules and regulations about religious emblems or instruction, prayers and religious exercises, when these rules have been devised for the protection of minorities, which have no existence in unmixed schools? The answer to this really turns upon the double question—first, whether religious minorities have a right to be considered and protected by the law; and secondly, whether the law can be carried out at all, if not of universal application? There are, of course, persons who believe that truth alone has rights, and that it is wrong not to proselytize whenever there is an occasion. These persons do not really advocate denominational education, they only advocate the teaching of their own religious creed. Neither Protestants nor Roman Catholics of this way of thinking would approve of the recognition and support by the State of both denominational and undenominational schools. To those who admit the right of minorities, this double system would present insurmountable difficulties. The fact that a given school is at this moment unmixed is no sufficient reason for supposing that it was so last year, or that it will be so next year. If a school with an average attendance of thirty children is once recognised as a denominational school in a parish because it was unmixed in 1868, what is to become in 1870 of five or six children (Catholics in Ulster or Protestants in Munster), who, in the interval, have grown up in a religion different from that taught in the school? Are they to go without education, or to be exposed to proselytism, or is the character and organization of the school to be altered for their sake? I do not suppose anyone would support either of these alternatives. The truth is that a double system is impossible, and if the rules and regulations which protect the religion of the minority are to be enforced at all they must be enforced everywhere.

48. So far from arguing from the large number of unmixed schools which exist in this district that the denominational principle should be recognised, I can only draw the conclusion that their patrons are already in possession of the principal benefits which those under the denominational system enjoy, and that whilst they have little to gain, they and their clerical brethren generally have much to lose by the change.

49. When I hear people say, "If I had a school I should insist on entering it at any time I pleased to give religious instruction;" I can only reply that no more ridiculously preposterous claim could be made. The present rules and regulations of the National Board allow as much time to be given each day to purely denominational religious instruction as is ever given in a school of the Christian Brothers, in a convent school, or in an Episcopal college. What is not allowed is a deviation from the time table—and the prohibition is a most salutary one. I think the astonishment of a professor of the Catholic University or of Maynooth would be extreme if the Rector or President suddenly made his appearance in the middle of a lecture on geometry, chemistry, physics, or Greek, and announced his intention to give some religious instruction. If the religious instruction which is given in any of the National schools is insufficient the fault certainly lies elsewhere than in the rules and regulations of the National Board. It will, perhaps, be said that religion ought to be taught not only in the prayers, spiritual exercises, catechism, and other direct dogmatic instruction, but throughout the whole course of education, and that religious and secular education cannot therefore really be separated. Whatever truth there is in this is not really at variance with the National system in the hands of a zealous and intelligent manager; and as an objection, it is far more plausible on paper than in fact, particularly as regards primary instruction. Nothing tends to make religion odious more than the habit of "improving" the communication of knowledge which bears but little direct relation to religion. And there are several of the subjects of primary instruction which are hardly capable of being "improved" in behalf of religion. I certainly do not think a school would turn out better Christians if the copy-books contained only pious texts, if all the sums were worked in refutation of Bishop Colenso, and if no parsing were allowed except out of approved spiritual books. The reading books may be objected to on religious grounds, either as containing objectionable matter, or as not containing sufficiently definite Christian doctrine. The latter of these defects may surely be supplied to *any* extent in the time set apart for religious instruction from the standard books of the Church to which the children using them belong, and there is probably no subject to which the Commissioners of National Education would give a more attentive consideration than the expunging from their books any matter which gave reasonable offence to a large section of the community. The use of the books published by the Commissioners is not compulsory. And one of the best proofs that these books are not so offensive as violent opponents of the National system assert, is the fact that they are used in Irish Catholic and even convent schools, which have no connexion whatever with the National Board. In England nothing was more common a year or two ago than to find the Irish books in use in the Roman Catholic schools under inspection, and if they are now being superseded by other books, it is not on account of any objectionable matter they contain, but because the new books are considered much *easier* for children who are to pass an examination under the Revised Code.

50. One of the rules of the Commissioners prescribes that "no emblems or symbols of a *denominational* nature shall be exhibited in the school-room, *during the hours of united instruction*, nor will the Commissioners, in future, grant aid to any school which exhibits on the exterior of the buildings any such emblems." With reference to this rule my private opinion is, that it is most deeply to be lamented that any Christians in Ireland should look upon the Cross or the Crucifix as denominational symbols offensive to their religious feelings; but since this is the fact, any National system worthy of the name, must take these feelings into account, and the majority will do well to consider whether a denominational system which would enable them to gratify their own feelings by the exhibition of religious emblems and symbols, would not be dearly purchased by the sacrifice of those protective rules by which their own children are certainly in many places guarded from proselytizing influences. If the denominational principle be once recognised, not only will a very great many National schools—which at present contain an immense number of Roman Catholic children—become decidedly Protestant schools, but a whole series of schools which at present have no connexion with the National Board, will acquire the right of obtaining support from the Parliamentary grant. A new stimulus will be given to the proselytizing influences of these schools, the efficiency of which will be very greatly increased by Government inspection.

51. It will, perhaps, be said that my objections to the introduction of the denominational principle in Ireland, appear to rest upon the very great probability that Protestants would be gainers, and Roman Catholics losers by the change. But this is not at all my meaning. *Fiat justitia, ruat cœlum.* I have only been arguing *ad hominem.* I believe that the present system does as full justice to all parties as those parties themselves permit. Catholics and Protestants have an equal right to claim the assistance of the State for the education of their children. Catholics and Protestants have an equal right to make as many converts as they can. But the State is not bound in justice to furnish either party or both with the means of proselytizing successfully. If it be true, as the opponents of the present system assert, that proselytism is in some places carried on in National schools, the true remedy lies in a more vigorous enforcement—certainly not in the suppression—of rules which protect the religion of the minorities.

I have the honour to be, my Lords and Gentlemen,

Your most obedient servant,

P. LE PAGE RENOUF.

Report of Patrick Cumin, Esq., Assistant Commissioner.

London, February, 1869.

My Lords and Gentlemen,—In compliance with instructions which I received last summer, I have now the honour to transmit my report upon the primary schools, in that part of Ireland which was assigned to me. But before entering upon the main subject, I may be allowed to mention that I have enjoyed peculiar opportunities of forming an opinion upon the comparative state of the primary schools in Ireland; because I have had the advantage of examining the same class of schools in other countries. In England I was employed as an Assistant Commissioner under the Duke of Newcastle, and reported upon the primary schools in Plymouth and Bristol. In Scotland I acted as Secretary of the Commission on Primary and Middle Class Schools, of which the Duke of Argyll was chairman. Besides which, some years ago I took the opportunity of personally visiting and examining some of the primary schools in Canada, and the United States. I have thus had an opportunity of studying the principles of these various systems, of seeing them in practical operation, and, what is probably of more importance, of forming a judgment as to the amount of knowledge which may be expected of scholars in primary schools, and of observing the manner in which the religious difficulty (as it is called) is encountered. Former experience.

I.—Preliminary Observations.

2. Ireland, as everyone knows, involves many difficult problems. But none are probably more difficult than those connected with education. Until last autumn I had never been in Ireland, and, therefore, to me, a stranger, it was of great importance that I should hear the opinions of persons living in the country who had reflected upon the subject of primary schools. There is probably no district either in England or in Scotland which does not abound with persons of various ranks and professions who have considered such questions, and are ready to express their opinions upon them. But in Ireland I was surprised to find it quite otherwise. In the districts which I visited, except Fermanagh, there were few resident landlords, and scarcely one who took the slightest interest in the schools. The Established Church clergy ostentatiously hold aloof from any practical attempt to educate their Roman Catholic parishioners. The priests profess themselves the mere mouthpieces of their bishops, and, with few exceptions, seem nervous about expressing any opinions on educational questions; while the bishops, so far as I could gather, had not considered the question except from a clerical and provincial point of view. The result has been, that I have been compelled to draw my own conclusions from the facts which were before me; and if there be anything valuable in this Report, it will be due to the fact, that I have considered the education-problem in Ireland not only with reference to Ireland itself, but with reference to the other portions of the United Kingdom. Difficulty obtaining information.

3. The districts assigned to me were the Constabulary districts of Carrick-on-Shannon, in the county of Leitrim; the Constabulary district of Sligo; the Constabulary district of Enniskillen, in the county of Fermanagh; and the corresponding districts of Killybegs, Glenties, and Dungloe, in the county of Donegal. These six districts, according to the census of 1861, comprised a population of 105,120; and happily for my purpose each of them has its own peculiarities. I may here mention, that a Constabulary district consists not of a parish or of any number of parishes, but of a certain number of townlands. Districts examined.

4. Starting from Dublin I went by railway to Boyle where the District Inspector of National Schools resides, and which was my head-quarters for visiting the district of Carrick-on-Shannon. Boyle is celebrated for its noble Abbey, now in ruins, and its horse-fair. The neighbourhood is surrounded by large grazing farms, held by tenants under Lord Lorton, who is non-resident. The town of Carrick-on-Shannon, picturesquely situated upon the river, is about seven miles off in the county Leitrim. The National school is under the patronage of a Protestant lady who subscribes liberally towards its support. Beyond Carrick, the holdings appear to be somewhat smaller than in Roscommon. There are some resident gentlemen; one of the most considerable proprietors is Lord Albemarle, who is non-resident, but subscribes to some of the National schools. From Boyle I went to Sligo. The Constabulary district of that name includes not only the town, but a considerable part of the surrounding country. In this district the influence of Bishop Gillooly and his clergy is very powerful—so powerful, that there is no National school under a Roman Catholic patron within the borough. Beyond the borough, toward Strandhill and the west, the district is bounded on the north by an inlet of Sligo bay. There is no lack of comfortable residences; but those who occupy them are almost all Protestants, and confine their interest and pecuniary assistance to schools connected with the Established Church. Between the indifference of the Protestant landlords, and the determined opposition of the Roman Catholic clergy to the National schools, these institutions are not likely to enjoy great prosperity. Proceeding northward, along the coast through the properties of Sir Robert Gore Booth, the late Lord Palmerston, and Mr. T. Conolly, I reached the town of Donegal. The principal landlord here is Lord Arran, who is also non-resident, but subscribes liberally to the National school. The parish has the advantage of a most active parish priest, Dr. Mulreany, who takes considerable interest in education, and has been the means of providing more than one school in the neighbourhood. The Established Church clergyman, however, whom I saw, entertains strong views against the National system, and peremptorily insists upon the reading of the Bible as a necessary part of the school work. So far as this gentleman, and those who adopt his views are concerned, it is probable that the mass of his parishioners would even now, be sunk in barbarism. Carrick-on-Shannon. Sligo. Donegal.

5. Within a few miles of the town of Donegal is the beautiful Lough Eske. Buried in the mountains, its waters are encompassed on the south and west by steep sloping banks clothed with thick woods, which half conceal the charming grounds and residence of Mr. Brook, the chief proprietor of the neighbourhood; while at the upper end of the lake a broad green meadow stretches into its waters, and shows a pleasant summer residence, backed by woods and a sea of mountains. On the eastern side opposite, the ground rises abrupt and rugged; and as I climbed the rough road to a school-house, I saw studded along it the cabins of what are here called farmers, but would elsewhere be called cottiers. The men themselves, their wives and families, were gathering in the harvest, or if the wives were absent I could see them through the peat smoke of their cabins nursing their infants, or preparing the food. It is not many years since the English tongue became general in these regions. The children, whom I found in school, were much more familiar with Irish than with any other tongue, and the parents, I was told, knew only the native language. Lough Eske. Irish language.

6. From Donegal I changed my quarters to Killybegs. The road which I travelled passes through a series of villages—each with its cluster of inhabitants and National school. There is no difficulty in distinguishing these buildings, because upon the walls are written up the words "National School." There is, moreover, a From Donegal to Killybegs. "National Schools."

Vested schools. singular uniformity about their appearance. If the school is *vested*, or in other words, built partly at the expense of the Board, the house is square-shaped, of stone, well constructed, in substantial repair, equipped with maps, books, &c., and with offices attached. There is very seldom a class-room, possibly the number of scholars is not sufficient to necessitate such accommodation; but there were certainly some cases in which a class-room would have been of great advantage especially for the infants. The most conspicuous defect is that there is no

Non-vested. residence for the master. But the *vested school* houses which amount to 1,218, constitute a small proportion of all the schools connected with the Board, for on the 31st of December, 1867, 4,824 schools were *non-vested*. These schools, which have been built or hired by the patron, or manager, and to which the Board contributes only part of the teacher's salary and school-requisites, are inferior to the *vested* schools. They are sometimes tolerable structures; but in most cases they are thatched cottages, or hovels, with mud floors, abominably dirty,

Offices. indifferently furnished, in bad repair, with neither offices nor play-ground. With respect to the offices, indeed, it seems practically of small importance whether they exist or not. In one case I was told that the priest thought it more healthy that there should be none. Upon the same principle I must explain the fact that in the remote districts the offices attached to vested schools looked as if they had only just left the hands of the builder, or carpenter; evidently they were never used. In such matters I cannot think that the Inspectors are so particular as they ought to be, for I generally found them very dirty, and the teachers seemed surprised at the trouble I took to inspect them personally. It is true that most of the non-vested schools are somewhat superior to the hovels in which the people themselves, and even the school-masters, pass their lives. But it seems to me vain to expect improved manners or increasing self-respect, unless the children are assembled in a building superior to the wretched hovels which they call their homes, and unless the teacher is accommodated in a manner befitting his position, and which will enable him to set an example of cleanliness and order to his pupils.

Killybegs. 7. Killybegs which I now reached is beautifully situated upon the bay of the same name. It is only twenty miles across to Sligo; nor is there any reason why in a few years Killybegs should not rival the more accessible watering place Bundoran. Killybegs has all the marks of a thriving little town, and for these, it is much indebted to the wise energy of the late proprietor and his agent, Mr. Wilson. That gentleman built a quay, gave a site for the National school, and erected perhaps the best set of school buildings which I saw. There is a school for boys and another for girls, a master and a mistress, and a house for each, with a good garden. I was told that until shortly before Mr. Wilson's death, every National schoolmaster on the estate received £5 besides his salary from Government, and that in the appointment of teachers, the reasonable desires of the people were respected.

Glencolmkill, Ardara, Glenties, Dungloe. 8. It is needless to pursue my journey in detail further. Having penetrated to the most westerly part of my district at Glencolmkill, I returned to Killybegs, and thence proceeded northward through Ardara to Glenties and Dungloe, where my tour ended.

Character of this district. 9. Throughout the whole of this district, west and north of Killybegs, the country exhibits the same physical features, and the population the same characteristics. The whole west coast of Donegal may be described as a series of broad headlands—a broken line stretching out into the Atlantic, and fringed with clusters of islands. The part near Glencolmkill, where Prince Charles sought refuge, is especially bold and picturesque. But as I passed more inland, the eye ranged over a wide tract of peat-bog and moorland, with here and there a wretched hovel. The holdings are generally exceedingly small. In one estate which yields £8,000 a year, I was told that the rent paid by each tenant does not exceed £5 a year; but it must not be supposed that this implies great poverty because I was also told that in this country as elsewhere in the north, the custom of tenant-right prevails, and that an outgoing tenant (although he has no lease) will obtain from the incoming tenant £1 for every shilling of rent paid to the landlord. There is of course a certain proportion of the land which is cultivated, but the people live chiefly by grazing cattle and selling them at a profit. In the autumn and part of the winter, such a place as Carrick is enlivened by the visits of sportsmen from Dublin and England, and by a few tourists. But those transient visitors take no practical interest in the settled population or in their improvement. Resident gentry there are none, except indeed the Established Church clergy, of whom there is one in every parish. To the poor and afflicted of every creed, these gentlemen in time of famine or pestilence, have always done their duty. But the vast majority of the population is Roman Catholic, and in ordinary times the parish priest is the only person whose advice or sympathy is either asked or desired. It is not many years since the population of these districts was brought within the reach of civilization, for until the railway was extended to Ballyshannon and Sligo, these western highlands of Donegal were almost more distant from London than New York; even at this day I found that in some parishes the parents of the children understood nothing but Irish, and indeed were it not for the National school, the children would now be as ignorant as their parents.

Importance of schools. 10. In Ireland, as in the Highlands of Scotland, a school is the only instrument of civilization. It is the only means by which the ignorant peasant has his vision strengthened, so as to look beyond the village where he is born, or is enabled to live and prosper in any country to which he may transfer himself. The invariable effect of education in the Gaelic-speaking districts of Scotland has been to promote emigration, and thus to remedy the evil of over-population. The same effect is taking place in Ireland, nor did I witness any spectacle more touching or significant than that of young men and women of eighteen or nineteen years of age, standing up in the same class and struggling through their lessons with children of ten or eleven, in order to fit themselves for America. Among these people the necessity of education is thoroughly understood; and it is (as I have been told more than once) the express wish of those who have already emigrated that nobody should follow their example without a reasonable stock of knowledge.

Effect of education on emigration.

Attitude of the landlords and the Established Church clergy. 11. In circumstances such as these, schools have become an absolute necessity, and it is the obvious duty of those who take any interest in the people to promote their establishment. As a stranger, therefore, I was surprised to find that to the schools, or at all events to those of which the Roman Catholics can take advantage, the Protestant gentry, whether resident or non-resident, and the Protestant clergy give neither countenance nor support. There is indeed one working clergyman in the neighbourhood of Ardara, who is an exception to the ordinary rule; but he is an exception. The result is, that during the last thirty years almost the only persons in Donegal who have exerted themselves to civilize the people by supplying them with schools, have been the parish priests; and the people would grievously belie their national character, if they had proved ungrateful for the important benefits thus obtained for them by their clergy. There is, in truth, scarcely a National school west of Killybegs or north of Ardara which has not been established by the parish priest. The Protestant clergy have confined their exertions to supporting a few Church schools which the Roman Catholics cannot possibly attend; while the landlords have contented themselves with granting sites for National schools and sometimes assisting in their construction. In a parish inhabited almost exclusively by Roman Catholics, I have seen a Church Education school containing nine little children aided by £7 from the Protestant landlord, while within a few hundred yards there was a vested school crammed with scholars, and taught by a probationer under the National Board, who receives the usual salary out of the Exchequer, but not one farthing from the landlord.

Priests have exerted themselves to build schools.

12. Before concluding this short account of my tour, I may mention that if any one desires to see the difference between a property which is under the personal control of the landlord, and a property which is managed by an agent, he has only to visit the neighbourhood of Anagry, and then to travel a few miles northward to the

neighbourhood of Gweedore. In the one he will see the traditional Irishman, uncouth, uneducated, and half naked, living in hovels little better than pigsties; in the other he will see a peasantry, decently clad, comfortably housed, and with schools and chapels or churches within reach. So striking is the contrast between the influence of a resident like Lord George Hill, and that of a non-resident like the Marquis Conyngham.

Contrast between Great Britain and Ireland.

13. So far as the mere occupations of the people, and the features of the country are concerned, there are parts of Scotland, and even of England and Wales, resembling the districts which I visited. In other respects the two islands present a striking but melancholy contrast. In England by far the larger number of landlords reside upon their properties and share in their management. They take a pride in being popular with the tenants and labourers of the estate. Their personal comfort, setting aside any nobler motive, induces them to cultivate friendly relations with the people about them. Indeed the mere fact of residence and the personal intercourse with tenants, implied by residence, prevent landlords from committing acts which may be perfectly legal, but which cannot be committed without personal inconvenience and unpopularity. Again in most parts of England, except indeed in Wales, the religion of the landlord is identical with that of the mass of the people; and this identity of creed tends more, perhaps, to produce harmony than any other circumstance. But further the effect of a common creed extends beyond the village church to the village school. Thus in the rural districts of England, the school is patronized and supported by the squire and the parson, their wives and daughters. The school thus becomes a parochial and popular institution; and the people are encouraged by the most powerful influence to send their children to school, and assisted in their efforts to do so. In short, in England the poorer classes of a district are practically civilized by contact with the richer classes in the neighbourhood; while the feelings of respect and gratitude thus engendered become instruments for cementing together the various elements of society. Contrast between Great Britain and Ireland. Identity of creed in England.

14. As it is in England, so it is in Scotland. Scotch landlords are resident even in the remotest Hebrides. The proprietor has a dwelling-house and spends a portion of the year in his island home; while the people enjoy all the advantages of a person of superior wealth and intelligence, living on the spot. In matters of religion I am quite aware that while the mass of the population is Presbyterian, many—nay most of the landlords are Episcopalians; but then the religion of the majority has been established by law; and the landlords, whatever be their creed, regard the Presbyterian Church as a national institution, which it is their duty to support. The same feeling extends beyond the church to the school. In discussing this question with reference to Scotland, it should never be forgotten that the statesman who established Presbyterianism, established also the parish school. Not satisfied as in England, with setting up a church in every parish, the expenses of which should be defrayed out of the land, the Scottish Reformers prevailed upon the legislature to pass laws enacting that in every parish there should be a school supported like the church, out of the produce of the land. Accordingly, in Scotland the school is regarded not as an affair of the squire or of the parson, but as a national institution. The schoolmaster is not a mere servant of the minister of the parish, but he is a public officer occupying an independent position, and charged with duties recognised as not less important than those of any other public officer. In Scotland, therefore, to furnish the means of education to the people, is not a mere moral duty which may or may not be fulfilled according to the caprice of individuals. By law and by the traditions of the country it is an imperative obligation; and one of the chief burdens upon the land is the expense incurred for erecting proper school premises and providing a salary for the master. Scotland. Religion. Parish school.

15. Experience has amply justified the wisdom of those who laid the foundation of the Scottish school system; and the practical benefit of the system has no doubt influenced the Scottish landlords or heritors (as they are called) in their dealings with the parish schools; for their conduct, of late years at least, has been marked by peculiar generosity. Serious as the practical shortcomings of the Scottish parochial system are admitted to be, it is surely of enormous importance to have it theoretically established, that the supply of an adequate number of efficient schools is a public duty. The recognition of this duty implies that the instruction provided must be such as every citizen can accept, without violating his conscience; and that every holder of property must contribute towards the erection and maintenance of the school buildings and the salaries of the teachers. In England, where no germs of a system of national education exist, these principles are still the subject of vehement controversy. But in Scotland the double obligation is admitted without a dissentient voice. There is no Presbyterian school in Scotland in which a conscience clause is not one of its essential regulations, and since it has been proved that the number of efficient schools is inadequate, there is no party in Scotland which disputes the necessity of an education-rate to be levied on property, and to be administered by the inhabitants of the district in which additional school accommodation is required. Difference between Scotland and England.

16. In those districts of Ireland which I visited, matters are very different. I found the landlords, and large farmers almost all Protestants, while a vast majority of the people, except in Fermanagh, were Roman Catholic. In some districts the landlords are resident; but in others, and especially in Donegal, to be resident is the exception, to be non-resident is the rule. It must be admitted, however, that the remoter parts of Donegal are more fitted for sport, than for social intercourse. In short, the only residents in the county who are superior to the small farmers and labourers, are the landlords' agents, the Established Church clergy, and some of the priests. But these various classes can scarcely be said to constitute one nation. They are united by no ties of common sympathy, or of common religion. Between the landlords, their agents, and the Established Church clergy on one hand and the priests and people on the other, there seemed to me an impassable wall of separation. And, if I may venture to make the remark, one of the worst evils of the Established Church is that the influence of her clergy is almost uniformly employed to perpetuate and widen this unhappy division. Where the landlord is non-resident he is naturally much influenced by the opinions and wishes of the parson of the parish. Nor, being absent, does he personally feel the necessity and advantage of understanding the peculiarities and conciliating the good will of his tenants and dependents. Where the landlord is resident he is too often swayed by the traditional feelings peculiar to Protestants, and is practically prevented by social and domestic influences, from acting with that liberality which common sense would suggest. Ireland.

17. Be the cause what it may, it is rare indeed to find any landlord giving the slightest assistance to the National school. To Church Education schools, and Erasmus Smith's schools, the Protestant landlords sometimes give a small annual donation. Towards the erection of the National school in which the great bulk of the Irish children are educated, they sometimes give timber and more frequently a site, but toward the salary of the master and other annual expenses, the landlords very rarely contribute one farthing. Out of all the schools which I visited, I found not more than six National schools aided by the landlord amongst whom were Lord Arran, Lord Albemarle, and Mr. Murray Stewart. It may perhaps be said that this is exceptional. But I find that throughout Ireland, the Imperial Exchequer contributes annually more than £340,000 toward National Education, while the annual local subscriptions and local endowments do not exceed £12,000. In confirmation of this it is stated in the Report of the National Board for 1867, that only 16·69 per cent. of the sum expended upon the teaching staff in National schools is "locally provided," while 83·31 of the expense is provided out of funds voted by Parliament. Putting the same result in another form, it is stated by an officer of the Board that the average Landlords give nothing to National schools.

amount of local subscriptions for each pupil is 9½*d.*, the average amount of school-fees for each pupil is 2*s.* 7½*d.*, and the rest of the expense, which as I understand is not less than 15*s.* 8*d.* is paid by the Treasury. Calculate the cost therefore as you will, the children in the Irish National schools are educated almost at the sole expense of the Treasury. The burden thus cast upon the taxpayers of the United Kingdom is surely excessive. At all events it is quite disproportioned, as we shall see presently, to the cost of education borne by the Exchequer, either in England or in Scotland. Nor can it be said that it is the people who have chiefly failed in their duty, for while landlords and others contribute only £12,000, the parents contribute £40,883 in the shape of school-fees. It is an instructive fact that in the county of Donegal where the National schools are the only schools for the mass of the people, the landlords and others contribute only £391, while the parents contribute £935; and that in the rich county of Fermanagh the landlords and others contribute £73, while the parents contribute £380.

In Ireland chief cost of education falls on Treasury.

18. Let us now glance at the rest of the United Kingdom. The comparison, or I should rather say contrast, is instructive. In England and Scotland the annual cost of educating a child may be taken to be about 27*s.* Of this sum it may be said roughly that 9*s.* is provided by the parents of the children in the shape of fees; 9*s.* by local contributions; and 9*s.* by the Treasury. Comparing these results with those stated above, it should seem that, whereas in Ireland nearly the whole cost of education in the National schools is paid by the Treasury, in Great Britain the Treasury pays only one-third of the cost. Nor is this all; for while in England every pound expended by the Treasury is represented by more than two pupils, and in Scotland by three pupils in average attendance; in Ireland not quite one pupil can be found in the schools to represent each pound expended by the Treasury.

Irish schools compared with Scotch parish schools.

19. But the contrast between Ireland and Great Britain becomes still more striking if we confine our attention to the parish schools of Scotland, which, like the schools under the Irish Board, are national in character. In Scotland the heritors or landed proprietors pay an education assessment of £47,000 a year towards the salaries of the teachers in parish schools; and in so doing voluntarily tax themselves beyond the amount for which they are legally responsible. So far they are both ratepayers and voluntary subscribers. Again, it must be observed that this sum of £47,000 is entirely confined to about a thousand national or parish schools, which are found only in the rural districts, and is entirely independent of the large sums contributed, partly by the landlords, to the 4,000 denominational schools which are found both in town and in the country. The result is that whereas throughout the whole of Ireland, the population of which is 6,000,000, the local endowments and voluntary contributions from persons of all classes towards the National schools amount only to £12,000; in Scotland, the population of which is only 3,000,000, the landlords alone contribute £47,000 a year towards the national schools in the rural districts of that country.

20. I conclude, therefore, that although Ireland requires an increase in the number, and an improvement in the quality of National schools, the means for carrying these changes into effect, must be obtained not from the Treasury, but from local sources.

Summary.

21. In short, in England and in Scotland the wealth and religious zeal of the upper classes combine to promote the cause of education. Everywhere in Great Britain philanthropists are found ready to contribute toward the erection of schools, and to share in the trouble and expense of managing them. Schools thus conducted succeed, because they furnish an excellent education without offending religious prejudices, and are managed and taught by those in whom the people have confidence. But in Ireland there seem to be few if any educational philanthropists. Almost everything which is done for education is done by Government; and even those schools which are aided by local contributions, such as the Church Education schools, are so conducted as to exclude the mass of the population. With rare exceptions, the only schools of which the Roman Catholics will, or indeed can avail themselves, are schools conducted upon the national principle of protecting the rights of conscience; but to such schools the landlords contribute practically nothing. It is surely vain to expect social peace or contentment where most of the landlords and men of wealth repudiate the duty of contributing toward the education of the mass of the people. It is, if possible, more vain to expect such blessings in Ireland where the very persons who think it the duty of the State to maintain churches and schools for the Protestant minority repudiate the same duty when it is invoked on behalf of the Roman Catholic majority—where the local endowments, which should be used for the religious and intellectual improvement of the whole community are, under the sanction of law, monopolized by a fraction of the Irish people—and where private wealth and beneficence are, for the most part, devoted to the same restricted objects.

II.—Statistical Results of Examination of the District.

Preliminary remarks as to statistics.

22. Having thus stated the general circumstances of the districts assigned to me, I proceed to furnish the Commission with some statistical results. It was, of course, impossible for me, within the limited time at my command, to examine or even to visit every school in my district. Indeed my instructions assumed that the number of schools visited should not exceed 100, and I managed to overtake very nearly that number. I had been furnished before setting out with a list of the schools of every kind within my district. The following is an abstract:—

List of schools furnished by Constabulary.

District of Killybegs.

Sub-Districts.	No. of Schools.	National Schools.	Church Education.	Wesleyan	Endowed	Private.	Monks'.	Nuns'.	Mission.
Carrick-on-Shannon, . .	23 viz.	20	2	0	0	1	0	0	0
Sligo, ...	22 ,,	10	2	0	4	3	2	1	0
Enniskillen, ...	44 ,,	27	13	0	3	0	1	0	0
Killybegs, ...	51 ,,	37	3	2	8	1	0	0	0
Glenties, ...	29 ,,	25	3	0	0	1	0	0	0
Dungloe, ...	22 ,,	19	0	0	0	2	0	0	1
	191, viz.	138	23	2	15	8	3	1	1

Correct.

23. This list had been prepared by the Constabulary; and so far as my experience goes, it seems to have been prepared with care and accuracy. I am not aware that I found a single school omitted which ought to have been included, or one included which ought to have been omitted. In some cases I found schools which looked at first sight as if they ought to have been included, but upon further inquiry, I discovered that these schools were in fact beyond the boundary of the Constabulary district, and therefore properly excluded. I may, perhaps, add that the arrangement by which the inquiries of the Assistant Commissioners were confined within certain recognised districts, having defined boundaries and known populations, proved, in my case at least, eminently judicious. Any other system would have made it impossible to compare the results obtained in Ireland with those obtained in other countries.

Advantage of definite districts.

24. Besides the names and localities of the schools, the Constabulary ascertained, by personal inspection, the numbers and religious denominations of the scholars present in school on the 25th day of June, 1868. I heard a complaint that in one instance the constable had arrived before mid-day, and that therefore the numbers present were less than they should have been. But I took pains to compare the numbers in the Constabulary returns with the numbers which I saw present, and I am satisfied that the returns are, for all practical purposes, accurate. The numbers and denominations of the scholars, however, which I found in the hundred schools which I visited, would give a very imperfect idea of the state of education even in my district; and, therefore, I prefer to state the numbers of the scholars found by the Constabulary present on the 25th June. It is necessary to add that the population of each of the districts was obtained from the Constabulary head-quarters at Dublin Castle. Nature of Constabulary returns.

Before concluding this portion of my report, I feel bound to state, that nothing could exceed the intelligence and zeal displayed by the officers of the Constabulary with whom I was brought in contact during my official visit.

25. The following table exhibits the general results as to the number of children at school in my district, on the 25th day of June, 1868, and other particulars:— Statistical Table.

Constabulary District.	Children.			Religious Denominations.						
	Male.	Female.	Infants.	E.C.	R.C.	Presb.	Other Denominations.	Tota number of Children.	Total Population of Constabulary District.	Proportion at School.
Carrick-on-Shannon, . . .	543	537	2	107	971	1	3	1,082	11,789	1 in 10·9
Sligo, ...	597	590	190	270	1,008	37	62	1,377	16,755	1 in 12·
Killybegs, ...	1,282	1,150	147	525	1,944	45	65	2,579	31,817	1 in 12·3
Glenties, ...	557	465	17	148	831	–	60	1,039	13,270	1 in 12·7
Dungloe, ...	338	203	50	55	536	–	–	591	12,745	1 in 21·5
Enniskillen, ...	880	665	307	975	772	60	45	1,852	18,744	1 in 10·
	4,197	3,610	713	2,080	6,062	143	235	8,520	105,120	1 in 12·3

26. With regard to this table, it is to be observed that the schools and scholars included in it, comprise every school within the district—good, bad, and indifferent. In this respect the table resembles those compiled by the English and Scottish Commissioners, and differs materially from those compiled from the official returns of Prussia and Switzerland. In Prussia and Switzerland every school included in their returns may be considered efficient, or at all events has the guarantee of official superintendence; but in Ireland, Scotland, and England, there is no such security. The schools are of various merit—some, indeed many of them, being rather schools in name, than in reality. But even if we assume that the scholars included in this table attend some tolerable school, the result is far from satisfactory. The only other remark which I desire to make is, that the number of private schools, namely, eight, is so insignificant, that they may be practically disregarded. This, however, represents a remarkable contrast to the state of things in this country. Table includes schools of every quality

27. Taking the six Constabulary districts together, it appears that there was only 1 person to every 12·3 of the population (1861) actually at school on the 25th of June, 1868. That this is tolerably accurate is clear from the fact, that according to the Census Tables, there were, on the 17th of May, 1861, present in school, 1 in 13 of the population. It will be observed that I have taken no notice of the number of children alleged to be upon the roll in Ireland, because any comparison founded upon such numbers, would lead only to misapprehension. According to the Report of the National Board for 1867, there was 913,198 children on the rolls within the year. But this merely implies that at some time of the year 913,198 names appeared upon the school-rolls; and obviously the same name may have appeared any number of times even on the same register. The average daily attendance amounts only to 321,515, so that in order to find this number, no less than *two-thirds* must be deducted from the number on the school roll. But in Scotland the number in average attendance is obtained by deducting *one-fifth*, and in England by deducting *one-third*, from the number on the roll, so that (as I have said) any comparison between the Irish schools and those of Great Britain in this respect, would prove altogether fallacious, and should not therefore be attempted. Number in attendance, not number on the roll of importance.

28. Comparing the results which I obtained in Ireland with those obtained in other countries, it appears that in Scotland a proportion of 1 in 7·9 is in actual attendance. If we confine ourselves to the insular districts which are not so well provided with schools as the rest of the country, the ratio of scholars in attendance to population is 1 in 9·7, so that even the worst part of Scotland is superior to Ireland. With respect to other countries, it is stated, upon the authority of the Duke of Newcastle and his colleagues, that "in Prussia, where education is compulsory," and where, I may add, all the schools and teachers are tolerably efficient, "the proportion of children receiving instruction is 1 in 6·27;" "in England and Wales," where, I may add, the schools are by no means all efficient, "the proportion is 1 in 7·7; in Holland it is 1 in 8·11; in France it is 1 in 9·0" of the population. Comparison of other countries. Scotland. Prussia, Switzerland, England.

29. From these figures I conclude that Ireland is very much inferior to other countries in the amount of education; and it will presently appear to be equally clear that if the quality be taken into account, the contrast is not less striking. Nor let it be imagined that I am setting up the condition of England or Scotland as satisfactory. On the contrary, in Scotland it is the universal opinion, that something must be done to increase the number and improve the quality of the schools; and it is notorious that the same feeling prevails in England. There can be no reasonable doubt, therefore, that if the schools in Ireland are to bear comparison with those of other countries, they must undergo considerable improvement. Conclusion from table.

III.—The Means of Education in Ireland.

30. The means by which education is carried on in Ireland is substantially of two kinds: first, there are the National schools; secondly, there are the Denominational schools. Schools National and denominational.

In both, the ordinary branches such as reading, writing, arithmetic, geography, and grammar are taught. But the peculiarity of the Irish National schools is, that religious instruction is confined to a particular time; that no books can be used in school unless sanctioned by the National Board; and that the National schools alone can receive aid from the Public Treasury. In Ireland as elsewhere the religious is the chief difficulty, and it is met by every National school being subject to (what may be termed) a time-table conscience clause. I mean by this that every National school is bound by a rule which restricts the teaching of religion to a particular hour fixed by the time table. In countries, such as Scotland, where the conscience of parent and child is protected by tradition, by the specific injunction of the Presbyterian churches, and by popular feeling, a stringent rule such as that enforced in the Irish schools may be, and is practically unnecessary. But in countries, such as England and Ireland, where the rival churches claim the right of directing the education of the children, and where the National schools. Necessity of a stringent conscience clause.

teachers are very much under the control of the clergy, stringent regulations as to religious teaching are absolutely required. In such cases the teaching of religion must be confined to a particular hour, in other words, there must be a time-table conscience clause as a fundamental rule of every school aided by public money. In Ireland it is a fact, attested by experience, that the only schools largely attended by children of various denominations are National schools. Whether the teacher of a National school be a Catholic or a Protestant, children of either persuasion readily attend it. This fact proves that the people of Ireland thoroughly believe that the rights of conscience are practically maintained. But further I think that the Protestants of Ireland by permitting their children to be taught by Catholic teachers, show themselves superior in liberality to the Protestants of England or Scotland. For I believe, that much as the working classes in this country object to sectarian education, the Protestant workman would hesitate to send his child to a school taught by a Roman Catholic. This feeling may possibly arise from the fact, that there is no school taught by a Roman Catholic in which the conscience of the scholar is protected by a stringent rule enforced by superior authority. But, be the reason what it may, a system which has inspired such general confidence as the National school system of Ireland, deserves the warmest commendation.

National schools attended by persons of various denominations.

Denominational schools.

31. The denominational schools which I saw are connected either with the Established, or with the Roman Catholic church. They receive no aid from the State, and are in no way subject to State control. The Protestant schools are supported either by endowment or by private beneficence. The Roman Catholic schools are supported by the fees of the scholars, and by aid from the bishops. In the case of boys they are conducted by Christian or Marist Brothers, who have taken the vows of chastity and poverty, but are not in orders. The Brothers receive nothing beyond their living and a place of residence. In the case of girls, the schools are conducted by Nuns, and form part of a convent. I should mention, however, that some of the Convent schools are connected with the Board, and, therefore, National schools.

Peculiarity of these schools.

32. The peculiarity of the Denominational as distinguished from the National school is, that the Denominational school is set up avowedly for religious purposes. The Protestants insist that the Bible shall form an essential part of the school work, and that every child shall read it. The Roman Catholics insist that religious dogmas shall form an essential part of the school work. Both, in short, consider that every part of the instruction should be impregnated with religious ideas and observances. Hence the pauses in Convent and Christian Brothers' schools at stated times for the purpose of prayer; hence the importance attached to the exhibition of images and emblems in the school-rooms; hence the necessity of teachers being—not indeed in orders, but—consecrated as it were to the office of teaching; hence the importance attached by the clergy, both Protestant and Roman Catholic, to the power of entering every school, indulging in religious exercises, and appealing to religious sanctions. The right thus claimed by the clergy in Ireland presents an insuperable obstacle to their obtaining a share in the Parliamentary Grant. In England and in Scotland the State recognises the denominational system which secures to the clergy those special advantages to which they attach so much importance, and which are indeed one of its essential elements. But in Ireland the Government system is intended to be National, and the schools are so conducted as to admit scholars of every creed. Religion is treated as a special subject to be taught separately, and not as a regulating principle which is allowed to influence and modify the lessons given in every subject.

In this respect the system in Ireland is diametrically opposed to the system which prevails in England.

Clerical influence in Irish National schools.

33. At first sight, it might seem that in the Irish system, which professes to be non-sectarian, clerical influence would be less powerful than in a system, such as that administered by the Committee of Council, which is strictly denominational. But there are peculiarities in the Irish system which lead to rather a different conclusion. Thus in England and in Scotland the State-aided schools are managed by a committee, of which the clergyman is only one member; but in Ireland the National schools, except in a few cases in the north, are managed by the patron, or a manager appointed by him. In consequence of the attitude assumed by most of the landlords, and by most of the Established Church clergy, the manager is generally speaking the priest of the parish (simply because he was the first person who applied to the Board for aid), and practically his power in the school is absolute. He can appoint the master, and what is even more important, dismiss him without a moment's notice, and without assigning any reason whatever. The result is, that the schoolmaster is more completely under the power of the priest in Ireland than he is in England (par. 42).

Peculiarity of non-vested schools as to religious teaching.

34. Again, in all non-vested schools (that is in all schools built without any aid from the Treasury), the patron or manager may forbid any religious instruction within the walls of the school except such as he approves: and it is especially to be noted that the *non-vested* schools are more than three times as numerous as the *vested schools* (par 6). The result is, that if the manager is a Roman Catholic, and the school is non-vested, he may prevent the Presbyterian or Established Church clergyman, or any one else, from giving religious instruction in school even at a separate hour; and, in like manner, if the manager is a Presbyterian, he may prevent the Roman Catholic from receiving religious instruction within the school building, or (indeed practically speaking) at all. In this way, the manager of a school is able to put a stop to religious teaching, which he thinks unorthodox; but over and above this, he can compel the teacher, on pain of dismissal, to teach the children their catechism. Hence it is that, according to the usual arrangement, the same person who gives the secular gives also the religious instruction. In order to be able to enforce their wishes, the clergy must of course be managers of the school, and the teachers of the same denomination with themselves. Usually these conditions co-exist, and when they do, there can be no noubt of the convenience of the arrangement; nor am I surprised at the watchful care of the Roman Catholic bishops in seeing it carried into effect. For instance, I myself heard one of them complain of a National schoolmaster, who was also a Catholic, because children belonging to his school came badly prepared for confirmation. The bishop considered it an essential part of the master's duty to prepare the children for his examination in the catechism. It happened, in this case, that the patron of the school was a Protestant, and so the power of dismissal was with the patron; but if the priest had been in his place, the master would certainly have lost his situation. It appears, therefore, that in the Irish National schools, when the patrons are priests, the teaching of religious dogma is quite as essential a part of the school-work as reading or writing. These Irish schools are sometimes called secular, but, having regard to the whole circumstances, nothing as it seems to me can be more inaccurate.

Contrast of the school system in England and in Ireland.

35. Placing the Irish system and the Privy Council system side by side, there are, I think, some particulars in which each in turn is superior and inferior to the other.

36. First as to Inspection. Comparing the class of gentlemen who fulfil these duties under the Committee of Council and under the Irish Board, I presume no one will entertain much doubt as to which has the advantage; and I am fully convinced that the superiority of the British schools is in a great measure due to the character and position of the British Inspector. I have no reason to doubt that the Irish Inspectors are thoroughly competent for the work which they have to do in primary schools; but if an Inspector is to exercise any general influence he must be something more than a good judge of reading, writing, and elementary arithmetic.

Inspection in Ireland without notice.

37. In some respects, however, I think that the Irish plan of inspection is superior to that which obtains in this country. In Ireland, the inspection is without notice. In this respect the rules of the Board coincide with the practice of France, Prussia, and other Continental nations. In England or in Scotland, no Inspector enters a

school without due notice. It is impossible to exaggerate the beneficial effects produced by the uncertainty of the time at which the Inspector pays his visit. The Irish teachers, as a body, are needy, and many of them have business of their own. They are farmers and sometimes private tutors. There are seldom, as I have already explained, any persons of local influence who take interest in the National schools, and with few exceptions the priest rarely enters the school-room. If it were not for the Inspector, who may look in any day or at any hour without a moment's warning, I am satisfied that the amount of instruction would be much less than it is. The rules of the Board assume that the Inspector visits a school three times a year; practically this rule is not always observed, but a thorough examination takes place at least once in twelve months. Although this may probably be thought an excessive degree of superintendence unquestionably it has its effect. But I am inclined to attribute even greater importance to the fact that the Inspector's visit, when it does take place, is unexpected.

Inspectors in Ireland need not be of a particular creed.

38. Again, there is no provision in Ireland requiring the Inspector to belong to a particular religious communion. Schools under Catholic managers are inspected by Protestants, and schools under Protestant managers by Roman Catholic Inspectors. But, in this country, the Inspector belongs to the same communion as that of the managers; and his appointment must be approved by the archbishop or bishop in the case of the Church of England schools, and by other ecclesiastical authorities in some other schools. I know that a demand has been made by the Roman Catholic prelates for denominational inspectors; but I believe that any such concession would be a retrograde step, and is not desired either by the managers of the schools or by the parents of the children. In the few Convent schools which I visited I was told by the Nuns that they had perfect confidence in the Protestant Inspector, and I never heard any desire expressed on the part of the Protestants that the Inspector should uniformly be a Protestant. Besides it seems to be abundantly clear that if the inspection were denominational all confidence in their impartiality would be destroyed, nor would there be any security that the rules of the Board had been obeyed. Indeed, the only ground upon which denominational inspection can be desired is in order to obtain the benefit of a critic disposed to leniency. Lastly I may observe that in Scotland the feeling is decidedly opposed to denominational inspection, and that the Scottish Commissioners, with the concurrence of every witness whom they examined, proposed to abolish it.

Privy Council system more efficient and less costly to the State.

39. Having admitted that, so far, the Irish system of Inspection has certain advantages, I am disposed to think that in other respects the Privy Council system is more efficient, and certainly less costly to the State. In Ireland, the annual expense of a school is defrayed almost entirely by the Treasury, while the managers, who exercise almost absolute power, so far from contributing anything towards these expenses, frequently insist upon the teacher repairing the school-house, and paying rent for it (par. 17). But in England and in Scotland the managers, whose power is much more limited, are required to contribute a sum equal to that obtained from the Treasury. Again, in Ireland, the managers too often use their influence to hinder the collection of school fees, and thus deprive the teachers of a stimulus, not only profitable to themselves, but beneficial to the parents. But in England, and more especially in Scotland, the salary of the teacher is made to depend upon the school fees; so that his own interest, and the success of the school, are made to react upon each other. Indeed it may be observed that in Ireland, the only stimulus to the master, is the prospect of an increased salary, which can be obtained only by passing an examination for a higher grade. The necessary result of such a system is that a teacher, instead of devoting his best energies to the production of the largest number of good scholars, devotes them to enlarge his own information. The most learned man is not always the best teacher; and, therefore, the test of a good teacher should be not the amount of his knowledge, but his capacity of communicating it to his pupils. I would suggest, therefore, that the salaries of the Irish teachers should be raised only in consequence, and in proportion to, their success as practical teachers.

Position of managers.

40. The general result then is, that in England, the managers have a pecuniary interest in the success of their school; and it becomes their interest to secure an efficient teacher, and, if possible, to retain him in their service. But in Ireland the manager is subject to no such salutary influence; and an obsequious is sometimes preferred to an efficient teacher, especially if his character is tainted by independence.

Position of teachers in Ireland.

41. Again, no system of education can be efficient unless the teachers enjoy a reasonable amount of independence, and unless they are provided with adequate salaries, and comfortable homes. But in every one of these particulars the Irish system fails. I have already described the position of the teacher, and have shown that he is liable to be dismissed without cause, at a moment's notice (par. 33). It matters not, in my mind, that managers seldom use their summary power. For the sword is constantly suspended over his head, and this is enough to damp his energy, and crush his spirit.

Insecurity of tenure and poor salaries.

42. I have already observed that the arbitrary power thus possessed by the managers gives undue power to the clergy. But apart from this, such a position is degrading to the school-master. As a Scotch judge once said, "he is something better than a shoe-black." In a small village the school-master is an important public officer. He is the chief instrument for civilising the people and training them to habits of obedience at home and of loyalty to the State, and his tenure of office should be as secure as that of an ordinary foot-man.

43. Again his salary is quite insufficient; upon the average it does not exceed £30 a year without a house, but in the majority of cases it is much less. Out of 4,110 male teachers 2,383 receive £24 or less, and out of 1,985 female teachers 1,023 receive £20 or less. These sums are entirely paid by the Treasury and constitute nearly the whole of their emolument; for in most cases the fees are trifling. In England and Scotland the average annual pecuniary emoluments of certificated masters is £87, and of certificated mistresses £54, most of them being provided with houses. In Scotland the minimum salary of a parish school-master, secured by law, is £35, with a house and garden. This, however, by no means represents the whole amount of his emoluments. In addition to these it must be observed that he holds office practically for life. There is no doubt that the tenure for life has led to serious abuses, and the general opinion is that it ought to be modified. But, notwithstanding these abuses, there can be no question that the position of the Scotch parish schoolmaster, which approaches the level of the minister of the parish, has done much to inspire the teachers with self-respect, and the people with a belief in the value of education. There is one class of Irish officials with whom the school-masters are never tired of comparing themselves—I mean the Constabulary. It is impossible to speak too highly of that body. They are thoroughly loyal and thoroughly efficient, and the pay and privilege which they enjoy are such as to make them perfectly contented. There is no reason why men of the same class of life as those who join the Constabulary should not become teachers, nor is there any reason why teachers, if they were paid a higher salary, and if they were made more independent, and protected against arbitrary dismissal, should not be as loyal and contented as the Constabulary.

Comparison of teachers with Constabulary.

No houses.

44. Lastly, the Irish teachers are seldom provided with houses. The result is, that in the remote villages they live in cabins and wretched hovels like the rest of the people. The capacity to instruct children in the elements of reading, writing, and arithmetic is, of course, an essential qualification for a teacher; but habits of cleanliness, neatness, and decency are not less essential to the office. To inculcate these habits is one of the objects of a primary school; indeed, it is so laid down among the rules of the National Board. Teachers are expressly told that they "should set an example of cleanliness and neatness in their own persons, and in the state and general appearance of the schools. They should also satisfy themselves, by personal inspection every

morning, that the children have had their hands and faces washed, their hair combed, and clothes mended. The school apartments, too, should be swept and dusted every evening, and whitewashed at least once a year." To any one who has visited the non-vested schools which are connected with the Board, or seen the miserable kennels of some of the teachers, these instructions read like a bitter mockery. How is it possible, as an Inspector said to me, for a teacher to lecture children upon their want of cleanliness, when he himself, his wife and children are huddled together, with the baby in one corner and the pigs and poultry in the other? I have myself seen a first-class teacher living in a building called a house—granted, indeed, rent-free, by a nobleman, whose agent was patron of the school—into which, I venture to say, he would not thrust his master's dogs or horses, much less the lowest menial of his household. The four walls were standing, but the door was so badly fitted, that, in a windy night, no candle could be kept alight. In the kitchen there was a fire and some rickety furniture; and above, in a sort of loft, where there was a bed for his children, the joists had given way, the floor was half down, and the sky was visible through the roof, so that on a rainy night the bed must be deluged.

Scandalous case.

45. Under conditions such as these, is it surprising that the teachers should look cowed and discontented, or that the children under their charge should imbibe some of the bitterness and dissatisfaction of their instructors? It is a dangerous experiment to neglect the education of a people, but it is a thousand times more dangerous to call into existence a multitude of schools, to invite the people to enter them, and then to place in each a teacher who, from his inadequate salary, his uncomfortable home, and the precarious tenure of his office, is filled with discontent, and even tempted to disloyalty.(*a*)

Discontent of schoolmasters.

IV.—Irish System to a Large Extent Denominational.

46. I now proceed to show that although in principle the Irish system professes to be non-sectarian, still in practice it is more or less denominational. I think it will be admitted that the object of any National system of education ought to be to establish and maintain an adequate number of efficient schools, which shall be open to every child, and in which secular instruction may be obtained without offending religious prejudices. The rights of conscience being secured, the State or central authority should, as it seems to me, have nothing to do with religion, except, indeed, that the State should not interfere to prevent the clergy or laity from furnishing the children with religious instruction. It can scarcely be said that the Commissioners of National Education in Ireland, take the initiative in establishing schools, but with this exception, I think that I have described with tolerable accuracy the general principles upon which the Irish system was founded.

Denominational character of the Irish National schools.

47. The question now is, whether in administering the Parliamentary grant these principles have been properly observed? I have already explained the distinction between vested and non-vested schools. In the case of vested schools "such pastors or other persons as are approved of by the parents of the children are to have access to them in the school-room for the purpose of giving them religious instruction." In the case of non-vested schools, the patrons or managers are alone to determine whether any and what religious instruction is to be given in the school-room. No doubt such a rule as this must often produce great hardship, by practically depriving many children of any religious instruction during the week; and I have never, I must confess, been able to comprehend the grounds upon which the National Board has granted aid to schools, the managers of which refuse to admit, at certain hours, persons of various denominations to instruct the children in religious knowledge. Nor have I been able to appreciate the difficulty of the clergy assembling the children of their own communion in the neighbouring church or chapel, for a certain number of hours in the week. The Commissioners seem to have rejected both of these plans as impracticable; and they have had recourse to what are termed "modified grants." In other words they assist in setting up rival schools for the avowed purpose of enabling children to obtain religious instruction. And upon the same principle, the Board has officially declared that "they have never refused to endow, in the immediate neighbourhood of a Model school, a well-conducted mixed school under Roman Catholic management; although well aware that it had been established for the express purpose of drawing away from the Model school the Roman Catholic children attending it."

"Modified grants."

48. I must confess myself at a loss to understand in what way the Commissioners reconcile this policy with the principles upon which the Irish system was originally founded. To my mind these grants, and the multiplication of schools for the mere purpose of supplying children with religious instruction, are inconsistent with the principles laid down in Lord Stanley's famous letter, and in fact, amount to a practical abolition of the mixed system of education in Ireland.

49. Let us suppose, for example, a non-vested school under a Protestant patron large enough for the population of the district; let us suppose also that in this school there are fifteen or more Roman Catholics. In such a case, according to the rules of the Board, the Commissioners may, and, in fact, do grant aid to set up another school close by, the effect of which may be to damage and even ruin an existing National school. Now, what let me ask is the object of this inconsistent and suicidal policy? If it be to enable the Roman Catholics or Protestants to have a separate school in which the patron or manager shall be of a different creed from the school already existing, the only effect must be to separate children of different denominations from each other, instead of endeavouring to unite them. To act thus is to ignore the original idea of the founders of the Irish system. But the Board go further, for even where National schools already exist under Roman Catholic patrons or managers, they aid in the maintainance of other schools under the very same patrons, which are intended to be rivals. This they do, not because the new school will be more efficient for secular purposes, but because, being connected with some Convent, perhaps, it is more popular with the Roman Catholic clergy. It is surely preposterous to call that a National system, or to pretend that the Commissioners are seriously bent upon promoting mixed education, when they themselves set up, for sectarian objects, rival schools in opposition to National schools already established.

Commissioners aid rival schools

(*a*) I believe that nothing would tend more to increase the loyalty of the teachers, to promote a conservative feeling among them, and to enlarge their influence with the public, than to attach a dwelling-house and small garden to every National school-house.

For all schools hereafter to be built such an arrangement might be made without difficulty; and the addition of a house for the teacher might, of course, be made in the case of all existing vested schools.

But the case of the non-vested schools requires a separate consideration. Having maturely considered the mode of remedying this defect, I think that it presents an opportunity of introducing a change which would be of advantage to the schools and at the same time relieve the Board from the necessity of continuing the modified grants. I have already mentioned that the non-vested schools constitute a large majority of the National schools in Ireland, and that they seldom, if ever, have a residence for the teacher attached. I need not remind the Commissioners that the patron or manager has absolute power to determine whether any and what religious instruction should be given in a non-vested school. Now, in order to remedy both these defects, I propose that the patron or manager of a non-vested school, as a condition of receiving aid, should undertake to contribute towards the expense of building a teacher's residence, the Treasury, through the National Board, supplying the rest of the money. But in every such house I should require a room to be built for the express purpose of being used as a place in which the children, who are debarred by the manager from receiving religious instruction in the school, might receive such instruction. The expense of building this extra room would be defrayed by the Treasury.

There might be cases in which the non-vested school is not required; but it must be left to the Board to sanction such exception.

Instances.

50. During my tour I heard many complaints of the evil, and indeed cruel effects of acting upon this denominational principle. In one town which I visited, there is a National school of which the Roman Catholic priest is manager, but which was certainly in a very forlorn condition. I saw no signs of the manager taking any interest in it, and I was told by the teacher that since the establishment of a Convent school, the children who used to attend the original school had been withdrawn. In the small village of Ardara I saw two small schools close together, the patrons belonging to different denominations, each receiving Government aid, whereas there ought to have been only one large and really good school for the whole village. On the road from Ardara to Glenties, I met a woman whose school was well nigh ruined by the priest of the neighbouring parish having set up a new National school, of course with the sanction of the Board. The woman was a Protestant, and the manager of the school was a Protestant. To this the priest not unnaturally objected, on the ground that the vast majority were Catholics. In the village of Glenties, or within a very short distance, there are no fewer than four schools, two of which are Church Education schools. One of the National schools has been established for many years; but the patron is a Protestant, and, therefore, the master, though a Catholic, is not so completely under the power of the priest as he would like. The mistress is a Protestant, which (as I have already explained) has many inconveniences, especially if the mass of the population, as at Glenties, is Catholic. To obviate these inconveniences, and in order to have a separate school for girls, the priest is negotiating with the Board for aid to build a new school within a quarter of a mile of the existing school; and he seemed to be confident of success. Lastly, there was a new school near the town of Donegal, which can scarcely I should think be needed. At all events I found the old established school which is under the patronage of Lord Arran, a Protestant, by no means so full as it ought to have been; and I found by questioning the children, and from other sources, that they were in the habit of attending first one, and then another of the schools, just as it suited their own fancy or that of their parents. When there are too many schools the inevitable result is to destroy discipline by impairing the authority of the master, and to demoralize the parents. Dr. Mulreany, however, through whose exertions the new school was established, differs from me in opinion, and told me that he had proved his case before certain persons who were deputed by the National Board to conduct the inquiry.

Bad effects of this denominational policy.

51. One of the worst effects of the policy adopted by the Board is to multiply inordinately the number of schools and to increase the expense. In the districts which I visited, but especially in the towns and villages, this evil was very apparent; and this impression has been confirmed by a wide survey. Thus it appears that in Scotland the average number of children in attendance in each inspected school is 104; in England it is nearly 100, but in Ireland the average number of children in attendance in each National school is only 49·3. The same conclusion follows from comparing the average number of pupils under a single teacher in Great Britain and in Ireland. The following table exhibits the result:—

	England and Wales.	Scotland.	Ireland.
The Average Number of Scholars in Average Attendance:—			
To each teacher, ...	91	84	52
To each teacher or assistant teacher, . . .	82	82	40
To each teacher, assistant teacher, pupil teacher, or monitor,	45	42	27

From these figures it appears that the teachers in Ireland, if equally competent with those of England, should be able to do twice the amount of work which they are now doing—or in other words, that in Ireland double the amount of school work might be despatched without making any addition to the teaching staff. It is obvious, therefore, that having regard to the work done, the number of schools and teachers is excessive, and the cost at which they are maintained is unnecessarily increased.

Board should act consistently.

52. A Denominational system is one thing—a National system is another; but by all means let them be kept distinct. If the Board has established or maintains a school, let nothing be done by the same Board to impair its success—least of all should the Board set up a rival school by its side. Such a policy is not only absurd and extravagant, but it has a tendency to demoralize the people. The Committee of Council in this country, where the system is strictly denominational, never dreams of assisting to build a school if there is an existing school of the same sort, with a conscience clause, capable of accommodating all the children of the neighbourhood; and the fact that the Committee of Council assists two or more schools when one would suffice, is one of the most grievous defects of the denominational system. It is, indeed, the inevitable effect of such a system, but it is one of the grounds which the Scottish Commission have recommended its abolition north of the Tweed. A system administered upon such principles as those which seem to guide the Board in Ireland is not a National but a Denominational system—relieved, unfortunately, from those conditions, which prevent its abuse and control its tendency to extravagance.

Chief reason for sanctioning "modified grants" is to secure a Roman Catholic teacher under the control of the priest.

53. I can understand the reasons which have induced the Commissioners to establish these "modified grants." I admit the importance of providing children with the means of obtaining religious instruction; but if the only object of the Board were to provide religious instruction, a new school and a new staff would not, as I have already shown, be required. The reasons which induced this Board to sanction these grants was very different. It was that all the children might receive secular instruction from a person of the same faith with themselves. This, indeed, is the only way in which all danger to faith can be eliminated, and the clergy can be relieved from the duty of themselves giving religious instruction; besides, of course, it is the only means by which the clergy can obtain the control over the teacher upon which they are so eagerly intent. But I cannot admit that such reasons ought to influence those who administer a grant made by Parliament for united education; on the contrary, they seem to me utterly inconsistent with such a trust. Apart, however, from this, it is not unimportant to show that the same reasons are allowed to influence the administration of public funds voted for education in other countries.

Feelings of the people in other countries with respect to the teacher's creed.

England.

Scotland.

Holland.

54. I have already remarked that neither the Irish people nor their clergy forbid children receiving instruction from teachers of various persuasions. In the United States the same practice exists. But in England, Scotland, and abroad the majority in a locality would certainly insist upon the teacher being of the same creed as themselves. In England, indeed, it would be difficult to persuade a man to send his child to be taught by a Papist; in Scotland such an idea would be deemed preposterous. Nay, it appears from the Report of the Scotch Commissioners that in some northern counties where sectarian feeling runs high, a free churchman will not send his child to a school taught by a member of the Established Church, although the difference between parent and teacher relates only to questions of church government, and although in every school the rights of conscience are protected. In Holland, I am informed upon good authority, that the religion of the teacher coincides with that of the majority of the parents whose children are instructed; and that, if this were not so, there would be grievous discontent. But although the Roman Catholics and Protestants of Ireland accept education from masters without reference to creed, still they do so with evident reluctance. The bishops and priests make no secret of their wishes upon the subject, and I was invariably told by Catholic laymen that they would prefer a Catholic teacher, and by Protestant laymen that they would prefer a Protestant teacher for their children. No doubt, this sectarian feeling is kept alive and aggravated by the clergy of all denominations; and no doubt the same feeling prompted the National Board to introduce the "modified grants," to which allusion has already

been made. Although I am satisfied that the principle of these modified grants is inconsistent in theory with a strictly National system, still I cannot but think that in practice the religious prejudices of the parents as to the opinions and character of the teachers in primary schools ought, as far as possible, to be respected. It is true that, in a strictly non-sectarian system, the creed of the schoolmaster, so far as the State is concerned, is immaterial. But a doctrine, however true in theory, cannot always be adopted in practice; and whatever opinions the fathers of the children may entertain upon the subject of religious instruction, the mothers and the clergy, who possess the real power in this matter, consider religion an essential element in education; and, if religious instruction is to be given at all, there is an obvious convenience in having it given by the schoolmaster.

In England and Scotland the creed of the teacher coincides with that of the majority of the people.

55. It can scarcely be said that either in England or in Scotland any attempt has ever been made to exclude religion from exercising its influence in school appointments and school management; and, indeed, if any such attempt were made it would probably fail. There can be little doubt, for instance, that in Scotland if Lord Lovat or the Duke of Buccleuch were to succeed in getting a Roman Catholic or an Episcopalian master appointed as teacher in a parish school, there would be something like an insurrection. Nevertheless such an appointment would be perfectly legal, and if the master did his duty the faith of the children might be perfectly secure. Again, if an English squire were to appoint a Presbyterian or an Unitarian as teacher in his National school, the clergyman and the people would probably regard it as an affront. But in Ireland it is by no means uncommon to find the master or mistress a Protestant, when a large majority of the population is Catholic. In this matter I was surprised to find so much liberality of feeling. But a liberal disposition must not be strained beyond fair limits, and I must confess that in Ireland these limits have been exceeded. Suppose, for instance, the case of a parish in which the vast majority of the people are Catholics, and there is a National school, the manager of which is a Protestant; suppose, moreover, that the manager appoints a Protestant schoolmaster. It may be that he is an excellent teacher, but it is vain to expect him to possess the entire confidence of the people. Such an appointment has this inconvenience also, that the children cannot receive their religious instruction in school unless indeed the Protestant masters is requested to teach the Roman Catholic children their own catechism. This experiment I have seen tried, and with tolerable success; but, of course, as a general rule, it is impracticable. But to take an illustration.

Instance to the contrary in Ireland.

56. I have in my mind a case, in which the manager of the school is a Protestant, and the vast majority of the people Catholic. The school became vacant. The manager advertised for a schoolmaster, and announced in the advertisement, that no Roman Catholic need apply. A Protestant master was appointed. But the inhabitants of the place, and the parish priest, not unreasonably, regarded the form of advertisement as a slight upon their religion; and although the master holds a first-class certificate, the school is now a comparative failure. The school-house is one of the best—perhaps the best which I saw in my tour, and the master has an excellent dwelling-house and garden. In times past when the teacher of this school was a Roman Catholic, but thoroughly competent, no school in the district was more prosperous. There was mutual confidence between parents, priest, pupils, and teachers. The school was a living power of civilization, and a perpetual fountain of goodwill. But now the children have been transferred to an inferior non-vested school, which is grievously overcrowded, and the obnoxious school has been converted into a standing grievance and a source of discontent. If the parents for whose children a school is intended had the power to choose the master, they would, as in Holland and America, take care to appoint a man who suited them in matters of religion, or if the patron or manager in Ireland were a sensible man, he would, in appointing a teacher, consult the feelings of the people. But if patrons or managers neglect this obvious duty, it is not surprising that the people should be discontented, and endeavour to obtain some sort of redress.

Remedy.

57. The most effectual remedy for this grievance would be that the people of the locality should have a veto upon the appointment of any teacher in a National school or at all events, that the creed of the teacher should correspond with that of the majority of the parents whose children are to be taught. But the National Board has adopted neither of these alternatives. The plan which has been adopted is to aid in the establishment of new schools, the object being to supply the people with religious teachers in whom they have confidence. Finding the religious feelings of the people too strong, the National Board are compelled to set up schools simply to meet the religious wants of the people. In other words, *they have abandoned their principles, and have engrafted a denominational system upon one which professes to be undenominational.*

Convent schools.

58. Before concluding this part of my report I beg leave to draw the special attention of the Commissioners to the Convent schools. Nominally, they are National schools, because they comply with the rules of the Board, but to my mind they are thoroughly denominational. That they are denominational in the eyes of the people, and of the excellent ladies who conduct them, admits not of a shadow of doubt. When I asked whether any Protestant child ever attended a Convent school, the question seemed to excite a smile of incredulity. Nor was I surprised, for out of 73,300 children attending Convent schools only 73—less than 1 in 1,000 are Protestants. Indeed I should no more expect to find a Protestant in a Convent school than a Roman Catholic in a Church Education school, if there were any other school within reach. It is true that the formal religious instruction is confined to certain hours, the books are approved by the Board, and the images and religious symbols are shut up in cupboards or veiled—although in one school which I saw, the veil was of a very transparent type. But the atmosphere of the Convent fills the school, and must obviously be distasteful to Protestants. In the case of such schools to enforce the rules of the National Board is a work of supererogation. These rules are framed to protect the rights of conscience of the minority, but, inasmuch as in these Convent schools there is not, and never will be, any Protestant minority, it seems idle to persist in enforcing them. It has, indeed, been thought necessary to exclude from the office of teacher in National schools, all persons in religious orders, but upon the same principle, I think that nuns and Marist as well as Christian Brothers should be excluded. They are not in orders, but their peculiarities are as obnoxious to Protestants as those of a Protestant clergyman are to the Roman Catholics. Again, it is said that Convent schools are practically on the same footing as other National schools. The rules of the Board expressly declare that "They are subject to the same rules and regulations" as non-vested schools. But, as I understand the rules of the Board, Convent schools enjoy special privileges. In all other schools which are aided by the Board, the teacher must be examined and certificated, but in the Convent schools this most important condition is relaxed, and a grant is made according to the number in average attendance. The reason of this relaxation it is difficult, if not impossible, to understand, because in England, in Scotland, and I believe abroad, the nuns are quite ready to submit themselves to examination. I must say, therefore, that if the school system of Ireland is to be regarded as truly National and unsectarian, it is impossible to defend the exceptional rules which govern those Convent schools.

59. It is, I know, impossible to exclude these Convent schools from sharing in the Parliamentary grant, for I believe that even Archbishop Whately was one of the Commissioners who agreed to admit them as National schools; nor indeed do I think that it would be judicious to attempt to exclude them But it strikes me, that if any such exceptions are sanctioned, there is no reason why they should not be extended, and I shall endeavour to explain the extent to which I should be prepared to go in this direction.

60. The general conclusion I derive from the manner in which the Commissioners of National Education in Ireland practically administer the funds annually intrusted to them by Parliament is, that they have been compelled to abandon the non-sectarian principles, upon which the system was originally founded, and to adopt to a considerable extent the denominational principle. General conclusion as to the National Board.

V.—Should the Present System be Maintained?

61. During my tour in Ireland the question which constantly intruded itself upon me was, whether the National system ought to be maintained as it now exists, or whether a Denominational system ought to be introduced in its stead? Should the present system be maintained?

62. In ascertaining the general opinion upon this subject, I must confess that I experienced great difficulty. So far as the clergy of the Established and Roman Catholic Churches are concerned, there is no room for doubt. They are in a manner bound to oppose the National system; though I must add that some of the Roman Catholics admitted the difficulty of having denominational schools in places where the population is divided in religious opinion, and is too small to fill more than one school. In the towns, however, and in populous places they saw no difficulty. But so far as laymen are concerned, I did not find a single individual who was opposed to the National schools. Catholics and Protestants alike—the man of wealth and the man of humble means—all with one voice agreed in extolling the National schools and the benefits which they had conferred upon Ireland. I conversed with a merchant of great wealth in Sligo, and although he bore the character of a devout Catholic, he spoke in the strongest terms of the importance of maintaining the present system. I met the mayor of a provincial town, who, from poverty had risen to wealth, and he spoke with touching gratitude of the blessings he had himself derived from the National school in which he was educated, and of the friends he had made among his Protestant school-fellows. In Ireland, it is as I have found it in England and Scotland. The mass of the people care little for the denominational character of the school, or rather would care nothing were it not for the clergy. If the Irish laymen were left to themselves and emancipated from spiritual subjection, the National school system would probably be maintained without alteration. Opinions of clergy. Opinions of laymen.

63. But the laity are not left to themselves; on the contrary, they willingly submit to the guidance of their priests, and even sacrifice the interests of themselves and of their children in order to obey them. In Sligo, where there is a Model school which is taught by Roman Catholics and by Protestants, I heard the most bitter complaints from persons of various occupations, because they were forbidden to send their children to the Model school and compelled to send them to the Convent or Marist Brothers' schools, which they thought inferior. By law, of course, they are free to do as they please. But spiritual intimidation is too much for them. In a town further south, I heard of a Roman Catholic who sent his children to a private school taught by a Protestant, and he was persecuted until he withdrew them. In Enniskillen I was told of instances in which persons in a very respectable rank of life were compelled, after a struggle, to withdraw their children from the Model school in that town, and to place them in the Convent school. Again and again I asked what the effect would be if the ban put upon the Model school were annulled, and the never failing answer was that the attendance would be doubled, while the attendance at the Convent, the Marist, and Christian Brothers' schools would be proportionally diminished. It may, perhaps, be said the reason which induces Roman Catholic parents to prefer the Model school to schools taught by Marist or Christian Brothers is because its fees are lower. But even if this be so, it would only show that in the eyes of such parents, a few shillings a year are of more consequence than the faith of their children. Is it not better to believe that in the opinion of the Catholic laity, the Model school is dangerous neither to faith nor morals? Some time ago the Roman Catholic bishops laid down a rule, that no teacher who had been trained at Dublin should be employed in a National school under a Roman Catholic patron. This rule has created the utmost discontent among the teachers, and many, even of the priests, scarcely conceal their opinion, that it is both harsh and unnecessary. But still the rule is generally observed, although even those who submit to it do so with angry reluctance. Reason why the laity act differently from what they think.

64. These facts show, I think, conclusively that the power of the priest is very great, and that in matters connected with education the influence of the priest cannot practically be neglected.

65. Nevertheless, this influence has its limits; and I am convinced that if the chord be stretched a little tighter it may possibly snap under the strain. It is surely a striking fact that in the Model schools which I visited (and it is the same throughout Ireland), there are many Roman Catholic teachers, both male and female, with pupil-teachers under them. And notwithstanding the denunciations launched against these institutions, none of the teachers appear to suffer extreme spiritual inconvenience. The following is a still more striking instance of the people rebelling against the bishop and his clergy. There is an island off the coast of Sligo, which formed part of the late Lord Palmerston's property. When the present landlord came into possession, he found that there was no school on the island. He erected one, put it under the National Board, and appointed a teacher who had been trained. The bishop found that this teacher had gone to the training school at Dublin after the time when it was forbidden to do so. Thereupon, he directed the people to withdraw their children from the school, and threatened to deny the teacher the rites of the Church. The people refused to withdraw their children, and the teacher continued to do her duty; but she was denied the rites of the Church, and has only succeeded in getting them administered to her by some priest who is not within the bishop's jurisdiction. Again, I found at Dungloe a school which had been under the management of the parish priest, but was then under that of one of Lord Conyngham's agents, a Protestant. The way in which this change took place is remarkable. The school had been built partly at the expense of the people of the town; and the teacher, a man of considerable ability, and a popular favourite, was a native of the place. The priest being then the manager, had the power of dismissing the master. He exercised this power, and dismissed the teacher against his remonstrances, and without assigning any reasonable ground. The priest then appointed a new master. But the people were indignant, and demanded that their favourite teacher should be reinstated. The priest still refused. Thereupon the people took possession of the school, reinstated the master, got the priest displaced from his office of manager, and had Lord Conyngham's agent put in his place. I believe that these are not exceptional cases; and that if the circumstances are sufficiently pressing, the people will not always submit to the dictation of their priests. On the other hand, as I have already said, the Roman Catholic clergy, and indeed the clergy of other denominations exercise very great influence over the people. Limits of priests' power. Refusal to obey the bishop. Rebellion against priests.

66. It is sometimes said that it is the duty of the State to protect the people against ecclesiastical influence, and this is one of the reasons alleged for maintaining the National system as it is. In the case of a Church established by law, which is intended to meet the wants of the largest number possible, it may be the duty of the State to visit any attempt to narrow the limits of a National Church. But where a Church is voluntary, it is a mere private matter, whether any man is or is not a member of it, and therefore I cannot think that the State has any concern with protecting its members. Let those who find the yoke too galling withdraw from the Church which imposes it. Those who are too timid to do so deserve to endure the consequences. Member of a voluntary church ought not to be protected by the State.

In framing a nation's system of education the feelings of the people must be consulted.

67. Be this as it may, I think that in framing a school system for a nation it is impossible to frame it successfully, unless the temper and disposition of the people be taken into account. It is very right, and the positive duty of the State to protect the conscience of the minority. But this condition being secured, there seems no valid reason why the religious feelings, or even prejudices of the majority should not be consulted. In other words, I see much reason for insisting that in every convenient locality *there shall be at least one National school, according to the existing type.* But if any more schools are required, I see no reason why they should not be denominational schools with an ordinary conscience clause—the denomination being that of the majority of the people. Nor do I suppose there would be any difficulty in ascertaining the opinions of a locality as to the denomination to which a proposed school should belong. I cannot see why Irishmen should be treated differently in regard to schools from their English and Scotch fellow-citizens.

The denominational school must be accepted in Ireland on the same terms as elsewhere.

68. But if the people of Ireland insist upon having denominational schools they must accept them upon such terms as they have been accepted elsewhere. I am not, therefore, prepared to say that the amount of public aid should be the same in the case of a denominational as it would be in the case of a purely National school. It seems to me that in this respect Ireland should be placed upon a perfect equality with England and Scotland. In England and Scotland only about one-third of the whole cost of maintaining the school is defrayed by the State, the remainder being raised by local contributions and school fees. In like manner the State supplies only a portion of the sum required for building or repairing schools. Thus in England and in Scotland the existence of a certain amount of local voluntary contributions is an essential condition of the denominational system in this country. And the only ground upon which any individual is allowed to manage a school and to use it for religious purposes is because he contributes largely towards its maintenance. As a mere matter of justice to the general body of taxpayers, who are of various creeds, I think that this rule should be inflexibly maintained; nor do I recognise the justice of relaxing it in Ireland. I repeat, therefore, that if the Roman Catholics or the Protestants of Ireland wish the State to aid purely denominational schools they must accept that aid upon the same terms as in this country.

Poverty of Ireland.

69. It may be said that Ireland is much poorer than Great Britain, and that the landed property is in the hands of Protestants. But these denominational schools will exist almost exclusively in towns and populous places, and there can be no difficulty in permitting the inhabitants of such places to rate themselves so as to supply the necessary local contributions. The alacrity with which they impose a school rate will be the best test of their sincerity in the cause of denominational schools.

Summary of plan.

70. To sum up the case. The fundamental principle of every efficient scheme of National education is that there must be an adequate number of efficient schools for the whole population. If there exist already in any locality the requisite number of schools nothing more is required. But if schools are still wanting they may be supplied in two ways.

71. On one hand the inhabitants of a locality or certain private individuals may prefer what are called denominational schools, the chief object of which is to inculcate religious truth, but which also communicate secular knowledge. In such schools the State might fairly contribute towards the secular part of the instruction, which would be tested by Inspectors, while the ratepayers of the locality or the private patrons of the school would be left to supply the rest of the funds required. As I have said the proportion to be so contributed might be the same as it is in this country. But it must be carefully observed that, before any proposal for a denominational school is entertained, there must be at least one National school (proper) open to children of all creeds, and to the maintenance of which no local contributions by rate or private subscriptions would be required.

72. On the other hand, it might be that neither the inhabitants of the locality, nor any private individuals were ready to contribute the necessary funds. In this case, the schools required would be erected and maintained by the State, and by school fees; but they would be National schools (proper), such as I have described. In erecting and maintaining such schools neither local rate nor voluntary contributions would be required. As the denominational schools would be chiefly in towns; the National schools (proper) would be chiefly in rural places.

How money to be obtained.

73. But whence, it may be asked, would the required funds be obtained? It may be doubted whether Parliament would consent to increase the present grant of £340,000, but if the changes contemplated in the Established Church are carried into effect, there would be ample means for supplying any deficiency.

Hope that instructions have not been exceeded.

74. In making these suggestions, I trust that the Commissioners will acquit me of having stept beyond my province. It was idle to attempt to pass by the great question which is agitating the people, not only of Ireland, but of this country, viz.:—Is it possible, or is it just, to maintain the National school system of Ireland, without alteration? If it is impossible the inevitable question arises, what changes are judicious and practicable. These questions have occupied much of my thoughts, and I trust that I have contributed something towards their solution.

VI.—Quality of the Education furnished by the Schools.

Quality of education.

75. I now proceed to discuss the quality of the education furnished in the Irish schools. The subjects of instruction, are, of course, reading, writing, arithmetic, geography, grammar, and sometimes music and sewing. The only good specimens which I saw of the two last, were in the Convent schools. I should say generally that the reading was always very tolerable, but of course the scholars of one school differed much from those of another in their power of understanding and explaining words and phrases. Experience had taught me that

Dictation.

the best and easiest test of intelligence in the child, and good teaching in the master or mistress, is writing from dictation. This opinion was confirmed in Ireland. The sentences which I dictated, were such as these:—The days of the week; "I am grateful for all the benefits which I have received;" "Some of the apples are sour, some are acid;" "Snakes may be divided into two separate families, viz.:—those which have poisonous fangs, and those which have none." Some of these are taken from the ordinary reading books; some I had tried in schools elsewhere. I sometimes dictated four lines also from one of their reading books.

> "The wild duck seeks the sedgy bank,
> Or dives beneath the glistening billow,
> Where graceful droop or cluster dank,
> The osier bright and rustling willow."

76. To some these questions may appear too simple, but if they had seen the answers they would at all events agree with me in thinking that simplicity was not their worst defect. Before, however, proposing any of these sentences to a particular class, I generally showed it to the teacher, and asked him whether he thought that it would be beyond the powers of the children. Nor did I ever examine any child beyond the standard which is fixed by the National Board.

Arithmetic.

77. In arithmetic, I always began by numeration and notation, and my experience is, that wherever this test is satisfied, the school has been well taught. When it is not satisfied, the school has been badly taught. I then proceeded through the ordinary rules. In a very few cases I found the children able to solve questions in decimals; but although an ordinary sum might be worked, anything like a problem requiring reflection

generally proved too puzzling. Thus it was very rare to find a class of boys or girls who could solve the following simple problem :—A jacket and waistcoat are worth twenty-four shillings; the jacket is three times the price of the waistcoat. What is the price of each?" The amount of geography which the children possessed was not great; but it seemed to me one of the most useful branches of knowledge which they possessed. Very many of the scholars, even in the most secluded places, were familiar with the principal states and towns in America. The reason, probably, is, that they had friends and relations in the United States; and most of those above seventeen, of which there was not a few, expected to follow their example.

Teachers and children.

78. Considering the emoluments and position of most of the teachers, the want of local superintendence, and the apathy of the upper classes, I am surprised that they do their duty so well. The material with which they have to deal, is, no doubt, excellent. So far from their being any lack of intelligence in the ordinary Irish school-boy, it is impossible to imagine any creature more bright and intelligent. And it is perhaps singular that in the very wildest parts of Donegal the children exhibit the same intellectual smartness. But, notwithstanding these natural advantages, I must confess that, during the whole of my tour, I saw no school, except, perhaps, the Model school at Sligo, which could compare in excellence with the best British or National school in England, or with the Parish or Inspected schools in Scotland. This might probably have been said even before the Revised Code was introduced; but since its introduction I feel no doubt upon the subject. Between one National school taught by a certificated master and another, I shall not attempt to draw any distinction, though, of course, they varied in merit; but in the Convent schools, where the teachers are uncertificated, I found the reading, writing, geography, and sewing equal to the others; but in arithmetic, I should say they were inferior. I shall presently describe a certain number of the schools which I visited, and state the result of the examination. But before doing so, I may remark generally that in discipline, and in what may be called school-morality, the Irish is inferior to the ordinary school in this country. In the first place, the Irish teachers did not handle their classes with the same skill and precision as the English or Scottish teachers; but that might be because the classes were much smaller. In the next place, no one could fail to observe the want of that scrupulous honour and self-respect in school which marks a good teacher and a well disciplined pupil. For some time I was in the habit of relying upon the statements of the masters as to their emoluments, particularly as to the amount received for school-fees, and as to whether or not they had farms, but in some cases I found that their statements were so inaccurate, that I abandoned the attempt to frame statistics based upon them.

School discipline.

Again, the idea that copying or prompting is wrong in the pupil, or ought to be checked by the teacher, seemed quite a novelty. In the Model school at Enniskillen, after repeated warnings given by one of the Head Inspectors, who happened to be present, and within a few yards of the schoolmistress, some of the children persisted in copying from their neighbours. And in one of the best Convent schools in Ireland, even after a most solemn warning, delivered by a Chief of Inspection who was present, it became necessary to turn one girl out of the examination room. These are glaring instances, and I was surprised to meet with them in schools of such reputation. But, in truth, the practice of prompting and copying from each other is almost universal, and the inveteracy of this habit is proved by the fact that the pupils persisted in attempting to indulge in it even when carefully separated from each other.

Copying and prompting.

Inspectors.

79. I cannot help thinking that the superiority in these respects exhibited by the schools in this country arises from the great strictness of the British Inspectors, and from the social position which they occupy as compared with the teachers. In England, from the moment a child of thirteen enters upon the career of a teacher, the rules against copying or prompting, are rigidly enforced, and the penalty for disobedience is professional ruin. The result is, that the lesson which a teacher has learnt under such conditions he impresses with unusual zeal upon the pupils, and it is impossible to deny that the result is in every point of view most satisfactory.

Illustrations.

80. I now proceed to furnish some illustrations of the teaching in the Irish schools. In order to obtain a standard by which to measure these schools, I took the opportunity of examining the Model school in Sligo, and one Convent school in Dublin, both of which are considered to be very favourable specimens of the Irish system. In order to ascertain the merit of the Irish schools as compared with the schools in this country, I took the opportunity of putting the questions I had put in Ireland to the scholars in a London school of good reputation. The following are the results:—In the London school I examined twenty-six children, one of whom was sixteen, two fifteen, and the others between fourteen and eleven years of age. The passage in dictation was taken from an Irish reading book. It has already been transcribed. Out of the twenty-six papers, two were right, the rest had thirty-four errors. In explaining the word "acquiesce" none were right. In notation and subtraction, thirteen were right, and thirteen were wrong. In the question "Find how much 15½lbs. of beef costs at 7½*d.*" thirteen were right and thirteen were wrong. In the problem of the jacket and waistcoat seven were right.

81. In the Dublin Convent school I examined the papers of thirty-eight girls, all of whom except three were above twelve years of age, and of whom as many as twenty-three were seventeen and upwards. I should add that some of those examined were Monitors. But of these thirty-eight, only twelve could work correctly the question, what is the cost of 15½lbs. of beef at 7½*d.*; of these twelve, only one was thirteen, the rest were between sixteen and nineteen; again, out of the thirty-eight, as many as fifteen were wrong in notation and subtraction. In writing from dictation, the lines already quoted, only twenty-two were right, the rest made twenty-seven mistakes; again, out of the thirty-eight only nineteen could spell and explain the word "acquiesce," and only ten could work the problem "If a jacket and waistcoat cost twenty-four shillings and the jacket is three times the price of the waistcoat, what is the price of each?" It will be observed that while the girls in the convent schools were much older than the children whom I examined in London, the results in London are much more satisfactory, although by no means strikingly good. Indeed, speaking generally, I should say the Irish are inferior to the British schools, and I may add the American schools which I have examined.

82. In the town of Sligo the bishop has succeeded in extinguishing the ordinary National schools and has prohibited the Catholics from using the Model school. The heart-burning and discontent caused by this prohibition are feebly denied by the clergy, but the evidence, which I have had upon the point, is to my mind conclusive. There is scarcely an intelligent Catholic parent in Sligo, who does not feel the hardship of his children being deprived of the best secular education which can be obtained. The general answer given by the clergy to this complaint is that the bishop has provided schools conducted by Marist or Christian Brothers, which supply as good an education as that which is supplied in the schools under the Board. I know not what was the condition of the National schools before they ceased to exist. But I must remark that, unless the Model school be superior, the prohibition to attend it is obviously unnecessary. It seemed to me that in this Model school the instruction in the elementary branches was good; but the Commissioners, who thoroughly examined the school, are better judges of this than I am. Of this, however, I am satisfied, that in the female department, arithmetic, spelling, and writing are better taught in the Model school than in the Convent school; and I also think that the male department of the Model school is superior to the schools conducted by the Marist Brothers, of which there are two.

83. In one, St. John's Seminary, conducted by Marist Brothers, which is held in the premises once occupied by a National school, there are two divisions or departments. In the upper division there are two masters, one

being Director. There were thirty-one on the roll and twenty-seven present, each of whom paid £1 per quarter. In the lower school or division there were eighty-four on the roll and sixty-five present, each paying 10s. per quarter. I was told that altogether the fees amount to £240, of which the lower school yields £60. This I may observe, in passing, forms a remarkable contrast to the financial condition of Sligo Model school. In that school there are 356 on the roll, almost all Protestants, and of the same or even superior rank to the children in the Marist Brothers' school. But the fees do not exceed £132. So that a Model school which is more than three times as large as the Marist Brothers' school produces little more than half the amount of fees. There seems to be no doubt, therefore, that the scholars in the Model schools might be made to contribute in fees much more than they do at present.

84. I examined fourteen of the best scholars in the senior department of St. John's seminary, their ages ranging between eighteen and thirteen years. They read as usual very tolerably, and showed no want of intelligence, they had also a knowlege of ordinary geography. But in compound division six out of the fourteen were wrong, and in writing a sentence taken out of one of their school-books, as an exercise in dictation, there were five failures.

85. In the lower school of the same institution I examined nine, of whom five were fifteen, and four were between fourteen and twelve. In taking down and adding up the following sum :—

	340
	4,001
	60,200
	64,541
Three were wrong in adding	100,002
	164,543
Four were wrong in adding	1,000,101
Six were wrong	1,164,644

In multiplying £55 12*s.* 9¼*d.* × 23, six were right and three were wrong. And in writing a sentence from dictation, in which the words "mayor," "mare," "rode," and "carriages" occurred, four were right and five were wrong. I have no doubt that in a good National or British school in England, or in a parish or inspected school in Scotland, younger children would have answered better.

86. Besides what is called St. John's Seminary, which is intended for the better classes, there is in Sligo another school, also taught by Marist Brothers. This school is intended for the lower classes. The premises, I was told, were only temporary, although they had been used for a National school ; but they certainly were very bad, low in the roof, in wretched repair, and miserably furnished ; the offices were disgraceful. The upper room was divided into two parts by a curtain. Altogether there were present 167. The boys, in dress and demeanour, were like those in a ragged school in London or Plymouth ; though I may state, generally, that I was much struck by the superiority and politeness of the Irish boys as compared with the children in England, but more especially in Scotland. The number of masters was quite inadequate ; but I did not fail to admire the gentleness, patience, good nature, and devotion which distinguished these brothers. What surprised me a good deal was that the fees obtained amounted to £17, whereas generally the fees obtained in National schools are trifling. This fact, coupled with others, proved to me conclusively that if the Roman Catholic clergy chose, they could obtain, in the shape of school-fees, much larger sums from the parents. In this school I examined twelve of the scholars between fifteen and twelve ; in arithmetic two could not write down and add up thousands ; three could not write down ten thousand ; four were wrong in millions. In compound subtraction two were wrong ; and eight out of twelve failed in a simple sum in compound multiplication. Out of seventeen examined in dictation not more than two could write the days of the week, together with a simple sentence containing such words as "grateful," "benefits," and "receive." And, lastly, I selected from the junior class six, but they could not read, except with difficulty, more than one figure, and found it impossible to distinguish between 01 and 10, which I may add was easily done by infants in the Model school.

In this school I had some conversation with one teacher, an Englishman, who told me he came from Lancashire, and had been brought up in a Protestant National school. His religious faith had certainly not suffered from the ordeal through which he had passed.

87. It will be observed that both these schools were conducted by Marist and not by Christian Brothers. I was curious to know the reason, and I was informed that Christian Brothers are subject to their own Head, while the Marist Brothers (in Sligo at least) are subject to the bishop. This, of course, gives the bishop more absolute control over the education of his people.

Wretched condition of some Teachers.

88. As an illustration of the wretched condition of some National teachers I will take the case of a school near Sligo, taught by a woman. The situation of the school shows that it is absolutely required, but the building is poor enough. The school was not open when I was there, but I saw the mistress in the house, where she lives with a relation. The attendance is generally forty.

The Government Grant, ...	£14 0 0
Fees, ...	0 12 6
	£14 12 6

But out of this she has to pay £4 rent for the school-house, besides paying rent for a dwelling-house, so that after deductions made, she has about £7 a year. There are some Protestant gentlemen in the neighbourhood, and some farmers tolerably well off. But the poor woman gets nothing from either source ; indeed, some tolerably well-to-do farmers send their children for 1*s.* a quarter. To live alone upon the wretched pittance would, I should think, be impossible, but the relative with whom she lives enjoys a pension. The patron of this school is the Roman Catholic bishop, but he does nothing to aid either the teacher or the school. Probably the principles under which he acts, do not allow him to do more. The facts connected with this school, I had from sources which I believe to be trustworthy.

89. I will now take a parish in which the landlord is an absentee and a Protestant. He is represented by his agent, but the landlord himself is patron of the school. In this parish the school is admirably built, and consists of two departments, one for boys and one for girls. In the boys' department I found 35 present. They read, as usual, tolerably. In notation and addition I examined 18, a large majority being above ten, I dictated the following sum :—

201
5,600
220,001

But only four were right in taking the figures down and in adding them up. In the second class of which

there were 12, some could not distinguish between 001 and 100. In the third and fourth class of which there were 10, and of whom I examined 8 in compound multiplication, I found that only 2 of the 8 were correct.

I gave two monitors, one aged fifteen and another eighteen, a simple problem in division, and neither could solve it, although the same problem had been readily solved in other schools.

90. In this school, besides an excellent house and garden, the master had—

Government Grant, ...	£44	0	0
School fees, ...	3	0	0
Local contributions, ...	17	10	0
	£64	10	0

This is a case in which the master's salary is more than sufficient; the defect is that its amount does not depend upon his own exertions. Besides, it must be observed, that while the population is to a large extent Catholic, the master is a Protestant, and the circumstances connected with his appointment, made it particularly offensive to the Catholic population; indeed the priest avowed that he did all in his power to withdraw the children from the school, and to induce them to go to another school in the neighbourhood.

91. In the female department I found 33 present. The school and the accommodation for the mistress are excellent; she is a Presbyterian; her salary is ample, but it does not sufficiently depend upon her own exertions; it amounts to £47 10*s.*, of which £4 is derived from fees, besides a house and garden.

The first class, aged between eight and six, read tolerably. In the second class of sixteen, I examined twelve; their ages being between fourteen and eleven; out of the twelve only five were correct in writing down and adding the figures—

10
106
72
5005

In a simple sum in subtraction only four were right.

The reading was moderate, but in writing from dictation the sentence, "I am grateful for all the benefits I have received," there were eighteen errors in twelve papers. I may also mention that two out of the twelve could not write correctly the days of the week.

92. There seems to be no doubt that much discontent exists with reference to the state of education in this neighbourhood. During the life of the late proprietor I was told the master was very efficient, and the school was very well attended. But he was a Roman Catholic, and upon his promotion to be an organising teacher the present master was appointed. It is evident that he is not successful, not, probably, from want of ability, but from want of energy, and from not possessing the confidence of the people. There appears to me less excuse for appointing a Protestant master or mistress, because the Protestant rector of the parish has a school especially for Protestants, which is taught by a mistress. It is worth noticing that the people have some idea of applying to the Board for assistance towards another school—although the school accommodation is ample—simply upon the ground that the teacher is unsuited to a Catholic population, and it is possible that the application may be successful.

93. In ——— school, which is held in a room over the master's house, I found seventy-five present, of whom thirty-four were boys, and forty-one were girls. The master is a Roman Catholic. The room, which is low in the roof, ought not to contain more than sixty-seven, and consequently the atmosphere was most oppressive. In the second class I examined eleven children, between ten and eleven years of age. In taking down and adding up four rows of figures, the highest of which was 5,005, only two were right out of eleven, but in subtraction five out of eleven were correct. In the fourth class in compound multiplication, five were right, and four were wrong. In the same class I examined nine in dictation. They made nineteen mistakes.

I examined two monitors; they worked fractions, and read tolerably, but none could explain the meaning of the word "acquiesce." In this school the master has from the Board £44, and the fees amount to £9 11*s.* 3*d.* He has besides a house and land valued at £8 per annum.

94. During my tour I doubt whether I met anywhere more intelligent children than in the neighbourhood of Carrick and Glen Colmkill; nor have I ever seen more distinct proofs of a general desire for education. The places of which I speak lie to the west of Killybegs, in that broad promontory which stretches westward into the Atlantic. As an illustration of the quick-witted humour of the Carrick boys I may mention the following incident. I was examining the school at Carrick, in presence of the schoolmaster and schoolmistress, the priest, and my car-driver, who took special interest in schools. Before me stood a little barefooted Irishman of about twelve or thirteen, with a bright intelligent face, fine dark eyes, and black hair. His name was "Moses Erskine," I asked him to spell "excellent," which he did. I asked him what it meant. The boy hesitated. But the priest said—"Do you know anybody who is excellent at anything?" "Yes." And "who is it," rejoined the priest. "Myself," was the prompt retort. "And what are you excellent at," continued the priest. "At dancing, sir." I found that Moses was celebrated for his powers at an Irish jig, and that he was by no means shy of giving strangers "a taste of his quality." Being asked whether it would be "indecorous" to see Moses in action, I said certainly not. Presently the rest of the scholars were allowed to go. The door was shut, and Moses was left alone with us. But I observed that the windows outside were filled with the eager faces of his school-fellows. At first there was a difficulty about music, but the schoolmaster whistled an admirable jig, and Moses set to work with a vigour and natural grace which did him infinite credit. And as one step succeeded another, increasing in quickness and complication, the little wretch's feet looked, as one of the party said, like "electrified drumsticks." When Moses stopped, he was duly congratulated and rewarded. Carrick boys

95. Most of the schools in this district are under the patronage of Father M'Neely, who lives at Carrick, and to whom I am much indebted for the readiness and courtesy with which he supplied me with information. The landlords, of course, have given sites; but not one farthing is paid by any of them towards the maintenance either of the school-house or of the teacher. The clergy of the Established Church are vigorous supporters of the Church Education scheme, and, in scrupulously obeying the dictates of their own consciences, feel themselves bound to offend the consciences of others. The school-houses are generally rudely built, square in shape, with mud floors, benches, and a few maps. The parents of the children speak Irish, many of them no other language. But they display an astonishing zeal for education, and obviously appreciate its advantages. At Kilcar, Malinmore, and Cappagh, the school-houses are much too small for the number of children in attendance. Indeed, at Kilcar the master is compelled to assemble some of his children, and to teach them in the open air. But notwithstanding these many disadvantages, I was much struck with the ability of the teacher and the proficiency of the scholars. I put the same questions, which I had put in other schools, and I found them answered very creditably. During my examination of the school at Malinmore, several men who had been working at

the harvest came in, and listened attentively. Observing this, I took the opportunity of conversing with them. They turned out to be small farmers. One of them who gave his name as James Hagarty, told me that two years ago there was no school. He gave the land without, as I understood, the leave of his landlord, and built the school with the help of the neighbours. At that time it was supposed that it would be too large, but at the time of my visit, it was evidently too small. Properly the accommodation was not suited for more than sixty, but sixty-five were actually present, and this at harvest time, the most unfavourable period of the year for school attendance. The master had £24, and the mistress only £14. The master complained that the fees were too low, and were, in his opinion, not well paid; in this opinion, however, the farmers did not seem to concur. He also complained that in consequence of the resolution of the bishop and clergy he had been deprived of the privilege of going to Dublin to be trained.

96. Besides the National schools, the Convent schools, and those taught by the Christian and Marist Brothers, there are the Church Education and the Erasmus Smith and Robertson schools. These are in connexion with the Established Church. The average number in attendance at the Erasmus Smith schools amounts to 4,654, and at the Church Education schools about 40,000, of whom not more than 4,500 are said to be Roman Catholics. It is obvious, therefore, that the operations of the Church Education Society can produce no serious effect in civilizing the people of Ireland. In the neighbourhood of Enniskillen, where Protestants are numerous, the Society has numerous schools. Of the twenty-three Church Education schools in my six districts thirteen were in this neighbourhood. I will now give some specimens of those schools.

Church Education schools.

97. In the best Church Education school which I saw, and which was held in an upper room, the lower part of the house forming the house of the master and mistress, I found thirty-nine boys and girls present. The master had been trained at Kildare-street, and was in the first class. I examined first of all ten of the scholars. The reading was tolerably good. But out of the ten four were wrong in writing down sums which I dictated, while five out of the ten failed in compound multiplication. I then examined the class which was reading Third Book, their ages being between nine and twelve. Nine could spell correctly the days of the week; and their knowledge of numeration was very imperfect. I examined seven in the highest class in dictation. The sentence selected was—"Snakes may be divided into two separate families, those which have poisonous fangs and those which have none." There were five errors in all; one pupil had one error, and another had two errors. In this school the master and mistress had a free house and some land.

	£	s.	d.
The master's salary was	55	0	0
Of which £7 10*s.* 0*d.* was given by Lord Enniskillen.			
School fees,	8	0	0
	£63	0	0

There were no other local contributions.

98. In another Church Education school the school building was tolerable, but the master had no house.

	£	s.	d.
As master his salary was	30	0	0
As clerk he had	7	0	0
Church Education Society,	0	15	0
Total emolument,	£37	15	0

The ages of the children examined were from thirteen to seven. The number present was twenty. The reading, as usual, was tolerable, but the spelling poor. Five attempted to write "some of the apples are sour, some are acid." The errors were as follows—one made one error; two made two errors; two made three errors; so that there were eleven errors in all. Only one could write thousands; none could subtract 99 from 5,302; none could subtract 99 from 523 without the master's help.

99. In another Church Education school the master was very old, having been a teacher for more than forty years. He was, as usual in such cases, appointed by the advice of the clergyman of the parish.

	£	s.	d.
His salary was	14	0	0
Church Education Society,	1	15	0
	£15	15	0

Besides he had a free house and turf. There was twenty children present, of whom three could read a little and spell. According to the Clerical Inspector, whose report I read, "The answering of the children was satisfactory, as far as they go in Scripture and Catechism, also in arithmetic in a few instances. Fair spelling." None, however, could tell the difference between 01 and 10, but two or three could answer when I asked the question, "If there are six birds upon a tree and three fly away, how many remain?"

100. In another Church Education school, which was patronized by a person of rank and influence, the mistress had £30 a year, a free house, and firing. The reading and spelling were tolerable. But in arithmetic the state of matters was deplorable, although it appeared that the Inspectors reported it as satisfactory. Only one was right in writing down 10,042, and adding up three lines of figures. None could do a simple sum in the compound rules, and, to the astonishment and disappointment of the teacher, none could reduce 1*s.* 6*d.* to halfpence.

101. Upon the whole, I should say that the Church Education schools are inferior to the National schools, and of course very inferior to the Inspected schools in this country. Indeed, I should say that there are very few uninspected National schools in this country which are not superior.

If the clergy of the Established Church persist in opposing the National Board it seems incumbent upon them to provide some better machinery for educating the people than the schools which are connected with the Church Education Society.

I am, &c.,

PATRICK CUMIN.

CHAPTER I.—STATISTICAL RESULTS OF INQUIRY.

NATURE OF DISTRICT, ... 345
Extent to which schools of different classes supply the population, ... 345–6
CLASSIFICATION OF SCHOOLS of the various types, according to examination, ... 346
Classification of the schools according to elementary work, which they profess to do, ... 347
ESTIMATE OF WORK DONE IN COMPARISON WITH THAT IN GREAT BRITAIN, ... 347
NATURE AND EXTENT OF FLUCTUATIONS IN ATTENDANCE OF CHILDREN, ... 347–8
Discussion of the question how far the principle of the ENGLISH REVISED CODE might be applied to Ireland, ... 348–9
EDUCATION OF ADULT POPULATION, ... 349–51
SUPPLY OF SCHOOLS in the district, and SUMMARY OF WORK DONE in county Mayo, . . . 351–2

CHAPTER II.—NON-NATIONAL AND WORKHOUSE NATIONAL SCHOOLS.

1.—IRISH CHURCH MISSION SCHOOLS, . . . 352
Religion of pupils, ... 352
Statements as to packing of schools and payment of scholars, ... 353
System on which schools are organised, . . . 353
Details of individual schools, ... 354

2.—CHURCH, WESLEYAN, AND ACHILL SCHOOLS, . 355
Details of individual Church schools, . . . 355
Religion of pupils, ... 355
Wesleyan schools, ... 356
Achill schools, ... 356
System in Mission schools, ... 356
Difficulties in National, ... 357
Regularity of attendance in Mission, and irregularity in National schools, ... 357

3.—HEDGE SCHOOLS, ... 358
General plan of hedge schools, ... 358
Distribution, ... 358
Instances of nature of work done, ... 359
Inferences as to ability of parents to pay school fees, and as to popular feeling about religious teaching, 360

4.—PRESBYTERIAN SCHOOLS, ... 360
Character of schools, ... 360–1
Protestant rivalries, ... 361
Small attendance in schools, ... 362
Strength of denominational feeling, and difficulty of limiting it, ... 362

5.—ROMAN CATHOLIC CONVENT AND MONASTERY SCHOOLS, ... 364
Admission refused, ... 364–5
Admission given, ... 364
Results of permitted inspections, ... 364

6.—WORKHOUSE NATIONAL SCHOOLS, . . . 364
System and circumstances of workhouse school, 364–5
Regularity of attendance, ... 365
Management and results obtained, ... 365–6

CHAPTER III.—NATIONAL SCHOOLS.

INCOMES OF TEACHERS, ... 366
Drawbacks on income, including rents, sale stock, free stock, ... 366–7
GRATUITY SYSTEM, ... 368
Proposed pension system discussed, ... 368
WANT OF RESIDENCES FOR TEACHERS, ... 368
Disadvantages of actual state of matters, and advantages and expense of change, ... 369
PENAL ACTION OF BOARD, ... 369
Extent of it, and effects produced, ... 369–70
MODE OF INSPECTION, ... 371
Modifications suggested as to regular visits, . . 371

Page

System of incidental visits discussed, . . . 371–2
FREQUENCY OF TEACHERS' EXAMINATIONS, . . . 372
COMPLAINTS MADE AGAINST BOARD STATED, . . 372–3
TENURE OF TEACHERS' OFFICE, ... 373
Instances of working of present system under lay patrons, ... 374–5
Under clerical patrons, ... 376–7
General discussion of system, ... 377–8
GRATUITOUS EDUCATION proposed and discussed, 379–80
TOTAL INCREASE OF EDUCATION PAYMENTS NECESSARY, 380
CONNECTED QUESTION OF POSSIBLE ALTERATIONS IN MANAGEMENT, ... 381–2
EVENING SCHOOLS, ... 382
LAND QUESTION AND REGULAR ATTENDANCE, . . 382
COMPULSORY SCHOOL ATTENDANCE discussed, . . 382
FEELINGS OF POLITICAL DISCONTENT ALLEGED TO PREVAIL AMONG TEACHERS, ... 382–3
Statements made, ... 383
Letter from Rev. M. Finn, P.P., ... 383
Opinions of magistrates, ... 384
Cases of individual teachers, ... 384–5

CHAPTER IV.—THE RELIGIOUS QUESTION.

Extent to which MIXED EDUCATION prevails, . 385–6
SECULAR SYSTEM discussed, ... 387
Present position of State on subject, . . . 387
Archbishop MacHale's OPPOSITION TO MIXED SYSTEM 387–8
Objections entertained by clergy, ... 388
Stated by them, ... 388–9
Their objections to central training school, . . 389
Views which they attribute to the founders of the mixed system, ... 389
DIFFERENCE BETWEEN DENOMINATIONAL AND MIXED SYSTEM, ... 389
ACTION OF CLERGY IN FAVOUR OF REPEAL, . . 390
MODIFICATIONS in mixed system suggested and discussed, ... 391–2
STATE OF FEELING TOWARDS IRISH CHURCH MISSION SCHOOLS, ... 391
Illustrated by instances, ... 391–3
ATTITUDE OF CLERGY AND OF PEOPLE TOWARDS NATIONAL AND TOWARDS MISSION SCHOOLS, RESPECTIVELY, ... 393–4
ILLUSTRATIONS OF STATE OF FEELING, . . . 394–5
1. Partry. Recent clerical action, ... 394–5
How far sanctioned by Archbishop, ... 395
2. Garracloon, ... 396
Popular and clerical action continued for a term of years, ... 396–7
3. Clerical action and local interference with school building at Ballycroy, ... 397–8
4. Ballymonelly. Relative positions of landlord, priest, and people, ... 398–9
5. A runaway teacher 399
6. A school closed and unable to procure a teacher, ... 399–400
7 and 8. Schools at Louisburgh and Killadoon, showing position taken up by Archbishop MacHale and by the Board, ... 401–2
INFERENCES FROM PRECEDING STATEMENTS, . . 403
PROSPECT OF TRANQUILLITY UNDER PRESENT SYSTEM, . 403
ARGUMENT IN FAVOUR OF DENOMINATIONALISM FROM BRITISH PRECEDENT, ... 404
GENERAL CONCLUSIONS, ... 404

APPENDICES.

A.—LIST OF PUNISHMENTS IN INSPECTORAL DISTRICT OF BALLINA FOR TWO AND A HALF YEARS, 404–5
B.—OPINIONS OF TEACHERS ON SUBJECTS OF INQUIRY, ... 406–12
C.—OPINIONS OF SCHOOL PATRONS AND LOCAL GENTLEMEN INTERESTED IN EDUCATION, 413–19
D.—OPINIONS OF SCHOOL INSPECTORS, . . . 420–1

ANALYSIS OF MR. JACK'S REPORT.

	Paragraph
Introductory,	1
Chapter I.—Statistical Results of Inquiry.	
District, *a.* Geography,	2
b. Occupations,	3
c. Density of population,	4
Schools Visited,	5
Classification of schools and *number* of scholars present,	6
Estimated *distribution of scholars* in different classes of schools,	7–8
Per-centages of distribution,	9
Schools tested by Individual Examination,	10
Nature of test applied,	11
Classification of schools according to "*Results*" alone,	12
Gross results,	13
Numbers of children taught in each kind of school,	14
Ultimate classification of Schools,	15–16
What the schools profess to *teach*,	17–18
Difference of the two classes of schools *as to age* of scholars,	19
What might have been expected,	20
What is done in Government schools in *Great Britain*,	21
a. Total passes,	21
b. Per-centage of *passes* in *higher standards*,	22–3
Statistical Inquiry as to Attendance,	24
Rejected returns,	25
Roll compared with *average*,	26
a. National schools,	26–28
Fluctuation in average shown according to ages,	29–30
b. Non-national schools,	31–2
Whether the Revised Code be applicable to Ireland,	33
Difficulties,	33
1. Irregular attendance,	33
2. Alleged danger of inacurate returns,	34
3. Amount available under the code,	35
a. Calculated on average,	36
b. On maximum possible,	37–8
c. According to passes obtained,	39–40
Adult Education,	41
Extent to which the *people* past school age are *educated*,	41
Census of 1861,	41
Villages visited,	42
First village,	43
Second village,	44–5
County gaol,	46–50
Fourth village,	51
Comparison of results 1861 and 1868,	52–55
Female education,	56
County lunatic asylum,	57–59
Supply of Schools,	60
Instances of *inadequate supply*,	61
1. Erris,	61
2 Tuam,	61
Extra supply,	62
Denominational and other schools,	62
Example of *causes preventing supply*,	62
Population in 1868,	63
Conclusion showing *school-work in County Mayo in* 1868,	64–5
Chapter II.—Non-National and Workhouse National Schools.	
1.—Irish Church Mission Schools,	66–7
Religion of scholars,	68
Limitation of inquiry to secular work,	69
Packing of schools explained,	70
Excessive proportion of infants and *overgrown* children,	71
Food and clothes given,	72
Explanations,	73
Popular feeling on the subject,	74
School staff—male and female teachers,	75
Extra teachers,	75
Work and pay of extra teachers,	76
Nucleus of school,	77
Effect of system on the minds of children,	78
Schools,	79
a. Orphanages,	79–82
b. Of *questionable utility*,	83–90
c. General,	91
Teachers' incomes,	92
2.—Other Church and Wesleyan Schools,	93
Church Education and *General Irish Reformation*,	93
a. Of *questionable utility*,	94–96
b. General,	97
Popular feeling with respect to these schools,	97
Religious persuasion of scholars,	98
Smallness of *attendance*,	99
Schools endowed by *Erasmus Smith*,	100
Wesleyan schools,	101–3
Achill parish *National* and *non-National*,	104
Children *present*,	104
Circumstances of visit,	105
Comparison of *attendances*,	106
Rewards given by mission to scholars,	107
General *result* of examination,	108
Instances of *difficulties* in Achill,	109–10
Causes of *deficiencies*,	111
a. Denominational *rivalry*,	111
b. Low salaries in National,	112–13
c. Defective distribution,	114
Regular attendance in *mission* schools,	115
Irregular in *National*—common cause,	115
Object of mission schools,	116
Distribution of population,	117
General result,	118
3.—Hedge Schools,	119
a. Teachers,	119
b. Scholars,	120
c. Subjects of instruction,	120
Hedge schools clustered near *Tuam*,	121
Explanations offered,	121
Discussed,	121–2
Examples of various *hedge schools*,	123–131
General results,	132–3
Religious teaching in hedge schools,	134
Inferences to be drawn,	135
Neither (1st) that *larger fees* might be obtained for *National* schools; nor (2nd) that *National* schools are *unsatisfactory* as to religion,	135
4.—Presbyterian Schools. Of two classes—*a. congregational*; *b. missionary*,	136
Six congregational; ten missionary,	137–39
Small attendance,	140
Ten cases,	140
Efficiency of schools,	141
Case showing that the two *Protestant denominations* do not *amalgamate*,	141
Another case,	142
Patron's grievance and complaint,	142–3
Details of perplexing cases,	144–8
General result,	149
Inferences—1. *Strength of denominational feeling*; 2. *Difficulty* of prescribing limits to its action,	150–4
5.—Roman Catholic Convent and Monastery,	155
Admission refused at Castlebar; not at Bunacurry, at Westport, not at Clifden,	156–58
At Tuam, except as a visitor,	158–60
Inability to verify *statements* that the convent and Christian Brother's schools might serve as *training schools*,	161
Results of permitted inspection,	162–3
Workhouse Schools (National)	164–5
Religious persuasions of children,	166
Regularity of attendance,	166

Paragraph

Compared with outside schools, ... 167
Again compared, ... 167
Advantages of *workhouse*, ... 168
Drawbacks, ... 168
Good workhouse schools, ... 168
Life of *workhouse child*, ... 169–71
Management of workhouse school, ... 172
Salaries paid, ... 173
Work done, ... 174

CHAPTER III.—NATIONAL SCHOOLS.

Results previously shown, find their explanation in, . 175

INCOME OF TEACHERS.

Defects in National schools accounted for, . 176–7
INCOME OF 106 NATIONAL SCHOOLS, WEST CONNAUGHT, 178
Average Income for 106 *National* schools, West Connaught, ... 178
A *few* have *houses* rent free, ... 179
Two classes of incomes, ... 179
a. One-third of whole body of teachers, . . 179
b. Two-thirds, ... 179
Prices of necessaries, ... 180
DRAWBACKS ON INCOME, ... 181
Rent of schoolroom, ... 181
School requisites, ... 181
Sale stock, ... 182
Free stock, ... 182
Commission on sale stock, ... 182
Irregularities in supplying it, ... 182
Disadvantages connected with system, . . . 182
Teachers frequently fall into *debt*, ... 183
And have been known to *die* in *workhouse*, . . 184
Effect on *young men*, ... 184
GRATUITY SYSTEM, ... 185
Case of *gratuity* granted, ... 186
Objections to gratuity system, ... 187
Difficulties in the way of *pensions*. *Manager's* arbitrary power, ... 188
TEACHER'S RESIDENCES, ... 189
Small number of *free residences*, ... 190
Disadvantages, ... 190
a. Farmers, ... 190
b. Females, ... 191–2
c. Young *probationers*, ... 193
That want of *residences* limits *selection* of teachers, 194–5
That it prevents *study*, ... 196
That it keeps *teachers unsettled*, ... 197
That the *remedy* would cost little, and would open the market to female labour, ... 198–9
PENAL ACTION OF BOARD, ... 200
a. Westport district, ... 201
Probationer system, ... 202–4
b. Ballina district, ... 205
General *low position* of *teachers*, . . . 206
c. Swineford district, ... 207
Effect of *penal action*, ... 208
Complaints against former *Inspectors*, . . . 209
MODE OF INSPECTION, ... 210
a. Regular visits, ... 210
b. Incidental visits, ... 210–11
Possible modifications of system, ... 211
Effects of *incidental visits*, ... 212
General opinion on the subject, ... 213
FREQUENCY OF EXAMINATIONS, ... 214–16
Small *results* obtained, ... 217
COMPLAINTS AGAINST BOARD, ... 218
a. Official delays, ... 218–19
b. Changes made by Board, ... 220
c. Rules which have become *obsolete*, . . 221
TENURE OF OFFICE, ... 222
Power of *managers*, ... 222
Clerical and *lay patrons*, ... 223
Who are *patrons?* 224
How system has worked, ... 225
Cases A and B—a lay patron dismisses two teachers, 226–9
Character of teachers, ... 230–1
Powerlessness of *State*, ... 231
Previous action in same group of schools, . . 232–3
Cases C and D—same group of schools, . . 234–40
Case E—*clerical patrons* dismiss three teachers, . 241–9
Effect of these proceedings, ... 250
Position of the *patrons* and *teachers*, . . . 251–2
Conclusions as to *arbitrary powers*, ... 253–4
Disputable cases, ... 255
General working of system, ... 256
Effects of absolute power not exercised, . . . 257
GRATUITOUS EDUCATION, ... 258
Small amount of *fees*, ... 259
Irregular attendance, ... 260
Connexion of these two facts, ... 261

Paragraph

Feeling of people as to fees in *State schools*, . . 261
Fees cannot be increased, ... 262
Experience of one teacher, ... 263
Teachers' views as to *free schools*, ... 264
a. What is got for nothing is worth nothing, . 264
b. No advantage or disadvantage from *free system*, 265
c. Great advantage, ... 266
Free system exists for two-thirds of scholars now, 267–8
Amount raised by *fees*, ... 269
Objection, ... 270
How it might be *raised* otherwise, ... 271–2
Amount by which it appears necessary to *supplement payments*, ... 273–4
How it might perhaps be *raised*, ... 275
GENERAL RESULT OF SUGGESTIONS, ... 276–8
ALTERATION IN MANAGEMENT, ... 279
System of a *local authority* contributing to schools, . 280
System of no local authority, *State alone* contributing, 281
System of local authority created by central, contributing, State, ... 282
Difficult except under *denominational* system, . . 282
Unwillingness of *clerical patrons* to resign part of their power, ... 283–4
Local Committee of three members, or of two, . 285–6
Objects to be attained, ... 287
Evening schools discouraged by rule of Board, . . 288
By examinations to which teachers are subject, . 288
LAND QUESTION AND SCHOOL ATTENDANCE, . 289–90
COMPULSORY SCHOOL ATTENDANCE, ... 291
FEELINGS OF DISCONTENT ALLEGED TO PREVAIL, . 292
Statement by a teacher, ... 292
How far reliable. 293
Chief causes of feeling, ... 293–4
Number of teachers arrested on suspicion of *Fenianism*, 295
Letter from Rev. *M. Finn*, P.P., ... 296–9
Opinions of *magistrates*, ... 300
The teachers concerned. First, second, and third, 301–6
General conclusions, ... 307

CHAPTER IV.—STATE OF FEELING ON THE RELIGIOUS QUESTION.

Extent to which *mixed education* prevails, . . 308
1. In *mission* schools, ... 309
2. *Presbyterian*, ... 309
3. In *Church Education* schools, . . . 310
4. In *hedge* schools, ... 311
5. In *convent* and *monastrey* schools, . . . 312
6. In *National* schools, ... 313
Statistics showing extent of mixed education in National schools, ... 314
Statistics reduced by setting aside the more striking examples, ... 314
One-third of the localities visited show *average minority* of four *Protestants* each, ... 314
National schools where there is *no mixture* of religions two-thirds of whole, ... 315
Of every eight, three in National schools, five in Protestant schools, ... 315
Statement of question, ... 316
Seven-eights of the payments made by *State;* one-sixteenth by *landlords;* one-sixteenth by *fees*, 317
A *secular system*, ... 318
Objection in *popular feeling*, ... 318
That on the present system the *State is not responsible* for *religious teaching*, ... 319
But that she is responsible for the exclusion of "*emblem*" teaching from Roman Catholic localities, ... 320
Archbishop's opposition to *mixed system*—1860, 1861, and 1862, ... 321–4
Endorsed by *hierarchy*. Schools opposed, . . 325
1. Schools *vested in Commissioners*, . . . 325
2. Schools *vested* in unsuitable *trustees*, . . 326
3. Schools under teachers *trained* since inhibition, 327
Grounds of *objection* to common schools not any active *persecution* of Roman Catholic religion, . 328
Securities against this, ... 328
Grounds of objection stated, ... 329–33
Objection to *training* schools, ... 334
"Minor Model" and central, ... 334
Not neglect of *religious duties* but *spirit* of the place, 335
Feeling due to saying attributed to *Archbishop Whately*, ... 336–7
What the *Archbishop* may have meant, . . . 338
What the *Government* must have meant, . . . 339
Differences between *denominational* and *mixed* system, 340
Possible results of establishment of former in *separation* of classes in Ireland, ... 340
In *separation* of Ireland and England, . . . 341

Replies from *Patrons* and *Managers*, . . . 413–20

Appendix D.

Statements received from *Inspectors* of National schools, ... 420–1

Report of William Jack, Esq., Assistant-Commissioner.

January 6th, 1869.

1. My Lords and Gentlemen,—Shortly after you did me the honour to request me to act as one of the Assistant-Commissioners in conducting an inquiry into the state of primary education in Ireland, and the circumstances which help or hinder its progress, your Secretaries indicated to me the seven constabulary districts of Castlebar, Ballina, Belmullet, Newport, Westport, Clifden, and Tuam, as likely to occupy me sufficiently during the term assigned to my inquiry, and as containing schools of all the various types found in West Connaught. All the primary schools in these districts—246 in number, after making certain necessary corrections—appeared on lists handed to me, furnished by the constabulary; and I was directed to endeavour to ascertain by suitable examination or otherwise, their real educational condition, and whether these schools adequately supplied the wants of the country, and to report any result which appeared to me to throw light on the questions submitted to the Royal Commission. As no other Assistant-Commissioner visited West Connaught, I did not consider myself precluded from any inquiry there, which presented itself naturally in the course of my work, merely because it might take me into contiguous constabulary districts. In fact, however, I transgressed the limits indicated to me only in a very few instances, and the results which I shall report, may be considered to be gathered from that part of the country.

Chapter I.—Statistical Results of Inquiry.

2. Of the constabulary districts which were referred to me, five, including nearly half of that county, are in Mayo, and two in Galway. The Tuam district is not coterminous with any of the other six, which form together a long triangle, bounded on the north by thirty miles of coast, stretching from Killala Bay to Erris Head, and facing the Atlantic, for nearly sixty miles, from Erris Head to Slyne Head. The third side of the triangle is drawn inland from Ballina, at the head of Killala Bay, through Castlebar, to Westport, and southward through the wildest of the South Mayo and Connemara mountains, beyond Clifden. Along this line the three most important towns in Mayo arrange themselves, and the population is probably more concentrated than anywhere else in the county. What remained of my district, included only the smaller towns, Belmullet, Newport, Louisburgh, and Clifden, each with about 1,000 inhabitants, but each serving as the local centre of a scattered rural population. District. *a.* Geography.

3. There appeared to be no manufactures, and the people depended almost entirely on the produce of the earth. The fisheries are of limited extent, and do not occupy or provide for a numerous population. *b.* Occupations.

4. The county of Mayo supports one person for every five and a quarter acres, which is very much the same proportion as in Wales, when the mining county of Glamorgan is left out, or as in the counties of Aberdeen, or East Lothian. Considering that Mayo includes a wide tract of mountainous country, the cultivated part of it may be reckoned fairly, but not extravagantly populous. Education encounters no such difficulties from that cause, as it must face in the counties of Argyll, Inverness, or Perth. *c.* Density of population.

5. Within this district principally, I find that I have examined and reported on 200 schools. Of these 115 were National schools; 28 of the Irish Church Mission (besides 2 orphanages); 22 more, Church and Wesleyan schools (including 8 supported by the Achill Mission, and 2 by the Wesleyan Methodists); 25 "private" schools, including under that name one or two middle class adventure schools, 4 maintained by private benevolence, and the "hedge" schools or "pay" schools, which number about 20; 7 Presbyterian Mission non-National schools; and finally 3 convent or monastery non-National schools. I obtained valuable additional information from the teachers of 35 other schools, which I either visited briefly, or found in vacation, or was unable to overtake. Schools visited.

6. I found present— Classification of schools, and number of scholars present.

	Children above 6.	Infants under 6.		Children above 6.	Infants under 6.
In the 115 National schools, . .	4,089	692	In the 7 Presbyterian, . . .	87	28
,, 28 Irish Church Mission, .	589	219	,, 3 Convent and Monastery, .	146	55
,, 22 Church and Wesleyan, .	278	99			
,, 25 Private, ...	514	135	200	5,703	1,228

7. These figures, however, scarcely give an accurate idea of the numbers of children who attend the different classes of schools. I examined 85 non-National schools, of which there were 104 on my lists, and 115 National schools, of which there were 142. Of the 19 non-National omitted, 10 were convent and monastery schools, and from the numbers present on the day when the constabulary visited them (§ 162), I should think it fair to estimate 1,188 children as the number which I might have found actually present. The remaining non-National schools were almost all visited (82 out of 91), while of the National schools about every fifth one, (31 out of 142), was omitted. Altering the figures then, according to the per-centages of omitted schools, and supposing them to have contained the same average number of children as those visited—I should have found, had I examined the entire 246 schools of the district— Estimated distribution of scholars in different classes of schools.

	Children above 6.	Infants under 6.		Children above 6.	Infants under 6.
In the National schools, . .	5,059	855	In the Presbyterian, . . .	96	31
,, Irish Church Mission, .	653	243	,, Convent and monastery, .	868	320
,, Church and Wesleyan, .	308	110			
,, Private, ...	571	149		7,555	1,708

8. These new figures may be considered to give a fair idea of the extent to which the different types of schools supply the wants of the population. It is probable, however, that the per-centage for the schools of the Irish Church Mission is higher than it would be over the whole range of the two counties, as I visited Clifden, the centre of its activity in Connemara. A similar remark no doubt applies to the convent and monastery schools.

9. I re-arrange these figures as per-centages— Per-centages of distribution.

In the National schools, . .	67	per cent. of children above 6.	50	per cent. of children under 6.
,, Irish Church Mission, . .	8½	,,	14	,,
,, Church and Wesleyan, .	4	,,	6¼	,,

	100		100	

* The per-centage of infants here given is calculated on the basis of the very few of these schools which I visited personally. The constabulary do not appear to have acted on any uniform definition of "infants."

SCHOOLS TESTED BY INDIVIDUAL EXAMINATION.

10. To these schools, the general tenor of my instructions, the importance of the question whether the English Revised Code was suited to the circumstances of Ireland, and a desire to have something a little more definite than my own hastily formed impressions, as a help to my judgment of the educational character of the Irish schools in general, and of their different classes, induced me regularly to apply the test of individual examination. I made no attempt to decide how far the infants were "suitably instructed," as they are not examined individually according to the code. It would have been useless and mischievous to have insisted on testing schools, in the course of my rapid visit, by a pedantic application either of its standards, or of any tests for which they had not been in some measure prepared beforehand.

Nature of test applied.

11. I attempted to discover something as nearly as possible identical with these standards, and at the same time corresponding fairly to the actual classification of the schools examined. The children above infancy in most of them, fell naturally into *three* classes—those reading the Third Book of Lessons, and those *above* and *below* it. If the children in the last class left school to-morrow, they could scarcely be expected to retain much of their education in later life. Not a few are certain to leave soon—the remainder are in the way of getting an education likely to be of permanent use to them. Those above the Third Book are generally the elder, the better taught, and the more regular scholars. The Third Book class itself corresponds fairly to the fourth standard of the English code, and I expected children in it to go as far as, say, compound multiplication, and to write and spell a fair passage of four or five lines with perhaps not more than three mistakes. Those above it corresponded to the fifth and sixth standards. Below the Third Book, there were Second and First Book children. I expected those in the Second Book to do simple multiplication, and to copy a line of print; and those in the First Book to write some monosyllable, and to add a little. These requirements correspond tolerably with the National school "programme of minimum proficiency," and as I afterwards found, with that of the Irish Church Mission. The others had naturally set before themselves something of the standard of attainment commonly accepted in these, which form the majority of the popular schools, and I applied to them the same tests substantially, although I was perhaps more disposed to make every allowance in their favour which appeared consistent with the ultimate comparison I wished to institute. Wherever the number of schools tested was large enough to make it safe to disregard the innumerable individual circumstances which affect the result of a rapid visit, by a new examiner, armed with an unfamiliar testing apparatus, I think my figures may be taken to give a fair approximation to the truth. But they could scarcely be relied on for more than to point out generally what were good, what were bad, and what were average schools. The sources of uncertainty, inevitable in the application of my test, made it useless as a means of discriminating and arranging the schools according to their individual merits. but it sufficiently separated them into these three classes.

Classification of schools according to "Results" alone.

12. I took a school to be below the average, which obtained only 40 per cent. of possible passes, in an examination of this kind, held according to its own classification of the children. Another which obtained 80 per cent. or more I considered to be good. In this way I found 25 bad, and 10 good, out of the 115 National schools. Among the 28 Irish Church Mission schools 4 were bad, and 1 good. Of the 22 Church and Wesleyan schools 3 belonging to the General Irish Reformation Society, and 5 of the Achill schools were bad, and 3 of the type of the Parochial schools, were good. Of the private schools all the hedge schools but 1, and 2 of the 4 schools maintained by private subscription were bad—1 of the private adventure middle class schools was good. Six of the 7 Presbyterian schools, and 2 of the 3 convent and monastery schools were below the average.

Gross results.

13. I add the total per-centage of "actual" to "possible" passes obtained by each—

National,	51 per cent.	Convent and Monastery,	40 per cent.
Irish Church Mission,	57 ,,	Presbyterian,	36 ,,
Church, Wesleyan, Achill Mission,	55 ,,	Hedge,	22 ,,
Private adventure (middle class),	66 ,,		

14. These figures give the few private adventure middle class schools an advantage, but their number is so small, that the fact can scarcely be looked on as important. The same thing may be said with respect to the Presbyterian and Convent and Monastery schools. In the comparison between the National schools on the one hand, and the Church and Mission schools on the other, it is to be noted that the total number of children subject to the examination test, is—

Numbers of children taught in each kind of school.

In the National schools, ... 36 per school.
In the Irish Church Mission (deducting two orphanages), . . 19 ,,
In the Church and Wesleyan, ... 13 ,,

and the school staff in the former consists of 115 principal teachers, 25 assistants, and 21 monitors, for 115 schools, while in the Irish Church Mission schools there are 28 principal, and 10 adult assistant teachers, with 2 paid monitors, for 28 schools; a larger staff for just over *half* as many children. The Church and Wesleyan schools, have scarcely ever more than a single teacher to each, but he has only *two* scholars to teach for every *five* under the National master.

ULTIMATE CLASSIFICATION OF SCHOOLS.

15. I went over the same list again carefully, taking the figures of results only as an aid to my judgment of the school in the whole circumstances, as they were explained to me at the time. I find that I may classify the schools visited as follows :—

Number of Schools examined	Class of School.	I.		II.		III.		Data insufficient for estimate.	Per-centage of Class.
		Distinctly above average.	Per-centage of Class.	Average.	Per-centage of Class.	Distinctly below average.	Per-centage of Class.		
115	National, ...	23	20	58	50	27	23	7	6
28	Irish Church Mission, .	2	7	14	50	7	25	5	18
22	Church and Wesleyan, .	0	0	14	64	8	36		
25	Private (including 18 hedge schools), ...	1	4	4	16	20	80		
7	Presbyterian, . . .		0	2	28	5	71		
3	Convent and Monastery, .		0	1	33	2	67		

16. The per-centage of schools distinctly below the average is less in the National schools than anywhere else, and the Irish Church Mission schools come next in order; but, in addition to their 25 per cent. of bad schools, there are 18 per cent. where the number of children examined is so small as to make it impossible to form any estimate of their intrinsic character. It cannot but be regarded as serious if so many of even the National schools should deserve to be thus classified, and the system might fairly be reproached with this result, were not the circumstances of the teachers (chap. III.) such as to make it difficult for Inspectors to insist more strictly on creditable work. The fact that they have 20 per cent. of really good schools to boast of, is more, I think, to their credit, than the fact that they show 23 per cent. which are inferior, is to their disadvantage.

17. I attempted to discover how the schools were accomplishing the educational work necessary to the well-being of children growing up in them, according to their own classifications. The three following tables include the classes where such an inquiry was practicable or worth making:— What the schools profess to teach.

In the National Schools.

Infants.	Under 3rd Book.	In 3rd Book.	Above 3rd Book.		
692	2,921	326	37	=	3,284 children between 6 and 12 years of age.
	277	316	148	=	741 children over 12 years of age.
	3,198	642	185	=	4,025 Total over 6.

18. On arranging these as per-centages, I find that 15 per cent. are infants, and that of the remaining children 79 per cent., or 4 *out of* 5, being under the Third Book, will retain very little if they leave school, as a large number of them certainly will, without having advanced into it. The number of those in or above it is, in fact, very nearly the same as that of those above 12 years of age.

In the Irish Church Mission Schools.

Infants.	Under 3rd Book.	In 3rd Book.	Above 3rd Book.		
219	311	59	18	=	388 children between 6 and 12 years of age.
	80	67	48	=	195 children over 12 years of age.
	391	126	66	=	583 children over 6.

19. Accordingly 38 per cent. are infants, and 24 per cent. children over 12, leaving 38 per cent. between 6 and 12. In the National schools, on the other hand, there are 15 per cent. infants, and 16 per cent. over 12; so that there are 69 per cent. between the two ages specified. It would obviously be absurd to institute any comparison between the two types of schools without weighing so striking a difference. Difference of the two classes of schools as to age of scholars.

In the Church and Wesleyan Schools.

Infants.	Under 3rd Book.	In 3rd Book.	Above 3rd Book.		
99	169	33	6	=	208 children between 6 and 12 years of age.
	22	17	32	=	71 children above 12.
	191	50	38	=	279 Total above 6.

The infants number 28 per cent., and the children above 12, 19 per cent., so that there are 53 per cent. remaining between the standard school ages. In respect of the age of their pupils, these schools occupy a middle position, therefore, between those of the National Board and the Irish Church Missions. Of the remainder, the most numerous class, the Hedge schools, defy classification of any kind. There are too few of each of the other types to make it worth while to attempt it.

20. Everyone practically familiar with education has been led earlier or later, in estimating the effective merit of any class of schools, to discard any very strict standard of what ought to be, and to content himself for most purposes with comparing what is actually done with what is done elsewhere under similar circumstances. There needs no demonstration to show that the facts stated above are in themselves unsatisfactory. The Third Book ought to be reached by a child, regular in its attendance, by 9 years of age; there remain on the average three years of school-life. The number of children in or above the Third Book ought, accordingly, to be nearly as large as that of those below it; instead of being only 21 per cent. of the whole school, it ought to be 50 per cent. But it is difficult to make fair allowance for the influences which hinder education, and which, although they may be successfully combatted in this school or that, never fail to impress themselves on the general mass. I have accordingly, so far as the published figures permit me, compared these Irish National school results with those exhibited in the British schools actually inspected for Government. What might have been expected.

21. The last Report of the Committee of Council on Education shows that 690,000 children were presented for examination out of an average attendance of 1,081,000, and that 1,758,000 passes were obtained. I found the *actual* attendance in the Irish National schools to be very much the *average* attendance for the year, and I shall assume it to be so for the purposes of this comparison. An average attendance then of 4,717 children (under and over 6 years of age) in the National schools gave 6,253 passes. The per-centage of passes in elementary subjects, to average attendance, was thus 1·63 in Great Britain, against 1·32 in West Connaught. The general indications of the position which West Connaught holds among the schools of Ireland, which I gather from the last Report of the National Commissioners, lead me to expect that the other Irish schools would not at present show results quite equal to those obtained in Great Britain. In West Connaught the results are distinctly inferior. What is done in Government schools in Great Britain.

a. Total passes.

22. Again, I find that of the entire 690,000 children presented, 174,000 are in standard IV., or above it. The proportion in Great Britain of those above 6, who would be classified as in or above the Third Book may therefore be said to be a little over 25 per cent. In West Connaught it is 21 per cent., so that the Irish schools, estimated according to their own classification of their scholars, show a distinct, though not excessive, inferiority to the British—an inferiority still more marked, if they are estimated according to the results of examination. The better schools of the Board show clearly how much improvement might be got out of the Irish scholar and teacher. *b.* Per-centage of passes in higher standards.

23. It would serve no useful purpose to follow such a comparison farther. It will suffice to show that the effects we might expect to find wrought by the numerous discouragements of the Irish teacher's life (chap. III., *infra*) are actually produced. The British standard is by no means a Utopian one, and I think it ought not to be difficult, considering the extreme quickness of the Irish people, to make their schools exhibit a marked superiority in elementary work, instead of a distinct inferiority.

24. I issued a circular to the teachers of schools I had visited, and of some others which I had not been able to overtake, inquiring— Statistical inquiry as to attendance.

I. How many children (boys and girls separately) were *on the rolls* of the schools, for *each quarter* of the year, distinguishing them as (1) infants under 6 years of age; (2) children between 6 and 12; (3) children over 12?

II. How many children, discriminated in the same way, were in *average attendance* for the same quarters?

III. How many children had attended school during the year—(1) less than 50 days; (2) between 50 and 100 days; (3) between 100 and 150 days; (4) between 150 and 200 days; (5) over 200 days?

25. I obtained returns from 145 schools, 5 of which did not reach me in time for tabulation. The answers obtained to questions II. and III. controlled each other, so far as to enable me to detect any decided and irreconcilable discrepancy, and I regret to say that I found myself compelled in consequence to reject altogether 41 of the returns sent me. I had no reason to doubt the *bona fides* of the teachers, in any case; but it was impossible to make use of the figures where they appeared to me to confute each other. I asked Rejected returns.

nothing from the masters of the private schools, and the amount of incorrect information I received, mainly from schools which keep regular records, surprised me greatly. There is no *prima facie* reason to be doubtful of the general accuracy of those which I give from the remaining 99 schools.

Roll compared with average. *a.* National Schools.

26. In the National schools, the practice is to strike off from the roll all who have been absent consecutively for a quarter of a year, so that the number left includes the whole of those who have been in the school for any time within that period.

27. I found the numbers in 64 National schools for the four quarters ending June 30th, 1868 :—

	1st July, 1867— 30th Sept.	1st Oct.— 31st Dec., 1867.	1st Jan., 1868— 31st March.	1st April— 30th June, 1868.
On Roll, . . .	5,378	5,517	6,016	6,062
Average attendance, .	2,474	2,280	3,077	2,130

28. Even the excessive difference between the number on the roll and the number in average attendance (the proportion being about 2 to 5) is not so striking, as the way in which the average attendance fluctuates while the roll steadily goes up, through the year. It mounts from 100 in the last quarter of winter to 135 in the first quarter of the year, and falls from 135 to 93 in the next. In fact a great mass of the children, who never appear there at any other season, flock into school from January to April. A glance at the table below, which shows the details out of which these figures are made up, and arranges them into per-centages, will tell us who these children are.

Fluctuations in average, shown according to ages.

29. I have taken the last quarter of the year as the unit of comparison.

Per-centage of average attendance.	1st July, 1867— 30th Sept.		1st Oct.— 31st Dec.		1st Jan., 1868— 31st March.		1st April— 30th June, 1868.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Under 6,	105	114	100	100	98	95	93	93
6 — 12,	112	109	100	100	137	134	95	96
Over 12,	106	95	100	100	161	145	84	82

30. These per-centages show that the attendance of the girls is irregular in the same quarters, and very much to the same extent as for the boys. The infants appear to be scarcely at all variable, being only a little less numerous in the cold spring months, a little more numerous in the warm days of summer and autumn. The children over twelve, on the other hand, increased from the last quarter of the one year to the first of the next, from 100 to 161 boys, and from 100 to 145 girls. Next quarter, when "spring work" called them away, the number fell to 84 boys and 82 girls. In fact, nearly half of the actual average attendance above these ages appears in school only for the winter quarter, and, of course, not necessarily for the whole of that. Among the children between six and twelve, who form the main body of the school, are a number of younger ones, who may be supposed to fall off like the infants, and a number of elder ones, who increase like those above twelve; the general result giving a rise to 137 boys and 134 girls, followed by a fall in the "spring-work" quarter to 95 and 96. It is frequently said (and these figures show it to be true), that the school of the first quarter of the year is so different from that of the other three that they could scarcely be recognised as the same. The entire number of grown scholars is nearly doubled, and some of the smaller children appear to be turned out to make room for them. My detailed reports will show that the accommodation actually given in the schools is frequently no more than sufficient for the ordinary average of the other quarters, and some schoolrooms must be so crowded in winter as very seriously to interfere with the possibility of doing proper and satisfactory work in them. It is the same with the school staff, which is called on suddenly to supply the needs of this mass of half-grown ignorance.

b. Non-National Schools.

31. The Non-national schools, which for this purpose I classify together (leaving out all except the Church, the Irish Church Mission, and the Presbyterian schools, as too few in number to be worth tabulating), exhibit less unsatisfactory results.

	1st July, 1867— 30th Sept.	1st Oct.— 31st Dec.	1st Jan., 1868— 31st March.	1st April— 30th June, 1868.
On Roll, . . .	668	674	740	729
Average attendance,	400	415	478	454

32. The rise from the last quarter of the old to the first of the new year is only from 100 to 115, and the fall in the spring and early summer is to 109. Every 2 children in average attendance in the school correspond to 1, instead of (as in the National schools) to 3, who are loitering outside. These results are obtained from 22 schools, of which 15 belong to the Achill Mission and Irish Church Mission, where regular attendance is encouraged by special payment. The 4 Church Education schools included, are, however, quite as regular. The 3 remaining seem to be as irregular as the National schools.

Whether the Revised Code be applicable to Ireland.

33. My statistics enabled me farther to answer a question to my own satisfaction, to which I had addressed myself at first with some interest, viz.: how far the principle of the English revised code—according to which the main part of the State grant (about 6*s.* out of 10*s.* per child in average attendance), is made to depend on the number of passes obtained in the three elementary subjects—might be applied advantageously to Ireland.

Difficulties.

One of the greatest difficulties in its way was foreseen and encountered in the feeling certain to grow up among teachers, that under it, they would receive nothing for a considerable portion of their work and that not the least laborious, that, namely, which they spent on dull children, and on others who had attended for less than 100 days. It has not been found easy even in England to silence their complaints by the obvious and reasonable answers which may be offered them. It would be far more difficult in Ireland. In Great Britain the percentage of those presentable for examination by age and attendance was 77·7of the average attendance of the schools. In Ireland (65 National schools, excluding those attached to workhouses) the average attendance was 2,473, and of these 2,040 (82 per cent) were presentable by age and attendance. The Irish per-centage,—fractionally reduced on a full comparison for those who in Great Britain have already appeared once in the sixth standard, —would therefore be very much the same as the British. But there is nothing on the one side of the channel to correspond to the fact, that while 2,040 is the average attendance of the children over six, 6,579 separate children have passed through the schools and appeared on the school rolls during the year, so that for every single scholar thus qualified, there would be two disqualified, for teaching whom the Irish master, whe gets next to nothing from any source independent of the State, would be paid *nothing at all.* No calculation showing that the system would work well as a whole would readily reconcile teachers to payments made on a basis so unsatisfactory in relation to details. It is certain, besides, that this difference between the roll and the average, extravagant as it is, is even more absurdly exaggerated in special cases. In six schools, for instance which I happened to have grouped together for local reasons, in the district of Ballycroy near Newport, I found that only 100 children over six were presentable on account of age and attendance, out of 604 such children in attendance during the year—that is one in *six* scholars for these schools, against one in *three* as the average of the district.

1. Irregular attendance.

34. There is another point to which it is necessary to advert. The list of punishments for one school district

published in the Appendix, will show how numerous are the charges of "falsification of school accounts" and "neglect of practical rules" mainly devised to render such falsification difficult, which are brought and which are held to be proved against some of the Irish teachers (*infra*, § 204 and 205, and Appendix A). Almost all these falsifications are made under the temptation of a money gain, to which no one is more accessible than a man steeped to the lips in poverty, as are many of the Irish teachers. The last report of the Committee of Council on Education, page xcix., shows that "the practice of making false entries in the register" of the number of attendances has appeared in Great Britain. It is the easiest form of deception, it is one for which a teacher with little conscience, and a keen sense of his own interest, can make the most plausible excuses to himself; and falsification has been held to be proved in a great number of cases, even under the present system, which presents greater difficulties and fewer temptations than one resting mainly on a capitation grant. 2. Alleged danger of inaccurate returns.

35. The question next arises whether the scale of Government aid on the principle of results adopted in England, would meet the wants of the Irish schools? I was able to calculate this in three ways, and I was surprised to find that, however I looked at it, it would lower the present incomes, many of which will certainly bear no nearer approach to starvation. 3. Amount available under the code.

36. The English code is calculated to charge the State with about 10*s.* per head on the average attendance. The sixty-five schools would thus divide among them £1,236 10*s.*, or £19 0*s.* 6*d.* per school, a sum considerably less than that (£27 per school, *infra.* p. 122) which they now derive from the State. The result for the whole of Ireland would be £158,112 10*s.* 0*d.*, which, divided among 6,372 schools, gives £24 17*s.* This is, as nearly as possible, the sum (£152,488 15*s.* 6*d.*) now paid to principal teachers in ordinary National schools. Instead of the farther sum of £72,700, now paid to assistants, workmistresses, and monitors, for teaching monitors, in good service salaries, in premiums for order and neatness, &c., there would but be £5,500 left for all these purposes. *a.* Calculated on average.

37. In the 115 Irish National schools which I saw, there were present 692 infants, and 4,089 children above that age. Making no deduction whatever, and assuming that every child obtained three passes, we should bring up the payments to the *maximum*. The amount that *might* thus have been obtained is— *b.* On Maximum possible.

	£	*s.*	*d.*
692 infants at 6*s.* 6*d.* + 4*s.*	363	6	0
12,267 passes at 2*s.* 8*d.*	1,625	12	0
4,089 average at 4*s.*	817	16	0
	£2,816	14	0

38. The maximum amount which could have been derived from the State under the system of the Revised Code would therefore have been £24 10*s.* per school, which is about £2 10*s.* less than is now paid by the Board.

39. The actual passes obtained were 6,253 instead of 12,267, and the sum total of the State aid according to my examinations—making no farther deductions—would have been £2,015, and would only have given £17 10*s.* *per school* instead of the £27 actually paid. It is, I think, sufficiently obvious that this sum of £17 10*s.* added to an average payment of £4 from school fees and local subscriptions together (*infra.* § 178) would be totally insufficient to keep any kind of system afloat. It is possible, of course, to retain the principle of payment by results, altering the scale of payments and the conditions under which they may be obtained. But no change that could be made would be likely to meet the difficulties arising from the excessive irregularity and the extraordinary difference between the number in average attendance and the number on the roll. I confess that I doubt how far any practicable modifications would surmount those which must be encountered in the application of the Revised Code to the circumstances of West Connaught. *c.* According to passes obtained.

40. These were the general Statistical deductions from my inquiry into the condition of the schools. Before I proceed to details showing the distinctive characters of the different types, I shall indicate the results of a parallel inquiry.

41. I was anxious to ascertain by personal examination, how far the education which has been given for the last thirty-five years has succeeded in producing an educated people. The statistics of the Census of 1861 on Irish Education, are an aggregate, I believe, of an immense number of opinions offered by a crowd of unknown witnesses. The questions which they answered were these—how many, distinguishing sex and age, could neither read nor write—how many could read but not write—how many could do both? It was not impossible that by a counterpoise of errors something approaching the true result might have been arrived at. If it happened, however, that these questions were asked hurriedly, and answered by the heads of families, without any attempt being made to verify them, the great bulk of the errors would probably be found to lie on one side of the truth. Whatever the value of the answers might have been at the time, at all events the statistics founded on them are now eight years old, and I resolved (so far as the limitation of my stay in Ireland permitted) to make one or two attempts to answer the same questions for myself. Adult Education. Extent to which the people past school-age are educated. Census of 1861.

42. Nothing would have been so likely to serve my purpose as an individual examination of the men of the County Militia, but that force, unfortunately, has not been called out for the last three years. I was thrown back on villages, and after consultation with a District Inspector and a Head Constable, I selected three of these as likely to give me a fair approximate idea of the actual condition of education among different parts of the population beyond the age of fifteen. Villages visited.

43. The first was within two miles of Castlebar, the county town of Mayo, and until recently the schools there were those nearest to its population. I visited ten houses out of twelve—all the adults in the two others being absent at the time—in Snugborough, and nobody refused me the information I wanted. I considered that fair writers were able to read, and I took the best information I could get about one or two men who were absent at harvest in England. There were in all 34 persons above fifteen years of age—14 males and 20 females—of whom 10 males and 10 females could read—some with great difficulty—and 8 males and 4 females could write. I obtained 10 signatures out of the 12 obtainable from these 34 persons. First village.

44. My second village was Murrisk, between Westport and Louisburgh, two considerable Mayo towns, and about six miles from either. Since 1844, a National school for boys and another for girls, have existed under the patronage of the lady to whom the village belongs, and they are superintended and encouraged by her. I should fancy the people a little better off than most of the inhabitants of small villages in Mayo, and they have enjoyed the benefits of education at least as long as the average of their neighbours. I found the schools very thinly attended (there were present twenty-six in the two—there being about sixty families in the immediate neighbourhood); and I was told that the children kept hanging about the road a great deal in summer for the chance of a sixpence for guiding strangers up Croagh Patrick or to the "stations" on the slope of the hill. The population is half fisherman, half agricultural, and most of the villagers seem to do a little in both ways. Second village.

45. I inquired into the educational condition of all the thirty-one families nearest the roadside. The sergeant of Constabulary who accompanied me states that none of these families were recent incomers. They had resided regularly there for periods varying from thirty to seventy years (the average being forty-six years). The entire number of persons above fifteen in the thirty-one families was 96, and of these 17 could read and

write, 7 could only read, and 72, or *seventy-five per cent.*, could do neither the one nor the other. Several of those who could read and write were absent in England and elsewhere, and I only obtained *seven signatures from the ninety-six persons above fifteen*—of whom probably seventy at least were present to answer for themselves. No fees were charged in the schools, and I did not learn that any opposition had been made to their progress. The people had only shown themselves extremely indifferent to education, and it was thought that the peculiar circumstances of the place might have had their influence. The result was very much below the average of the other places I visited personally, and it gave a disheartening proof, how education, organised under Government inspection and locally superintended, may fail for a quarter of a century to make a serious impression. Of course some of the persons above fifteen, now living, had reached that age when these schools were established, and were beyond their influence. But the per-centage was below what might reasonably have been expected from the constant education of even half the children of school age since that time. The present teachers receive their entire salaries from Government, except that the mistress has a room rent free. These salaries amount to £18 for the master and £16 for the mistress.

County Gaol. 46. At Castlebar I thought it possible that I might learn something of the state of popular education in the county gaol. Unfortunately for my object, I found it nearly empty. It had once had 500 within its walls. When I saw it there were only fifty-one prisoners. Ten were debtors, drawn probably from all classes of society, and five were in hospital. I examined the remaining thirty-six. There was no inmate under nineteen. The grown prisoners used to be regularly taught, but since the number has fallen so much, more of the necessary work of cleaning the gaol, &c., is required of them, and the gaol school has been closed for the last year. The Governor believed that his prisoners represented fairly the lower labouring class population, as none of them were under sentence for very long terms. I should think the estimate fair for the men, but perhaps a little hard on the women. I obtained eleven specimens of handwriting from the thirty-six. I should add that one prisoner who was there because he had signed his name a little too freely, had bound himself by a vow neither to read nor to write for a certain period, and he might probably have furnished a twelfth. The remaining twenty-four—two-thirds of the whole number—could not write at all. Of the twenty-two men, eleven could write, and one of the fourteen women made the attempt.

47. The reading was of course a little better. Of the twenty-two men, eight, and of the fourteen women, eleven could not read at all; eleven of the men and three of the women could read with effort an easy sentence from the Second Book, containing nothing beyond dissyllables; and three of the men could read well.

48. None of the women could count at all, but six of the men were able to find for me the price of seven lbs. of coffee at 1*s.* 1½*d.* per lb. Of the other sixteen a few thought they might remember how to add or subtract a little on the slate, but most could do nothing, and those that could, could not turn it to any use.

49. The great majority of both sexes (thirty out of thirty-six) belonged to the county, and one or two came from Sligo or Galway. The women, when they had anything to do, worked at agricultural labour, and some had been in service. Of the men, seventeen were of the labourer or lowest servant class; two were rovers, a gipsy and a vagabond who had been fourteen or fifteen times in gaols throughout Ireland; and three were handicraftsmen.

50. The village of thirty-four inhabitants above fifteen years of age, two miles outside the prison walls, was certainly superior to the village of thirty-six within—especially in the fact, that four of the women in Snugborough could write decently. There were fifteen readers in the gaol, and twenty in the village. Upon the whole, the men of the gaol did better than the men outside, and the women very much worse. If so slight a comparison could justify any inference, it would be that a very little knowledge is sufficient to keep women out of prison, but that it is rather more dangerous to teach a man the merest elements of learning, than to leave him totally ignorant. In fact, from what I saw, I should suppose the Governor was justified in considering his subjects, as in the matter of elementary education, only a slightly unfavourable specimen of a Mayo village.

Fourth village. 51. There was another village, Dooagh, in the Island of Achill, which is one of the most curious aggregations of miserable huts I have ever seen. Altogether, taking in a dozen houses which straggled a little towards the outskirts, there were 141 huddled close, very much as if they had been shaken out of a bag, and had lain as they fell. There was scarcely anything that could be called a street, and a stranger set down in the middle of the village would have found it difficult to get out again. The roofs rise from walls four or five feet high, built up out of a few irregular big stones, and the floor is mostly the natural soil. The people, however, are not so badly off as the miserable look of their dwellings would lead one to suppose. Most of them rent two little plots of ground, one in the immediate neighbourhood, one on the hill-side, about two miles away—the one for early and the other for late sowing—and they migrate to the latter for three or four weeks in the summer or autumn. The sea comes up to their doors, and if they had nets or organization, no doubt they could not fail to make it produce as much as the land. They form a colony, which appears almost autochthonous, the members of which find it so difficult to distinguish each other, that they are compelled to resort to patronymics, and similar makeshifts. There is John Mangan (*Strong*), and Michael Lavelle (*Hugh—i.e.*, the son of Hugh), and John Macnamara (*Tom Owen*, viz., the son of Tom the son of Owen), and so on. There has been a National school in the place since 1855, and the teacher taught a private school in the neighbourhood previously. The school made a very creditable appearance, and with the help of the master, the father of the pupil-teacher, and a youth of twenty-one, who was a pupil, I went over all the families, inquiring how many of them above fifteen could read, or write, or both. I believe that an individual examination would have given very much the result, at which, occasionally after balancing conflicting opinions as to a person's title to rank in one of the classes, I was able to arrive. In the 141 families there were 583 persons, of whom 407 were above fifteen. Of these 164 could read and write, somehow. A very few were returned who could read, but not write. Whenever, from conflicting testimony, the matter was a little doubtful, I took the more favourable answer. There are *two* in *five* then, of the population who can go as far as, say, an easy dissyllable book, or farther, and the same number who can at least write their names. The remaining *three* are probably unable to do so much. Education is gratuitous, under the rivalry of schools which pay 1*d.* a week for attendance. Accordingly, a Dooagh man appears to consider that he is rather conferring an obligation on the teacher by sending him his children to be taught, without stimulating him by the hope or prospect of reward.

Comparison of results, 1861 and 1868. 52. Dooagh is better than Murrisk, and about equal to Snugborough and Castlebar gaol, and I incline to believe that, with the two latter, it gives a fair idea of the actual state of popular education in a village in Mayo, while Murrisk shows us what is the condition of localities below the average. A number of the persons above fifteen, got, or failed to get, their education before the present system was inaugurated; but, after all allowances have been made, I think it is impossible, in the face of facts like these, to say, as is sometimes done, that, thanks to the National schools, the Irish people are now among the best educated in Europe. They are, certainly, very imperfectly educated in these specimen villages of Mayo. The result is not in itself so surprising, when we remember that *nearly half of the children above six* in the whole of the National schools which I have tabulated, have attended for *less than fifty days* in the year (*infra*, § 167, non-pauper schools).

53. The statistics of 1861, gave the following results for county Mayo :—

	Males.	Females.
Can read and write,	33 per cent.	15 per cent.
Can read only,	11 ,, ,,	11 ,, ,,
Can do neither,	56 ,, ,,	74 ,, ,,

54. The three villages—Murrisk, Snugborough, and Castlebar gaol, show the following results for 1868 :—

	Males.	Females.
Can read and write,	44 per cent.	14 per cent.
Can read only,	11 ,, ,,	18 ,, ,,
Can do neither,	45 ,, ,,	68 ,, ,,

55. In the result for Dooagh, the sexes are not separated, but so far as it goes it confirms the others. My inquiries appear to indicate that the Census figures of 1861 still fairly represent the condition of female education in Mayo, but that the education of men has considerably advanced. As they exhibit it, even that is very far indeed from being satisfactory. But the state of the women is simply deplorable—three out of every four women above fifteen years of age, being unable either to read or write, and half of those who are able to do anything, being only capable of reading an easy sentence with effort. The statistics of 1861 gave very much the same results for the whole of Connaught, and those for all Ireland were not so much better as might have been hoped. It is proper to remember, in estimating the work done by the National schools, that emigration may have removed an excessive proportion of the better educated of the labouring classes since their foundation.

Female education.

56. I turned to my statistics showing the comparative attendances of boys and girls, for some hint of the cause of the very marked inferiority in the results of female education among those who have passed 15 years of age. There were found on the rolls of eighty-seven schools 4,731 boys, and 3,634 girls, or 57 per cent. of boys against 43 per cent. of girls. There is a slight further difference in favour of the boys as regards the regularity of attendance, 71 per cent. of the girls, and only 66 per cent. of the boys, not having attended for 100 days. These figures go some way to explain the great difference existing between adult male and female education, but not all the way. They show that the parents are not so anxious that their girls should learn (believing no doubt that education is of less importance in their case, as it is not so likely to help to advance them in life), and that they take less trouble to see that they come regularly. A mixed school where sewing is not taught, and mixed schools are the common type, is always less popular with mothers. There may even be a little feeling that the mixed school is not in itself a suitable place for girls much over twelve years of age. But the true explanation must be sought in the fact that the girls leave school too soon to have formed habits of reading and writing, and that their circumstances give them far fewer opportunities of keeping them up than is the case with men. The remedy, if there is one, can be found only in the improvement of all the schools, and especially in the creation of new ones more interesting to girls, and better adapted to their special wants.

County Lunatic Asylum.

57. I made the same inquiries at the County Lunatic Asylum as at the prison. Its inmates are almost all, persons whose relatives are unable to pay anything towards their support, and they belong mainly, no doubt, to the ordinary agricultural class, which forms the staple of the population of Mayo. Infirmity of mind must have prevented some, in whom it was early developed, from acquiring the rudiments of education, while in other cases the brain may have been exceptionally active in youth. Accordingly, the figures which were given me as the result of an inquiry by the Medical Superintendent of the Asylum, throw little light on the state of popular education in the county.

Mayo County Lunatic Asylum.—Inmates at Midsummer, 1868:—

	Males.	Females.
Well educated,	6	2
Can read and write well,	11	7
Read and write indifferently,	7	3
Read only,	14	4
Can neither read nor write,	37	51
Unknown,	4	15
	79	82

58. There were probably not two inmates under 18 years of age.

59. I speak with great diffidence, but it appeared to me likely that the introduction of some system of teaching might have an important influence as a remedial agency, and that a patient sent home with additional means of healthy occupation in the acquired faculties of reading and writing, would probably be less likely to return as an inmate, as patients apparently cured often do at present.

Supply of schools.

60. The inquiry how far the educational wants of a country are supplied by actually existing schools, is a little indefinite, and I doubt whether it is possible to offer any precise answer to it, without a distinct understanding as to what is held to be sufficient. It would be easy to say where schools are needed, either on the assumption that the State was to disregard, or that it was to take account of, existing denominational agencies. The great majority of the children of Ireland of school age, no doubt appear on the rolls of the National schools, and the fact implies that they have actually attended them for at least a day or so in the year. In the main it is so in West Connaught. There are comparatively few districts quite out of reach of some National school, and those which are so, are almost always supplied by some denominational agency. In addition there are the hedge schools, worthless indeed to an extent that no one who has not seen a few of them could readily believe, but which could not be ignored in any attempt to discuss the adequacy of the present school supply. There are comparatively few districts where no school of any kind has penetrated. But such districts still exist.

Instances of inadequate supply.
1. Erris.

61. Thus there is a wide tract of wild country in the north of Erris, between the sea and the high road from Ballycastle to Belmullet, which needs three or four schools suitably placed, and which has only a single school for a considerable population. A traveller starting from Newport, Mayo, along the main road running up through Ballycroy to Bangor, crossing Carrowmore lake, and coming to the sea at the head of Greyhound Bay, coasting round for over twenty miles, landing near Ballycastle and striking southward through Crossmolina, back to Newport, would inclose a district of country containing probably 400 square miles, within which there appear to be nine National schools, and so far as I could learn, scarcely any others. It contains much wild bog and barren mountain, but there is a widely scattered population, no doubt requiring schools in many localities.

2. Tuam.

Round the episcopal city of Tuam, again, there is a wide space empty of National schools, which is only supplied by a few hedge schools of the common type.

Extra supply. Denominational and other schools.

62. In the Clifden and Achill mission districts, the missionary schools occupy a large extent of field; in the latter they are almost as numerous as those of the Board, but much less numerously attended; in the former they are twice as many, and the attendance is somewhat in the same proportion. Their school-houses are much more satisfactory erections than the average National school-rooms, and their masters are better paid. The additional Church schools, the Presbyterian schools, the Convent, Monastery, and Christian Brothers'

schools, the private Adventure schools, and, perhaps, even occasional Hedge schools, fill up in a temporary way many of the graver deficiencies in the educational supply. There are few places where there are too many, and, as in most of the rooms which I visited there was a fair number of empty seats, I doubt whether there are many localities where the *mere erection of additional buildings* would materially affect the educational position of the county. In most instances where it might do so there is a conflict between the landowner and the Roman Catholic clergyman which must be settled somehow as a preliminary measure. The nature of these quarrels I shall be able to illustrate sufficiently at a later period, but the people continue uneducated so long as they remain open. In one place I was visited by a deputation from the parents of a village, inhabited by sixty families, which was delivered over to a miserable hedge school established a month before my visit, in a cow-house which its regular occupant had left empty for her summer pastures on the hill side. They said that they would be willing to send their children anywhere, even to a Mission school, if there were one, rather than let them grow up in their present condition. Six years ago their landlord had proposed to build a school for them, but their priest, who lived fifteen miles away, would not let him (that is, he told him he would denounce it, and keep the children away from it), except on condition that he should have all the power himself. It was just a fight, in their opinion, to decide which of the two parties should have the authority over them, and between the two they had a sorry time. No one dreamt of the little community setting up any permanent school on its own account, without the consent of priest or landlord. It would not, perhaps, be very easy for it to do so; in some cases, where a site might be refused under the actual law, it would be impossible. But I have seen no country where the idea of such non-dependence seemed to be so utterly foreign to the people.

Example of causes preventing supply.

Population in 1868.

63. I tried to find out whether the population had increased or diminished perceptibly in the interval between 1861 and 1868. The result of my inquiries was unsatisfactory. On the one hand, on the authority of the Record of Births, Deaths, and Emigrations, in the county of Mayo, kept by the Registrar-General, the population is given as 257,119 in 1866, as against 254,796 in 1861 (Thom's Statistics of Ireland, p. 761). I inquired, on the other hand, of the constabulary, and found that at Castlebar they estimated that there had been a fall of 11 per cent. in the seven years—from 14,884 in 1861 to 13,241 in 1868. The Head-Constable at Ballina estimated the fall in his district at very much the same. At Clifden there was an estimated fall from 7,973 in 1861 to 7,179 in 1868. In the parish of Achill, which was returned as having 5,776 inhabitants in 1861, the population was estimated by the constable as 4,175 in 1868. These returns uniformly showed a decrease, in place of the slight increase estimated by the Registrar-General. I concluded that it was better to accept the statistics of the Census than to attempt any unreliable correction. In general, I think it is clear that in the neighbourhood of the towns of Castlebar, Clifden, Ballina, there has been a perceptible decrease. In the rural districts, except in Achill, the population must either have remained stationary or slightly increased.

Conclusion, showing school work in county Mayo in 1868.

64. In the last report of the Commissioners for National Education the average attendance in the 268 National schools in Mayo is stated as 11,417. In my district sixty-seven per cent. of the children at school above six (two-thirds), and fifty per cent. (one-half) of those under it, were in the National schools. I have explained that the Irish Church Mission, and the Convent, Monastery, and Christian Brothers' schools, are, probably, considerably more numerous there than for the parts of the counties which I did not visit, and, together, they include eighteen per cent. of the school children above six, and thirty per cent. of those under that age. I believe, therefore, that it is fair to say that throughout the county three-fourths of the average attendance is at the National schools. On this basis, we have an average attendance of 15,223 children of all ages in all the primary schools actually open, including the hedge schools. On the basis of the population of 1861, this is a *total school average attendance* of *one* in *seventeen*. As far as I could judge from what I saw, the children attending middle class schools in the county are not numerous enough to raise this beyond *one in sixteen*. That fraction probably measures the actual school-work of every kind in Mayo, and it is easy to compare it with whatever other fraction may be accepted as the standard of satisfactory performance. About a quarter of this work is done by the agencies of the denominational and hedge schools, which can scarcely be considered as in any way permanent.

65. I have referred in this calculation only to county Mayo, as I visited a much larger extent and a much less exceptional portion of it than of county Galway.

Chapter II.—Non-National and Workhouse National Schools.

66. These were the general results of my inquiry, but so stated they would probably afford a less complete representation of the actual state of education in West Connaught, than a few details illustrating the characters of the various types of school. I shall take the denominational schools first in order.

Irish Church Mission Schools.

67. The largest class of these belonged to the Irish Church Mission. With three exceptions, they were situated in Connemara. The number which I visited was twenty-eight; in addition, there were the two orphanages, conducted on the Mission principles, but supported by separate funds. Before entering the district I informed the Rev. Mr. D'Arcy, Rector of Clifden, that I was anxious to visit and examine these schools, with the consent of those who had authority over them. Mr. D'Arcy told me that everything would be freely open to me, and I have to thank him and the other clergymen concerned for acting invariably in the spirit of that promise.

68. These schools are in the strictest sense denominational. They are established and maintained for the purpose of "proselytising," a word which, I need scarcely add, I adopt merely because it is accurately descriptive. To teach secular knowledge is not their first object—it is rather to propagate what their supporters consider religious truth, and to attack prevailing religious error. Among their weapons in this warfare, these schools take, I believe, a prominent place, and it is felt and found that the better the secular knowledge given in them, the better they are attended, so that there is more of an open door for the vitally important religious truth. I do not doubt that their promoters look on the removal of ignorance of the elements of reading, writing, and counting, as in itself a valuable result. But it is merely an incidental one, and not in any sense their principal object. Of 984 children on the rolls of twenty-eight schools, 604 were children of Roman Catholic parents, 214 of converts, 118 of original Protestants, and 48 of mixed marriages. A first visit is enough to convince one of the character of the schools. The walls are generally covered with placards containing texts of Scripture. If the children sing, it is always a hymn that is offered—in one case I found that nothing secular could be supplied. The copy-book head lines are short texts. A boy who is told to write anything from memory, writes a hymn or a commandment. A visitor who is not shut off from an examination into the religious instruction, as I considered myself to be, could hardly fail to find that the children's memories are well stored with the words of the Bible.

Religion of scholars.

Limitation of inquiry to secular work.

69. I considered it to be my duty to investigate the condition of these schools simply as places of secular education, as sources of moral influence, and centres of healthy discipline. It was not to be expected, therefore, that I should arrive at the same opinion of their value as their promoters. I took no notice of an important part of their work—that which they considered to be most important—and in estimating the usefulness of a school, I paid no attention to its possible influence as an agency of conversion. I regarded it only as doing a certain

amount of the work of elementary education in the place. After these reserves, which I am bound to make, I proceed to describe what I found in the mission schools.

Packing of schools

70. I was frequently struck by the fact that the number in actual attendance was considerably above that shown by the school registers, as natural for the preceding days, weeks, or months. I do not doubt that in the majority of cases I saw most of the readily available children on the roll at the time. Thus in eleven schools, I noted the average attendance for the previous month as 280, whereas the actual attendance on the day of my visit was 426. I noted four where there was no similar discrepancy, and in the remainder, for one reason or another I did not take the trouble to compare the figures and the facts. This "packing" of the schools, as it is sometimes called, is a practice which has two sides. In the first place, it may be reasonably represented that an examiner should have opportunity to see all those who can be collected, who at the time are really under the school influence—in the second, it may be said that his idea of the character and nature of the work would be truer, if he saw the school as it would appear to an unexpected visitor on an ordinary occasion. Between these two views it was not necessary that I should select. It was necessary that I should remember that a school prepared for a visit according to the first plan, ought not be judged in the same way as if it had been prepared on the second, and it was according to the first plan that the mission schools seemed generally to present themselves.

explained.

Excessive proportion of infants and overgrown children.

71. Another point strikes a stranger at once—the large proportions of the two classes which may be looked on as the fringes of the school—the infants under six, and the children over twelve. Thus, out of 802 present in twenty-eight schools, 219 were under six, 388, being only 48 per cent. between that and twelve, and 195 over twelve. The explanation is to be found in the conditions under which these schools are generally held.

Food and clothes given.

72. They all give free education. They supply pens, copies, slate-pencils, slates, and books for nothing. In so doing they follow the example of the other denominational schools, Presbyterian or Roman Catholic, which I visited. But they go further. Everywhere, I think, except at Ballinahinch and outside Connemara, they give food during a portion of the winter, and more or less clothing. The regular arrangement is, that each child attending school receives half a pound of Indian meal per day, and each "total orphan" a pound. The same children who get food get clothing, a jacket, a petticoat, or a pair of trowsers according to their wants. The amount varies in different schools, but it appears to come to about a suit of clothes in the year. The food is distributed from, say, January to June, sometimes for a longer, occasionally for a shorter period. In a single case I found that breakfasts are supplied in addition all the year round, and this is a relic of a system which was once more common. The food and clothes are given to all the poor, to 429 out of 592 children present when I registered the facts, or to three out of four of the entire attendance. There appears to be no serious attempt to keep out children who can only walk a little, and accordingly a child of three years of age can by attending a mission school, obtain, from that time forward, three pounds of Indian meal a-week for its family, and a suit of clothes every year.

Explanations.

73. It is proper to add that the funds from which these gifts are supplied are not the general funds of the mission. I am not aware whether there is a special "food and clothes fund" common to the mission schools, but the clergymen or some local friends appear generally to contribute. The food and clothes are distributed, however, by the managers and teachers, and the people make no inquiries as to the quarter from which they come.

Popular feeling on the subject.

74. It is easy to understand under what influences this system may have grown up. In the dead of winter, and in the dreary spring, before the new potatoes blossom, starvation seems never quite out of sight of a cabin door in Connemara. When "the meal" has gone done, I am told of cases where the people are seen wandering by the shore, trying to gather a few cockles, to keep life in. On the other hand, it is not to be wondered at, that those who do not avail themselves of it should speak of it, like an old National teacher, who appeared to me as far from bigotry as most people, as "a scandalous system of purchasing the consciences of the poor." The Roman Catholic clergy talk against "souperism" with a vehemence of which there is not the least reason to doubt the sincerity, but the bitterness which their words quicken in the hearts of the people, is oftenest there already. The great bulk of the food and clothes getters are not "converts," or children of converts—they are children of Roman Catholics. They attend, not as a necessity, but naturally as part and parcel of the understanding implied in their being scholars (so it was generally put to me), the Protestant Church and Sunday school. I only remember one case, where, on inquiry, I found that they did not all go. It is felt by their neighbours, and said repeatedly by the priests, that unless the parents are themselves secret converts (and they would be thought no better of in that event) they are educating their children to what they know to be the ruin of their souls, for the sake of these paltry bribes. To believe that of a neighbour is to despise him heartily, and such a feeling expresses itself readily in open hostilities.

School staff.

Male and female teachers.

75. In these schools the teacher is often a married man, and his wife is registered as the female teacher. With fifteen or twenty children it must sometimes be hard enough for them both to find employment. The nucleus of the school, containing the best taught and most regular scholars, is often made up of the two families which are the centre of the mission settlement, those of the teacher and of the Scripture-reader. In addition, I found to my surprise when it was no longer possible for me to verify the fact in more than a single case, that a few of the elder boys are probably themselves salaried "Irish teachers." In the case I refer to—

Extra teachers.

Omey Island—I found fifty children present; of the fifty, five were, I was informed, Irish teachers, and one absentee was an Irish teacher also. I am told that these teachers are paid for "teaching Irish outside the school to persons not attending the school as well as to those that are." There are said to be six other Irish teachers connected with the same school whose ages are given me as about twenty-six, twenty-six, twenty-nine, thirty-two, thirty-six, fifty, and there are thirty of the fifty children who were present whose names lead one to suppose that they may be related to them.

Work and pay of extra teachers.

76. After I had visited their schools, I asked information with respect to these Irish teachers from the two clergymen principally connected with them, but I received no answer. I find, however, the following facts, with reference to the mission district I visited, in the official report of the Society for Irish Church Missions. In the parishes I examined there seem to be, in all, 20 schoolmasters, 16 mistresses, 87 Irish and English teachers. There are 160 of these text teachers altogether employed by the society and they receive a total of £615 2*s.* 8*d.*, so that their average income is £3 17*s.* or about 1*s.* 6*d.* a week. The work was described to me by a mission teacher who acted in this capacity for six or seven years. "They go about in the district, when and where they choose, gather together as many scholars as they can, and teach them texts and Irish language." Once a month the "reader" goes round with the teacher and sees what he has done. The pay depends partly on the number of scholars with whom the reader is satisfied, and in my informant's case it varied from 4*s.* to 8*s.* or 9*s.* a month.

Nucleus of school.

77. I do not know whether many of the eighty-seven Irish and English teachers are themselves grown up boys attending school or are relations of other pupils. If they belong to any considerable extent to either class it is obvious that in this way, and wherever the families of the reader and the teacher include a fair number of children, there is a considerable nucleus of a school, depending on direct payment or immediate official connexion. In addition there are sometimes a few "original Protestants" belonging to an agent or a shepherd.

The parents of the other scholars (429 out of 592) receive a payment for the attendance of their children which must go far to maintain the family for half the year. The children of Roman Catholics receive it as well as converts, and in either case those of the children are regularly taught the "One Hundred Texts" and the "Romish Controversy," and attend at Church and Sunday School.

Effect of system on minds of children.

78. From everything I could gather either inside or outside of the schools I cannot doubt that this system is acting precisely as it might be expected to do. The children feel that they are sought after, and take liberties. The teachers are anxious above all things to keep open the door for sound Protestant influences, and permit liberties. The parents are looked on by their neighbours as selling their children's souls for bread, and the worst feelings of sectarian bitterness and the worst manifestations of sectarian violence are common. I have heard of them mostly as proceeding from the Catholic majority; the Protestant minority, whatever it thinks, is generally thankful enough to be allowed to exist in peace and quietness. The hearty contempt which all men entertain for those who sell their faith for bread is the natural soil for every feeling of animosity and act of violence.

Schools. *a.* Orphanages.

79. The schools themselves—considered as schools—are of nearly all kinds. Two institutions called the Connemara Orphanages, the Ballyconree Boys' Orphanage and the Glenowen Girls' Orphanage, Clifden, deserve a little special notice. The orphans are brought from all parts of Ireland. At Ballyconree, the number from the county Galway, which includes Connemara, and a great deal besides, was twenty-three—the number from the rest of Ireland, thirty-five. In Glenowen, the number of Galway girls is twenty; from the rest of Ireland, twenty-seven. The orphanages began, I believe, as for the Connemara district alone, but are now open to all Ireland. They are maintained on Irish Church Mission principles, but supported by separate subscriptions. There were forty-seven girls and fifty-eight boys present, and they were classified as seventy-one children of Roman Catholic parents, eleven children of mixed marriages, and twenty-three Established Church, including converts and original Protestants in nearly equal proportions. These children are not reckoned in my former account of the numbers present at mission schools.

80. The boys' orphanage at Ballyconree was the best taught mission school I visited. Everything gave the feeling of life, healthy organization, strict supervision, careful exaction of work. I examined it in the usual way, giving only a rapid glance at its general circumstances and surroundings. The orphans were doing very much such work as I should have expected to find in a good English certificated school. They could not go very high, and failed when they tried, but they knew ordinary work and felt that they knew it.

81. The girls' orphanage I thought scarcely quite so satisfactory. It must be difficult to manage a school where the girls range from six to twenty-one. It may possibly be harder to find occupation for growing girls than for lads, but it appears to me that it would be very much for the good of those who are left, if no girl were allowed to remain after her fifteenth year. Of the forty-seven girls, eighteen are above that age; in a school which the conditions of its existence make mainly elementary, it is, I think, impossible to employ them profitably, and I doubt whether so many as are found here can be usefully occupied in extra work either for the house or for the Boys' orphanage.

82. The remaining schools are of all types. Some of them, whatever may be their value in a proselytizing sense, are utterly useless in any other. I suppress the names in this place, but all the particulars are given in the reports on individual schools, which I have forwarded to the Commission.

b. Of questionable utility.

83. At A, I found two scholars, besides the five children of the teacher, who is the wife of the Scripture-reader. The National school, vigorously taught and well attended, is within a couple of hundred yards, a very much inferior building, and receiving a very much inferior income (£15 and no residence against £36 and a residence). The National teacher who preceded the present one appears to have been converted by the mission agency, and now teaches a mission school.

84. At B, the school has been established for six months. There were seven scholars, four belonging to the Roman Catholic herd in a bedroom of whose house it was held, and to whom probably the mission pays rent. The seven are all Roman Catholics, and all get food.

85. At C, a school established seven or eight months ago, there are eight Roman Catholic children on the roll. They are the family of the farmer in whose cow-house (renovated) the school is held. Their ages range from four to twenty. I found six present. Another family had sent three other scholars, but they went home six weeks ago. The family which constitutes the school used to send their children two miles to the nearest National school. Now, the father, the master tells me, gets £4 a year as rent for a cow-house about nine feet square, and he draws food in the winter for as many of his eight children as he allows to attend.

86. The school at D has been taught for the last nine years by an old woman who is hopelessly deaf. She is just leaving.

87. At E there is a school where I found that the averages for the preceding five months had been between eleven and thirteen. Eleven of the children belonged to three families—the teacher's, a Scotch agent's, and an English farmer's. The rest seemed to come and go, and from the averages it is clear that there could seldom have been more than three or four other scholars present. I find that the average age of the children attending this school is seven years, nine of the nineteen present being under six.

88. The school at F has two teachers for an average attendance of thirteen pupils.

89. At G, on the other hand, the attendance rises to nineteen, six being the children of the two teachers.

90. At H there is a school with a curious history. It was a National school, redeemed, I was told by the late Bishop of Tuam, on the repayment of the public money invested in it, after he differed with the Board. It now belongs to the Irish Church Mission. It is in a small Roman Catholic village, with fifteen or twenty houses. The school is taught by the daughter of the gamekeeper of a neighbouring estate, and is attended solely by more or fewer of her brothers and sisters. There were two little sisters (one four and one seven years of age) present on the day of my visit, and the doors were only opened about half-past eleven. Before last winter two other pupils used to come, but a bridge was swept away, and they have not been able to attend since. Out of his private resources, the landlord maintains another small school for his tenantry, and it is rather nearer the gamekeeper's house than that taught by his daughter. The landlord's school is in no sense proselytizing, Presbyterians and Roman Catholics both availing themselves of it.

c. General.

91. Such schools are obviously set up and maintained to give the Mission principles a footing in the locality. As schools, they have little effect, and their disappearance would scarcely have any damaging result on the secular knowledge of the children. The rest are better, and do their secular work with a success which is quite comparable with what is obtained in the National schools. I have pointed out that the total number of passes is rather higher, but there are fewer schools which may be called really good.

Teachers' incomes.

92. The incomes of the teachers are very much better than those of the National schoolmasters. In twenty-seven schools there are thirty-seven teachers, whose joint salaries amount to £1,285, and almost all of them either have houses in addition, or lodgings rent free. The income, *per school*, is thus, on an average, £48, and a house in five cases out of six, against £31, and a house in one case out of six (*infra*, §§. 178, 179), under the system of the Board. In fact the mission teachers are comfortable and reasonably cared for, and they are less disposed

on their own account, to shift about from place to place. They are often, however, transferred to new stations, by the authority of the society.

II. Other Church and Wesleyan Schools. Church Education and General Irish Reformation.

93. The next group of denominational schools includes those belonging to the Church Education Society, the General Irish Reformation Society, Erasmus Smith's trust, the Wesleyans, and the Achill Mission. The schools of the Church Education Society appear generally to derive no direct benefit from its agency, beyond the training of teachers for the service, and the systematic inspection of the schools. They are maintained partly by local subscription, partly by endowments or salaries assigned for church offices, such as those of parish clerk, organist, and sexton, which are frequently attached to the office of schoolmaster. The General Irish Reformation Society often assists these local efforts. There appears to be no very direct attempt at proselytism, but the right of using and appealing to the Bible at any hour of the day is insisted on as fundamental. The schools are of very various degrees of merit.

a. Of questionable utility.

94. One of them is that at A. The master is an old man, of about sixty-three, who acts as Scripture-reader, but not regularly, though "on account of being a convert, he has as much to do about that as about his school." His school-room is a sod cabin, about nine feet square, and five feet high or so, to the slope of the roof. He and his wife live in it. It has a hole at the top which is used indifferently by the smoke and the rain, and the floor is the natural bog. There are only four small panes of glass in the one window, but there is the door to fall back on for light. The furniture of the school-room consists of a double bed, a table, a chair, two bits of forms, and a kind of settee between the fire and the table, consisting of a few sods, with a cloth spread over them. Children and poultry trot out and in, and fill the remaining space. I found seventeen of the former present, but only six could read, and two managed an easy sum in simple multiplication. They were all Roman Catholics, except two, of one of whom, a girl of about fifteen, the teacher inquired whether she was an English Protestant, a Methodist, or a Presbyterian? She told him she was the whole of them, an answer which appeared to give him great satisfaction, as he added with enthusiasm, "That's right, that's right—and you're a Scripture reader too, thank God"—adding, for my information, that he called them all so who could read the Scriptures. Within a few hundred yards of the spot there is a vested National school, with a Roman Catholic teacher, which has been subject to the relentless opposition of the Roman Catholic clergy for the last five or six years, and which had just been shut up a few days before my visit. There was nothing else in the neighbourhood, and it was into this school that their action tended to drive the children. If they learned as little Protestantism in it as they seemed to learn reading or writing, perhaps there was not much to alarm their priests, even in so terrible a consequence. Here and elsewhere they treat a thoroughly inferior "proselytizing" school with a contemptuous indifference with which they seldom favour a vested National one.

95. Another, of something of the same type is at B. The teacher and his wife live in a room off the school-room. In the school-room itself, the family (with five children) of a "caretaker," whom the clergyman took into his service a year ago, when he was out of a situation, have taken up their home. Six of the other scholars belong to the Scripture-reader, one is the teacher's child (or grandchild), and the two left belong to another "caretaker" of the clergyman. These make up the fourteen children whom the teacher reckons he has "in the gross." They are, of course, all adherents of the Established Church. The master, "the same age as Trafalgar," has been a Scripture-reader a good deal about the country, and does a little in that now, as he would not like to be idle. He takes good care that his scholars learn the Catechism, and there are testaments and one or two other reading books. There are just two slates—no maps, no blackboard; what school furniture there was looked rather out of use. The master informed me that his highest class were "youngsters in reading," and that they were now practising the first chapter of St. John's Gospel. His second class was spelling and beginning to do a little reading, "but very slyly." There were two writing copies, and another child might have had paper given him, but neither he nor his teacher had an additional pen to use with it. Three tried arithmetic, one failing in compound addition, one in simple division, one in simple addition.

96. A third was at C, and seven children, belonging to the Protestant Orphan Society, constituted the majority of the pupils. When a Protestant father dies, leaving children under twelve years of age, they are eligible as Protestant orphans, and are boarded out with as respectable poor Protestants as can be got to take charge of them for £5 a year, for food and clothing—a payment, no doubt, less than would be needed to maintain them in any poor-house in the country. Where the mother is left, the society enables her to bring up her children till they reach twelve or a little longer. It is generally anxious that they should be taught, and it locates them, if possible, near some Protestant free school. The mistress at C tells me that the General Irish Reformation Society, from which her salary is mainly derived, exists principally for the purpose of bringing Roman Catholics under the Word of God, but none of them attend at present. She has no reading books, except a basket of two dozen Bibles that was sent her some short time since. The work is of the most elementary kind.

b. General.

97. I should be doing great injustice to the Church schools if I represented these as fair specimens. Of the six others which I saw, one gave a rather advanced education to its senior scholars, for whose sake it appeared to me a little to neglect the remainder, and it had gained several competitive distinctions; two others did good work; and the whole six were quite up to an average half dozen of National schools. They do not appear to be attended by many Roman Catholic children, nor to be subject to anything like the violent hostility which the Roman Catholic clergy direct against the schools of the Irish Church Mission, the vested National schools, or those containing teachers trained in the denounced training school of the National Board.

Popular feeling with respect to these schools.

Religious persuasion of scholars.

98. Of the ten visited there were two with 9 Established Church and 36 Roman Catholic children on the roll. In eight others there were 154 Established Church, 4 Roman Catholics, and 2 Presbyterian children. It is obvious, of course, that these are congregational schools, and that it is only in the other two that anything approaching to proselytism is possible, or would be much worth trying. One of them is the school A, which I have described above. The 4 stray Roman Catholics and the 2 Presbyterians who wander into the remaining eight, are scarcely numerous enough to awaken the activity of their spiritual guardians.

Smallness of attendance.

99. The actual attendance in four of these schools was under twelve per school, and it is easy to understand how difficult it must be to maintain any kind of life or efficiency under circumstances so depressing. One or two of the best are kept up chiefly for the children of the middle classes, and two of them have the benefit of a small endowment.

Schools endowed by Erasmus Smith.

100. Among the Church schools I may reckon the two, on the foundation of Erasmus Smith, at Killala and Mullifarry, close to each other. They were the only specimens of this class in my district. They appear to belong to very different types. In the one, the charity is used as the means of giving free education; in the other, the pupils pay 5*s.* per quarter, which is a fair middle-class fee in the west. The salaries amount to £17 10*s.* in the one case, and £25 in the other, but there is a farther gratuity of £5, which comes generally, if things go right. The master has a residence, and holds his office at pleasure of the Board of Governors, to whom an Inspector of their own reports. The parish clergyman of the Established Church appears to have a kind of superintendence, but it seems not to be accompanied by much real authority. The scholars of all denominations have the same religious instruction, except that the Roman Catholics do not learn the Church

Catechism. In one of the schools the religious knowledge follows the secular teaching, according to the practice of the Board, and the Roman Catholic children are free to leave if they choose, but they have never done so in fact. There are no children admitted under six, a regulation which I would fain have seen more generally adopted in ordinary schools. The inspection takes place twice a year—once in the winter with notice, once in the summer without. In one of the schools (ten present) there were fifteen Established Church, one Roman Catholic, and three Presbyterians on the roll; in the other (seventeen present), there were eighteen Established Church, and two Roman Catholic children on roll. Both are in the immediate neighbourhood of schools almost entirely Catholic, and of others almost entirely Presbyterian, and the mixture is one indication among many, that the people do not themselves look on their children as endangered by their association with other denominations, even in schools like those of Erasmus Smith's charity, so long as they see no reason to be afraid of proselytism. They appear, like those of the Church Education Society, to be regarded as comparatively innocent in their religious tendencies. At present their endowment maintains a permanent school for the children of the Established Church, while the Presbyterians in the neighbourhood support one by themselves, and another with the assistance of the State, and the Roman Catholics derive the support of their schools wholly from the State. Without this endowment there might perhaps have been two others occupying their place, conducted on the principles of the Church Education Society and supported by subscriptions. But it is not improbable that the children of a mixed population might have been gathered together in a mixed school. Both appear to be looked upon as practically Church schools, and in one of the two the parish clerkship is given to the teacher, just as if he had been the parochial schoolmaster. The secular work shown was very much on the level of that in ordinary National schools.

Wesleyan Schools.

101. I saw two Wesleyan schools, and there was another in my district, which was in vacation at the time of my visit. Of these, only one, that at R. in county Galway, was strictly for the education of the poor. It is a small school with twenty-eight on the roll, and fourteen or fifteen in average attendance. I found eleven present. The children are all Roman Catholics, and the education is free. I was struck by the fact that the religious extracts in the National school-books (which are those in use), supply all the religious teaching given in the school, or sought by the people. The Wesleyan Mission Fund gives a salary of £30, and a house and garden to the teacher—solely towards the decent up-bringing of a small neglected Roman Catholic population, and without making the slightest attempt to proselytize. I met with no similar instance of general benevolence on the part of the denominational societies.

102. The second school was in Westport with two Established Church children, two Presbyterians, and fifteen Wesleyans on the roll. The fees were 2*s*. 6*d*. to 10*s*. a quarter, and as the fact indicates, the school was practically for the children of the middle class.

103. The third in Castlebar I did not see. Its average attendance was eleven, and the lowest fee paid, was, I understand, 5*s*. a quarter, so that it also was substantially a middle class school. I believe it was mainly attended by Wesleyan children.

Achill parish, National and non-National.

104. The last of the group of Church schools which I visited were those in the Island and parish of Achill. The name has become so famous in connexion with Irish education controversies and efforts, that, as I was able to see the whole of the schools in the parish, with a single exception in the small attached island of Inishbiggle (about eighty inhabitants) in the Sound, which was in vacation, I shall give a short account of them all. The parish is cut into two parts, Achill Island and Curraun, by a strait known as the Sound of Achill, which narrows to 100 yards,. At the inland end of the parish two seas almost meet across a ridge of ground, scarcely more than half a mile in breadth. The population of the island and the half island together is about 4,175 (reported by the constabulary), and this includes the two small islands of Inishbiggle and Achill Beg. The latter has eighty-three inhabitants, and until recently it contained a National school. But in every such remote locality, it is difficult to induce anyone to settle who has a chance of occupation on the mainland, and the £15 a year on which a probationer has to exist, is apparently insufficient to tempt anyone at present to try school keeping in that solitary spot. Excluding Inishbiggle and Achill Beg, there remain nine National, eight Achill Mission, one monastery, and one private subscription school, for 4,000 inhabitants. Only three of these are in the peninsula of Curraun—a fourth which appears to have belonged to or to have been vested in the Roman Catholic Archbishop of Tuam, at Belfarsad, was recently burned down, and the Grand Jury awarded £50 as compensation for loss occasioned by malicious damage. In the remaining nineteen schools, I found actually present, on the day of my visit—

Children present.

	Males.	Females.	Total.
In the 9 National schools, ...	204	114	318
„ 8 Mission schools, ...	97	77	174
„ 1 Monastery, ...	7	–	7
„ 1 Private subscription school, ...	2	10	12
	310	201	511

Circumstances of visit.

105. The mission schools in the north had gone into vacation a day or two before my visit, and I was indebted to the kindness of the incumbent, the Rev. Mr. Barker, and of the missionary Superintendent, the Rev. Mr. Heather, for re-assembling the children. I think that perhaps I may once or twice have seen more than the average number of pupils. In one case, through the teacher's zeal I certainly did so. On my first visit to him I found that there had been six children present (four of them his own), on the previous day, and that eight had been his average for the preceding month. On my return two days later, I was gratified by an actual attendance of eighteen. But such a result was exceptional, and the tabulated averages corresponded very fairly with the numbers found actually present.

Comparison of attendances.

106. The schools of the Mission are much less numerously attended than those of the National Board. In the district to the west of the mission colony, the two mission schools, Slievemore and Rockfield, had only 41 children present—the two National schools, Slievemore and Dooagh, having 117. All four are at present substantially denominational, there being only three Roman Catholic children in the two mission schools, and no Protestants in the two National schools. Protestant children used to attend Slievemore National, which is under lay Established Church patronage, till the others were established—one nine months previous to my visit, the other two years before.

Rewards given by Mission to scholars.

107. The Achill Mission Trustees are proprietors of the entire northern half of the island, but I did not hear it said that they employ the influence this circumstance gives them, unfairly, for the purposes of proselytism. Education is gratuitous in their schools, books and school requisites being given freely. They have introduced besides a practice of paying the children of all their tenants who attend pretty regularly, one penny per week, as a premium, and their object appears really to be attained. The average attendance of five of the mission schools varies between 95 and 108, in the four quarters of the year, while in six of the National schools it ranges between 137 and 239. The practice has, of course, made it impossible to collect fees in the other schools, and education there is free. The mission farther provides a suit of clothes per annum. It is the theory that the

ildren must attend for ten months in the year, to entitle them to this reward, but I was told in two of their hools, that all practically get it either on the ground of regularity or of poverty. The offer of these advan-ges is thought by the National schoolmasters and as far as I can judge, by the Roman Catholic population, be of the nature of a bribe, and the feelings with which it is perhaps not unnatural that some persons should gard those who have set up a mission to convert them, are probably much embittered in consequence. There ppears to be a good deal of such irritation between the two religious persuasions.

108. Looking at them as purely secular, the two best of the National are superior to the two best of the ission schools. I should consider two others of each kind "fair;" the remainder—half the schools of oth kinds in the parish—are extremely unsatisfactory, in their present condition, even for a remote and inly peopled district. General result of examination.

109. One of these five National schools has just been re-opened, after having been closed for two years. It is n exceptional case, but it may serve to illustrate what I shall have to notice again and again—the way in which ne low salaries paid to the National teachers interfere with and often prevent the reasonable possibility of neir success. The school supplies about 120 families, who have no other within reach. There are no voluntary ontributions actual or likely. The people have little money, and if they had, it is not in paying school-fees nat they would be disposed to spend it. They live in a district reached by no regular road; but there is a foot-rack for four miles along the slope of the hill, which overlooks the Sound. There is no house for the master, and robably no lodging but in some one-roomed cabin, which he must share with the family. The priest, his patron, ves ten miles off, and there is apparently no sort of society in the place which is likely to sympathise with a lad ho reads books. Nobody will come here who can get anything elsewhere to do, and a slip of a boy of eighteen sent down as probationer, at £15 a year, to open the new school. He has to print an alphabet for his scholars—e has to manufacture slates for them out of the slates of the old roof—there are just two books in his school orty-five children) and three copies. To add to his distress, a parcel containing books and school-stock—the price f which, unless he happened to be more fortunate than most teachers, he himself must have already paid—went own on its voyage to him the week before my visit. There are a good many of his pupils bigger and stronger nan the master, and he says himself that they are "very bold and cross," and that unless the priest kept them fear a little, he would have no chance whatever with them; without that he "would not take £1,000 and stay ere." The other day he gave "a little tip to a big boy" who told him that if he did it again, he would draw is slate (an adapted roofing slate) "red out of his head." It is no doubt a case of exceptional savagery ltogether, and I saw nothing so wild, and heard of nothing quite so uncomfortable, elsewhere in the west; but is just to these remoter districts that the £15 schoolmaster of the National Board finds his way. As, in two ases out of three, school-fees amount to little, and local contributions to nothing, it follows of necessity that eachers avoid places which promise them no advantage but the certainty of solitude. Given the actual social ondition, the past and the future of the education of such a wild district are alike written in the salary of en pence a day "in the gross," which is paid to the schoolmaster. Instances of difficulties in Achill. A.

110. As far as I could gather, the same story with a few variations had been repeated in the same neighbourhood, t the school which had been burnt down. The teacher, preceding the last, continued for some time as probationer, nd is said to have been at length dismissed by the Board, for failure at his examination. A young man succeeded im who seems to have had a very stormy time of it. The population are said to be as wild as their neighbours in ne locality I have just been describing, and at last the school-house was burnt down. The grand jury awarded 50 damages for malicious injury, and the burnt-out teacher was off to England two or three days before my isit, as a harvestman. The people were very "rough" and "bold" and constantly threatening to beat him, and s he gave evidence which led to the award of the grand jury, which saddles the district with the damages, I was old that they had threatened to pitch him into a lake in the neighbourhood, and he was glad enough to get lear away. In fact, a boy at £15 a year is totally unfit to hold his own in such a situation. B.

111. Of the remaining eight indifferent Mission and National schools, I consider three of each kind as spoiled y a competition which, except possibly from the religious view-point, is attended by none but evil consequences. t B., for example, there are three schools, all on the road side, within three-quarters of a mile of each other—ne mission school with an average attendance of eight, the monastery school with an actual attendance of seven, ne National female school with nineteen present. One good school, creditably managed and taught, would do etter work than the three together, if the seventy or eighty children who are, I am told, available, could e brought to attend it together. Now, the mission school tempts with its penny a week and its clothes—the nonks used to give food, but that has ceased since the potatoes became so cheap—and the National school has nly gratuitous education to offer, under a probationer mistress, younger and less experienced than either of the eachers of the other two. Causes of deficiencies. *a.* Denominational rivalry.

112. I do not know all the reasons for the failure of the two remaining, but competition is not the only, nor ndeed the principal cause. The scale of payments is insufficient to tempt any but the poorest class of National chool masters to come to Achill and settle there. They are £14, £15, £15, £16, £16, £18, £20 and a house, 27, £30—or an average payment of £19 per annum. There is not a halfpenny of local contribution, the whole f these salaries coming from the state. Three of the schools divide among them £4 8*s.* 6*d.* in fees—the rest etting nothing at all. The mission salaries are by no means extravagant, but they are very far superior to these, ne lowest being £24, the highest £40, the average £31, and five of the eight teachers having houses rent free. *b.* Low Salaries in National.

113. The two additional schools, the monastery school and the private subscription school, had too few pupils n the day of my visit to make it proper for me to express any distinct opinion on their merits.

114. It appears then that there are twenty schools for the population (including the school in Inishbiggle). et they are so distributed as to leave considerable districts almost without teaching. Thus Shraheens is one of ne largest villages in the island, and the nearest school is two miles away. Near the crown of the ridge by hich an old road crosses the southern end, is a hamlet, the children of which are not likely to find their ay to any of the existing schools. The island of Achill Beg is completely neglected. The mission efforts—do not know whether from choice or of necessity—appear to be confined to the people on the estate of the ission trustees, and denominational exertions are never likely to proceed on any principle of division of labour. *c* Defective distribution.

115. The system of payment adopted in Achill is apparently much less objected to than that in Connemara. he amount is, of course, smaller, and it does not appear that there is any excess in the attendance f infants, nor is the proportion of children over twelve at all larger than might have been anticipated. I have ointed out that, probably in consequence of these weekly payments, the attendance is really much etter in the mission schools than is usual in West Connaught. On the other hand, that in the National chools is very much worse. The fluctuations in the four quarters of the year range from 100 to 114 n the mission schools, from 100 to 145 in the average National school, from 100 to 174 in the National chools of Achill. I cannot doubt that the regularity in the paid schools, and the irregularity in ne others, are alike due, in large measure, to the system of payment. A feeling has grown up that nose which are unwilling or unable to pay for regular attendance, should not expect to get it, and the Regular attendance in Mission Schools. Irregular in National. Common cause.

Object of Mission schools.

parent, instead of looking on himself as benefited by the State support of schools, to which he contributes nothing, considers himself rather ill-used because his scruples do not permit him to accept the money and clothing which is offered to him, and which a few of his neighbours obtain.

116. The mission schools are maintained partly for aggressive and partly for conservative purposes. I saw Achill before Connemara, and the children had not been classified for me under the names with which I became afterwards familiar—"Roman Catholics," "Original Protestants," "Converts," and "Mixed Marriages." Occasionally there appeared to be some difficulty in determining the religious denomination to which a particular child belonged. As nearly as I could come to it, there were 48 children (23 per cent.) original Protestants, 123 (or 58 per cent.) children of convert parents, and 41 (or 19 per cent.) of Roman Catholics. It appears therefore that the mission schools are in the main conservative, meant to sustain rather than actively to propagate the Protestant religion. I do not think that feeling runs so high between the two parties as it does in Connemara.

Distribution of population.

117. In the southern part of the island, which does not belong to the mission trustees, I found 12 Established Church children in the private subscription school, and three others on the roll of a single National school. The population there is thus scarcely at all mixed, and there are no proselytizing schools, so that there is little room for religious bitterness. On the mission estate, and the small estate on which the monastery is built, I found 191 Roman Catholic and 5 Established Church children in the National, 7 Roman Catholic children in the monastery, and 114 Established Church, and 28 Roman Catholic children in the mission schools. In the peninsular part of the parish, the mission colony is gathered close to the rectory—the rest appears to be altogether Roman Catholic. It is only on the mission property therefore that there is much mixture of religion (119 Established Church, against 219 Roman Catholics), and the reputation which the trustees appear to have as considerate landlords seems to have rather kept down religious animosities, though it certainly has not extinguished them.

General result.

118. The general result of the educational work that has been going on in the north of the island, under the joint agency of the missions and the National schools, is not, I think, too favourably represented by my inquiries (p. 106) into the case of Dooagh, and according to them North Achill stands higher than the average of the county. South Achill and Curraun are certainly lower, so that education appears to be best in the district where the mission schools are chiefly found, although within that district itself, it is certainly not best in the mission schools.

III. Hedge-schools.

119. The next most numerous class I found to my surprise to be the "hedge" schools. They appear to have been native to the country, and are still "racy of the soil." They are set up by any one who can read and write a little, and who is near starvation enough to have no other escape from it. The teachers are responsible to no one, and are sustained rather by the common conviction of the neighbours that the "poor creatures" teaching them need charity, than by any belief that they give, or can give value for the money they are paid; certainly they are never stimulated by unreasonable demands on the part of exacting parents. The common belief is that these hedge schools have become entirely extinct in the progress of civilization. Unfortunately they are very far from extinct in West Connaught. Every schoolmaster is an absolute monarch in his school-house, and the contrast between this sense of unlimited power, and his squalid and hopeless poverty, is said frequently to make the hedge schoolmaster an extremely discontented man. The National teacher is near enough starvation; the hedge school teacher often could not exist at all without the scraps and leavings of the poor, which "God be good to them, they often send him, and never find themselves the poorer for."

a. Teachers.

b. Scholars.

120. The school work begins some time in the morning after the scholars come in, and is left off some time in the afternoon when the master is tired, but the children arrive pretty much when they choose, and go away when it suits them. They seem seldom to be organized in classes, so that a little irregularity puts nobody about, and it is no doubt extremely attractive to the parents, and to the children. Sometimes a little Irish is taught; generally the pupils learn nothing but the catechism (on which they spend pretty much the same time as is done in the National schools), and the spellings of the long words in the "Universal Spelling Book" or the "Reading made Easy." A child is promoted to "read" at about ten or eleven years of age, and as there is a very limited amount of reading lessons in his spelling-book, he soon becomes master of them. Between its covers he finds an amount and variety of information, agreeably diversified, which is surprising. The latter half of the book contains geography in 4 pages, arithmetic in 3, a chronological account of remarkable events in 3 more, The accomplished Gentleman, or Principles of Politeness and of knowing the World, by Philip Stanhope, Earl of Chesterfield. To which is added the Economy of Human Life, translated from an Indian manuscript, written by an ancient Brahmin; the whole concluding with a description by Massillon, of the character of a true Christian, and a memoir of "Kerry's pride and Ireland's glory, the far-famed and indefatigable Daniel O'Connell." Lord Chesterfield's work appears to have made a deep impression in the hedge school. The child who happens not to say, "good morning, ma'am," or "good evening, sir," as he comes in or goes home, gets cuffed for his pains. When he does, his salutation is scrupulously returned, with a "good morning, miss," or "good evening to *you*, sir," which makes him contented with himself, and with all the world. He must never begin to read, without "By your leave, sir," meant either for his teacher or his book. I doubt, indeed, whether the hedge school is necessary to teach Irish children a politeness which comes natural to them, though it is not always instinctively manifested in these forms. At all events, this, and the catechism are its main achievements. Arithmetic is very rare indeed, at least in the summer, and there is little writing, as the school is crowded, and the desks are few, or none. Usually, it is held in the teacher's one-roomed cabin, and the children assist with the hens and pigs at the cooking of their instructor's meals.

c. Subjects of instruction.

Hedge-schools clustered near Tuam.

121. These schools are especially numerous in and around Tuam. In the town itself, and within a radius of three or four miles round it, I found as many as seven, and I visited them all, as well as two more a little farther from the same centre. In Tuam, a place of just over 6,000 inhabitants, three of these private schools manage to maintain themselves, although there are two Protestant schools, two convent schools, a school taught by the Christian Brothers, and in addition, two middle-class schools. In the three private schools, I found 107 children present, all Roman Catholics. They are kept up solely by fees, and as I was informed by one of their mistresses, they are not supported by the Roman Catholic clergy, as no priest ever looks near them. In the convent and Christian Brothers' schools, a free education is, no doubt, given (438 scholars were present on June 25th), and the private schools throughout the west are as empty of Catholic emblems—except that there is usually one highly-coloured religious print hung up on the wall, if the school is the cabin of the teacher—as the National schools themselves. I recollect one only with a statuette of the Virgin. Why they should flourish in Tuam I am at a loss to imagine. The people pay voluntarily for a wretched education, if it can be called education at all, while they have gratuitous instruction offered them under the sanction of the ministers of their Church. They are not indeed directly opposing their clergy in sending their children to the private schools, but those of the convents and the Christian Brothers are known to be viewed by these authorities with much greater favour. I was unable to see the latter (§. 158), and unable in conse-

Explanations offered.

Discussed.

a. In Tuam.

quence to inquire whether anything in their arrangements helped to explain the surprising, and to my mind, unaccountable success of these private schools. Religion, I should imagine, is less frequently introduced than in those which are taught by the religious orders. Indeed as far as I could get information, though it is never excluded by express arrangement from any part of the school time, no more attention is paid to its inculcation than in the National schools themselves. There were no Protestant scholars present in any of the hedge schools I visited.

122. The six private schools which I found surrounding Tuam, find their support and the ready explanation of their existence in the absence of National schools, and in the causes of that absence. On one road out from Tuam the first National school is twelve miles from the town; on another, eight. Two hedge schools appear in these empty spaces. A third private school of a rather superior type stands opposite a deserted National school, where they had to take down their signboard some twenty years ago or more, in consequence of the Roman Catholic archbishop's opposition to the system. The dispossessed master appears never to have been classed, and is now teaching a fourth hedge school a few miles off. The National school in fact does not seem to flourish in the neighbourhood of the old episcopal city. *b.* Near Tuam.

123. Let me give one or two examples of these "private" schools. The mistress in one of them had taught for five and twenty years. As was to be expected therefore she taught "just in the old way"—her pupils came round her by "fits and starts," and for the most of them she was candid enough to say that "shouting at them was all she taught them." The rest were drilled in reading, writing, catechism, and a little calculation. Her twenty-nine scholars had eight copies among them; but there was no "calculation" of any kind. There were only four who tried to read. As for sewing, she told me she considered that they "were not fit for that improvement." What they get from her therefore is little enough. They pay her 2*d.* a week for it—which is a very high fee for Connaught. Some of them perhaps deserved her energetic denunciation of their discipline—"Ah, you ruffians, you're a disgrace to any school." Examples of various hedge-schools. *a.*

124. Take another case. The master was lame of a hand and a leg. He had just left the school in which the constabulary had returned him to me, because he was unable to keep up the £1 rent; and a farmer who had an empty cottage, a wretched place enough, a mile and a half away, gave him the use of it in return for the teaching of his two children. There were twenty-eight others present—half of them boys and half of them girls—half his old scholars and half new ones. None of them could cipher; and only one, a boy of thirteen, showed a copy, which was poor enough. The master had had ten who could write and cipher, but they were all absent at harvest work. The average age was very much that in an ordinary National school. There were few reading or spelling books; the Catechism did duty—in this instance only, as far as I saw—for everything. Of course there was no grammar or geography. Of the thirty, only eight or nine professed to read. *b.*

125. Another was about three miles away from this, and was partly supported, the master told me, by an annual subscription from His Grace the Roman Catholic Archbishop. There were twenty-three pupils. The master, a young and active-looking man, educated in St. Jarlath's, Tuam, could not be responsible for their arithmetic at present. In fact, only one boy could do a sum, and the same boy was the only one with a copy. The room was a dark, low-roofed little cabin, and there was no proper furniture. There were forms round the wall and one double desk. Two were brought up to read to me; one in the monosyllable part of the spelling book, which she read by spelling, and the other in the narrative part, which was fairly done. The master preferred that I should not trouble myself with the others, as they were all alike—about half the school spelling and not reading, the other half reading. *c.*

126. In another there were twenty-six children. There was only one reading, and two were writing very badly. Nobody counted—nobody did grammar, of course. The master had four or five who could cipher, but they were absent; and he even had "grammarians," but none of them were about, at the time of my visit. The school forms were simply rough lumps of wood, planted across two stones, so placed that the scholars sitting on them might have the support of the wall for their backs. *d.*

127. In summer when the days are fine, these school-rooms are probably not unhealthy. The children run in and out freely, and the master turns them out occasionally in a body, and settles them under the roadside hedge from which they take their name. In winter the weather makes this impossible, and the schools are crowded. There the children stand the long day through, in the reeking atmosphere of these miserable cabins, packed together, so that they can scarcely move. Nothing can well be imagined more unhealthy, unless it be the journey home which succeeds these vapour baths, in the cold wet winter afternoon.

128. I examined one school near Clifden, *al fresco*. The week before my visit the farmer, who had lent his cow-house for the school in the spring and early summer, had brought back its tenant from the hill side, and the scholars had to leave. There were twenty-nine altogether grouped round the mistress, who administered learning from a chair nearly opposite the door of her old school. A kind of hope was entertained,—but there seemed no ground for it—that some other place might be discovered in time. On fine days they came, as they used to do, only that the limited discipline implied in the mere existence of enclosing walls had disappeared, and classification or class teaching were of course impossible. About one in three had been writing, and half as many counting, before the school had been turned out. The rest, with these exceptions, could only spell and not read. The fee was 1*d.* a week, and nobody gave anything more. *e.*

129. I suspect that the same account might be given of another school, which I visited without success. It is planted in an admirable situation, at the mouth of two converging valleys. It was half-past eleven when I left the spot. There had been school the day before, and one scholar actually turned up with a book in his hand, but ran away as fast as possible when I tried to speak to him. The teacher did not appear at all. The school-room (there was no doubt it was the right place, for I got two independent witnesses to speak to it) was a cow-house with a small brown cow inside, and the floor was covered with ferns and other bedding. There were no forms or seats. There were holes in the roof large enough to let a stone as big as a man's head fall through. *f.*

130. Take another case. A married woman, whose husband is a carpenter, lives with him in a house the floor of which is about twelve feet by fourteen. He does not always carry on his work at home; but there were a hatchet-block and something like a bench and plenty of shavings in the school, so that he must have been working there on the day of my visit, and these things occupied a good deal of the floor space. I found sixty-four children present; two and a half square feet for each child, if the floor had been free. The writers pay 2*d.* a week; the others, 1½*d.* There are no counters, none learning to sew, and only thirteen professing to be able to read; the rest are spelling. The uncle of the mistress preceded her, and she began school-keeping in the same house about thirty-five years ago as his assistant. She and her school have been there through the whole generation in which the education controversies have been raging, and have survived them all. *g.*

131. One last example is that of a school kept by an old woman of seventy-two. A few of her pupils try reading—most spell. For herself she never got beyond "command" in writing, and she does not think it worth while (as that besides was a long time since) to carry them on in that subject at all. Of course they don't count. They *h.*

are very irregular in the hours at which they come; some not till one o'clock or so. Hers was the first hedge school I saw, and as I looked in on a Saturday to ask if she would let me visit it next week and examine her scholars, I could scarcely believe that her cabin was the school or herself the schoolmistress. It was a little dark hovel, with the floor a foot below the level of the street; with a bed in one corner and a heap of turf in the one opposite. The poor old woman made her 2*s.* 6*d.* a week honestly. Without having to appeal to the poor-rates she kept herself out of the workhouse. She respected herself, and probably was respected by her children because she could read a book in the Irish language.

General results.

132. I found that twenty-three schools of the type which these may be considered fairly to represent, were in actual operation in my district; and I visited almost the whole of them. They are apparently more numerous during the winter months, springing up wherever there is a neglected population, or one which the disputes of its superiors have deprived of learning. The less permanent are opened in any empty cottage or cow-house; the others generally in the cabin, which is the living and sleeping room of the teacher and his family. In one I found that the only furniture, besides a single chair, consisted of three beds; another school-room was created out of charity to the schoolmistress by the wife of a harvestman, who had gone to England, taking in the mistress and her scholars to share her cabin and keep her from being lonely till her husband's return. In twenty hedge schools I found 347 boys and 285 girls present—an average of thirty-two for each. Among them I do not reckon four private subscription schools, maintained by local proprietors, two of which were fair and two extremely unsatisfactory; nor four private pay schools, where the fees were obviously adapted to the circumstances of the middle classes, one of which was worthless, while the two others which I saw took rank above the average National school in elementary subjects.

133. In the hedge school proper there is never more than the rudest attempt at school furniture. I saw with surprise and delight a bit of an old shutter, about two feet square, made to do duty as a black-board in one of them, but there was nothing of the kind elsewhere. There are no maps, and, of course, no geography. Grammar is looked upon, I am assured, on all sides, as a pure waste of time; and time is never wasted on it. One teacher stated with pride that in winter he had one boy learning "the sciences," which turned out to be the familiar "orthography, etymology, syntax, and prosody;" but I had none of these sciences produced. In most of the hedge schools there is "a little calculation," but they can rarely show a visitor any of it in the summer. I found sewing taught to the girls in a single instance. There is extremely little writing, because a kitchen-table has to serve for desks, and there is frequently a lack of pens or a famine of paper. I should fancy that of the 700 children, actually present in midsummer, seventy perhaps might be able to do something at writing, and perhaps 150 could read. The remainder can at most spell.

Religious teaching in private schools.

134. In the largest of the private schools I examined, attended by sixty-four Roman Catholic pupils, and one of the Established Church—a school which has been established for more than forty years in Clifden—I was surprised, after all the excitement which the quarrel between the mixed and the denominational systems causes, to find that no religious knowledge whatever is taught except on Saturday and then for only half the day. In the National schools it is customary to devote half an hour to it every week-day, in addition to the half Saturday. This school appears to have gone on quietly in the centre of the Irish Church Mission district, where popular feeling on the impropriety of excluding religion is supposed to run unusually high, for forty years, without a complaint from any one. When there are boys to be presented for confirmation, the teacher tells me, a little extra time on week-days is sometimes given to their religious training. I have had many other casual indications—that for instance of the Wesleyan school at R—— (§. 101), where no religious knowledge is taught to the children (all Roman Catholics) except what is found in the National school-books—that the people would not themselves be discontented with a system in which the whole ordinary teaching is not leavened by religious instruction, and that the objections to it are rather stated for them than felt by them.

Inferences to be drawn.

135. I doubt whether I saw all the hedge schools in the district—though I inquired about all that were returned by the Constabulary, and discovered some half dozen for myself. They are scarcely called schools, and, indeed, scarcely deserve the name, and they change their situation so often, and spring up so suddenly, that it is excessively difficult to fix them in returns. Three, for instance, had been discontinued in the course of the two months between my visit and that of the officer who prepared my schedules; and when I was in the neighbourhood, I heard of three or four others casually, after I had made arrangements which prevented my visiting them. As a class, they are sufficiently perplexing, and their existence in such numbers is a phenomenon which needs explanation. For my own part, I think they prove little more than—1st. That the people are really anxious to have education, or something that is so called. 2nd. That many of them have no idea what it might fairly be expected that their children would learn in a reasonable school. It is true that the fees paid (largely in kind I believe), come in the main from a very poor class of the community; and so far, these schools show that there is more money than is generally believed, out of which fees might be paid, were the people more willing. But I am told universally that in State aided schools two-thirds don't pay, that perhaps, one-third really cannot, and that another third will not, being firmly convinced that, as the State has taken the main burthen on its own shoulders, there is no need for them to pay anything. The indisposition in National schools is so great, that an attempt made all over the country to force fees against the feeling of the Roman Catholic clergy would certainly half empty them, whatever may be the truth as to the ability of the people to pay. It is said, sometimes, that the existence of these hedge-schools demonstrates the unsatisfactory character of the instruction otherwise available, or the unsuitableness of the principles on which it is given, to the wants of the people. It would be absurd for a moment to compare the education in the National schools with that in the hedge-schools, although it may be true that the people think a good deal of time wasted in the former on grammar and geography, which ought to be saved for plain work. The force diverted from these channels in the hedge-schools is not, however, sufficient to bring them within sight of the level of the National schools in reading, writing, and arithmetic. With respect to the argument that the hedge-schools show that there are objections on religious grounds, widely entertained by the people against the National system—it is disposed of at once by two facts:—1st. That hedge-schools are set up and maintained—and even more freely than elsewhere—in and near Tuam, where, except that in the workhouse, there is no National school at all. 2nd. That the education in the hedge-schools does not appear to be of a more religious character than that in the National schools—that more time is not devoted to it, and that the masters, so far as can be inferred from general inspection, look neither more able nor more disposed to give it, nor to impress it on the minds of their pupils.

Neither (1st) that larger fees might be obtained for National schools;

nor (2nd) that National schools are unsatisfactory as to religion.

IV. Presbyterian schools.

136. The next class of schools which I visited or inquired about, were those of the Presbyterians, one maintained by the Scottish Ladies' Society, and the others by the Connaught Scriptural and Industrial Mission, which supports altogether forty schools in Connaught.

of two classes:

a. Congregational.

137. They may be divided into two distinct classes, six being maintained mainly for a Presbyterian population, ten being almost entirely Mission schools for non-Presbyterians. In some of the latter the principle of the mixed system—the separation of the secular and religious teaching—is voluntarily adopted, but the Roman

Catholic or Episcopalian children are not told to leave at the time of religious instruction, and they seem to wait cheerfully with their companions for the General Assembly's Shorter Catechism. As in the schools of the Irish Church Mission, the scholars learn texts and hymns, and the schools are maintained, no doubt, mainly for "proselytizing." Education and requisites are generally given for nothing; but there is no food and no suit of clothes. The teachers are commonly young girls under twenty, receiving about £20 a year, whereas those in the Irish Church Mission field get about £40, and when they act as married couples they have £70 or £80. Three of the schools are National, two, passing, I should imagine, by a rapid decline out of that stage of existence, as the average attendance must be fifteen to entitle to any grants, and in one of the cases I found only four children, and in the other only one, present. These schools obtain from Government two-thirds of the lowest probationer's salary, and the mission makes up something in supplement. *b.* Missionary.

138. The six maintained for Presbyterians had on their rolls 95 Presbyterians, 7 Established Church, and 5 Roman Catholic children. The ten others had on their rolls 11 Presbyterians, 69 Established Church, and 186 Roman Catholic scholars. It is easy from these numbers to see that the first class are entirely distinct in character from the second, though they are maintained by the same society, and though their support may serve the same general objects.

139. In estimating these schools I take no account of the denominational or missionary purposes they may serve. I consider them solely as places of secular training and moral influence.

140. They are very frequently too small to make any healthy competition among their pupils possible. What can be done in A, with an average attendance for the preceding quarter of 7, 3 of them under six years of age; or B, with an average of 8, 4 of them under six; or C, where there are only two families on the school roll, supplying 9 children; or D National school, which 1 child sometimes frequents (whom by good fortune I was able to examine); or E National, which 4 children of a single family attend with creditable regularity; or F, where the 6 scholars present belong to two families; or G, with 10 children; or H, with 11, of whom 5 are under six years of age? This extreme limitation of numbers indeed appears not to be altogether displeasing to the authorities of the Connaught Industrial and Scriptural Mission. At K I found two of their schools within, I should think, a mile of each other, the one of which had 10 when I visited it, 3 being infants, the other of which had just gone into vacation, but had enjoyed an average of 7 for the preceding week. I have enumerated ten of the sixteen schools of the society, which were on my lists, and there are only forty in the five counties. I attempted no selection, and I believe that I only omitted to visit one or two of those in my district, in the neighbourhood of Ballycastle. Small attendance. Ten cases.

141. I have said that it was difficult to see how any good could be done in these ten schools. In the five of them where I examined the children I could not see that any particular good was done (leaving denominational interests out of account) which could not easily have been attained without their existence. The two K schools were, the one within half a mile, the other within a mile and a half, as near as I could judge, of a National school, taught by an Established Church teacher, and under Established Church management. Its buildings were amply sufficient to accommodate the pupils of all the three schools, and the salaries of the two Presbyterian mistresses might have been saved to the subscribers, without any bad effect on the education of the district, or any increase of charge to the Government. Such an arrangement would have been, on the whole, more favourable to the "rights of conscience" than that which exists at present. There are twenty-one children on the roll of the school where I found ten present, and fifty-three on the roll where seven had been in the previous week, and out of these seventy-four, representing an attendance of say twenty, there were only one Presbyterian, eighteen Established Church children, and fifty-five Roman Catholics. In the National school there were present twenty-one, and on the roll there were fifty-one, of whom thirty-six were Roman Catholics, fifteen Established Church, and no Presbyterians. The school-room is capable of accommodating twice as many, and there is a second below, now disused, equally large. There is thus a population (ninety-one Roman Catholics, thirty-three Established Church, one Presbyterian) very well suited for mixed education, but its Presbyterian friends from the north appear to maintain two small schools for the express purpose of preventing it. In the National school, which their policy discourages, and which until recently was a Church Education school, the only religious teaching is that of the Protestant Establishment, and it is given, of course, under the protection of the rules of the Board. I was told, with reference to such instances as these two, that it was frequently easy for a person familiar with the story of their foundation to understand the justification of their existence better than a stranger; and I do not know what weight might be properly assigned to explanations of this character in particular cases. Efficiency of schools. Case showing that the two Protestant denominations do not amalgamate.

142. Another curious example of unmixed education is that at E. This is a National school, the patron of which, some years ago, was the rector of the parish. It appears to have been one of those very small schools (between fifteen and twenty in average attendance) to which, under pressure from the denominations, the Commissioners have agreed to assign two-thirds of their minimum salary, or £10 per annum. The entire available population—Established Church and Presbyterian, seems at present, from what I am told, unable to supply more than eighteen children for the school roll. The Board's regulation was meant, no doubt, to admit small schools, virtually existing for denominational purposes, but willing to adopt the fundamental practices of the mixed system, while the extreme limitation of the amount of State aid was intended to compel their patrons to make some local effort for their support. Accordingly, the school at E was probably unable to exist without additional funds. It was used by both Episcopalians and Presbyterians—a National school, within a quarter of a mile, being frequented by the Roman Catholics. Some three or four years ago the rector transferred the patronage to a Presbyterian minister in the immediate neighbourhood. At present, the school appears to receive supplemental salary from the Connaught Scriptural and Industrial Mission Funds. How long this has been so, I do not know. The teacher was an Episcopalian, a probationer, who had failed twice in his examinations, but meant to go up again. In February of last year he was appointed by the rector parish clerk, with a salary of £10. His patron, the Presbyterian clergyman, told him, he says, that he must either resign this appointment or lose his school, and he chose to retain the former, and was dismissed. Fifty yards from his late school, across the road, the rector has a small lodge, into which he transferred the dismissed teacher, who will derive his support from his parish clerkship, and subscriptions. The E National school has, at present, an average attendance of 3·8, and the only four children who attend it at all, belong to one Presbyterian family. The E Church Education school was in vacation at the time of my visit, but there had been three present, the day before vacation, and the attendance had been as high as seven, and fluctuated down to three. It is likely, I should suppose, that the Commissioners may, in the circumstances, withdraw their grants from the former. Their rules, however, appear to prevent them from doing so in the quarter when the attendance first falls away (Part iv., sec. 4, 1, *e*)—and the patron claimed grant for the new teacher, for the part of the quarter ending March 31st, during which he had taught in the school. Two months elapsed without any official action being taken or intimated in the case, only the salary did not come. The patron had written again, about a fortnight before my visit, but the Education Office continued its silence. The amount claimed is £2 10*s.*, and the patron Another case. Patron's grievance and complaint.

thinks that he is entitled to an official acknowledgment of his letters. Once, previously, payment for this same school had been delayed for several months, and he at last wrote directly to one of the Commissioners, after which the money came. He is manager of five other schools, supported by the Connaught Mission, and he states that although the principle adopted in all of them is that of combined secular and separate religious instruction, and although he takes nothing to do with the religious training of the Roman Catholics, the Office is managed so badly, and gives so much annoyance, that upon the whole, he prefers to continue his schools as they are, losing all the benefits of State aid and superintendence, and maintaining them out of the Connaught Mission funds. I fancy that, besides, they are almost too small to receive any money grants according to the regulations of the Board.

143. It is impossible not to contemplate for a moment this spectacle of denominational education in full force—the 5 Episcopalians, the 4 Presbyterians, and the 45 Roman Catholics, within a quarter of a mile of each other. The only school worth calling one is no doubt the last, which, however, unfortunately is in the yard of the Roman Catholic chapel, so that an additional obstacle is interposed in the way of the attendance of Protestant children. Unable to compose their irreconcilable religious feuds, the 4 Presbyterians and their teacher defy the 5 Episcopalians and their teacher across the road. A large part of the livelihood of the Episcopalian master is paid him for Church services. The salary of his opponent seems to come from the subscriptions to the Connaught Scriptural and Industrial schools. It appears as if funds might be obtained sufficient to support separate schools for 4 Presbyterian children, for 5 Episcopalians, and so on wherever it seemed necessary, and as if the energy of the Presbyterians were sufficient to protect the consciences of their people against the dangers to be apprehended from their fellow Protestants of the Establishment, as well as the more serious risks that might threaten them from other quarters.

Details of perplexing cases.

144. I confess that I have been extremely perplexed—being unable to take account of denominational reasons—to understand the existence of several others of these Presbyterian schools. Take that in H. In the same street there are the National schools, under the management of an Established Church layman, with good buildings, good male and female teachers, and numerously attended, and, about 300 yards away, the parochial schools, partly supported by endowments, with excellent buildings, not at all crowded, and with male and female teachers. Between the two, in a miserable little upper room, are the 5 infants and 6 small children who make up the H Presbyterian mission school. The Established Church schools contain 1 Roman Catholic, 27 Established Church, 2 Presbyterians. The National schools had on their rolls 258 Roman Catholics, and 3 of the Established Church. The Presbyterian mission school has 1 Presbyterian, 3 Established Church children, and 11 Roman Catholics on its roll. In the whole three there are just three Presbyterians, and two of them are not in the Presbyterian school.

145. At C, some six miles away, I found myself just as much puzzled. The only children attending belonged to two well to do families—one Presbyterian, the other, half Presbyterian. The eldest boy of the first family went past the door to the National school; the four younger children, three girls, and a younger boy, finding this mistress's school close beside them, attended it. The other family, five in number, would no doubt have gone to the National school had they not found this on their way; or as that would have been a considerable distance for them, and as their father is a man of some influence, they might have been the occasion of setting up a real school, in a locality near their own house, which needs it extremely, and which is now supplied by the most wretched hedge school, I believe, that I saw in the whole country. Nobody else attends, and the teacher finds it extremely lonely. The National school is well taught, and its manager is a Protestant layman.

146. At D, there is a coastguard station and apparently room for a school. There is a National school there, but it is under the patronage of a Presbyterian clergyman some distance off. The Mission subscribes £10 to it; the teacher is a young Presbyterian girl. There are 13 Roman Catholics and 1 Established Church child on the roll. There are no other Episcopalian children in the neighbourhood, and there are no Presbyterians or other Protestant Dissenters. The Government appears to have been regularly paying salary; but the attendance, as I found it was 1. Why the school should be a Presbyterian one, and why the Mission should not transfer its teacher and its £10 to some other locality, nothing but denominational or historical reasons can explain.

147. F Presbyterian school is another difficulty. In the National school, which is under lay (E.C.) patronage, which is very much looked after, and which appeared from everything I saw to be taught with a great deal of energy and success, there is an Episcopalian teacher. There are 46 Roman Catholic children, 43 Established Church children, and 3 Presbyterians on the roll. I found in the F Presbyterian school 6 children present. There are 27 on the roll, and of these 6 are Presbyterians, 14 Episcopalians of the Established Church, and 7 Roman Catholics. The schools are within a quarter of a mile of each other; the buildings are excellent in the one case, and miserable in the other. The mission school, as far as I could judge, only did harm to the secular education of the neighbourhood.

148. The school at G is one to which I turn with some satisfaction after these riddles; it is a National school, and, as usual, under a young mistress. The State pays her two-thirds of a probationer's salary, £9 6*s.* 8*d.*, and the mission gives £12 13*s.* 4*d.*; there are 27 Presbyterians and 1 Roman Catholic on the roll. It is not a good building, and not easily accessible; it is, of course, substantially a congregational school, but it is large enough to have some chance of doing real work. Within a mile and a half there is another National school, all the children being Roman Catholics; within the same distance there is an endowed school with 18 Established Church children, and 2 Roman Catholics. In the immediate neighbourhood there is a fourth which was formerly under the Board, and which is still kept by a dismissed National teacher; the school was built by her or her friends. In this there is a little mixed education, 23 Roman Catholics, 6 Established Church, 4 Dissenters, and 1 Presbyterian appearing on its roll. All the four lie within a circle a mile in radius, and their fusion would be mixed education in reality.

General result.

149. I have mentioned in detail a considerable number of my seventeen schools, and I need not go further. All that I actually saw, appeared to me inferior—two of them, possibly, because I saw them in rather unfavourable circumstances; more, because it is only an excellent teacher who can manage to keep a little healthy vitality in a school attended by less than a dozen children, and the average of actual attendance in each of eight of these schools on the day of my visit was six and a half. All but one of them were under mistresses, half of whom being just out of school-girlhood, were probably without the patience, and generally without the skill, necessary to manage these handfuls of children.

Inferences.
1. Strength of denominational feeling.

150. I have often asked myself what light the existence of these schools and their character throws on the question to which the attention of the Royal Commissioners is naturally so much directed, as to the duty of the State in relation to the present mixed system of education. They show, I think, that the voluntary energy of the denominations is a force on which a great deal of reliance may be placed, at least in West Connaught. It appears to be quite able to maintain a school for two families, or for one; it is as ready to set up and support one against a Protestant as against a Roman Catholic rival; it has so much superabundant vigour that it can even carry a Presbyterian flag into a district where there is only one Protestant (an Episcopalian) within reach of it, and assist

the Government to maintain a school with an actual attendance of one child. Were the State to retrace the steps it has taken in the direction of denominationalism, and to rescind the rules under which it now admits schools with an attendance below twenty-five to partial privileges, this denominational energy would, no doubt, be perfectly able to repair the breaches, but it could scarcely continue, in addition, to sustain the mere fragments of schools which I have described. On the other hand, West Connaught, remote and romantic, may possibly be a country, for which it is easy to obtain subscriptions, and I believe that not £50 out of £1,200, which is the annual income of the Connaught Scriptural and Industrial Schools, is raised in the province itself. It might, perhaps, be imprudent to infer what it is capable of accomplishing in ordinary cases, from the vigour of denominationalism, under such exceptional circumstances.

151. On the other hand, this extravagant multiplication (from a secular point of view) of petty schools, appears to show how alone the denominational spirit can be fully satisfied. Half of them seem to have no rational explanation, except that they may be thought useful for holding congregations together, or for keeping scattered units of a great religious body in mind of the far off Church and Catechism of their youth, or for proselytizing. A few may be maintained on educational grounds only; the official report talks of them as part of a wide field of missionary labour, and says that they are under the constant and immediate oversight of the missionaries of the district, and are greatly helpful to the work of the missionary Scripture-reader and colporteur. 2. Difficulty of prescribing limits to its action.

152. So long as congregations supply sufficient children to make even a tolerable school and perhaps longer, as—the limit fixed is an average of fifteen—the mixed system of the present day meets the first of these wants completely. The other two cannot possibly be met by the Government of a mixed country. It can scarcely undertake to maintain separate schools, which no teacher can keep reasonably efficient for half-dozens of children; still less, of course, can it subsidize a system of proselytism.

153. These schools seem to me to prove that there is an extremely strong tendency to denominational action, and at the same time that it is likely to survive all conceivable legislation, even under a system giving grants to all sects alike, and leaving them at liberty to proselytize at all times of the day. Even then the State would be compelled, both on financial and on educational grounds, to refuse to sustain separate schools for half a dozen children. The zeal of the religious bodies would probably supply these deficiencies, and it is difficult to say what work of that kind it is not adequate to overtake.

154. Beyond these plain inferences, the Connaught Scriptural and Industrial schools seem to me to throw very little light on the question. It is, of course, unimportant, except so far as the Presbyterians themselves are concerned, that they may induce some of their rivals to smile at what may be thought the inconsistency between their zealous support of the National system of mixed education as a whole, and their separatist action in Connaught.

155. I regret extremely that the data on which my estimate of what I may call the Roman Catholic denominational schools rests are so limited. In the district assigned me there were thirteen of this description. One of the National schools—the Ballina National (female)—is taught by the Sisters of Mercy. I have no reason to doubt that the secular and the religious instruction are separated according to the rules and principles of the Board. But the teachers wear the habits of their order; a room of the building, reached by the same staircase as the free National school, is used as the "benefit school," in which the children pay fees suitable to the middle classes; in that room Roman Catholic emblems are freely exhibited; the Sisters of the same convent teach both schools, and pass constantly from the one to the other; and the National school appears to me to differ from the convent school in Clifden, almost solely in the circumstance that it is inspected and subsidized by the State. V. Roman Catholic Convent and Monastery.

156. On my arrival in my district, my first official act was to apply to the parish priest, the Venerable Martin Browne, Roman Catholic Archdeacon of Tuam, for admission to the National schools of which he is patron, and to the convent school at Castlebar. With respect to the latter I obtained no definite answer. On presenting myself at the convent, I was informed by the Sister who received me that the Archdeacon had told them that he would not take the responsibility of authorizing my admission without the express leave of the Archbishop. She said, accordingly, that I could not otherwise see the school, and volunteered an opinion that I should be met by the same answer at all the convent and monastery schools in the diocese. I wrote accordingly as follows:— Admission refused at Castlebar,

"Offices of Royal Commission on Primary Education,
"46, Sackville-street, Upper, Dublin,
"Castlebar, July 2, 1868.

"My Lord,—In prosecuting the inquiry to which the documents I enclose for your information refer, I am anxious to see schools of all descriptions—National or non-National—actually supplying the educational wants of the people of counties Mayo and Galway, as well as to obtain authentic information of every kind and from all classes of the community. On requesting permission to-day, at the convent here, to visit the nuns' school, I was informed that the authorities do not consider themselves justified in admitting me to see the school, and examine the scholars in secular knowledge, without express authority from your Grace. I beg accordingly to solicit the favour of such authorization with respect to this and similar schools.

"I expect to be in Tuam officially about the end of August.

"I have the honour to be your Grace's obedient servant,

"The Most Rev. Dr. M'Hale, Roman Catholic Archbishop of Tuam." "William Jack.

157. I received no answer to this letter. I was extremely anxious that no omission of mine should limit my inquiry, or prevent any section of the community from access, through me, to the Royal Commission. Accordingly I presented myself next at the monastery at Errew, where the school was in vacation, the Brother teaching it being ill. The school-room is a large building, well provided with desks, maps, and school requisites, and the usual Catholic emblems. At the monastery, Bunacurry, Achill, the authorities had no difficulty in admitting me and giving me every information; but the time of visit was perhaps unfortunate, and there were only seven scholars. At Westport, the Rev. Father Ronayne, the Roman Catholic administrator of the parish, stated that he should have felt himself unable to admit me to the convent school without His Grace's express permission; but the Sisters were at the time in retreat. He did not think that there would be the same difficulty about that taught by the Christian Brothers. In these circumstances I thought it right to inform him of my application to the Archbishop and its want of result, and asked him, as the Roman Catholic resident authority, to be so good as to let me know, after conference with the authorities of the Christian Brothers' school, the view taken by those who might consider themselves entitled to accept or refuse my visit there. I added that I should not myself again apply to the Archbishop. I received the following note before leaving the locality:— not at Bunacurry, at Westport,

"The Presbytery, Westport, August 18, 1868.

"The Rev. J. Ronayne, Catholic Administrator of Westport, presents his compliments to Professor Jack, and begs to inform him that the Superior of the Christian Brothers does not think it advisable to admit him to inspect the schools without the leave of the Archbishop of Tuam."

158. At Clifden, where I went next, I called on the Very Rev. Canon M'Manus, P.P., and Vicar Forane, and not at Clifden.

I thought it necessary after this to tell him also the position in which my unanswered application to the Archbishop left matters. Father M'Manus told me that he had received no instructions with respect to my admission into his schools—that he thought I was acting fairly by the Roman Catholic community, in treating the Archbishop's silence as no decision, and that he would willingly give me every facility to examine and inspect the schools and the scholars in secular knowledge. The convent was in retreat, but he and the Rev. Mother were so obliging as to release the Sisters in charge of the different departments, and to re-assemble the scholars for my inspection. I accordingly saw the Convent school at Clifden, with the Orphanage attached to it, and the Monastery school at Ardbear, a mile out of the town. Before leaving Clifden, I wrote to the Rev. Father M'Gee, Roman Catholic Administrator of Tuam, to inform him that I should reach Tuam by September 7, and officially to request the permission of the authorities of the two convent schools, and the Christian Brothers' school in Tuam, to inspect these institutions, and examine the scholars in secular knowledge. I received the following answer:—

At Tuam, except as a visitor.

"The Presbytery, Tuam, Sept. 6, 1868.

"Sir—In reply to your letter of the 3rd, and having reference to your intended visit to the Catholic schools here, I beg to say that as a stranger and a visitor you shall have access to them, and that the teachers in their respective departments will afford all necessary information on the subject of your inquiry. These schools, however, have no connexion with the State, and those who preside in them *will not receive its official as an examinator* of themselves or the children under their charge.

"I am, sir, yours faithfully,

"William Jack, Esq." "James M'Gee, Catholic Administrator, Tuam.

159. I had a short personal interview with Father M'Gee, who stated that he had shown my application to the Archbishop, and was acting on his instructions. I informed him that the examination of the scholars was of the essence of the inquiry I had been deputed to conduct, and that I did not propose to avail myself of the permission to visit the schools under these limitations. He promised, of his own accord, to inform Dr. M'Hale that that was the view which I took of the case, and told me that he should let me know if it induced him to alter his course. I heard nothing farther of the matter.

160. I confess that I could not help contrasting this action with an inscription on the wall of the Christian Brothers' school in Westport, to which I was refused admission, simply as an officer of the State.

"Male and Female Free School, established in 1819, by the Most Rev. Dr. Oliver Kelly, under whose zealous patronage, and by the indefatigable exertions of the Catholic clergy and parishioners it has been supported, and through whose unabated efforts, liberally aided by the Government of our most gracious and benevolent King George IV., this school has been built."

Inability to verify statements that the Convent and Christian Brothers' schools might serve as training schools.

161. I regretted it the more because in his pastoral letter to the Very Rev. and Rev. the clergy and faithful of the diocese of Tuam on February 6, 1861 (the pastoral from which the most decided action in opposition to the National system dates, and in which he prohibits the training at the central model school in Dublin, of any Roman Catholic teacher from his diocese, without his own written authority), the Archbishop says—

"For highly qualified teachers to conduct elementary schools, the young men already educated in your National or other schools, and particularly the young men educated by the Christian Brothers in Tuam, can furnish a sufficient number, and as for female teachers, they can be supplied in abundance from among the young women educated in the schools of the six convents of this diocese, entirely unconnected with the National Board, and free from the taint of its dangerous teaching."

Results of permitted inspection.

162. I venture to think that such a statement, bearing on the supply of teachers in a remote, poor, but populous part of Ireland, might have been properly submitted to the verification of an officer, bound by the commission he had the honour to hold, to report his opinion of the facts, apart altogether from their bearing upon the questions in dispute between the Archbishop and the National Board. I have to add that in the convent school in Clifden—the only one of the six which I saw—I found one girl in training as a teacher, who, I thought would be likely to succeed well—that in the convent school at Ballina (in a neighbouring diocese, under the National Board, and tainted presumably by its dangerous teaching), there were seven monitresses receiving salary, and acting as pupil-teachers. In both it appeared to me that the discipline and morale were good, and were likely to act beneficially on the girls trained there; but I thought that in both of them there was a want of that precision and definiteness in teaching, and of that accuracy in work, which are conspicuous in the best schools under trained mistresses, and which are the natural effects of deliberate professional preparation. Neither of the monastery schools I saw were in the least adapted to fulfil the functions of teacher-training establishments; and as far as my imperfect data allow me to form an opinion, I should say that the present Roman Catholic denominational schools of such a district are probably inadequate to discharge such functions, although perhaps rather less so when they are under regular state inspection. I am unable, of course, to offer any estimate of the number of teachers, male and female, that they might be expected to prepare. The number of children attending these schools is stated in § 7, and is made up of those I found present where I was admitted, and those found present on the day of visit by the Constabulary in other cases, and from statements made by the authorities with respect to one school which was in vacation at both times.

163. I ought perhaps to add, that I presented myself also at the monasteries of Curryfin and Brooklodge, in the neighbourhood of Tuam, after the receipt of the Rev. Mr. M'Gee's letter, and that the authorities there held that they were bound to act on the precedent which it set.

VI. Workhouse schools (National).

164. There is a single exceptional group of National schools, of which I think it best to record my detailed impressions separately in this place.

165. There were altogether eight Workhouse schools (containing ten departments), those, namely—in

	Children present.				Practically permanent inmates.
	M.	F.	R.C.	E.C.	
Castlebar,	21	34	54	1	30
Ballina,	27	31 (2 teachers).	63	4	24
Killala,	11	8	19	–	13
Belmullet,	11	17	28	–	No information.
Newport,	12	12	19	3	9
Westport,	31	20	50	1	No information.
Clifden,	25	14	39	–	32
Tuam,	36	31 (2 teachers).	67	–	51
	174	167			

Religious persuasions of children.

166. Including all in the district assigned me, I found present 174 boys and 167 girls. Four of the workhouses contained no Protestant children, two contained one each; the other two contained three and four, respectively. The proportion of Protestants is no doubt diminished by the Protestant Orphan Societies, which provide in Mayo for, I believe, about ninety children. There were 159 of the scholars, out of a total of 269, or about

sixty per cent., who might be considered constant inmates of the workhouse, being deserted, or orphans, or children of helpless permanent inmates. These pupils attended of course every day when they were in health. The remaining 40 per cent. were more or less irregular. On comparing the roll with the average attendance for the four quarters of the year, ending 30th June, 1868, I find in the six schools which sent me available returns :— Regularity of attendance.

	First Quarter.	Second.	Third.	Fourth.	Average for year.
Roll, ...	298	279	279	314	292
Average attendance, .	196	190	193	188	192

167. A child is as usual struck off the roll, after thirteen weeks' continuous absence. In the ordinary National schools outside, from which I had returns, I should have had 445 children instead of 292 on the average roll of the four quarters, for 192 children in average attendance. Compare again this table of the scholars who have attended as under in the two classes of schools :— Compared with outside schools.

Again compared.

	Under 50 days.	50—100.	100—150.	150—200.	Over 200 days.
Workhouse Schools, .	34 per cent.	17	15	17	17
Non-Pauper Schools, .	44 per cent.	24	17	11	4

It appears therefore that in the workhouse schools 49 per cent., or one-half, have attended more than 100 days, while in the non-pauper schools outside, only 32 per cent., or one-third, have done so.

168. In addition to this advantage in regularity, everything is provided in the workhouse. The children have (or ought to have) books, copies, slates, whatever they require, and as soon as they require them. The school is airy and well-ventilated—in one or two cases indeed, so much so, that as the windows won't shut tightly, and there is only one fire-place for an immense room, the children must be nearly frozen in winter. The full regulation of their time is in the hands of the workhouse authorities, and there is, therefore, every opportunity for learning lessons ; and the older scholars might be kept quiet and helped on by giving them the use of a small library of interesting books. To set against these advantages there are only two drawbacks ; the one in the inherited sickly constitutions of some of the children ; the other in the want of home feeling, and home life. But there is no room for doubt, that although nothing in the workhouse can quite replace that, in other respects it might very readily be made a tolerably satisfactory place of education. The one-roomed cabin of the poor man, who is himself frequently ignorant and careless, is not a good place for home lessons, and his child has no library but the school-books, of which he sees perhaps enough in the daytime. I see no reason, on the whole, why the education in the workhouse should not be quite equal, at the least, to that given outside. There cannot be the slightest motive for making it an uncomfortable home to the child whom its parent's misfortunes or vices have compelled the state to adopt. It is a pleasure to say, that in three of the ten schools, I thought these reasonable expectations fairly realized. In one of them the sixteen elder boys are taught trades during the afternoon. There is a good time for play, and the children go to bed at eight, and get up at six in summer, and seven in winter. In the two others the children are not sent to bed till nine, and don't get up till half-past six or half-past seven. The regulations of these schools imply that a considerable amount of latitude is given to the pupils, and no doubt they involve a great deal of trouble in supervision from the teachers. The details of daily life out of bed, have all to be arranged, and it must be a work of some difficulty, to find the children occupation enough to keep them out of mischief. Scarcely any lessons are set to be prepared out of school hours, and there appears to be nothing anywhere like a school-library. I should have thought that no cheaper or more effectual way, both of employing and of improving the elder children could have been discovered. Advantages of workhouse. Drawbacks. Good workhouse schools.

169. In most of the other schools I found that it was the regular practice to lock up the children out of the way in their sleeping-room from 7 at night till 6, 7, or 7.30 in the morning. The usual plan is that an old pauper woman sleeps in the girls' room and the school-master's room is adjacent to the dormitory of the boys. I cannot say that I wonder in the least that the workhouse authorities should have frequent trouble with children, especially with boys, so treated. It is, of course, impossible that they should be content to spend their whole time in sleeping, as they are, no doubt, ordered to do when they are locked up. I was told in two workhouses that under the predecessors of the present teachers they grew riotous, smashed and destroyed their school requisites, and ended by becoming thoroughly demoralized. Any evil influence which might introduce itself among them could not fail under these conditions to spread disturbance throughout the school. Life of workhouse child.

170. In three of the worst workhouse schools which I visited, I found, that in the first the boys had boots in winter but no stockings, the girls, on some mysterious principle, being refused both. In the two others, neither boys nor girls had shoes or stockings summer or winter. In a fourth school the girls got boots, but no stockings, and there was only one fire-place in a room occupied by thirty-one children, 48 feet long by 30 wide, where the windows were so fastened that the upper part was constantly falling open, so as to provide a plentiful ventilation. I thought it an illustration of the spirit in which these adopted children of the State are occasionally brought up for her, that in a workhouse school which I visited by previous arrangement at nine o'clock, and where, of course, I might have remained for a few hours, the children were presented unbreakfasted, and it was only at the end of my examination, and because of the difficulty with which they were induced to leave the school-room at a walk that I learned the fact. In the same school it did not surprise me to learn that they never had access to their parents in the house except at dinner time. In one of my three good schools on the other hand I was told that they had free access to them, at appointed times.

171. Wherever the children, in fact, were treated without consideration by hard mechanical rule, with the interests of the workhouse authorities regarded as paramount, and the well-being of the children as a secondary consideration, the results were distinctly inferior to those in average schools outside. Wherever the opposite policy was adopted they were at least equal, perhaps on the whole, superior. There are no workhouse schools on the average level, and I do not doubt that where the humanizing principle is absent they are pretty certain to become, by a law inevitable under the conditions of their existence, thoroughly inferior.

172. There is a sort of conflict of government in them, on which I do not think it advisable to express an opinion. If the inspectors of schools report unfavourably of the teachers, the inspectors of workhouses appear to have the power of giving or refusing effect to their judgment. In the ordinary National school, the patron who does not pay the master has the same power, but the National Board, if they sustain their Inspector, may cut off their payment, and the case is, therefore, practically closed. In the workhouse school, the National Board inspects, but it pays nothing to the teacher as a rule ; it has only the power to give or withhold some insignificant premiums, and accordingly its officer is free to express his opinion, and the officer of the Government, through whom payment comes, has the power to endorse or to reject it. It is easy to see the disadvantages of an arrangement of this kind. I was told by a workhouse master that the school Inspector "wanted to dismiss our mistress, but our own Inspector, when he came down, said he did not agree with his report, he merely disregarded it, and she remains where she was." There is little doubt that the school Inspector's influence after that would be extremely small ; and there is no doubt that he is likely to be a more competent judge of the efficiency of a school than the Inspector of the Poor Law Board. I am not aware what reasons may be adduced Management of workhouse school.

in defence of an arrangement which is likely to result in what is undesirable in any country, and more so in Ireland than usual, a public difference between two officers of the same Government.

Salaries paid.

173. The workhouse teacher is better paid than his neighbour outside, the salary generally amounting to almost as much, independent of board and lodging, and there is the temptation of a pension. On the other hand his life is more monotonous, and he has longer hours of labour. It does not appear that the situation is either eagerly sought after, or very greatly valued. The work to be done, is, perhaps, more difficult than elsewhere—the restraint is much greater—and the schoolmaster requires not merely to be a man of skill in his profession, but of considerable good sense and patience, kindly and firm. I doubt whether the difference in the money value of the salaries, is sufficient to tempt a high class of teachers to give up their comparative freedom outside, and I believe that it would be sound policy so to arrange as to make it probable that such teachers might be attracted.

Work done.

174. For the rest, the average work done in the elementary subjects in the ordinary National schools and in the workhouse schools, is very much on a par. In both, the proportion of actual to possible passes is just fifty-one per cent. On the other hand the workhouse children are generally older than those in the outside schools who read the same books, and a visitor can seldom fail to be struck with the comparative want of alacrity, with the slowness in answering or understanding questions, with the depressed look, and the low physical tone which appear in most of them. The amount of disease in some of the schools is excessive; many of the children having, no doubt, inherited feeble or depraved constitutions. It is doubtful enough, whether the aggregation of workhouse children together in a place whose whole atmosphere is that of hopeless pauperism, can produce satisfactory moral effects. Its educational results, in spite of all the advantages which books, apparatus, and regular attendance give, are, on the whole, inferior to those obtained in the outside National schools.

Chapter III.—National Schools.

175. I have already given the general results of my inspection of the 115 National schools which I examined, and I shall not attempt to add details like those which I have thought it right to supply with respect to the less familiarly known non-National schools. I have stated my conclusions elsewhere (§§ 12–20) as to their relative importance as instruments of education, and as to their comparative efficiency. The points to which I prefer to solicit your attention are those which bear on the grievances of which the National teachers complain, the actual hindrances to the success of their schools, and the suggestions which my experience of West Connaught induces me to offer towards their removal. I submit them to the Commissioners with the less reserve, as it will be necessary for them to consider the circumstances of Ireland as a whole, and I think it not at all unlikely that some conclusions, which I believe warranted by the facts before me, may be much modified or altogether overthrown, by a comparison with the facts collected from other districts.

Defects in National schools accounted for by.

176. The results I have tabulated in Chapter I. have shown, what surprised me very considerably, that as places of secular instruction the National schools in West Connaught cannot be confidently said to be better than their neighbours. The Mission and Church schools obtain a rather larger proportion of possible passes, and as they show us fewer examples of the good school, and more of the unsatisfactory or insignificant, it is a necessary consequence that the middling schools, the most numerous class in both instances, should be a little better, subject to the reserves made in §§ 14 and 18, than the same class under the Board. It is not very difficult to find the explanation of this state of matters in the pecuniary circumstances of the National teacher.

177. I tabulated my inquiries for ALL my 106 Connaught National schools, excluding those in workhouses.

178. The following table shows the result, and I think it is sufficiently startling:—

Income of teachers.

Income of 106 National Schools, West Connaught.

From Government—(*a*) For principal teachers,	£2,335	From local contributions and endowments,	£210
(*b*) For assistants, monitors, workmistresses, &c.,	504	From fees,	208

Or, leaving out shillings and pence—

Average Income for 106 National Schools, West Connaught.

From Government—For Principal teachers,	£22	From local sources,	£2
,, For Assistance,	5	From fees,	2

A few have houses rent free.

179. In addition, nineteen have houses, and one or two more have single rooms attached to or partitioned off from the school-room, provided by the patrons, so that one in five may be said to have houses rent free. The average payment of the principal National teacher in charge of a school, from all sources, in all the National schools in my district which I visited (106 out of 134) is £26, or 10*s.* a week; and four out of five of them have to pay house rent out of this. Statements of average income, however, give a very unfair impression, when that income approaches so near starvation. I have separated the thirty-two wealthy schools, where the principal teacher gets more than £30 a year—the teacher's average income in them being £38 5*s.*, or 14*s.* 9*d.* per week, and one in three having houses provided in addition—from the seventy-four which remain. In these—*and they are more than two-thirds of the whole*—he gets only £20 15*s.*, or 8*s.* per week, and sixty-six of the seventy-four have house rent to pay; or one in ten only has any advantage beyond this weekly sum of 8*s.* from his profession.

Incomes of *a*. One-third of whole body of teachers. *b*. Remaining two-thirds.

180. This is the central fact of the National teacher's daily life. If he is a married man, and can gather enough together, he tries to add an acre or two of farm to his and his family's occupation. In the great majority of cases he is quite unable, even if he were competent to do anything of the kind. The price of living is not lower in West Connaught than might be expected in a country which sends all the produce it can spare from home consumption, to the readily accessible markets of Dublin, Lancashire, and London. No system of training, inspections, and examinations, no temptations in premiums for order and cleanliness, no good service salaries, and retiring gratuities, calculated of course in due proportion to the ordinary incomes, no apparatus of fines, reprimands, and depressions, in the world can keep things right under such circumstances. It is not surprising to discover that nothing of the kind does so.

Drawbacks on Income.

181. I said that two-thirds of the teachers have 8*s.* a week, out of which nine of every ten have to pay house rent. In addition to this, a very considerable number (*one* in *three* in the Ballina Inspectoral District, which was the worst I saw in this respect) have to pay rent for their *school-rooms*. Some of them pay none, because they or their friends have actually built and own the school-rooms themselves—a father setting up his daughter in National education, as others set her up in a shop. Many more have to keep up the school-house, and although the Inspectors are "contented wi' little and canty wi' mair," to a degree which astonishes one accustomed to British schools, it is scarcely possible to keep up a thatched cabin, most probably badly constructed from the first, for less than £1 a year. They are bound, besides, to see—where nobody else takes the trouble to do so, which is the general case—that the school furniture is kept decently serviceable, or at all events capable of doing some service; they must take care that there is a proper supply of slates, books, copies, and maps; and if there is not, they

Rent of school-room.

School requisites.

must find some way of putting matters right. The local patron is not obliged to touch these things with his little finger. In 77 cases out of 106 not a halfpenny is raised locally (except in fees) towards the support of the school. In some of these (not in the majority) the patron keeps the school in repair. He scarcely ever contributes to the supply of school requisites. If new maps are insisted on, the teacher must provide them; if a school clock is wanted, he raises 10*s.*, by a forced rate, if he can, and the Government sends him down an American apparatus, no doubt worth much more, but which a little experience of the damp, the carelessness, and the absence of skilled clockmakers in the far West, very soon brings to a stand still. In three out of four of the schools I visited, these useful inventions will in all likelihood never go again. An experienced Inspector, indeed, is no more exacting in such matters than he can help; it is only when, once every two years (and changes are so frequent that all the five Inspectors I saw had taken charge of the districts in which I found them within two years) an officer is sent to a new district, or a young and zealous man is first appointed, that danger is apprehended.

Sale stock.

182. Let me not be supposed, however, to imply that the teacher must actually provide books, slates, copies, and maps, at shop prices, and hand them over to the scholars for nothing. Shops are rare, and pence are few. On the other hand, school requisites are necessary, if there is to be schooling. The Board has thus been compelled to become a distributor of these things on a great scale, at a reduced rate, just as it sells the American clocks cheap, but with better results. The teacher buys them at about a third of the shop prices. The Board used, once every three years, to supply obvious deficiencies, occasioned by natural tear and wear, in maps, tablet rails, and a few things of that sort. This grant was called free stock, and ceased a short time since. They still give a grant of the kind to a school which is just starting on its career under their auspices. The teacher now buys the maps, &c, required for renewals (fewer of them of course), at about a third of the shop price, and they immediately become the property of the patron. This is an arrangement, the propriety of which it has been found extremely difficult to explain to him, but which is intimately connected with his whole relations to his patron and to the Board. He buys the books, slates, and copies, at the same reduced rate, paying the money beforehand. He is permitted, however, to re-sell them to the children at the price which they cost him. It was found that he lost a great deal of the money he had advanced in bad debts or in unbought books. A child who was too poor to buy one, often appealed too strongly to the master's feelings, to be left alone in his class without it. A book once given and not paid for, was as good as lost. The Board accordingly now allows the master 25*s.* worth of books for 20*s.*, if his prepaid order amounts to as much. This commission appears to have been calculated fairly, and where it is obtained, the teacher is generally satisfied. On the other hand, out of a gross income of £5 a quarter it is not easy to set aside £1 in a lump sum, and not comfortable to have to wait its slow return in halfpennies, as the stock gets used up. Many of the teachers say that they count the money as good as lost once it has gone away; and where the order is not sufficient to entitle them to commission, as is the case most frequently, there is a certain amount of loss which is inevitable. The results, as is natural, are great discontent and a grievous dearth of books besides. How often have I had it explained to me that the master was waiting for next quarter's salary to enable him to send off his order. The Inspector would, no doubt, hear the same true story repeated next quarter when he came. The teacher coaxes the children to contribute the price of the books which are immediately wanted before he sends off to Dublin, but it is six weeks before they come; the date of their arrival is extremely uncertain, and as a rule the parents prefer to see their book before they part with the money for it. His next shift is to wait as long as his school necessities, his conscience and his Inspector will allow him, till there is a whole crowd of children urgently requiring books, so that a large proportion of the money he has laid out may be recouped to him at once, when the parcel arrives. It may, no doubt, be found difficult to issue a great number of small orders, to all parts of the country with perfect regularity, and the smaller and more numerous they are the greater is the per-centage in office time and trouble which the Board pays on them. Probably the restriction of the commission to orders above £1 is meant to diminish this considerable tax. It is certain, however, that there is at present excessive delay in the issue of these orders; and, in many cases, I have been told that schools have had to wait for three or four months after their money had been duly forwarded. Of course, such a result is the more damaging where the master has kept back his remittance to the last possible moment, in the hope that the books may be bought up at once. A school, kept in the lowest permissible state of efficiency for a quarter before the money goes away, and held there for another quarter before its equivalent in books comes back, has wasted more of the public money contributed to its support than the entire amount of the order for "sale stock." The system of cheap books is probably, now at least, a necessity. Like many other things in Ireland, if it was not to be continued, it should never have been begun. The people, who get books for nothing, from denominational schools, who never have much spare money at the best of times, and who are not particularly inclined to spend what they have on such luxuries, are pretty sure to be unwilling to pay three times as much as they are now induced with great difficulty to give. A bookless school rapidly sinks, of necessity, to the level of a hedge school. It would be difficult to find a better agent for the distribution of cheap books than the schoolmaster. Surely it is not impossible to discover some way in which these necessities of the situation may be met, without fining him for the trouble he must be compelled to take, or asking him to elect between starving his school, and starving his family. I think there can be no doubt that the limitation of the commission to orders above £1 is indefensible, as an arrangement for schools where two-thirds of the teachers have a total income of £5 a quarter; and if the limitation be necessary to the proper issue of the sale stock from the Dublin office, as it may be, the necessity points to some quite different system.

Free stock.

Commission on sale stock.

Irregularities in supplying sale stock.

Disadvantages connected with system.

Teachers frequently fall into debt.

183. These are the drawbacks on the teacher's *gross* income which is 8*s.* a week in two cases out of three, and they leave him little hope of saving money in his youth against the time when he is worn out by age or infirmity. A man who marries on it, must be steeped to the lips in hopeless poverty all his life, unless his fortune lifts him to one of the few better paid situations, and keeps him there. In the course of my first week in Mayo I was told by an extremely intelligent young teacher that out of *thirty* National schoolmasters he could reckon up in his own neighbourhood, and whose circumstances he believed he knew, there were *twenty* so in debt as to be in serious difficulties, and that *ten* of the twenty were over head and ears, hopelessly involved. I used this statement continually as a way of gauging the meaning of vague complaints, and of bringing people to details instead of general observations. I found no teacher or parish priest who thought it exaggerated. I was told almost universally that it represented as fairly as such a general statement could, the facts of the case in that part of the country. A teacher in the neighbourhood of Westport says, "They are often unable to come into town for want of a decent suit of clothes"—"with an old hat and holes in his coat, the poor fellow slinks about through side streets and by-ways, thoroughly ashamed of himself. He is not helped, by them, to maintain his own respect or that of his pupils and their parents. When he comes into town with his quarter's salary, it is mostly to pay over due debts, and when he goes home again, there is not a feather left in him."

184. Another teacher in the same neighbourhood has been thirty-five years under the Board. He has brought up two sons as teachers, one of whom emigrated about six months before my visit, another left

while I was there. They were both likely lads, and good teachers, both classed, the one twenty-three, the other twenty-four years of age, the one three years and the other eight years in the service. He says that they both told him before they left, that one of their main reasons was, that teaching was a profession without a prospect. The father enumerated four teachers whom he had known, who had been compelled to retire and who found their way to the workhouse. One of them died there. The second got a "retiring gratuity" of £40, but had not a shilling left, a year and a half after, as, in fact, "half the gratuity was generally gone before it was given." A third got a "retiring gratuity" of £12, he believes, and died in the workhouse. A fourth, after about thirty years' service under the Board, got from £50 to £60. He was about sixty years of age. The money lasted him for about two years, since which time he has been in beggary. It is understood that the Roman Catholic Archbishop has given him a few pounds from time to time, but he lost his sight and he has nothing now but what he can beg in the streets to keep himself and his wife. These histories, enacted before their eyes, had a great influence on his sons, and, of course, such things work in the same way on all men who are young and unfettered. Sometime ago, in fact, the Board was compelled to recognise that the income of the National teacher is so low that something must be done for him when he is past work, and the system of retiring gratuities was instituted in consequence.

And have been known to die in workhouse.

Effect on young men.

GRATUITY SYSTEM.

185. A case which occurred when I was in the neighbourhood, will fairly illustrate the way in which this system works, and the amount of money by the prospect of which, at the end of a long life of labour, the National teacher's salary is "virtually raised." The Commissioners are authorized to grant gratuities to teachers disabled by age *and* infirmity. They refused it in one case to a mistress forty years of age, who had been twenty-two years under them, and who was thrown out of their service by ill-health, on the ground of her youth. The rules regulating these gratuities are private, although it is now understood to be the practice to grant one month's salary in a lump sum for every year spent in the service.

Case of gratuity granted.

186. The case is that of the assistant teacher in Castlebar National school—an old man in his seventy-sixth year. He commenced teaching in 1812, and was appointed master of Castlebar school in 1820. His school was taken into connexion with the Kildare-place society in 1823, but that connexion ceased in 1826, and he came under the Board at its foundation in 1832. He was summoned for training in 1840, but the school having been withdrawn from connexion with the Board at that time, he was unable to avail himself of the summons. It was replaced under them in 1842, but remained so for only a short time, owing to the same influence (ecclesiastical, I presume) having again cut it off. A third time it returned in 1852, and it has continued under the Board till now. The teacher was then again summoned for examination, but on its being ascertained that he was too old, he was dismissed without being examined, so that he never had an opportunity of rising above the lowest class (III [2]), and that through no fault of his own. Some time after 1852, his son-in-law became principal teacher of the school, he himself becoming assistant; his daughter being principal teacher of the girls' school. The attendance in the male school is now about 100, and it appears to be, and to have been during the whole forty-eight years of this teacher's connexion with it, the principal people's school in the county town of Mayo. Throughout his long service, he never received a reprimand. At last, in the course of this year, it was suggested by the Board's Inspector that he should retire. These suggestions appear to come with the force of commands, wherever there is a *prima facie* case to bear out the Inspector's action. In this instance, of course, it was obvious that a man who had been fifty-six years teaching must be past work, and he applied for retiring gratuity. He had taught for a generation and a half, in Castlebar, and every one spoke well and thought kindly of him. The facts were not in any way disputed, and the Commissioners considering "that from old age and declining health, he is unfit for further duty, have ordered that salary be withdrawn from him from the 1st October next, and that in consideration of his long and faithful services, a retiring gratuity of thirty months salary (£45) be awarded to him on condition that he retire finally from the office of National teacher, and give up all the school property.' A strong effort, supported by the patron, was made to induce them to do a little more, to raise the £45 to £54,' but it was unsuccessful.

Objections to gratuity system.

187. I confess that I cannot resist the conclusion either that no retirement money should be given, or that it should take the form of a pension. To present a worn out old man whose stipend has never enabled him to lay past a halfpenny, with £45, appears to me an unhappy way of marking the close of so long a connexion, and of rewarding so much good service. If he has managed to keep out of debt, it is only to protect him for a couple of years against the workhouse with all its hateful associations, and then to leave him to drift in or to die. No young man can be tempted by the prospect of such a crown of honest labour. There appear to me to be only two courses fairly open—the one to abolish these gratuities, and to pay such a price for teaching, as may make it not impossible to save out of the wages of youth and middle life—the other to adopt a system of pensions. Although one calculating politician told me he should prefer the equivalent increase of salary to a pension system, because he was convinced that the latter demand must be granted some day—there is no doubt that the mass of teachers would greatly prefer a small pension secured to them, under known regulations, to the equivalent increase of actual pay.

Difficulties in the way of pensions. Manager's arbitrary power.

188. On the other hand it seems plain, that the system of pensions is quite inconsistent with the arbitrary power at present given to the manager or patron. The Government, when it bids a teacher look forward to a pension as the reward of good service, confers on him a little estate, of which it would be monstrous that any man should be entitled to deprive him at will. I can conceive such a power vested in the responsible head of some department—say, the police—but I cannot suppose it deliberately given to each of 6,000 self-elected private citizens. I do not think it advisable, as I have elsewhere said, that the Irish National teachers should have an *ad vitam aut culpam* lease of office; but unless the condition of their tenure become something very different from what it is at present, it appears to me scarcely possible to meet their wants, in what, no doubt, in many other respects, would be the most satisfactory way, by granting pensions for old age or infirmity. There are so many other evils connected with the present tenure of office, that, difficult as it may be to alter it, I cannot but hope that some considerable change in it may be found practicable. When reasonable protection against capricious or wrongful dismissals (pp. 129–134) shall have been secured, it will be possible to consider the demand for pensions. There is no doubt that under such a system there is a permanent tendency to take them too soon. On the other hand, there are few places in which the mere spiritlessness of a languid and half conscientious old age can do more damage than in a school. In three years, many a poor child has had its one chance in life of getting a little elementary learning, and it is of vital importance to it at least, that the man in whose skill and energy rests the hope that it may carry something really permanent away, should not be spiritless or worn out.

TEACHERS' RESIDENCES.

189. I have pointed out that 11 of the 33 teachers on the higher plane, and 8 of the 74 teachers on the lower, have residences provided for them, rent free. That such a residence may one day be built is another of the National teacher's aspirations. It is not only that his income might thereby be raised, but that he might be settled among the people respectably; might be at hand to talk to them after school hours; might in fact take root in the soil of the little village community. If a residence attached to or connected with

a school-room were worth so much money added to the salary and no more, it would be unnecessary to discuss the question separately.

Small number of free residences.

190. At present thirty-seven National schools in Mayo, or one in seven, are returned to the Board as having residences free. My returns (19 in 106, or one in five and a-half) are a little more favourable. The remainder, six out of seven, are unprovided with them. What is the result? I recall three teachers, who, finding no other suitable lodgings, reside in the local public-house. There may be many more such cases, for it was only occasionally that I asked or was told, where or how they lodged. A few rent small farms of five acres or less, rather, as they told me, sometimes, for the sake of the house that goes with the holding, than for any other reason. But there are not a great many who have money enough to do so, and my experience was that when they did, with exceptions of course, the farm became their first care, and the school their second. Such a farm is generally worked partly by the teacher and his family, and partly by elder scholars who give an equivalent in three or four days' work for the master, in lieu of school wage. The great majority of the male teachers, however, walk to and from the nearest town daily, if it is anything under five miles away.

Disadvantages.

a. Farmers.

b. Females.

191. The teacher at A—— female school was once appointed to a school at B——, which in every way but one was most desirable—the best she ever had; but there was no residence attached. The manager wished to separate off part of the schoolroom, but the Inspector at once said that the Commissioners would not allow it. The mistress could get no lodgings in the place, suitable or unsuitable, except a single-roomed cabin, where she would have had to eat and sleep with the family, and where the family boarded a few animals already. She had nothing for it but to walk six statute miles each way, every day, to the nearest town. She was unable to do so, and resigned with the greatest regret, as the situation was in every other respect what she wished. Most mistresses in country schools are in just the same position. It is extremely rare, I am told, and anyone who knows the country can confirm the statement, that a separate room, however small, apart from the family, can be obtained; and where houses exist that could give such accommodation, their owners will not let it at prices which teachers can pay.

192. Her predecessor was for some time teacher at C——, and had to walk, as the present master does, and as all the successive teachers there have had to do, eight miles a day to and from the nearest town. The school-hours are, let us say, from half-past nine to half-past three. She had to start at eight, in a wild, wet, wintry morning, thinly clad, to light the fire, and to stay in her school-room without refreshment till after an hour and a half's walk, beginning about the end of the short winter's day, she got home at five o'clock. Of course it was work which no young woman's health is likely long to bear up against.

c. Young probationers.

193. The last teacher at D—— had no friends there, and as his salary was £15 he could not well have afforded to pay even humble lodgings. His father lived in E——, between six and seven miles away, and he walked home regularly. He was a lad of eighteen, not particularly robust. The school-room was very damp, with a clay floor, and the roof, when I saw it, let in the rain. The road is along a deep bay of the Atlantic, and as wet and windy a one as could well be found. The boy was "a martyr to tooth-ache" all the time; his health finally gave way; he saw it was "killing him" and he resigned after half a year. Another lad engaged to come in his place, but thought better of it. The teacher who is there now is about seventeen years of age, and has some friends in the neighbourhood, with whom he lodges.

That want of residences limits selection of teachers.

194. This, indeed, is the commonest effect of this state of matters. Father Fineran, of Tully, says, "The probationer system works in this way. Managers look out for anybody on the spot who can just pass" (and an Inspector tells me that a probationer passes if he shows knowledge equal to what might fairly be expected of a boy of ten in a good school, *i.e.*, if he can pass about as much as the fourth standard of the English Revised Code), "who will keep the school open, and who lives on the place, because as they live with their friends, they may exist on the Board's salary of £15 when a stranger could not. They are very injurious to the schools.

1. Because the children do not respect them as their teachers.
2. Because they have really no proper qualifications. Managers cannot help it at the salaries allowed."

195. His own boys' school is under an aged assistant, so as merely to be kept open and no more, because there is no residence for the teacher. The former master had friends in the neighbourhood, and lived with them, but there is no other village nearer than Letterfrack, which is about three miles off, where he might (or might not) get accommodation. In the girls' school, the principal and assistant teachers are sisters, and in order to make it possible for them to come and remain, the patron has to pay for furnished lodgings.

That it prevents study.

196. It is necessary that the teacher should read and study a little, if he is to keep himself from becoming a mere drudge. How is he to do it in circumstances like these? I had occasion to go to a teacher's lodging—in a cabin on the sea-shore. A kind of partition, a few boards, about six feet high, not running up to the open roof, shut off the teacher's room, which contained his bed, his table, his chair, and his library. The room was, I should judge, about seven feet long, by six feet broad. There seemed to be three generations of a family in the cabin, and quiet was naturally unattainable. At present these men are constantly preparing for the examinations, to which the Board is constantly inviting them, and, perhaps because they cannot learn in their houses, they are said to spend a good part of the school time that ought to go to teaching the children, in preparing their own lessons.

That it keeps teachers unsettled.

197. It appears to me extremely important that teachers should feel themselves to be settled men,—that the people should look on them as a real part of the village population, and not mere chance visitants, that they should get to know them personally, and that they should have some sort of apparent reason for even looking up to them. There is no country in the world where it is so necessary that a man who is to get on, and do good, should strike his roots into the soil, and should enter into all the friendly relations of a member of the community, in which his lot is cast, and whom he influences.

That the remedy would cost little,

198. In the West, it would cost about £50 to build a comfortable boarded house of two rooms, and if the State were to offer that in consideration of a site and a bit of garden ground, say half an acre, the interest would be less than £2 a year, and the house would be worth more than double the amount to the teacher, even in money. There is no way in which the Government could improve the status, the loyalty, the efficiency of the Irish teacher, so materially, and at so little cost, as by the abolition of the rule that the Commissioners do not sanction grants towards the expense of erecting residences. That the thing may be done economically, there should be no interference with the plans, beyond a simple prescription that there should be at least two rooms—that the floors of both should be boarded, and that together they should give a certain minimum amount of floor area, and of cubical contents.

and would open the market to female labour.

199. The male teacher ought to have such a residence—for the mistress it is almost necessary. My experience has not led me to think female teachers very suitable for mixed schools in the west. The winter scholars are many of them grown boys, who are quite beyond the control of any girl, or of most women—but there is no reason for artificially limiting the market, and making it, as is now the case, nearly impossible for female teachers to exist alone in remote country parishes. It appears to me to be mistaken economy to substitute for the male teacher, a married and staid man, who should be a centre of order, as well as of civilization—next to the

clergyman, perhaps the most useful official in the parish—a girl who is nothing out of school, and not much there. But such a girl is better at least than no teacher at all; and there is no need to refuse her the chance of employment.

PENAL ACTION OF BOARD.

200. One of the most serious causes of dissatisfaction among the teachers is in the amount of penal action which their inspections entail. In the course of single visits to each school, I had no sufficient opportunity, to form an opinion on the necessity of it, and I did not use the lists with which, on my application, the Inspectors of three National school districts obligingly supplied me, until after I had completed my own inspections and reports. If the official action, which I shall detail, was all necessary, the National schools in these three districts must be in an unsatisfactory condition, and among the teachers there must be a large proportion of inefficient and untrustworthy men. In any event, a system cannot produce healthy results which is carried on by means of such frequent punishments. I may be permitted to say that in each of the districts for which I was furnished with these particulars, there had been changes of Inspector within the period to which my statements refer. My information may be considered, therefore, to represent the normal condition of matters, in schools aided by Government money in Connaught.

a. Westport district.

201. In the Westport district (about 100 schools), in the three years ending June 30, 1868, there were 111 reprimands and 8 admonitions. The effect of the reprimand is serious. Three years must elapse after it before the teacher can become eligible for good service salary. He cannot obtain any of the premiums, given for order, neatness, and cleanliness; and there may be other disagreeable consequences. The admonition is less serious. Reprimands came in the three years to 61, out of the 100 schools, and twenty-three of them were once, twenty-three twice, twelve three times, two four times, and one six times reprimanded. In addition to these there were 7 schools, the teachers of which were fined for various offences—three in 5*s.*, three in 10*s.*, and one in £1, subsequently reduced to 5*s.* I can conceive nothing more likely to aggravate a schoolmaster, or to destroy his self-respect, than that he should be mulcted in this way, as if he had been drunk and disorderly.

Probationer system.

202. There were six teachers "depressed" to lower classifications and salary, generally to "probationers" (£15 males, £14 females). In this position, they are subject to re-examination before they can look on themselves as anything but teachers on trial, and they are dismissed altogether on a final failure to pass the ordeal. There were twenty-four cases in which the Board cut off their grant—a step which, in a country where the teacher has scarcely anything else to live on, is equivalent to dismissal. Many of these were probationers. These persons pass some kind of rough individual test, before the District Inspector, who is generally at his wits' end for any kind of master to supply half-a-dozen vacancies, and they are sent to the schools on a trial, which lasts theoretically one year, generally two, sometimes three, and which, in the case of one remote school, had lasted for six years. It is not to be wondered at that, after a little, they should have to be definitively rejected, when the salaries are taken into account, and when we remember that almost any youth above seventeen, who can read, write, and count a little, may become a probationer. Nothing, I think, could well be worse than a system by which schools are opened and re-opened at uncertain intervals, by a long succession of poorly paid and ill-qualified teachers. They have just time enough to establish some few friendships in the locality when they are turned away.

203. There were thus in three years 156 cases of penal action in these 100 schools, and they affected 73 schools, or three out of four of the whole number in the district.

204. Most of the benefits attainable under the system depend on the average attendance. This is made out from the school registers, which are kept by the teacher, and he is sometimes charged with deliberately falsifying them, so as to entitle himself to a better salary, and in fact to cheat the Government. Many of the punishments were inflicted in cases where, in the judgment of the Board, this charge was proved, or where there was a suspicious disobedience to rules which have been devised expressly to prevent these falsifications. Thus in Westport district there are twenty-five of the reprimand cases (one in five) of this kind.

b. Ballina district.

205. In the Ballina district (three-fourths in Mayo, one-fourth in Sligo) my information is for two and a half years, ending Midsummer 1868. The average number of schools is ninety, so that the figures would require to be raised throughout in the proportion of four to three in a comparison with Westport. There were 119 reprimands and admonitions; 14 fines varying from 5*s.* to £2; 1 depression, and 25 withdrawals of salary—in all 159 cases of penal action; about two for each school in the district, in a period of three years. I have subjoined the list, omitting all names, in Appendix A. It will show the character of the favourite offences. The practical rules so often mentioned are, in the main, intended to secure accuracy in the accounts. There were in all 69 separate schools punished, in two and a half years. Falsification is sometimes visited by reprimand, sometimes by fine, and sometimes by dismissal. Of the twenty-five dismissed teachers, sixteen were probationers.

General low position of teachers.

206. The teacher's condition is altogether less satisfactory than in any other locality which I visited. Of the entire number—say 100, to allow for a few assistants—one is in the first class, sixteen in the second class, all the rest are third class, or probationers. There are only two who have proper teachers' houses, though there are six instances besides where the house (not being the teachers' own property) is rent free. There are scarcely any local contributions, and the deficiency is not made up by any excess of school fees. The eighty-three teachers (five in six of the whole number) who are third class or probationers may be considered to have an average income of £16 from the Board, and £1 10*s.* from fees, and many of them (about one in three) have to pay rent for their school-houses out of this income, or at least to keep them in repair. It is unreasonable to pay teachers 1*s.* a day, and to expect to get a class of persons universally animated by zeal for their profession, and with a high sense of honour. Where salaries are better, the general result is also better; and the Westport district, in which an example has been set in the large group of schools to which Lord Sligo contributes, possesses, no doubt, on the whole, a superior class of teachers, and gives less trouble to the Board.

c. Swineford district.

207. The tables in the Swineford district applied to two years and two months, beginning and ending as in Westport—an interval of ten months having elapsed during which there was no Inspector. There seem to have been 68 cases (admonitions not included) of penal action during that time, and they were substantially of the same character. I saw little of the district itself, and the changes in its inspectoral administration, which appear to have been frequent, probably made punishments a little less numerous than usual.

Effect of penal action.

208. It is impossible, I think, to contemplate all this penal action without feeling that the teacher under the Board has an uncomfortable life, between poverty on the one side and punishment on the other. If the class of men deserves this treatment, the sooner it is replaced by another, which would neither endure nor deserve it, the better for the country. In such circumstances how can they be contented, and why should they try to work towards the consolidation of the people or the support of the State? Watched, punished, starved, the master cannot fail to lose his self-respect. He is not likely to resent the strictness of the regimen under which he lives any the less, in those cases where possibly he would do worse work without it. His life is a perpetual struggle with want and discontent, and he sees nothing before his old age but the workhouse. It is not likely, *a priori*, that the Board should get a body of first-rate teachers on these terms, and I think it possible that the elaborate machinery of inspections five

times a year may be necessary, to extract as much good work from them as it does. The results are better than could have been expected at the price paid, but the saving is bought by the wretchedness and the resentment of a class whose cordial sympathy and support are of the utmost importance, and might have been secured. It was never of course a question of purchase; could it have been so, the sympathy of the teachers, their cordial loyalty, their influence in favour of the "National" idea which has animated the State in its foundation and support of the mixed system would have been invaluable. The hope that in spite of the religious differences which have long separated and will long continue to separate the people of Ireland, the next generation, educated together in schools free from the suspicion of proselytising and not open to the charge of secularism, may live in peace and unity, is one which is, I think, strongly entertained by the teachers of Connaught; but it is accompanied by a sense of injuries received from the Government so deep and so universal as to paralyse it. I do not add, so just, for there is a very great deal to be said on the other side; and the Board, whatever its shortcomings may have been, has done infinitely more for them than any other power. As things are at present, the social status of the schoolmaster is so low—in consequence of his frequent inability to pay his debts, to keep a decent coat on his back, or to make any provision for the time of old age and inefficiency when he is thrown aside—that his direct political influence is small. But his views on political and social questions are sown broadcast among the children of the nation.

209. This excessive amount of punishment, and the fact that the teachers are too poor, too little regarded, sometimes too ignorant, to resist or reclaim effectually against it, even when it is unjust or mistaken, must necessarily have a bad effect on the Inspectors themselves. No check on any tendency to oppression, could be devised which would be so reliable, as the elevation of the status of the teacher. As it is, I have heard considerable complaints against Inspectors, not now administering the district I visited; some of them made on such authority as to leave no doubt of their substantial truth. A venerable Roman Catholic priest, who is patron of several schools, told me with indignation of an Inspector, who examined the school of one of his teachers, with his hat on all the time—in his presence, he being the patron of the school, and of course bare-headed. I have heard teachers speak with something approaching ferocity of what they have had to endure in this way. But these were exceptional cases, and it was the general testimony of the masters, offered of course in many casual ways, but I need scarcely add, never asked for, that the Inspectorships in the West are now held by men interested in teaching, honest, capable, strict, and courteous. The fact remains, however, that the principal safeguard against the abuses of inspectoral power, is to be found at present in the care with which Government makes its original selections. The Head Inspector, who surveys ten districts, may see the schools once in three or four years, but there is little attempt made to appeal to him against an officer of his staff. It is perfectly open for the manager to remonstrate, but as he is generally not present at the Inspector's examination—getting no notice of it—he is probably unable to question the details by which the penal action is justified. The teacher cannot directly communicate with the office, and apparently he is often in too humble a position to communicate directly with his manager.

Complaints against former Inspectors.

210. A question was raised in my mind, very early, as to the mode of inspection. There are three regular inspections and examinations per annum, at uncertain times, and without notice given to teacher or manager. They may be separated by intervals of any number of months. In addition to these, there are "incidental visits," two being paid on an average annually to each school. The incidental visit is meant to check minor abuses. The Inspector makes a practice of dropping in at any moment of the year, just to see that things are going on according to rule. Thus the teacher should have his school open by a certain hour, say ten, and the Inspector walks in ten minutes after, to see that he is at his post. The school should not be closed before three, and, he finds occasion to be there at a quarter before three. The rolls for the day must be called before twelve, and he comes in a few minutes after mid-day, and counts the number actually present, comparing it with the number recorded in the book, or noting if no record has been made. The registers must be kept posted up regularly, and they lie always open on the master's desk.

Mode of Inspection.

a. Regular visits.

b. Incidental visits.

211. Is this inspection too much or too little? Is the system of incidental visits necessary, or does it do good? These are questions, to some extent, of administrative detail, but they touch on the whole relations of the teacher, and it would be difficult to overrate their importance. It was not easy, perhaps, accustomed as I had been to the annual visit, with ten days' notice preceding it, and to the cordial understanding due to their friendly interest in a common object, between Inspectors and Managers in Scotland, for me to regard these arrangements at first with perfect impartiality. I came very soon to recognize, that an amount of government is expected and usual in Ireland, which would neither be expected nor endured in Scotland or England. There is no doubt that the Irish patrons do not, as a rule, take so much interest in the schools as those in Great Britain, and that outside of the patrons there is no effective local interest at all. Then the excessive irregularities in the attendance make it difficult to recognise the same school, visited in February, and in July. I can believe, therefore, that a winter and a summer inspection are equally necessary. I should hesitate to say that there may not be advantages, even in three per annum, especially if one of them were clearly differentiated from the other two. I think it would be extremely desirable, for instance, that on one occasion in the year, the school should be invited to make the best appearance it honestly could—that the managers should have notice of the visit, and that it should be open to the parents of the children to come, if they chose. At such an inspection, an individual examination, on the principle of the revised code, of all the children who had attended over, say, one hundred days in the year, as in England, might, perhaps, be followed by a distribution of small book prizes, worth 1*s*. or 1*s*. 6*d*. to all who passed in the three subjects.

Possible modifications of system of regular visits.

212. My feeling would still lead me to prefer that incidental visits should be abolished. When a teacher gets more than he thinks his share of them, he begins immediately to look upon himself as a suspected man, and attributes all the Inspector's after conduct to personal malice; a reason of action imputed in the west of Ireland with a readiness I have never seen equalled elsewhere. I do not doubt that these visits tend to check abuses; but they do so in a way which brings evil effects, sufficient to make up for a good many. With the little local interest now taken in the schools, abuses are likely enough to arise—unless the eye of the State is everywhere—especially with underpaid and discontented teachers, constantly watched and treated without confidence. But they are not prevented at present, as the long lists of punishments for falsification, for neglect of practical rules, and so on sufficiently prove. I doubt whether under a more generous system they would be more numerous; especially if it were possible to stimulate the people of the locality to take a greater interest than they now do in school affairs. In local superintendence, and as it appears to me, in that alone, can we find the remedy for the petty abuses against which incidental visits are directed. As long as they are continued, I think it will be difficult to make the teacher feel that the State is anything but a cruel taskmaster, from whom his wages are extorted, to whom he owes no attachment, and pays none. In schools open to a winter and a summer visit at uncertain times, subject at each visit to a strict examination, and inspected once in addition, with notice and in public, I am inclined to think that the Board would exact as many guarantees, on all sides, as it prudently can even in exceptional circumstances.

Effects of incidental visits.

213. I permit myself to say so much on account of the importance of the subject; but I feel that I am not

General opinion on the subject.

sufficiently acquainted with the habits and character of the people to express myself more decidedly. The Inspectors of the National Board in the main disagree with me; the local patrons, both lay and clerical, are almost universally opposed to any relaxation of the system, and the reasons they generally state, are the insufficiency of the present management, and the extreme unwillingness which prevails in Ireland, to inform the Government of any offences against it, which its officers do not discover for themselves. The teachers are, I think, about equally divided. I need not say, therefore, that the preponderance of adequately informed opinion is distinctly against the views I have expressed.

FREQUENCY OF EXAMINATIONS

214. Another grievance, far less commonly stated, is the amount and frequency of the examinations to which the teachers are subjected. Many of them, indeed, look upon these with a curious tenderness, as, in a sense, symbols that, poorly as they are paid and little as they are trusted, they belong, nevertheless, to a great profession; and they would regret their curtailment very much as the army would be distressed by a diminution in the number of grades in the service.

215. For myself, I cannot see what advantages are secured by the perpetual examinations and re-examinations which a teacher has to undergo. There are eight distinct grades—the lowest of all being the probationer. He appears to present himself to the District Inspector, and to pass a test very much at that officer's discretion, but amounting substantially to a Third Book class examination, and then, if he is above 17, he may be admitted to take charge of a school. There is always a plentiful supply of schools, which nobody but probationers can be got to fill. Of the 6,000 principal teachers, 500, and 902 of the 2,200 assistants and junior assistants, under the Board, offer no better guarantee of their fitness to teach. The number of probationers in my district was exceptionally large and corresponded nearly with the number of inefficiently taught National schools.

216. These teachers are summoned, about a year later, for an examination before the Inspector, and by an ingenious arrangement, this examination is broken into two parts, the "written," and the "oral," to which those only are admitted who have got a certain proportion of marks in the "written," and which follows it at an uncertain interval of four or five months. The probationer who does not pass, has a second chance given him a year later (if the Inspectors permit, as they seem usually to do), and no more, according to the rules of the Board. These rules, however, cannot be very strictly carried out, as I found one probationer in a remote school who had continued in that rudimentary condition for six years. Most of those who struggle through the double gate of the "oral" and "written" are classed as III^2, a few as III^1, a very few higher. At III^2 the teacher finds a long staircase of six of these double steps (*i.e* "writtens" and "orals") before him. He can make none of them without examination. He can scarcely do better than take a year to each; he is occupied most of his life in ineffectual attempts to rise through them. He has to wait till he is authorized by the Inspector to try each successive time, and he must try when the Inspector tells him to do so. Sometimes he works away for years, without being summoned; sometimes he is summoned too frequently for his comfort. It seems very rare that he goes up step by step, year after year; and after the examination time of life is over, whenever that may be, he must get more and more sick of the continual thrashing of the well-worn chaff of his cram books. Long after anybody else is treated as a grown workman, and judged by his work, he is tested like a school-boy, and kept rubbing up elementary text-books. They lie on his desk in school hours and interrupt his day duties; no doubt they haunt his evenings and his dreams. I confess it appears to me a great waste of power. I can well conceive the propriety of separating those who just pass at first, and those who pass well, and possibly there might be some advantage in a second examination for the latter, and a third for the former. After that, it appears to me that the success of the teacher in his proper work is the only test which the Board should apply to him, and that the highest classification should be attainable through a sufficient period of very good service. I do not know how much official time, paper, and money, are spent on the present laborious system; but the amount of all three must be very large indeed. I do not mean, of course, that a teacher is any the worse for a thorough knowledge of the subjects he has to teach, and a little beyond them; and there may be some truth in what I was often told, that without the application of this perpetual goad, the Irish teacher would not be disposed to keep up his knowledge. But I cannot think that a person who has arrived at years of maturity, and who is already certified to have a creditable knowledge of his subjects, will be bettered on the whole by unremittent examinations. If his energies are too many for him, and if he has no books or private tastes, he might always find something to occupy him where he would be doing good in his vocation, in the evening school To judge a man after, say, thirty, by examinations alone or mainly, is surely a mistake.

Small results obtained.

217. I have said that most of the teachers appear to drag themselves slowly and by exhausting efforts up this ladder of promotion. The great majority of those near the top, have probably attained their superior position in consequence of their superior start, as the best students of the training colleges. Yet, after all, there is only one out of eight principal teachers who appears in any of the three grades of the first class. The efforts of the remaining seven are cheered by the fact that they may be "depressed" and "summoned for depression," just as they may be promoted. If, by any chance or change of circumstances, they leave the service of the Board for some little time, they may have to begin it all over again as "probationers."

COMPLAINTS AGAINST BOARD.

218. I have represented in several places that dissatisfaction is frequently expressed with the action of the "Office" in Dublin. I had neither opportunities, nor any desire to institute an inquiry into the conduct of the Department there, or to learn anything of its working, except so far as it was necessarily involved in the history of the schools in the West; and I have little doubt that sufficient explanation might be given of many things which appeared to have caused ill-feeling. It must be almost impossible for any Department to maintain friendly relations with a body of men whom it finds it necessary to punish, as the Board punishes the teachers in the Ballina district. Workmen paid wages so low as these men, are little likely to be contented with their masters, however considerate, forbearing, and paternal they may be. I cannot wonder that a fine of £1, taken out of a quarterly salary of £4 10*s.*, or a delay, for no apparent reason, of six weeks in the payment of that salary, should aggravate the sufferer. Thus on August 22nd, two teachers at A and B received their payments for the quarter ending June 30th—all the forms having been duly filled up, and forwarded in proper course, and one or two letters of complaint from the patron having been found necessary to produce even so much despatch. In such cases, I did not ask for explanations from Dublin. The feeling among teachers and managers in the west, caused by what they complain of as the needless delays and uncertainties of the Office, is nearly universal.

a. Official delays.

219. Here is a single case in illustration. On 27th May, 1867, a schoolmistress came to a school six miles from Westport, by the appointment of the manager. He appears to have received a letter, two or three months after, stating that the average was not sufficient to entitle the school to her services. An attendance of forty-five is necessary, and in the quarter in which she came the average was 31·9. He told her to go on, if she liked, at her own risk, and that he would be very glad if she could work up the school to the proper average. Next quarter it was accordingly 51. Notwithstanding, no payment came to her. Next quarter, there appears to have been some cause of falling off, and it went down again to 31·6. Next quarter—the first of last year—it was 80·6. I do not know what it was for the second quarter of the year, but the teacher had just been told that she would be taken on from June 30, 1868, but that nothing was to be paid her for the preceding thirteen months of work. There is no fault on her part—her manager is thoroughly satisfied, and he told me that the

District Inspector had expressed himself satisfied also. She has been lodging in the locality, and living away from home on the strength of this salary, which she appears to have been entitled to receive for the last nine months, as an average reached in one quarter continues to be reckoned to the school until the fall has appeared in a second quarterly return. She has worked, she says, very hard all the time—devoting herself entirely to teaching the school, and giving a great deal of extra labour, after school hours, so that the needlework should be satisfactory. She thinks that she may take some credit for the increase in the attendance, as it was 15·8 in the quarter before she came. Her claim now, is for £14 for the year for which she is told she is to get nothing—or at least for £10 10*s.* for three-quarters of it. She has got into debt, of course, and has not a shilling in the world. About five years since, in a school where she assisted previously, she was about ten months as workmistress without receiving any salary. Then the lady of the patron, who was a Member of Parliament, wrote directly to the Board, and about three or four months after her letter, payment was made. She says she is heart sick of these delays, and is tempted to go to service of any kind, rather than continue teaching.

b. Changes made by Board.

220. There are other complaints, often repeated by people from both sides, (*e.g.* pp. 174, §§ 6, 175, II.), to the effect, that recent regulations of the Board are hostile to its own system. As it possesses semi-legislative powers, and as the regulations issued on its authority may be conceived in the spirit of one or the other of the two great parties, neither is satisfied with the share of power assigned to it—ten Roman Catholics against ten Protestants of all kinds—in the constitution of the Board itself. I do not understand why the detail management of the National system need differ essentially from that of any other public office, if its principles, once decided upon, were permanently adopted and expressed in an Act of Parliament. After that, the Board need be nothing more than an executive.

c. Rules which have become obsolete.

221. The teachers often charge the Commissioners with having broken faith with them, and point to some of their own printed rules, which undoubtedly are not at present in operation. Thus, before assistance can be granted they must be satisfied that "some local provision will be made in aid of the teacher's salary in addition to the school fees, and that the school is in good repair and provided with suitable furniture;" and the house and furniture "must be kept in sufficient repair by means of local contributions," to entitle to continuance of aid. They are anxious that a further income be secured to the teacher either by local subscriptions or school fees, and they require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the teacher. These regulations are, certainly, obsolete, and if they ever did the masters any service, they can do so no longer, since the fact that they are a dead letter is universally known. Whether the Commissioners ought to have refused to encourage any system which neglected them, is a question on both sides of which much might be said. Nothing they could do could alter the two main facts—1st, that the clergy will *not* heartily encourage any system in which they, and they only, have not absolute power in their own schools; and 2nd, that the landlords will *not* voluntarily subscribe to the support of schools from which everyone but the clergyman is excluded. It is against these facts that the regulations of the Board have been powerless in West Connaught.

Tenure of Office.

222. The arbitrary power, vested in the patron, of doing absolutely as he chooses with his schoolmaster, while the State accepts the subordinate position of paying for him, is the most anomalous feature of the Irish system. There are a few very good school managers in Connaught, and I am not sure that, anywhere, managers and patrons interest themselves, as a class, in schools, as they are officially supposed to do. There are abundant complaints, however, no doubt perfectly well founded, that many managers, perhaps the majority, do little beyond appointing and dismissing the teachers and signing the school-papers in course. The majority certainly do not manifest their interest in education by money sacrifices. I have said above that the local contributions (excluding fees) towards school expenses amounted to £210, and deducting £25 paid in endowments, there is left a sum of £185 raised to aid in supporting twenty-nine schools (out of 106). Probably the majority of these 29, and, say, a third of the others, are kept in repair at the expense of the patrons, in addition. The patrons of 47 per cent., therefore, neither pay nor get others to pay towards the support of them in any shape, the entire income coming from the State, and from fees. In 24 per cent. more, the payment is limited to keeping the school building in habitable repair, and it is only in the remaining 29 per cent. that anything at all is contributed towards the teacher's maintenance. I found it usually the case that the managers who gave money, however little, gave time and labour.

Power of Managers.

Clerical and lay patrons.

223. The largest class of these patrons (60 out of 106)—the Roman Catholic priests—have their position by virtue of their spiritual office, which procures for them the confidence of the parents. In four schools under them there is voluntary contribution, either given by themselves or procured by their influence from individuals. In fifty-six, with the exception of the maintenance of the schools in repair, in a few, say, a third of the whole—there is no payment whatever. The bulk of the lay patrons of both denominations support their schools by small contributions. The clergy, on the other hand, have built or bought many of the non-vested schools of the district, and their encouragement of course increases the attendance of the scholars. With these exceptions they do nothing for the schools. The State retains in its own hands the power of withdrawing salary from the schoolmaster; the patron has the power of withdrawing the schoolmaster from the salary. He appoints him, he dismisses him, with or without reason, at a day's notice, or at no notice; he has absolute authority as to all school affairs, except that he might perhaps need the Inspector's consent to any change in the time-table, after it has been agreed upon, that he cannot introduce other books than those of the National Board, and that he must allow the separation of the secular and the religious institution.

Who are patrons?

224. Who are the patrons to whom this arbitrary and unlimited power is assigned? To begin with, all but every school in my district has one and no more than one; there is a single exception in Westport, where a school committee acts. The regulations about patrons are of the utmost simplicity. 1st. "The Commissioners recognise, as the local patron, the person who applies, in the first instance, to place the school in connexion with the Board." 2nd. "In all cases the Commissioners reserve to themselves the power of determining whether the patron can be recognized by them as a fit person to exercise the trust." In theory, unless someone has asked before him, anybody may become a patron of a school by asking leave of the Board to do so. Practically, persons without real influence in the locality have either not applied, or their applications have been rejected. A clergyman who writes, saying that he wishes to put a school under the Board becomes patron of it at once, and his successor in office after him for ever. A layman who can close the door of the school, whose property, in fact, it is, may become patron of it, of course. All the patrons I met were clergymen or landlords; the great bulk of them being the Roman Catholic parish priests.

How system has worked.

225. The extraordinary dangers of such arrangements are sufficiently obvious. The teacher, after his training, examination, and certification by the State, is liable to dismissal at a moment's notice, for no cause whatever; and this power is exercised by a person who, in three cases out of four, pays nothing towards his support. The State retains the power of verifying the proper performance of the work done for it, in any way it pleases, and maintains the master, by paying him, in many cases, his entire salary. After school hours, and subject to this verification, in school hours, the master is as much the servant of the patron as the latter thinks fit to make him, and as he is willing to bear. It appears to me, that such an arrangement can scarcely be defended in theory.

It can only be justified if it can be shown to have worked in a satisfactory way in practice; if the patron has in general exercised his powers for the good of the school over which he has been set; if any social influences have, as a matter of fact, prevented the abuses which it could not but be feared would issue from the situation. These justifications are sometimes pleaded. In my district at least I have seen quite as many, and quite as bad abuses of this arbitrary power, as could have been anticipated.

Cases A & B.—A Lay patron dismisses two teachers.

226. The circumstances under which the male and female teachers of the National schools at A were dismissed, will illustrate their character. The school at A is vested in the Commissioners, and all repairs upon it are done at the public expense. The patron was the landlord, on whose property the school was built. He, no doubt, contributed one-third of the original cost of building, and he gave a site and ground which now brings to the teacher an income of about 17 shillings a year. He took great interest in the schools and constantly superintended them. There was, however, no local contribution of any kind towards their expenses. They had an average attendance of between 150 and 200 children, and the school fees amounted to about £7. The Board paid the entire salaries of all the school staff, in addition to maintaining the buildings in repair.

227. The patron recently retired from that position, and left the locality. His eldest son was appointed to succeed him, and arrived at his father's house, where he has taken up his residence, on a Wednesday. The male teacher had heard it reported all over the town that when he returned—he had lived in the neighbourhood during his father's residence on his estate—the master was to be removed, through the influence of a person whom he regarded as unfriendly to him. On the morning of Friday, two days after the patron's arrival, the teacher was induced to seek an interview with him, in the course of which he humbly and respectfully expressed his hope that there was no foundation, in fact, for this report. His new master appeared to be in a violent passion, and said that he should remove him; his words were, "Now, I might have given you B, but I shall send you to C; and I advise you to be cautious, for there is not a word you say that I am not told." The teacher replied that he had been as cautious and as dutiful as possible, and that he must have been misrepresented. In the evening he was sent for and told that he was removed to C, a school, to and from which he would have had to walk eight miles a day (as the present teacher of it does, there being no place on the spot in which he can find a decent residence); with not half the attendance, so that his salary might have been cut down, by the rule regulating averages, from £32 to £18, and where he would have had no school-fees, the income from which amounted to £4 in his own place. His patron has six schools under him, three of which are A, B, and C. On the same Friday evening he had promoted the teacher of C to B, and the teacher of B to A. On Sunday evening the parish priest informed the dismissed teacher that, as the master from C had gone up for training, in opposition to the edict of the hierarchy, *he* should not permit him to hold so important a position as that in B, and that he had managed to secure that this dismissed man should not be sent to C, but to B. It was his brother-in-law who was removed from B to A, but this fact does not appear to have been felt as any alleviation of the hardship. B is, he says, a less valuable school than A, in consequence of its less central situation, because he will lose his good service salary, the renewal of which will depend on a fresh certificate from the Head and District Inspectors, because he will have six statute miles a day to walk, and because he has to exchange an assistant and monitor trained under himself for others.

228. On the Monday evening the teacher of the female school, the wife of the dismissed teacher of the male school, was told in the town that the new patron meant to dismiss her next day. On Tuesday he came into her school, accompanied by her brother, the new teacher of the male school, (which is in the same building, on the ground-floor), who had on the previous day taken her husband's place. He then called the mistress, and her assistant before him, and asked the latter whether she would be able to take charge of the school, to which she replied in the affirmative. He turned to the principal teacher and said aloud, before all her girls "I dismiss you." The girls commenced crying, and the patron said "Come outside and I will tell you the reason." All three went out together, and he said, "The reason I dismiss you is that you called a certain person" (naming him) "a sheep stealer, and a shopkeeper in town, father of some children at school" (naming him) "a whitewashed rogue." She said that she had never mentioned any name in connexion with these words, but that she did say, "Thank God, though they have dismissed my husband, yet they did not do so on account of his having been a rogue, or in gaol, or a sheep-stealer." She stated to the patron that three persons were present (naming them) when she said so, and that one of them was connected with a youth who had been an assistant teacher, under her husband, and who had been sent off to America, the late patron paying his passage, because when he came back from training, to which he had gone (having been summoned by the Inspector and ordered to go by his patron), in spite of the edict, the priest had denounced him, had cut down the attendance and would have annihilated it altogether had he not been removed. This woman had said to her that she had a spite "long in" for her and her husband, because she considered that they were the cause of sending her boy out of his native land. After this conversation all three returned to the school, and the mistress asked the patron to allow her to take with her the clock and school requisites which belonged to her, and which she had paid for, and he said he had no objection. She said further that she had taught for sixteen years under his father—having been promoted ten years ago to this school—and that nobody had ever tried to get her dismissed but the person who had done so now, and he had attempted it before.

229. I informed the patron that I had learned the substance of these particulars in answer to questions which I had put to the teachers, and he said that he preferred making no statement through me, as to the reasons which induced him to take these steps. I do not understand that there is any doubt as to the substantial accuracy of the main points of the story. The Daily Report Book contains the entry signed by him—"Visited the school this day and dismissed the schoolmistress, ——— manager of the school."

Character of teachers.

230. The District Inspector had previously stated to me, that, in his opinion, the two teachers were two of the five in his district whom he should be disposed to place highest. I saw the schools on the Friday, a week after the dismissal of the husband, and a few days after that of the wife. The work shown was substantially theirs, and my opinion entirely agreed with that of the Inspector. The husband had been fifteen years a master—eight under the patron's father, by whom he had been twice promoted, and never removed except for promotion. The wife had taught under the patron's father for sixteen years—and had been promoted ten years ago to the school from which she was dismissed. There is no breath of suspicion against the moral character of either, and no statement of his reasons appears to have been given by the patron to anyone. It is universally felt among the teachers of the district to be a case of the greatest possible hardship. The husband has since been appointed to a school near Dublin, the wife not having been restored, as far as I know. She was offered the assistantship in her former school, under her former assistant, but she refused it.

231. The facts are more eloquent than anything that could be said. A new patron, who does not contribute a halfpenny towards the support of the schools, the entire expense of which comes from the State and the parents—who no doubt knows the teachers, and the local circumstances, but who has had no detailed acquaintance with the condition of their schools or the way in which they are worked, without any reason assigned, depresses a first rate teacher, with fifteen years' service, with good service salary from the Board, with eight years' good service under his father who preceded him as patron, to a position very much inferior—and he

takes this step after a residence of two days in the district as patron, and without a shadow of reason given, except that "he advised him to be cautious," for that "there is not a word you say that I am not told." The wife takes her husband's part, says that he at least has nothing to be ashamed of in his life, and hurls a bitter word or two against some person or persons whom she supposes to have been the cause of her husband's ill treatment. On the instant, she, also an excellent teacher—ten years in her situation, which was the best in his gift, under the patron's father, and sixteen years altogether in his service—is absolutely dismissed. The National Board, representing the State, calmly accepts the position and allows two of the best of its teachers, according to the opinion of its own officers, to be dismissed at an hour's notice, without moving a muscle. Its rule is, that "the local patrons or managers have also the power of removing the teachers of their own authority;" and it respectfully adds that "managers of National schools are requested to notify all changes of teachers to the office, and to the Inspectors of the respective districts." Powerlessness of State.

232. The action of this patron's predecessor appears to have been different. It must have been his principle that changes were good for his teachers (one told me he had been shifted about from one to another of the schools under him thirteen times in nineteen years), and accordingly he moved them with great freedom, just as he thought right. As far as I could gather, the masters felt that these changes were often made on reasonable grounds. Occasionally he appears to have been attempting in this way to defeat the hostile activity of the Roman Catholic clergy, the whole weight of whose opposition seems to have been generally concentrated at a given moment against a particular offending teacher or school. The patron accordingly used to withdraw the master to another school less under the ban, and the clergy were seldom so unreasonable as to follow him to his new situation, at all events for a time. Previous action in same group of schools.

233. He was very anxious that teachers summoned for training should take advantage of it and go up to Dublin. A late assistant in one of his schools, A, went up accordingly, and he and the school were denounced from the altar immediately after his return. The denunciation, as I was informed by one who was present, was to the effect, that so long as that *assistant* taught there, he and all the children going to the school, and all their parents would be excluded from the rites of the Church. The attendance which was 69 for the previous week, fell to 33—and would have fallen lower, had the people not learned in the course of the week that it had been arranged that the assistant was to leave for America on the Friday—his passage out being paid, it was understood, by the patron. Sentence of starvation or banishment, in point of fact, had been recorded against him, and it was carried into effect within a week after his return from the training school maintained by the Government and denounced by the Catholic clergy. Had he struggled on or been allowed to do so, the principal teacher who had not offended would also have lost his living, because his school would have been cut away under his feet. The Government which had just trained the emigrant teacher might have quite as well presented what his training cost them to the people of the United States. The week after he left, the average returned to sixty-two.

234. The present teacher at the neighbouring school C, went up from A, where he was principal teacher in 1864, to attend the navigation class at the training school. He had been previously trained and classed. As A is a small harbour of some importance, the patron had resolved to introduce lessons in physical science and navigation. On the morning when the master was about to leave, the priest came up to his room and prevented him, but the patron subsequently insisted that he should go and he went accordingly. He remained there for five months. The religious system is the same, he says, as for the teachers in training in the general model school, and there was a strong feeling among them all that every possible attention was paid to their religious duties. When he came back from Dublin, whither he had proceeded in obedience to the summons of the Government, and his patron's express command, he was surprised and aggrieved to find that another permanent teacher had been appointed in his stead. He was removed to an inferior school, D, three miles distant, so that he had to walk six miles a day. He left the school at A in an excellent state as to apparatus, &c., mainly by help of Mr. Vere Foster's grant, the contribution to meet which he himself had given. At D there were no maps and he had to supply them, and everything was in a wretched state. The average attendance at A when he left was 120, and at his new school it was 30. There was no opposition given him by the clergy from June, 1864, to April, 1867. His average attendance was 45. At that time he was removed to C, a worse school still, with an average of about 12, and one mile further off than D. Cases C. & D.—Same group of schools.

235. His predecessor at C had gone up for training in January, 1866. The same patron had insisted that he should go when he was summoned, and he had gone accordingly without the priest's consent and with no certificate from anyone but the doctor. He says that while he was there, there was no complaint among the teachers themselves as to any want of care in the authorities over their exact performance of their religious duties. They were one and all convinced that they were as thoroughly attended to as was possible, and more so than they were at home. When he returned, the priest refused him the rites of the Church, but for nearly a year he did not interfere actively with his school. About the end of January however he denounced it and the parents and children supporting it from the altar, telling the people that the model school was a bad and obscene place, and interfered greatly with the morals of teachers. After this the scholars, most of them, left the school and remained away. The priest told this teacher's mother (who depended on him for support) that he thought it possible that her son might not be troubled if he went to another parish, but that he was compelled to act as he was doing. The teacher told this to the patron, who appointed him to D, removing the D teacher to C.

236. Leaving him there I follow the other master. He had found the attendance four or five in April and he managed to raise it to about forty in November. At that time the "Station of Confession" took place, and the attendance fell to about twenty, all the children from the parish in which C is situated, leaving, but those from the neighbouring parish remaining. Orders had been issued against the school which are still in force, and which are renewed at the Stations, but it is not now denounced from the altar, and about 20 of the children, from the parish in which C is situated, have returned. Nothing has been done against them or their parents.

237. At D, to which the ex-teacher of C was sent, there was for some time no opposition. Then the new priest spoke against the school from the altar, but not very severely, and the orders against it not being repeated at the Easter station which soon followed, but little damage was done. For the first quarter of 1868, the average attendance was 40. On 24th May the school was effectually denounced, the priest this time saying that he would curse the parents and refuse them the rites of the Church. The children immediately left. The average for the quarter ending June 30, was only 9, some of these being Protestants. This action and the effect of it still continue, and the present attendance is 3 (average for July), all Catholics.

238. The patron, in fact, had to deal with two neighbouring priests, neither of whom appears to have been anxious to take notice of transgressions which were not brought within his official cognizance. Believing in his own inability to protect the teachers when the clergy did choose to interfere, the patron instantly moved a teacher against whom a successful persecution had been commenced, to a new place. So long as the ex-teacher of A remained in D, the priest of that parish, living four miles or so from A, was not officially (or for anything I know, not in fact) aware of his disobedience to the clergy, and he was not molested. When he returned to C, he was in his original parish, but in a worse school, so that the punishment he was actually undergoing, his

eight miles weary walk each day, along a most exposed road, and the other disadvantages of his situation, compared with that from which he had been originally driven, may have pled for him for a time, and may still mitigate the severity of the action taken. For some reason or other, the priest of the neighbouring parish (D) appears not to have been willing to let his successor who had also committed his crime in A, remain quiet so long at D.

239. I told the late patron the general nature of the information I had received. He has given up the business of school management, and prefers not to return on any such details.

240. The cases I have just narrated exhibit the action of lay patrons. In one instance it is a benevolent but very decided despotism; in the other, so far as it appears, it is despotism and nothing more. In neither case did the persons who exercised these powers pay any yearly contribution to entitle them to do so; but without the late patron the schools might possibly never have existed, and he gave them a great deal of very valuable time and superintendence. In his contest with the clergy, he was enabled to protect the teachers to some extent, by virtue of this absolute authority. The new patron had not had opportunity when I saw him to do more than exert himself as I have described. Both were gentlemen of high position in the county, laymen, and members of the Established Church.

Case E.—Clerical patrons dismiss three teachers.

241. The case of four teachers near E will farther illustrate the insecurity of the tenure of office, and will show that the schoolmaster is not allowed by spiritual patrons to forget the absolute power of dismissal which is vested in them, or that it may be used in defence of any interests and to repress independent action of any kind. My narrative is taken from the statement of a National teacher who was resident, at the time, in the parish of the clergyman principally concerned, of one of the masters, of the Inspector, of one of the clergymen, and of the documents published in the local newspaper. As in all similar cases, I have given every other person who could consider himself injuriously affected by an incorrect account, ample opportunity to furnish me with his own statement of the facts.

242. In the summer of 1866, charges were made against the District Inspector of National schools by the Rev. Mr. ——, P.P. of F——. An investigation was ordered by the Board, and, as a consequence of it, the Inspector was admonished and removed to another district. The official decision appears to have been a little hasty, for any censure implied in it was afterwards revoked, and the charges were pronounced "unfounded." It is not, in my view of the matter, of the slightest importance which of the two parties to this quarrel was in the right. The Inspector had gained the good opinion of many among the teachers, and four of them issued the following circular to their brethren.

"September 1, 1866.

243. "We beg to inform you that in consequence of the present District Inspector being on the eve of promotion and removal to another part of Ireland, we have been requested by a large number of teachers to solicit subscriptions in order that a suitable presentation, accompanied by an address, be given him before he departs from among us. We need scarcely remind you that he has been a stern advocate of the teachers' rights, and that he has, in connexion with his official duties, endeavoured to promote their welfare."

244. The remainder of the circular specifies particulars about subscriptions, and the teachers signed their names as a committee. The official decision in the case of the Inspector had been communicated to the Rev. Mr. —— in a letter from the Education Office, dated twelve days before this, but as it had not been published by him, the result that the Inspector was about to leave, was probably all that was accurately known by the authors of the circular when they issued it. The Rev. Mr. —— wrote on the 9th to a newspaper published in the town which was that gentleman's official residence, informing its readers that the Inspector had been punished in place of being promoted, giving the teachers' circular, which had not been addressed to him, and adding:—

245. "The object this has in view is, I believe, to compliment the Inspector, and thereby, as far as it can, prevent him falling back to his original position, and, at the same time, censure Father —— (himself). The implied censure, even from such sources, I would respect if I deserved it." And closing with—"If any, then, except the gossips of 'this town' and near it, as well as the writers of the above circular, can see promotion for the Inspector in this punishment of the Commissioners, I believe I may go down."

The next number of the same (weekly) newspaper contained the "Teachers' Defence." It is rather a long document, but I must quote enough to show its spirit and tenor.

246. "We are educators of the poor. Constant observation on the growth of the human mind has given us an amount of experience in the department of education which enables us to determine how far one method of teaching may be more advantageous than another, and whether education has progressed in the locality in which any of us may be situated, or whether it has retrograded within a given period of time. As we are but mere auxiliaries appointed to labour after a prescribed form, and as the National Board's Inspector is the person instructed to communicate to us the method of teaching which we are to pursue, it is evident that the education of a district will increase or decrease according as he is efficient or inefficient, zealous or negligent. We feel that we were competent to judge of the efficiency of our present Inspector from our long acquaintance with educational matters, and we consider that, as an educationalist, he had few equals. Moreover the half-paid teachers of this region were beginning to perceive that his disinterested advocacy of their claims to a better social position, with those with whom his duties brought him in contact, was gradually sweeping away the prejudices from the public mind, which, since the establishment of National education in Ireland, have more or less retarded the payment of local fees towards their salaries. Under these circumstances, then, can it be wondered at that when it was announced, by 'gossips,' if you will, that the Inspector was about leaving, we should step to the front to present him with an address and testimonial to mark our sense of the efficient discharge of his duties in the public service. Our action was guided solely by our belief in the prosperous condition of education, under his supervision, in the increasing interest manifested by local parties for the teachers' welfare, owing to his representations, and in the general state of advancement of schools under his suggestions. We deny having any authentic knowledge of, or any interest in, the private misunderstandings of the Rev. Mr. ——, save, indeed, certain ambiguous details which we were compelled to listen to, in order to gratify the whims of an acquaintance.

247. "The reverend gentleman has written that the 'gossiping' produced the circular. If by this is meant that we have been influenced directly or indirectly by any person or party in acting the part we have assumed in this case, we beg respectfully, but firmly, to give it our contradiction.

248. I may add that the Inspector was entirely unaware of the proposal to compliment him till the Rev. Mr. ——'s letter appeared in the newspaper, and he then informed the committee that he should not feel himself at liberty to accept anything of the kind. The teachers proceed—

"Though we are but humble men, subject to the will of the Board, our good managers, and the people, we claim to possess as much honour as would prevent us becoming the parasites of any man or any party; we have not the unmanliness to act in that manner, the duplicity which in what are called refined circles, prompts the soft word to the lips and freezes the heart with deceit. We affirm that we had no intention or desire that the circular written by us should convey a censure on the reverend gentleman. Why should we act thus? The Inspector was leaving the district, or supposed to be leaving; we could expect no favour from him, nor could it be said that our action was any other than disinterested, and will it be supposed that we would upon the strength of mere idle gossip, upon which we could not rely, assume to ourselves the responsibility of passing a censure upon the Rev. Mr. ——? We, who can be deprived of our present means of support by three different parties, viz., our managers, the Board, or the people. The question is preposterous. Had we been cognizant of all the facts of the reverend gentleman's case, had we seen the Board's letter which he quotes, had we lent our ears and attention to the petty bits of news which radiated from his parish, and had we no

higher thought or motive than rabble-like, to take the one side and rail at the other, then indeed we would admit that the motives imputed to us by the reverend gentleman were well founded. But the reverse of all this is the fact. It may be that the reverend gentleman supposes that, 'even from such sources,' no genuine sentiment of manliness, no higher motive than that which panders to the ruling power could emanate. We will not stop to inquire whether the reverend gentleman entertains this idea in its widest sense or not. Possibly the reverend gentleman has taken up the same view as the majority of the men of the present generation—that if a man be in a lowly station, he must therefore be devoid of honour; if in poverty, he must be unworthy of trust. We shall not question other men's opinions, or other men's motives; we simply know our own, and as we believe them to be honourable and just, as well as having no desire, either by word or deed, to hurt the feelings of any gentleman, cleric or lay, we must beg to be excused if we endeavour to maintain them unsullied."

249. This letter appeared in the newspaper on the Wednesday, and these are all the passages in it which appear to me capable of exciting any angry feeling. The four teachers were under four Roman Catholic clergymen, as patrons, none of them under the Rev. Mr. ——. They resided at distances of from ten to fifteen miles from him. Their original action, as they themselves explained it, was perfectly natural and competent, and any passages in their letter which indicate warmth are abundantly accounted for by his preceding letter and conduct. In any event, the quarrel was one with which their own managers had nothing to do. Even had they been of opinion that the teachers had interfered in a matter which did not concern them, or that they had allowed themselves to use imprudent expressions, and to fail in the respect due to a clergyman, a little friendly admonition would surely have been enough. One of the patrons took this view. Another whom I saw, was absent at the time, but his curate, acting for him, suspended the teacher, who was not allowed to resume work until after his patron's return, and then only on the publication of a letter in the newspaper expressing his regret—a letter of which I have not obtained a copy, but which I believe was intended on the one hand to sustain the curate's action, and on the other to re-admit the teacher on terms as easy as that condition made possible. That teacher, I was informed both by the patron and by the present District Inspector, is one of the very best in the district. He himself *declined to give me any information on the case*, having had enough trouble about it already. The relative position of teachers and patrons is still, of course, the same as it was at that time. The third had three courses presented for his election—to recant publicly, to be dismissed, or to resign. He chose the latter, and went off to Glasgow, got employment on the staff of a newspaper there, and when he had gathered enough money, emigrated to America. These three teachers were, all of them, young men of marked ability and promise, and natural committee men for such a movement. The fourth was only seventeen years of age at the time, and he was dismissed, but finally restored on his signing and publishing the following letter to the editor, in next week's paper:—

"Sir—I very much regret having given the sanction of my name to a document that has appeared in the last issue of your journal, a document, which upon perusal and reflection, I consider as imprudent as it was impertinent."

These are all the material facts, and perhaps it is scarcely necessary to supplement them by the statement, that one of these teachers had a mother and some helpless brothers and sisters depending on his earnings for their support.

Effect of these proceedings.

250. It is as little necessary to point out the impression that must have been made by them on the schoolmasters in the district. Three out of four Roman Catholic clergymen carried their professional friendships so far as to treat this proposal, which, in itself, was perfectly innocent, and the slightly independent attitude which the four teachers had afterwards assumed towards a fifth Roman Catholic clergyman, who was only a not very near neighbour, as an offence only to be wiped out by retractation or dismissal. The teachers were mistaken in speaking of the Inspector's promotion; their circular however was not addressed to the Rev Mr. ——, and contained no reference to him. He chose gratuitously to attack them, and to print and publish his views about "gossiping," and "such sources," and while they answered him by a simple statement of their real motives, and a repudiation of all desire to interfere in his quarrels, they did not affect to conceal that they were hurt by the language he had allowed himself to employ. High qualifications and excellent past services to the communities of which these clergymen were the spiritual leaders, were insufficient to save the teachers from the alternative of public humiliation or private ruin.

Position of the patrons and teachers.

251. Not one of the patrons who acted in this way had (as I am informed) either paid a farthing towards the support of the schools during the year, or obtained voluntary contributions toward them from any other persons. The teacher who went ultimately to America, received his class salary of £24 from Government. In addition he obtained from the head teacher in his school, a free will payment of £2 per annum, "in consideration of his efficiency and attention to his duties." The school-room is free of rent and taxes, being public property.

252. In addition to his class salary of £32 from the State, which is quite unusually high in that part of the country, the second teacher received a sum of nearly £14 in fees, and £4 for private tuition. His income came therefore, either from Government, or from the exceptionally large payments which his own efficiency had secured for him. The third master, the boy of seventeen, who was induced to write the unqualified retractation I have printed above, received £15, all from Government. The school-room belonged to a neighbouring farmer, who, as no rent was paid for it in that year, was not willing to maintain the house in repair. The result was the withdrawal of the grant, and a miserable series of complications, the story of which might be instructive enough, if it were not altogether too tedious to make it worth telling here.

Conclusions as to arbitrary powers.

253. These instances of the free exercise of arbitrary power appear to me perfectly sufficient to show that there is no restraining influence in the West which is worthy of the least reliance, as a protection against it. "Public opinion" is inoperative, or utterly disregarded. Both of these cases happened in towns. A patron may do what he likes with his master, as a man may do what he likes with his own. It might have been hoped—it no doubt was hoped—that such abuses would be rare, that the tendency to them would be held in check by the sense of the public good, which would presumably influence landlords and priests, that a fit of mere caprice or bad temper would not often be allowed to determine the conduct of responsible patrons. I think these two cases quite sufficient to demonstrate that such hopes have scarcely been realized.

254. Arbitrary power is not more innocent in the hands of a Connaught man than it is elsewhere, and under it the teachers are in a pitiable position. The natural market for their services in the West has never been very brisk—the Board has abolished it, and handed them over to the possession of the 6,000 persons who have become patrons under its system. These gentlemen have the luxury of power without paying much or any of the natural price for it. They have had no trouble in training, or in supporting the man, whom they cast aside at their pleasure. For him it is open to carry his services elsewhere, but his character has been fatally damaged, and no one can tell precisely what is the flaw. The patron can dismiss his teacher without notice, without a reason, and without a character; and it is inevitable that the teachers, as a class, should be discontented with the arrangement. The only protection consistent with such a law would be given if the State were absolutely to refuse her grants to all who had not enjoyed her training, and obtained her certificates, so that the supply of teachers who could claim them might be limited artificially, and never far beyond the demand. The admission of probationers settles that point against the masters, as any youth of seventeen who can work a few sums may become a probationer.

Disputable cases.

255. I have not thought it necessary to go into the details of more of the cases of dismissal of which I have heard. Some of them depend on the different views entertained by master and manager of the efficiency of the former. Others, like the following, appeared to me scarcely likely to reward farther investigation. There was a teacher, "a most respectable young man, and a very clever young man, who was really smart enough," (in the opinion of my informant, who is a very competent witness), "to become a sub-editor to a paper—a most respectably conducted young man, his morals being unimpeachable in every respect." He was dismissed by his Protestant (lay) patron, without the least fault being found against him as a teacher. "But there was a complaint lodged against him by the friends of a young widow in town, a tenant and co-religionist of the patron's, the nature of which was that the teacher wrote a scathing letter to this young widow, on hearing that her friends reported through town that the teacher had proposed marriage to her, or something to that effect. He had lodged at her place with another young man for some time, but removed to another house in town after the lapse of some weeks—I believe hearing that there was a rumour afloat among her friends that he was to be married to her, or something to that effect. After leaving her house he wrote the letter above alluded to, which was shown to the patron, and which sealed his fate as far as the school was concerned." It is dangerous for a young man in any position in life, to write such letters to "young widows," and the teacher may have easily managed to show himself deserving of censure in the attempt. The great majority of the cases of which I heard, offered fewer signs of a probable explanation.

General working of system.

256. The regular working of the system is illustrated in a letter from a schoolmaster. The absence of names in the statement did not allow me to investigate any of the details. He has passed under eight managers in succession. His first treated him kindly, but *threatened* his brother who succeeded him, with dismissal, without just cause. His second had dismissed his predecessor (and *his* predecessor before him), to make room for him—and after a few months dismissed him to make room for somebody else. The patron was a Catholic priest, and his predecessor's dismissal was attended with "awful consequences." The dismissed teacher became an apostate, and induced two or three members of his family to do the same. His third was a kind old Catholic gentleman, with whom he continued a few months, after which his brother succeeded him. The old gentleman died, and his widow gave his brother's school away, while he was at the training college, to which he had gone with her consent. His fourth was kind and considerate, but used to listen to stories from his bailiff, "as generally all of his class do; and it is well known in this country that bailiffs are not the most honest and honourable men in the world—they are generally the very opposite." The bailiff asked him to fill up a whole host of poor-rate books, one of which he did, but refused to do more without payment. This made the bailiff his enemy, and his manager came down one morning and threatened him with dismissal. His fifth, a priest, was a great friend of his, but had dismissed his predecessor most unjustly. His sixth, on a misrepresentation of his bailiff, threatened dismissal—calling on him to resign. The teacher told him that as the school was vested, he should not do so without insisting on an investigation. As for the next he has no complaint, but he tells me that rumour says that the teachers who taught here before were no way anxious to leave, if allowed to live on in peace and quiet by a certain local gentleman who cannot agree with any of the teachers of this school. He sums up, much to his own surprise apparently—for he is one of the few decided denominationalists I have met among the teachers—"The deduction from the foregoing sketch of what I know of all the managers I ever taught under, is rather curious. All the priests, four in number, that I have had to deal with as managers, have at one time or another dismissed teachers unjustly: while I cannot bring a single case of *absolute dismissal* against the four lay gentlemen under whom I have taught." It is not necessary to pass any judgment on the detail of these facts—they must of course be taken to present only the one side of the story.

Effects of absolute power not exercised.

257. The worst effects of the absolute power of dismissal are not to be seen in cases like those I have described, which have been pushed to the last extremities. The fear of instant dismissal and possible ruin, places the teacher in complete subordination to those who have the power to inflict it for any reason or for none. It is impossible that they should not be in absolute subjection to the masters placed over them, under the influence of that fear. I am told that in some cases it is necessary for the teacher to choose between obedience to the laws of the Board, whose bread he eats, and of the priest who is charged with handing it over to him. Questions like that about the use of the "General Lesson" may frequently arise. In the main, the clerical patrons of the west think it useless, and some do not look on the repudiation of persecution in it as right. The teacher obeys the master who is always beside him, instead of the paymaster who sits in Dublin, and the General Lesson is accordingly little seen, and seldom taught in schools in the west under Roman Catholic clergymen, the Board's ordinances notwithstanding. I offer no opinion of my own as to the intrinsic importance of these ordinances.

Gratuitous education.

258. These, then, are the principal grounds on which the National teachers complain of their treatment; but before submitting the views I have been led to entertain as to the course which might be taken in dealing with them, there is another question to which I must ask attention.

Small amount of fees.

259. One is struck, very early, with the extremely small amount of school-fees obtained in the National schools. Occasionally, indeed, some trifling payments are made in work or in kind which do not appear in the returns. The incomes of the old hedge school teachers were often principally made up from these sources, and the custom has been continued in some remote districts. It is impossible to estimate the amount thus added, but it is tolerably certain that it is small, and that nothing of the kind exists in the majority of the schools. I believe that, on the whole, the sums returned fairly represent the total incomes realized from fees. In my 106 schools, with about 4,300 children present, the total fees obtained were £208 for the year, or under 1*s.* per child in average attendance, and less than £2 per school. I find that, in Mayo, the total payments from school-fees amounted to £735 10*s.* 3*d.* in 254 National schools—£2 18*s.* per school; the number of pupils in average attendance being 11,071; so that the total amount is 1*s.* 4*d.* per head on the average attendance, which is about 6*d.* per annum for each individual pupil. It is an extremely small sum, and its amount raises the question of gratuitous education at once.

Irregular attendance.

260. The most extraordinary fact of Irish primary education meets us in the same connexion. The total number of distinct pupils on the rolls for the year 1866, in all the National schools, was 910,819, the total average daily attendance being 316,225, which is about *one in three* of the number of distinct pupils. The province of Connaught gives a result only a little worse than that for the entire country, *three* children appearing daily out of *ten* who are on the school rolls for the year. It is easy to conceive what disorganization of classes, what irregularity of attendance, what wasted labour, what disheartening results such a fact involves. The winter scholars are, as I have shown above (§ 30), almost entirely different from those in summer, and indeed each individual child attends apparently for little more than three months in the year.

Connexion of these two facts.

261. The two phenomena are said to have a direct relation. Generally two-thirds or three-fourths of the pupils pay no school wage at all; but fees are nominally charged in most schools, and the parent who does not pay them has, I am told, a feeling, every now and then, that he is behaving like a pauper. Any casual circumstance convinces him of what is sometimes true, that the same attention is not given to his chil-

dren as to the paying scholars, and that the master "leans to" the latter unduly. He has managed, besides, to work himself into a curious sense of being an injured man. He looks on the teacher as paid by the State, and he considers that that payment must be meant to entitle everybody to free education who chooses to have it. A teacher who "presses" fees always encounters this feeling, which scarcely any reasoning will overcome. In many of the little villages or country districts everyone is connected with everyone else, and an incoming stranger who offends one runs great risk of irritating all. These views are not, I think, in general discouraged by the Roman Catholic clergy, who almost unanimously advocate gratuitous education. They give little or no support to the master's efforts to obtain fees. As patrons they frequently prevent him from carrying his demands into a court of law. His claims are considered by the people to be unjust, and to argue a grasping disposition. It is curious that the same persons willingly pay 2*d.* a week—often, no doubt, from motives of mere charity—to a hedge school teacher, and refuse all payment to the teacher of the National school. All the denominational schools, however, offer their education and school requisites free, and some of them add clothes and food for their scholars, or pay for their attendance. These things have been going on now for nearly a generation, and there is no prospect that they will disappear. It is almost impossible for a teacher to make much head against them—quite so, apparently, without the cordial support of his patron, which in two cases out of three would not be afforded him.

Feeling of people as to fees in State schools.

262. All these reasons appear to make it improbable that the sum now obtained from school-fees can be materially increased; and I am assured by most of the teachers that its exaction seriously affects the attendance. There are many people in these agricultural districts, who have little or no money in their hands from the end of the spring till the end of the autumn, when their produce is sold. They live on their milk and potatoes without feeling the want of pence; but they have not got the pence at their disposal, and as accordingly they could not pay school-fees even if they wished, they withdraw the children.

Fees cannot be increased.

263. I shall give the opinions of a master of considerable experience, whose school is free. He has taught over thirty years, and was for fourteen years chairman of an association of National teachers in Tyrone:—

Experience of one teacher.

"He believes that a gratuitous system, under which every man would have a *right* to the education of his children, would improve both the attendance and the efficiency. He thinks that the parents of the class of the labouring poor in Ireland would be very much disposed to value and use such a right, and the cessation of the demand for school-fees would dry up sources of bitterness which perpetually bring trouble between teacher and people. He thinks that the people learn a great deal of the American free school system, and believes that they would regard the establishment of a similar system by the State as a considerable boon, which would do much to content them, as being a thing done in their own country, as liberal as what is done in the United States. He believes also that if it were given as a right it would not offend the sense of independence or demoralize by creating a feeling of pauperism, so long as the money came from the general taxation of the country."

264. The teachers I saw entertain three views on the question—the first that the free system would be injurious; and as what is got for nothing is counted as worth nothing, that it would diminish the real work done, and increase the proportion of irregular attendances. This is the view generally entertained by lay managers. I was told, on the other hand, by an extremely intelligent master that this is a middle and upper class idea, and that it is not at all so common among labourers in Connaught. People who are in the habit of electing to pay 1*s.* for a good article, or 6*d.* for a cheap and poor one, get naturally into the way of making the price the measure of the estimation in which they hold their purchase, and set no store by what costs them nothing. It is otherwise with the great mass of the agricultural labourers and small tenants, who only buy what they can't help buying, and seldom have two qualities of commodity to choose between. A great many things come to them without the payment of so much cash in exchange, and price is not the only measure of value. He was convinced that a poor Irishman would be just as likely to think much of his child's education, if he were told that it was his inalienable right conferred by a paternal State, and ready to be enforced by it against all opposition, as if he had to pay a weekly wage. There is no luxury which he prizes so highly as a right which he can enforce in a court of law.

Teachers' views as to free schools.
a. What is got for nothing is worth nothing.

265. The second opinion, which is very common, is that it would make very little difference either way. Many teachers say that they do not now exact fees from any who are either unable (and there are many so), or unwilling to pay them. Accordingly they think that as a free system would only give legal sanction to the actual practice, it would scarcely increase or diminish attendance. I confess that I doubt the soundness of this view. A very common exemption is a different thing from a legal privilege. The healthy feeling of independence may very well be hurt in the one case, and may yet find no place in the other. The poor man may dislike to receive a favour from the charity of the teacher which he would willingly accept as part of that repayment of taxation which the State offers to every citizen. It matters little that he thinks that the teacher ought not to have the right to charge him—he knows that he has it, and that he foregoes it only of favour. I believe that a privilege of this sort, which their clergy would encourage the people to use, would have an important influence in furthering—almost in creating—that local interest in the school without which perpetual inspection can hardly keep things straight.

b. No advantage or disadvantage from free system.

266. The third answer is given, I think, by the majority of the teachers whose views I collected on the question, and is altogether in favour of the free system. They assume, of course, that any pecuniary loss to the teacher would be somehow made up. Taking that for granted they think that immense advantage would be gained by the teachers being entirely relieved from any necessity or temptation to quarrel with the people on the subject. It is frequently said that the fee-paying children are the best attenders, but they tell me that it is simply because they belong to the better-off and more regular families, and that the same children would attend best under any system.

c. Great advantage.

267. But the great argument in the case is, that for good or for evil the free system prevails at present, for two-thirds or three-fourths of the children, and that any attempt, on a considerable scale, to alter that arrangement, would empty the schools. The choice is not between a free and a fee system, it is between the former frankly accepted and legalized, and the latter adopted in practice in the majority of cases, but leaving room for all kinds of angry feelings in teachers and parents, preventing many attendances, and making more irregular. The present system has all the disadvantages of a gratuitous one, and a good many peculiar to itself. It demoralizes the people, whatever the other may do, and the very persons likely to be taught to care little for education by paying nothing for it, namely, the ordinary run of the labouring classes, are taught so now. Only the best off and the most regular of them pay fees, and they might be helped by that means to value education if they were not sure to do so independently. The others take free education irregularly, and without thanking anybody for it. A peculiar arrangement has made them unwilling even to thank the teacher to whom they are indebted. Almost all advantages under the Board depend on the school maintaining at least a certain average attendance. Wherever its doing so is in the least doubtful—as in many country schools it may easily become—it would be madness on the master's part to allow his scholars to fall away on account of an insignificant fee, and the people know the fact as well as he does. Accordingly the parent often looks on himself as conferring an obligation instead of receiving a favour when he sends his child to school and pays nothing for him. When he pays, it is with a feeling that he is treated ungenerously or unfairly either by the schoolmaster or by the Board.

Free system exists for two-thirds of scholars now.

368. It is a question which is, I am fully aware, surrounded with difficulties. In a country where people have

been in the habit of paying fees, and where the greater number of them are able to do so, I should not be disposed to advocate a gratuitous system. In Mayo, since the establishment of the National schools, the great majority have not been in the habit of paying—a very large proportion of them cannot do so, and a proportion perhaps still larger, will not. In addition to this, the country is tolerably supplied with denominational free schools. There is no room for doubt that the irregularity in the attendance is enormous. The English statistics give us no accurate means of comparing the English proportion between the number of individual scholars attending school at all during the year and the average attendance, with that for Ireland. The registers are not made up with the same precision, and the number on the register (which is only one-third more for the whole country than the average attendance, instead of three times as much) in some schools, includes all who have been there within the last year, and in others, all who have been there within the last three months. The scholars in British aided schools certainly attend very much better than in Irish; and I see only two ways of bringing the latter near the level of the former. The first consists in the improvement of the schools, which is at the root of all other improvements; the second, in opening them as places of free education.

Amount raised by fees.

269. The cost to the State would be extremely small (£40,500 for the whole country), while the total national expenditure, on account of education, appears to amount at present to £363,500. The benefit to the teachers and to the community would, I believe, be very great, and everything I saw led me to believe that it would be fully appreciated.

Objection.

270. Under such a system it is perfectly possible that persons might take advantage of the National free schools, who are able to pay handsomely for the education of their children. So far as it is an evil, it is one the attempt to check which appears to me hardly worth making. The fundamental condition of the National free school—that it must be open to every child—is quite sufficient to keep out of it most of those who consider themselves at all raised above the people. When it fails to do so, though it may be a legitimate subject of regret that a well-to-do parent should impose a burden on the State, which he might himself have undertaken, his action, in itself, tends to the fusion of classes and to the raising of the lower, not to the degradation of their social superiors. Nothing has done more good to Scotland, than the fact that the minister, the doctor, the squire, have been in the habit of sending their sons to receive their training at the same parish school and on the same benches with the children of the labourer.

How it might be raised otherwise.

271. I have said that the objects to be gained seem worth the sacrifice of £40,000 out of the Imperial Treasury. I was not able to enter so fully into the questions involved, as to be able to form a decided opinion on the matter; but I believe that a capitation tax, levied impartially on every person paying poor rates, and on no others, and meant to take the place of school fees, and in addition to provide small prizes for regular attendance and good scholarship, would be submitted to as cheerfully as most taxes. An impost descending so low must be very limited in amount; but it would be very valuable by impressing on the people their responsibility for education and increasing their interest in the school, even if it should only produce a part of the £40,000. I find (Thom's "Statistics" for 1867, p. 778) that there are 17,500 purely agricultural holdings in Mayo rented at over £4. A tax of 1*s.* per head per annum on these alone would apparently raise £875, and an additional sum would be obtained from the Poor-rate charge in towns. This would replace the fees (£735, § 259), and suffice for a small premium fund in addition, and I believe that it would be felt that the article paid for was at the doors and of universal service. Such a tax would fall on precisely the class which now, in the main, pays school fees, and it would exempt, according to law, those who are now exempt according to practice, and whom it would be useless to attempt to include among the fee-payers. On the other hand there would be no visible distinction in the school—no temptation to the master "to lean to" the child who was only paying a legal tax, or to neglect the child who was entitled to a legal exemption.

272. I have made it sufficiently clear that the payments of the teachers appear to me unsatisfactory and that I think that they ought to be increased from some source or other. I have suggested that the amount now raised in school fees ought also to be raised from some other source.

Amount by which it appears necessary to supplement payments.

273. The question remains, from what source these additional sums are to be procured?

274. Assuming that the condition of things in Mayo and Galway is very much that of all Ireland, I should consider that the lowest addition to the teacher's income that can be offered, with any prospect of contenting him at present, is one-third of its actual amount—say, £77,000 a year. In addition, the abolition of school fees which I propose involves £40,000 more. An annual charge of about £10,000 represents the amount involved in building residences for the teachers, and I should suppose that a limited and strictly guarded pension fund for 6,000 teachers need not rise above £5,000. The total additional charge required to place the existing schools in a satisfactory position, might be estimated, therefore, to amount to about £130,000 per annum. From what source is this to come?

How it might perhaps be raised.

275. I found that I could not arrive at any opinion as to the manner in which such a sum might be raised from county or other local taxation, without spending more time on the inquiry than I could spare from other subjects. The total annual value of taxable property appears to be as nearly as possible, £13,000,000 (Thom's "Statistics of Ireland") and a rate of 2*d.* or 3*d.* in the £ would raise the amount I have named, from the county rates alone, and without the capitation tax. There is no doubt, I think, that such a rate would meet with small favour in the counties. The Government must make its election between the denominational and the mixed system. The former would be as vehemently disliked by the landlords as the latter now is by the clergy. A tax of any considerable amount, in support of either, would meet much opposition. But the money must be raised somehow, or the Irish schoolmaster will remain starved and discontented, a danger instead of a safeguard to the State, a centre of disturbance, not of pacification.

General result of suggestions.

276. My suggestions imply that the average payment of the principal teacher should be raised from £26, where it stands at present, to £35—that residences should be built in connexion with the schools, and that a moderate pension should be secured. The English certificated master receives £88 10*s* 5*d.* and the certificated mistress £53 11*s.* 3*d.*

277. It is, no doubt, impossible by any legislation to place teachers in a poor country where there is little reasonably remunerated employment on the same level with those of a rich one, with a good demand for labour at good wages, but the difference I have left is quite large enough. It may be undesirable to pay teachers whose main source of income is either the Exchequer or the rates, like others, who derive a good deal from local subscriptions. But to bring a proper class of men into the profession and to make them contented to remain there, their incomes must, in any country and under any circumstances, be sufficient to enable a moderate family to obtain necessary food and decent clothes.

278. There appears to be no such difference in the price of these things as to make it possible to live in Mayo for very much less than in England. I suggest that the average schoolmaster and schoolmistress should have a salary of 13*s.* 6*d.* a week, with a small house rent-free, and the prospect after long good service, of a small pension sufficient to keep them in their old age from the workhouse. These modest propositions imply an additional expenditure of £130,000 merely to maintain the present school staff. If more schools and teachers are wanted, the amount would increase in proportion.

279. The question is intimately connected with that of management. I have shown that out of £31 paid on an average to each school at present, the State pays £27, the parents £2, and the patron (who is practically the only local subscriber) £2. I have urged the propriety of relieving the parent from the direct impost of school fees, but I think, that its equivalent might perhaps be raised by a poll-tax upon those who now pay poor rates—a tax which would, it might be hoped, be felt just sufficiently to induce people to take an interest in the schools for which it was paid. The Grand Jury cess might be charged with one-third of the present Government payment, so that the State, not diminishing its contribution in amount, may diminish it in proportion, and so that it may be justified in giving an authority to the local managers of schools, not greater than that which they now possess (for that is impossible) but than the payments which they now make entitle them to expect. The only alternatives are that the State should be content to pay substantially the whole increased amount, or that a much larger proportion than at present should be drawn from local sources, by taxation, instead of by contributions. There is no prospect—the experience of the last thirty-five years has shown it beyond dispute—of any fresh increase of voluntary effort, and just as little of a rise in fees. If the teachers' condition is to be bettered, it must be either by an increase in the Government contribution, or by charging the rates with the considerable sums which the attempt involves. ALTERATION IN MANAGEMENT.

280. Let me assume, for a moment, that some system of the kind is in operation. I should look on it as providing the elements of a local management, which might have as much authority as the present patron, but with a better title to it, and more public responsibility. Uncontrolled local power might perhaps be given to a Board of three persons—one representing the grand jury; a second the ratepayers, paying poll-tax in lieu of fees; and a third, the present patron, or the clergyman of the majority. I have heard representations everywhere to the effect that it would be impossible—that if it were possible, it would be undesirable, to leave no local person or persons who should have power to act, solely on local grounds, and independently of the Government. A control, subject to appeal to the Board, would, it is thought, rapidly disappear altogether, as the managers, one after another, discovered that they had parted with all real influence. On the other hand, I think the instances I have given have shown sufficiently that a perfectly arbitrary power over the teacher cannot properly be lodged by the State in the hands of a single citizen, who gives no guarantee against his abuse of it. But if three persons, or a majority of them, responsible to their constituents, could agree that the teacher must be interfered with in some way, the probability is that they would be right, and vexatious intermeddling due to caprice or passion would all but disappear. There would be little fear that, under such a system, the religious convictions of the majority would not be protected. As its clergyman is, at present, patron in two cases out of three, he would become a member of the local Board; and the representative of the ratepayers, or, perhaps, the representative of the parents, would probably support his views with respect to religion. The minority would be protected by the delegate of the grand jury, as well as by the fundamental laws regulating the entire system of State schools. I found only one committee in the West, and there are no elements from which to elect, by open vote, a school committee which would represent the intelligence and opinions of different parties. System of a local authority contributing to schools.

281. The alternative is that the State should pay the whole income. Is it competent to take the whole management, and to govern the schools, independently of local control? I confess I should think it impossible for it to enter into the many questions of detail into which local managers alone can enter effectively—questions which are all important, notwithstanding, to the success of a school. I cannot see how a Government which has no despotic power, and whose traditions are all contrary to its exercise, could maintain its authority, or find out even what it was right to do without some local assistance. In the circumstances of such an opposition as that of the hierarchy, I cannot see how it could sustain from Dublin a conflict with opponents on the spot, armed with all the weapons of spiritual warfare. That it should become alone responsible for everything that might give offence to the clergy, to the people, to the teachers, would, I think, inevitably make the school one of the most serious causes of trouble which could be found in a parish. The Board would be compelled to develop its system of incidental visits to such an extent as to assimilate the duties of Inspectors more and more to those of detective officers—and the change would cause a bitterness of feeling and a loss of self-respect on the part of the masters, which would soon issue in evils as great as those which it aimed to repress. It may be said that, as matters stand at present, there are many schools where, because of the patron's indifference, the authority is mainly left in the hands of the Board. Matters work well enough in smooth weather, but when trouble arises, mischief is sure to follow. That indifference, besides, may disappear at any time, and the locality may resume its legitimate influence on the school. System of no local authority, the State alone contributing.

282. That the State should pay the entire school income, and accept the whole burden of school management, would be a course running counter to all the tendencies of its recent action. There is a third course possible, that it should pay the money, and create local managers by its election or nomination. In the abstract it is perhaps conceivable that it might nominate two assessors to the present local patron for each school, or perhaps better for each parish, representing so far as practicable, separate feelings, but with a common interest in the welfare of the locality. But the number of such assessors for 6,000 schools would be excessive, even if one of them, representing, say, the parents, were elected by the locality itself. Under the denominational system the local authority is ready made. In every denominational school the natural local manager is the clergyman or priest. There is no difficulty in discovering the person to whom local responsibility is to be transferred; the difficulty is in deciding that it should be transferred to him in Ireland. For it is of the essence of such an arrangement that the clergyman should refuse the jurisdiction of the State over everything except the results of secular instruction, and that the teacher, who derives his whole income from the State, should be at the service of the clergyman. I have heard complaints from a few National teachers that they are compelled to teach Catechism on Sunday, in Chapel, for three or four hours, in addition to their ordinary week-day work, and though many of them entertain no objection to this practice, which appears to be exceedingly common, almost all feel that they *must* be useful to the clergyman in whatever capacity, not connected with the school, he may desire. The schoolmaster becomes, in the west, the clergyman's lay assistant. Underpaid as he is now, he is little more than an *adscriptus glebæ*, or beadle. The fact helps to explain the aversion which Protestants entertain to schools under the patronage of the priest. System of local authority created by central, contributing, State. Difficult except under denominational system

283. I do not think that the clergy of the Roman Catholic Church (so few of the others are managers of National schools, that I had no means of forming an opinion with respect to their feeling on the point) desire that this relation of subservience should be less distinctly marked. After consideration, not one of them has expressed himself willing to give up any part of the absolute power he now possesses as patron. I was struck by the view that several took with respect to a question of administrative detail. One master had complained bitterly that "three or four weeks will often elapse, after the salary is due, ere it is paid; when it arrives you proceed to the manager's *Kitchen*, and remain there like a pauper till the manager is apprised of your business: he may not be at home at that time; well, you must call again, and again, reluctantly of course, until at last, the coveted order is delivered into your hands. Why not send the order at once through the post, to the teacher; it won't enhance its value one whit by passing through the manager's hands?" I put this question once or twice, and the answer I got was that it would be a real injury to the teacher, because, as matters stand, the manager often advances money to pay the teacher's shop bills before the order Unwillingness of clerical patrons to resign part of their power.

comes; and shopmen frequently allow the master things on credit, knowing that all the money will pass through the manager's hands, and that though he cannot absolutely confiscate it, he can see that they are properly paid. When I asked whether there might not be some advantages, in having a class of men able to pay their way decently, instead of being suspended all their lives in this manner, between the patron's charity and the shopkeeper's mercy, I was told that they were quite independent enough at present.

284. I cannot say that I think that it would be advisable to constitute the teacher a mere servant of the State. I see no reason, on the other hand, that he should be handed over as property to any other single citizen. In some respects, I think the clergyman the least suitable citizen of all those who could be nominated. He is the least responsible to public opinion, and the least willing to render an account of the motives of his actions. Under a church which regards him as, by virtue of his office, the sole dispenser of essential sacraments, and which considers him bound to an implicit obedience to his direct spiritual superiors, he recognises no authority in the feelings of his parishioners, and looks to no tribunal but that of his conscience or of his bishop.

Local Committee of three members.

285. A body of three local authorities, of whom he would always practically be one, and generally the most influential, could act with emphasis enough upon local questions, independently of the Government, and it would, at the same time, have something like a real responsibility for the exercise of its power.

Or of two.

286. An alternative form of government would be a board of two instead of three members—the one representing the church, the other the laity—the one the clergyman of the majority of the frequenters of the school—the other, a layman appointed by the Grand Jury or the Crown. Wherever they differed on any question of sufficient importance, say as to the appointment or dismissal of a teacher, a reference might be made to the Head Inspector of the district, an officer of dignity, capable of taking responsible action in delicate circumstances, not brought into constant and immediate contact with the schoolmaster whose interests would be largely in his keeping, and yet with free access to the entire record of his career, as it is preserved by his lieutenants, the District Inspectors.

Objects to be attained.

287. I offer these suggestions as, in the circumstances of West Connaught, apparently the most likely of those I have had to consider, to secure the two objects which I conceive it necessary to keep in view—1st. That the teacher should be secured in a position of much greater independence—and 2nd. That there should, notwithstanding, be preserved some effective local control over him, capable of decisive action, on local grounds alone. I think it necessary to secure both these objects, and equally necessary that the education payments should be increased by at least a third of their present amount. By what measures all these ends might be attained at once, it is not for one so little acquainted as I am officially with the general, social, and financial condition of Ireland to suggest. Whatever it may be thought proper to do, will probably be done systematically and for the whole country. The alternative suggestions which have appeared to me feasible, refer of course solely to the West Connaught district, within which my instructions confined me.

Evening schools discouraged—*a.* By a rule of the Board.

288. There appear to be no evening schools receiving the grant of £5, which is offered by the Board to National teachers. There seems, indeed, no demand for them for more than five or six months of the year, and the £5 is understood to be given only when the school has been kept open for nine months. During the winter months a reasonable average attendance could very frequently be kept up. I am assured by many of the masters that great good would be done by such winter schools, and that pupils in abundance are to be had for them, generally eager to learn, and willing to pay. As it is, a considerable number appear to have been kept open for two or three months. There is another hindrance to their diffusion, which is still more serious than the fact that the masters get nothing but fees for the extra work which they involve; namely, that all through youth and middle age, teachers are liable to the perpetual re-examinations I have described, and that they appear, as a matter of fact, to be generally preparing for something of the kind. If there were nothing else against that system, the fact that it makes evening schools almost impossible would be enough, in my opinion, to condemn it. It is not necessary to exaggerate their advantages, or to refuse to allow that the positive results which they produce are often disappointing, and always difficult to ascertain with precision—which, by the way, is by no means the same thing, although it is apt to appear the same to a person engaged in inspection. But with all their drawbacks they supply wants which can be met in no other way—they help to fix the education, which has only been partially completed in the day school, they give a second chance to the youth who has been neglected, and they are a proper source of extra income, obtained by the practice of their profession, to a body of underpaid men.

b. By examinations to which teachers are subject.

Land question and school attendance.

289. A considerable number of my correspondents, and a great many teachers, have expressed themselves very strongly as to the influence which the want of fences between the small holdings of the tenants, or along the road-sides, exercises in preventing regular attendance. The children are needed to herd the cows, or to watch the geese, and to prevent trespassing. There is no doubt that this cause operates as it is said to do, and that its effects are really considerable. How it is to be removed, or how its effect is to be diminished, is of course a question connected with the gravest political difficulties of the country. I need scarcely do more than refer to what the Rev. Mr. Malone, P.P., Belmullet, and the Rev. Hubert Fineran, C.C., Tully, have said about it in the appendix, pp. 171, 174.

290. I do not think it necessary to direct attention to numerous matters of detail in the administration of the National system, in which I should be disposed, from what I saw, to fancy that improvements might be made. The experience which its own Inspectors collect for the Board continually, is of course infinitely more valuable upon such points than anything that I could gather during my short visit.

Compulsory school attendance.

291. In view of the extraordinary disproportion between the number in average attendance, and that of individual scholars during the year—one to three in all Ireland, three to ten in Connaught—it is often urged that the State ought to enact provisions compelling attendance. I cannot think that the question is at present much worth discussion. The principles on which it gives its grants are too fiercely disputed—and it is too uncertain how any alterations in these principles that might be adopted by Parliament would be received by the community. Compulsory education, at least at present, is out of the question. No one could recognise the "private" schools which I have described, as places, attendance at which might be accepted as satisfying the requirements of a compulsory law. No such law could fail to insist on the children's attendance, under penalties, where there was so excellent and so well-provided a school-room as some of those which are under the displeasure of the church, and which remain, in consequence, not over filled with pupils. It would inevitably break down in presence of the fact that the Roman Catholic Archbishop of the diocese enjoins absence from the latter as a spiritual duty, and enforces it by spiritual penalties, more serious to many than the worst which the State could inflict. So much for compulsion under the present system. Any total change of it would unsettle so much, that it would require a considerable time before any one could be clear how the new arrangements might commend themselves to the community. It is only after experience has informed us upon this point, that it could be worth while to discuss the propriety of enacting provisions compelling attendance at school.

Feelings of discontent alleged to prevail.

292. After a conversation of some length with a young teacher who had a large circle of acquaintances, I mentioned the statement that Fenianism, and more generally feelings of disaffection, had been said to be widely prevalent among the masters. He replied that he had often wondered that there was not more of that kind of feeling; but that no doubt I knew that the National Board had proved in their report for 1867 that there was

extremely little ground for the numerous arrests that had taken place. So far as his experience and knowledge went, he was convinced that very few teachers had taken any direct part in the Fenian movement. I pressed him a little, and he said that if I wanted his candid opinion on the subject he would say that he thought there was less of the feeling he was going to describe among teachers than might reasonably have been anticipated from their circumstances, but that he had no doubt that it existed, and that to a considerable extent. Who were these teachers about whom I was asking? An enormous number were very young men, somewhere above seventeen, set down solitary in the middle of a wide tract of country, paid rather less than one shilling a day, with a position than which there was probably none in the world more precarious, for they could be turned away at a moment's notice by their manager, or at a day's warning by their Inspector; ill-clothed, ill-fed, and miserably lodged, often three or four miles away from the school, to and from which they trudged night and morning, winter and summer. They had no social standing, no one opened his doors to them except the labourers and smaller farmers. It was easy to lay down the law in such houses, to read the newspaper, or to retail bits of the leading article; and to become popular fellows they had only to echo and enforce the opinions common among these classes of the people. Whatever foundation there might be for these opinions, the commonest of them all (it was almost universal) was that England was a hard stepmother, that the evils of Ireland were mostly due to the English connexion, that she encouraged the rich and crushed the poor, that she wanted to root out their religion and their patriotism, and to banish the Irish people. Often enough, of course, the teacher shared these feelings. At all events he thought himself shamefully paid, and he considered the Board to be a hard master, inspecting him in season and out of season (five times a year on the average), and suspecting him constantly. His position was such, that though he would not willingly cut away the branch on which he sat while labour was so scarce, he would have almost a sense of relief were it cut away from under him. Naturally, the man became reckless. He knew many such men who had become so. It *might* not be quite fair, but they held the Board responsible for most of their sufferings, and what was done by the Board was charged on the Government. The view that the British Government, afraid to meddle with Irish matters more than it could help, contented itself with decreeing that there should be Irish education, and confined itself to cashing the cheques drawn by a select body of Irish gentlemen appointed to administer it according to Irish ideas, never entered their heads. It might be stated on paper—he did not know what the idea in itself was worth—but if the British Government imagined that it was not held fully responsible for the whole system and all the workings of it, it made a great mistake. The teacher was very much discontented; he held the Government responsible; discontent and distrust of the Government were in the air, and his mind was just the soil (as I might see for myself) in which such feelings might take root. The indulgence and expression of them was just the way to give him the prominent position in the society to which he was limited, which he thought unfairly denied him. It was his readiest consolation; it might sometimes be his revenge. He believed that this was a most dangerous state of feeling for society, and these men, in whom neglect was nursing it, had enormous influence on the future. He wondered that there was so little of it, as he thought there was; but it was *not* confined to the younger teachers. I must remember that a grown man with a wife and family was not more content with an income of 10*s.* a week than a young unmarried man with 6*s.*

Statement by a teacher.

293. I repeated this statement more than once to Roman Catholic clergymen and others. One of them, who had been familiar for more than a generation with the schools, and with all the circumstances of a considerable tract of country, said that it was God's truth the man had told me, whoever he might be. No one to whom I spoke of it thought it at all exaggerated or untrue. Many things I saw in the country led me to think it both true and moderate. There is a wide-spread feeling of discontent among the teachers. I have nowhere found any particular gratitude to the Board or to the Government. It is admitted that their inspection does much good, and prevents abuses. But its tone and spirit is one of perpetual suspicion, and every now and then an Inspector pays some teacher an unwelcome number of incidental visits. The number possible is quite unlimited. One master, for instance, tells me of twelve in a year, and the man is in a condition bordering on mutiny. He was in the police before, but he cannot now understand how he was so misguided—he married a teacher, and became one himself. In his old service he used to be under regular inspection and supervision, but it was Paradise to this. He has several children, but he would far rather make them policemen—rather simple soldiers—than bring them up to be in terror of their lives. This is a master with a fair school, with half a dozen premiums for order, efficiency, &c., and with a good local reputation and position.

How far reliable.

Some causes of feeling.

294. It is this tone of suspicion and distrust which, more than anything else, has prevented the teachers from feeling the amount of gratitude towards the Board that might have been expected from them. No doubt, poor as the salaries now paid are, those who did the work of elementary teaching in Ireland when the Board commenced its operations received a good deal less. If they were of the same type as the hedge-school men of the present day, they deserved no more than they got, however small the sum was. But the new men are more or less skilled workmen, and their payment is felt by themselves to be, what one of their number—himself a fairly paid man—calls it, a National disgrace.

295. At a very early period of my inquiry, the facts which presented themselves to me made me turn my attention to these questions. I had read, with a little surprise, in paragraph 60, in the 33rd Report of the National Board, "that the total number of cases which have come under our attention connected (however remotely) with the Fenian conspiracy, is forty-seven." I found that five of these cases had occurred in Mayo and Galway, and I felt that it was my duty to endeavour to ascertain by proper inquiries whether they threw any light on the general question, either of the connexion of teachers with Fenianism or of their supposed feeling of disaffection towards the State. I wrote on the subject, to Father Finn, of Ballaghaderreen, a short note intended to show that I was anxious to ascertain where there were materials for an opinion on this general question, and that I had no desire to make inquiries into any individual cases except in respect to it. The master about whom I wrote to him, and who had been in a school under his management, had gone to America, and the following letter which he addressed to me bears upon several points besides those directly connected with the subject of my inquiry. It would be difficult, however, to select portions of it, and it deserves very serious attention, not only in itself, but because it expresses feelings common to the great majority of the Roman Catholic clergy in West Connaught.

Number of teachers arrested on suspicion of Fenianism.

"Ballaghaderreen, July 14th, 1868.

296. "Sir,—In your letter of the 11th inst., you inquire, for the information of the Royal Commission, to which you are attached—First, how far feelings of disaffection may have been prevalent among National teachers, and Secondly, whether, in the opinion of competent persons familiar with their circumstances, there are any real grievances, or causes justifiable of discontent with their position or treatment, which might give rise to such feelings? In reply to your first question, I beg to say that, at all events, in this part of Ireland, there is, in my opinion, a very general, if not universal feeling of discontent and disaffection prevalent among National Teachers. But in expressing this opinion, I do not mean to give you to understand that any National teacher is more disaffected than the great bulk of the people among whom he resides, except so far as his superior education makes him feel wrongs and injustice more keenly; or that any National teacher is a Fenian—a few may be so—but all are disaffected. The rule of England has hitherto failed to win their hearts and their

Letter from Rev. M. Finn, P.P.

loyalty. In reply to your second question, I must say that this disaffection on the part of National teachers is owing to real and long standing grievances. Their position as teachers has not blinded their eyes nor blunted their intellects, and their connexion with the State has not caused them to forget that they are Irishmen. They are well educated men, holding an equal, if not better, position in society than an artizan, and whilst they are required to do a work not less laborious, nor so pleasing as that of the artizan, they must ordinarily do it for half his remuneration. You may say the remedy for this should be sought, not at the hands of the Commissioners of Education, but rather through local subscriptions. I wish the circumstances of Ireland were so altered as to allow this, but in most localities it would be altogether impracticable. We have scarcely any resident gentry—our landlords are absentees, or if resident are prepared to make little or no sacrifice towards the education of the people; those that are left to us—the little shop-keepers, and little land-holders, and labourers, are very poor, and to apply to them for subscriptions would be useless. In proof of this let me instance to you, that our teachers in the parish which I administer receive fees, say a shilling per quarter from each of about half their pupils. Were I to strive to supplement this by the proceeds of a charity sermon, or some of the other modes of getting up local subscriptions, I very candidly assure you, the result would not be £20 in the year; and what would that be for ten National schools, with twenty-two teachers and assistants? I may here add that this parish has less to complain of as to landlords, than perhaps any other in the west of Ireland, yet our people are poor as are the people of Ireland, because the social system is very unsound—and so long as our people continue poor, their teachers, depending on them, will be poor also.

297. "The people of Ireland have got more than sufficient reason to be poor. Absenteeism drains the country of its money, and places an unfair obstacle to employment—our landlords are so one-sided and unjust, that the man who would employ his capital in improving his farm would be an idiot—we have no means of getting up lucrative trades and factories, and when we had these working and flourishing, the jealousy of England annihilated them. Many thousand Protestants fill at home, in England, and the colonies, well paying situations, owing to having got a first-class education, and from such education, as it is at present afforded, the people of Ireland are excluded by their religious convictions. Our people have these, and hundreds of other reasons for being poor. They justly charge England with this poverty; and I can see no reason why teachers sprung from the people, living among the people, identified in interests with the people, sharing deeply in the people's adversity, and reading, with the minds of well-disposed and intelligent men, the wrongs and injustices perpetrated on the people, should not be discontented and disaffected—and discontented and disaffected they will continue so long as Ireland is governed, as for centuries it has been, for the advantage of the favoured few, to the detriment of the nation. Then to sum up. First. National teachers are discontented and disaffected on account of the small and inadequate remuneration they receive for their services, and this remuneration, whilst it depends as it does, in part on the payments of the people, must continue poor and inadequate so long as Ireland is ruled as it is. Second. National teachers are discontented and disaffected, because they and their children, owing to the dangers of faith and morals to be met with in the State colleges, are excluded from all the advantages and preferments of first-class education. Third. National teachers are discontented and disaffected, because, as intelligent, educated men, they can hardly discover any hope for their country if it continue to be ruled as it has been for centuries—and reading, as they do, the countless wrongs that have been inflicted on Ireland in the past and up to the present, they would not have the hearts of men if they were well affected towards their oppressors.

298. "Sir, I have now answered your questions fairly and candidly. If, in any of my observations, I seem to you rather hard on the English rule of Ireland, or show warmth of feeling, I can assure you it is justified by cause. I am no Fenian, and have no desire for the horrors of rebellion; and it is, therefore, I wish to say through you, to the Royal Commissioners, that though National teachers are not Fenians, or disposed to give up their peaceful avocations, still, that they and the people of Ireland generally, are at present dreadfully dissatisfied and disaffected. As the questions you have asked me to reply to have reference to a large, most useful, and intelligent class of Irishmen, whom I would not like to injure in thought, and much less stab in the dark, I owe it to them and myself to publish this communication.

"I am, Sir, your obedient servant,

"M. Finn, p. p.

"William Jack, esq."

299. There is only one passage in this letter to which I venture to call especial attention. It is that in which the writer says, that "their connexion with the State has not caused them to forget that they are Irishmen." I make no attempt to infer the writer's individual opinion, when I say that it is frequently asserted and believed by Roman Catholic clergymen that the whole aim and purpose of the Government system of education is to "denationalize" the country. There is nothing, I think, with which the Board can be less fairly charged, as any one may convince himself by a perusal of their new reading books.

Opinions of magistrates.

300. In the course of my inquiries I called on two stipendiary magistrates. One of them was convinced that there had been very little organized Fenianism in his part of the country (where two of the five cases had occurred), but he was thoroughly persuaded that the sole reason was, that there was a universal conviction of the hopelessness of the prospects of a rising. He believed that the people in his district had somehow become convinced that their great salvation *might be* in the separation of the connexion with England, although they had no clear idea as to the way in which the benefits which they expected would come. The other said, that he had no doubt I must have seen that the National teachers in his neighbourhood were a low class of men, rough, ill-conditioned, turbulent fellows. In his opinion no public confidence sufficient to support the system permanently could be hoped for so long as that was the case, and if it really was essential that the class of teachers should be improved, their labour must be rewarded by better payments. A great many had been charged with Fenianism. No doubt the offence had been brought home to very few of them, as had been the case with other classes similarly charged, but it was perfectly known to every well informed person that they were apt to be centres of disaffection and disturbance. The half educated fellows of the district brought them the newspapers, and every kind of cheap sedition they could get hold of, and they read them aloud for them, and illustrated them by commentaries of their own. I repeated to him the statement which I have given above (§ 292), as to the young teacher, settled in a lonely district, in a position beneath "respectable" society, but with cabin society at his command. He said that he had no doubt that it was perfectly accurate, and that the staple subjects of his declamations would certainly be Nationalism, and abuse of England and the English.

The teachers concerned.

301. I was informed that one of the five teachers, had been re-arrested on suspicion, the week before my visit—he had not however been acting as a schoolmaster for a considerable time; two had emigrated to America, and a fourth was believed to be there. I saw one of the five, and the sister of another.

First.

302. The one I saw was not a contented man, and considered himself to be miserably paid. His school-house is his own property and is in very bad repair. The management appears to be only nominal, and there are no subscriptions. The tenant right question came up in a curious way in his case. The Board, although perfectly aware that everything that is laid out on "requisites" comes from the teacher's salary, insist on seeing matters in the light of the management theory. New desks have to be put in, or it is reported that a clock is required. The master really buys them, but they are supposed to become instantly the property of the patron, who can turn him out of doors. The master must keep the children properly supplied with books, at the reduced prices, and he sends up perhaps for £1 worth. Should he die, or be dismissed before they have been used up, they are left in the school and cannot be taken out of it except by the patron's permission. The patron concerns himself with none of these things, and he may, of course, if he think fit, refuse to pay the value of the remaining stock, and may hand it over to the new teacher, if it pleases him to do so. The desks and the clock would generally be dealt with in this way. The money has already been paid for them, and it was known when it was paid that there was no security. This schoolmaster refused to supply new books, a

clock, or new desks, without a guarantee that when he left the school he should be paid the fair value of these improvements, so far as they might be unexhausted. No such guarantee was forthcoming from any body, and matters apparently rest there. His claim seems to be a perfectly just one, but in the curious position in which he stands to his two absolute masters, the Board and the patron, he has not got it recognised by either of them. The former is so well aware of the fact that managers usually decline to trouble themselves about the "sale stock" of books and school requisites, that it has a rule referring to the case "when the teacher of an ordinary National school advances from his own resources the amount of an order for requisites," and its theory on the point must be that it is the teacher's business to guard himself somehow in his contract with the patron. In the west of Ireland I never heard of such a thing; and, indeed, a contract, the fundamental condition of which is that the "local patrons (or managers) have also the power of removing the teacher of their own authority," could hardly, in any circumstances, protect the latter against the former.

303. The master, whose sister I saw, has his history written in the Inspector's Observation Book. He was twenty years of age in 1862, when, I think, he was classified, and from which time I followed his story. His salary was £18 a year. He obtained classification (III^{e}) at his first examination, and as the attendance was high (about 50), and his class too low to allow him to have monitors under him, he was always hoping to be summoned for another examination. He appears to have considered the Inspectors unreasonable in requiring good proficiency so long as he had no monitors. The schoolhouse is an unwieldy building, in bad repair, in an exposed situation, and it takes £4 a year on an average to keep it in decent condition. It would require about £3 more to supply it properly with sale stock, the money for which goes out in a lump sum, and comes back, when it does come, in halfpennies. All these expenses fell on the teacher, and they did not leave him much out of £18. As far as one can make out, the Inspectors insisted that he should do reasonably good work and keep the school-room in proper order. He replied that he could not do so without help, that he was giving them full value for their money, and that somebody else, whoever else it might be, and not the teacher with his £18 a year, ought to spend the £5 really needed on the school. Here are a few of the entries which he found written in the Observation Book, when the Inspector's visit was over:— Second.

"July, 1862. Notwithstanding repeated suggestions, I find the school and pupils badly supplied with books, stationery, and other requisites. The retrograde character of the school may be attributed in part, at least, to the deficiency of the necessary books, &c. I cannot understand how the teacher expects to be retained under the Board, or to escape fines, at least, while his school is so unsatisfactory."

"11th November, 1862. The teacher should use every effort to improve himself and his school. It is unfortunate to see so young a man with so little zeal."

"11th February, 1863. Former suggestions still applicable. I am sorry to see the very low character of the writing in this school. The proficiency is generally very low; still I observe some symptoms of an improvement, &c."

"It is useless to leave suggestions. Those left at former inspections have not been acted on, &c. &c."

304. At intervals, the book contains complaints that the walls are still damp, that thatching is required, that a sale stock should always be kept on hand, that the ceiling is out of repair, that the desks and the woodwork of the windows require repair (he had to pay 10*s.* for half a window which a gale drove in), that the ceiling is much in want of repair, that the ceiling is in a state dangerous to the lives of the pupils. The mistress, who succeeded him, adds, that it really was so for two years, and it became at last so intolerable that, even during a period when the Board had suspended payment of her salary, she was compelled to put it right.

305. His patron, a Roman Catholic clergyman, who has six National schools under him, thinks that the male teachers are, as a body, discontented with their pay and position. It it easy, I think, to read the feeling of one of them in the passages I have extracted, and which are repeated, with monotonous iteration, three or four times as often. I make no question of the judgment of the successive District Inspectors. But it is possible to understand his feelings on the other side. He is a young man of twenty, of some ability, struggling with the Board, on how much less than £18 a year (or 1*s.* a day) he is to be forced to sustain life, and how much in return he is bound to give, in honest labour, for that sum? In his view they insisted on his teaching fifty children, well, for about £13 a year, or 5*s.* a week, and he seems to have thought he owed them a very limited amount of service for the most he could get from them (£18). The altercation appears to have gone on, very much as might have been expected, the Board reiterating their view about once a quarter, and punishing him four or five times by official reprimands, addressed from Dublin; he doggedly offering them, as I should gather from the Inspector's observations, the same minimum of work. Then he was arrested in 1866. After his liberation he left the country; and was re-arrested again on suspicion—which nothing, I believe, was found to support—about ten days before I visited the school.

306. I talked with some reliable persons who were personally acquainted with another of the five teachers. They did not believe that there was any touch of Fenianism in him. On the other hand he appears to have been deeply tinctured with the common belief to which I have referred, and to have been convinced, like the archbishop and his clergy at Castlebar (*infra*, p. 390) that remedies, which did not include, "above all, the repeal of the Legislative Union," were "too late." That is a settled conviction with some of the teachers, and every grievance of which they complain tends to deepen it. They judge the spirit and temper of the Government by their own treatment by the National Board, and they charge Parliament with their miseries. Third.

307. I do not bring any charge of disaffection against the teachers of West Connaught, as a body, in saying that I think I have seen enough to convince me that the feelings, of which the teacher whose conversation I have reported spoke, exist to some extent. But I have not the slightest doubt that the causes, to which he attributes them, are present in abundance, and that they are in themselves not unlikely to create such feelings. I doubt whether I found a single National schoolmaster, so far as I gave him opportunity to express himself, contented with his lot, or with the Board; and as people form very decided opinions of their neighbours from the treatment they have personally received from them, it is serious to know that the teachers attempt no distinction between the Board and the Imperial Government. What effect an almost universal sentiment of that kind may produce, it is needless for me to say. If it be founded on substantial grievances, I think it is of the utmost importance that a serious effort should be made to remove them. Until that has been tried, it seems scarcely worth while to consider at whose door the responsibility for the present state of things, should be laid. General conclusions.

Chapter IV.—The Religious Question.

308. One of the most important statistical questions to which my attention was directed, referred to the extent to which "mixed education" actually exists in the National and other schools. Extent to which mixed education prevails.

309. It is frequently said—I do not doubt that it is, in a considerable degree, true—that in Achill, where 41 children, of parents at present Roman Catholics, are found present, with 171 of the Established Church, in 8 schools; and in the Irish Church Mission schools, where of 984 children on the rolls in 28 schools, 604 are the 1. In Mission schools.

2. In Presbyterian.

children of Roman Catholic parents, the mixture of religions is due to the temporal advantages offered as the reward of school attendance. As far as I could learn, no such rewards are offered by the Presbyterian Mission, yet in 16 of their schools I found 106 Presbyterians, 76 Episcopalians, and 191 Roman Catholic children. On the one hand, there is much less of the spirit of proselytism apparent in them than in those of the Achill or Irish Church Missions, and on the other, they offer no inducements of any kind except gratuitous education. It becomes still more apparent that there is no violent objection to a mixed system on the part of the people when we separate 6 of these schools, which may be considered as congregational, from the remaining 10.

	Presbyterians.	Episcopalians.	Roman Catholics.
Children in six Congregational Presbyterian Schools .	95	7	5
Children in ten non-Congregational Presbyterian Schools .	11	69	186

3. In Church Education schools.

310. The Church Education and Erasmus Smith's schools are not supposed to make proselytism their principal object, although they are conducted on denominational principles. Like the Presbyterians, they offer no temporal inducements. They present, however, fewer instances of a mixed system. In all the 12 schools I found 198 Established Church, 43 Roman Catholics, and 5 Presbyterians; and when I add that 36 out of the 48 non-Established Church children were found in 2 of the 12, I need scarcely say that although 6 of the remainder might be quoted as examples of mixed education, they were so to an extremely limited extent.

4. In hedge schools.

311. The absence of any but Roman Catholic children in the hedge schools is, perhaps, to be accounted for in the main by social influences.

5. In Convent and Monastery schools.

312. There is only one non-Roman Catholic child attending the schools of the religious orders.

6. In National schools.

313. The only remaining illustrations of the mixed system are found in the National schools. They are less numerous there than might, perhaps, have been expected—partly because of the great number of denominational schools of every description, which cut off the limited supply of non-Roman Catholic children at its source, partly, no doubt, because the opposition of the Roman Catholic clergy to the mixed system has been so resolute, and because the clergy of other denominations have, on the whole, used their influence in the same direction. A good deal of the reluctance of the Protestant population to make use of the National schools is probably due to the fact that the school has frequently been built either in the chapel-yard or in obvious connexion with the chapel (§ 282). I found about fifteen per cent. of the whole number, or one in seven, National schools, in this position. I am told that, in some cases, the arrangement was a simple consequence of the proprietor's refusal to grant a site elsewhere. Whatever may have been the cause, the effect is just what might have been anticipated. Scarcely one of these chapel-yard schools has a Protestant child.

Statistics showing extent of mixed education in National schools.

314. Of 120 National schools which I visited, I found that 44 contained children of different denominations, and 76 did not. In the 44 mixed schools I found on the rolls 2,885 Roman Catholic, 251 Established Church, and 85 Presbyterian children, or 89·6 per cent. Roman Catholics, 7·8 per cent. Established Church, and 2·6 per cent. Presbyterians. As is to be expected, a few schools help mainly to bring out these considerable proportions; and setting 4 of these, in which the attendance is made up of 48 Roman Catholics, 122 Established Church, and 56 Presbyterians, by themselves, we have a balance of 2,837 Roman Catholics, 129 Established Church, and 29 Presbyterians. The children of these minorities are scattered through 40 schools, and if the National schools were practically closed in their faces, they would have scarcely any chance of education. The union of the Established Church and the Presbyterians would scarcely give a roll attendance of *four* children for each of these 40 schools, even were they disposed to cast aside their sectional differences and to unite as Protestants. One of the four exceptional cases shows an attendance of 69 Established Church and 12 Presbyterian children, and another, 1 Roman Catholic, 10 Established Church, 20 Presbyterians; so that such a union would not be absolutely without precedent. A third has 46 Roman Catholics, 43 Established Church, and 3 Presbyterians; and it is said that as there is no pressure whatever brought to bear by the landlord on the parents of the children who frequent it, and as the priest, who lives some little distance off, interferes but seldom, the case proves that the people care more for good teaching, so long as it is not accompanied by aggressive religionism, than for anything else. One of the gentlemen who has done me the favour to express his views in the appendix—and who, as I gather, is not in favour of the mixed system, says:—"I consider this school as a great boon to the locality. Although the Roman Catholics have been warned not to send their children to it, and threats of religious penalties enforced, I find the children coming out of the adjoining parishes to attend it. The success of this school I attribute entirely to the efficiency of the teacher." It may be fairly quoted, at least, to prove that the people do not object to the mixed system so far as to allow their objections to override such a consideration.

Statistics, reduced by setting aside the more striking examples. One-third of the localities visited show average minority of four Protestants each.

National schools where there is no mixture of religions, two-thirds of whole.

315. There remain 76 schools in 120 in which there is no mixture of pupils. The county of Mayo contained, according to the Census of 1861, about 8,200 Protestants, or 1 to every 30 Roman Catholics. These 120 schools, mainly in Mayo, are nearly half the National schools of the county, and may be considered to represent the supply of such schools for rather less than half the population, say 3,700 Protestants. The Church and Presbyterian schools have on their rolls 492 Established Church and Presbyterian children belonging to that population, and there are others whose social circumstances enable them to attend middle class or boarding schools, which have not been included in my enumeration. The 336 non-Roman Catholics in the National schools (*being 3 as against 5 in the schools for their own denominations*) are numerous enough, I think, considering these drawbacks, to prove that there is a large number of children, although no doubt they are but a fractional per-centage of the whole children of the county—for whom their own denominations have been unable to provide separate teaching, and who would remain ignorant, if the doors of the mixed schools were closed to them. The churches indeed have done everything that could have been expected of them. Wherever there is an attendance sufficient to make a school possible—*e.g.*, the ten Church schools I saw, had on an average 13 children present in each—they have established one; but there are 40 districts (1 out of 3 of the entire number visited) where a minority unprovided for by them, exists, and where the average of that minority *on the roll* is not higher than 4. It is obvious that no separate school could possibly be maintained for such a maximum of children.

Of every eight, three in National schools, five in Protestant schools.

Statement of question.

316. The question is, whether the majority suffer an intolerable deprivation of their liberties in the maintenance of the mixed system to secure the privileges of this small number of their opponents, or whether the number is so small that the legislature ought to neglect it, even if the regulations necessary to provide for its protection only put the majority to inconvenience.

317. The answer must be considered in connexion with that which my facts give, as to the source from which the money payments for the majority and the minority alike proceed. Whether the income of schools may be considered to come from Irish, or from Imperial taxation, it is distributed by the State which is bound to do equal justice to all its subjects. The majority has as much *right* to be fairly considered as the minority has, and no more. It is scarcely entitled to complain although the State, which pays seven-eighths of the money,

Seven-eighths of the payments made by State;

decides to deal equally with all, and indeed it is but little of the remaining eighth which is paid by those whose demand for "free education" is loudest. The voluntary subscriptions are given by the landlords; the fees are paid by the parents—and neither of these parties do much to support the cry. The landlords, so far as I could discover, were all but unanimous for the mixed system; the people showed a languid preference for the denominational, but it did not appear to be looked upon as much of a people's question. one-sixteenth by landlords; one-sixteenth by fees.

318. Some of the landlords indeed, would be willing to go further and demand a secular scheme, excluding religious teaching from the school by express enactment, and leaving it free to the religious bodies to secure it in any way they might prefer. Such a system could scarcely be more vehemently opposed by the Roman Catholic clergy than the present; but I do not think that it would be so little objectionable to the bulk of the people. The teachers of the mixed schools which have fallen under the displeasure of the clergy, and the parents who support them, urge continually, with an earnestness which appears to me to show how important the argument is, both in their own mind, and in the public feeling, that the pupils are taught their Catechism as freely and carefully as elsewhere, and know it as well. The clergy on the other hand, reply simply that these schools are inhibited, that the Church has pronounced against them, that they are a device of the Government to proselytize in a way so much subtler than that of the "Soupers," that plain laymen must not be surprised though they cannot see how it is done. The relative positions of the clergy and their flocks would be entirely different if it were possible to deny that the children actually receive the religious impressions that come through Bible Narratives, and Catechetical teaching in the regular daily course. All that I could gather, led me to think that the people would feel as hostile to "godless" or "secular" schools, as their clergy show themselves to those under the mixed system. A SECULAR SYSTEM. Objection in popular feeling.

319. The theory of the present plan is very simple. In the view of the State, the teacher and the school may be regarded as wholly secular. Its payments to him, and its grants in aid of building and maintenance, may be considered equivalents for the secular work which he does, and which is impartially open to the entire community. On the other hand the schoolmaster is, in fact, generally a member of the religious persuasion dominant in the locality, and when he is not so, he loses so much of the influence he ought to have, that prudent patrons almost always consider the fact in their appointments. The State, which makes no claims on his time after his school hours, does not object to the patrons making a private arrangement that he should also act, without extra pay, as religious teacher to the children of his own persuasion, or to their lending him the school to enable him to do so. It stipulates, that wherever the minority or their guardians can secure for them a separate religious teacher, he shall have an equally free access to the children and the school under the same conditions, *i.e.*, at times not interfering with the common secular work. All intermixture of secular and religious teaching, except in a way specially prescribed and admitted beforehand, viz., through the numerous lessons in religious history and biography in the reading-books (about a quarter of the entire bulk of which is occupied with Scriptural Narrative), is absolutely forbidden. That on the present system the State is not responsible for religious teaching.

320. It is certain, on the other hand, that the seventy-six unmixed National schools are not now conducted precisely as they would be under a denominational system. There would be "images," and the pupils and their parents would probably prefer that there should be "images." There would be short prayers or acts of worship in the middle of the day, and, in fact, everything would tend to bring the school and the chapel into harmony. One of the advocates of "free education" is said to have declared it to be his object that there should be no more question as to Ireland "continuing for ever a Catholic country," and the people of that persuasion in the country would have no objection that it should be so. It appears to me that the State would be as little justified in taking steps to secure that end, as in attempting to convert a Catholic country into a Protestant one. It is a different question how far the fact that a certain policy, justifiable or necessary on independent grounds, may tend towards such a result, ought to influence it with respect to its adoption. A deliberate attempt to convert the minority to the religion of the majority, by closing the only available schools against their children, would be as unfortunate and as unfair in its way as a like preferential action in favour of the minority. But that she is responsible for the exclusion of "emblem" teaching from Roman Catholic localities.

321. The relation in which the schools of the National Board stand to the Roman Catholic Archbishop and Bishop of the two dioceses within which my work mainly lay, and latterly to the other bishops of Ireland is exhibited, so far as it is known to me, in the following narrative. On January 11th, 1860, the Roman Catholic Archbishop of Tuam issued the following circular to his clergy, which I quote from the *Mayo Telegraph and Connaught Ranger*:— ARCHBISHOP M'HALE'S OPPOSITION TO MIXED SYSTEM. 1860.

"St. Jarlath's, Tuam, January 11th, 1860.

"REV. DEAR SIR,—With a view to adopt the most effectual means to abate the evils of mixed education, now so deservedly and generally deplored, we require answers to the following questions:—First, are there National schools in your parish (and if so) how many? Second, of these National schools are there any vested in the corporate Board of Education, and if so, which are those schools? Third, who are the patrons of the several schools in your parish? Fourth, who are the Inspectors? Fifth, the National school being conducted on the principle of mixed education, whether the schools in your parish be mixed with Catholics and Protestants, or whether they consist generally of exclusively Catholic pupils? Sixth, what portion of time is allotted each week for religious instruction, and by whom dispensed. Seventh, whether any of the masters and mistresses who may dispense religious instruction have been trained in any of these Protestant or mixed institutions, where the ordinary or the clergy had no opportunity of ascertaining their fitness to direct the moral and religious education of Catholic children of this diocese? Eighth, do you know any of these Inspectors of Catholic schools to have been educated in, or to be connected with, the Queen's Colleges, condemned by the Church? Ninth, how often in each month do you visit these schools? Tenth, are there any of your flock sending any of their children to the condemned colleges above alluded to? Eleventh, how many Catholic schools of every description in your parish connected with the National Board.

"On account of the vital importance of this subject, your distinct answers to these questions will be expected before the 24th of this month.

"I remain your faithful servant,
"✠ JOHN, Archbishop of Tuam."

322. In a pastoral addressed to the Very Rev. and Rev. the clergy, and faithful of the diocese of Tuam, dated on the Feast of St. Bridget, 1861, and published in the *Telegraph or Connaught Ranger* of February 6th of that year, the Archbishop writes:— 1861.

"The ready replies which you have all sent to the several questions contained in our recent circular require that we should not omit to direct your particular attention to that which should be more properly called Government education. These questions, together with the information which you have supplied upon this all important topic, are so connected, not only with the religious faith of the people, but also with their dearest domestic and social interests, on which they have an intimate and influential bearing, that at present we can but merely glance at them. The first and greatest anomaly of the system, especially in this diocese, and over the entire province is, that nearly in all the schools the children are entirely and exclusively Catholic, a circumstance so far favourable, for which we are not beholden to the National Board or to the Government. But our obligations to them consist in this, that out of an immense sum entrusted to the National Board not a penny is expended on Catholic education, but on the unrighteous condition of subjecting the children to the discipline of a mixed education, and depriving them of that valuable instruction which it is the work of the Catholic Church as it

is our duty to impart. Contrary too, to the principles of the Catholic Church, and the rights of the episcopacy, that Board assumes in theory and exercises in practice such a control over books and teachers, that several of their books, utterly worthless, and others leavened with heresy and offensive to Catholic morality, have been circulated in these schools.

"The authority of the Catholic Church, and of its pastors, over those agencies and instruments of education, is disowned by the Commissioners; and their officials, encouraged by the prospect of increasing salaries in proportion as they promote the views of an Anti-Catholic government, labour to root out of the minds of the little children the affectionate reverence for their pastors, which has been such a distinguished feature in the character of our Catholic people."

323. This passage, I believe, fairly contains the Archbishop's case. His decision upon it is:—

"What, then, is to be done? To bestir ourselves, and to be girt with our spiritual armour. You will not, henceforward, be writing to those Commissioners for any new schools, as suppliants for a boon, receiving their arbitrary and penal conditions without inquiry or remonstrance, and without first, in every such case, consulting your ordinary. And next, you will not send, henceforward, any master or mistress to be trained for any of the schools without a similar reference, and without having his written sanction. We may then state, at more length, our reasons for those preliminary measures. For highly-qualified teachers, to conduct elementary schools, the young men already educated in your National or other schools, and particularly the young men educated by the Christian Brothers in Tuam, can furnish a sufficient number. And as for female teachers, they can be supplied in abundance from among the young women educated in the schools of the six convents of this diocese, entirely unconnected with the National Board, and free from the taint of its dangerous teaching."

1862.

324. In the same paper, under date March 5, 1862, the archbishop again says:—

"By certain collections throughout the diocese, Catholic schools are multiplied, Catholic books are circulated, the evils of an anti-National system of youthful instruction are much diminished, and a home education, racy, as it is termed, of our own religion, our language, and our land, in despite of perverse centralizing influences, protected and encouraged. In our last pastoral instruction, we required that, henceforth, no teacher from this diocese, either male or female, should go to be trained in the metropolitan model school, the most active centre of all the evils of that mixed education, so frequently condemned. This is, as yet, but an essay of the extent to which we mean to carry our opposition to that unhallowed system, and its executive central Board of education."

Endorsed by hierarchy.

Schools opposed:—

325. I am informed that the inhibition was unanimously adopted in form of resolution by all the Roman Catholic bishops of Ireland, at their meeting in Dublin, on the 6th, 7th, 8th, and 9th of May, in the same year. The Archbishop and the Roman Catholic Bishop of Killala, the Most Rev. Dr. Feeny, the only other Roman Catholic prelate whose diocese I visited, appear to object—

1. Schools vested in Commissioners.

(1.) To schools *vested in the Commissioners.* These are built by a contribution of two-thirds from the State and one-third from local subscriptions. They are maintained in repair by the State. There is a local patron with the usual powers. The fundamental regulations of the Board guarantee and stereotype their connexion with the state system. Such schools are now opposed under all circumstances. Mr. Mitchell Henry, of Kylemore, is building new schools of this character for a neglected population, and means to support them by subscription and superintendence. He offered the local managership, under himself, to the Roman Catholic clergyman, but it was formally declined (p. 416). The case of Mr. George Clive, at Ballycroy, to which I shall refer later (§ 399), illustrates the position assumed on both sides.

2. Schools vested in unsuitable trustees.

326. (2.) To schools *vested in unsuitable trustees.* Schools vested in trustees are built like the former class by help of a two-thirds contribution from the State. The trustees are proprietors of the school, and it is *their* duty to keep it in proper repair. The school-building is "for the purposes of National education." It appears that, in both forms of vested schools, the property is (not necessarily but practically) conveyed for these purposes for ever, except in case of repayment of all public moneys spent on the building, but the hierarchy appear to think that the power of the trustees is so considerable, that where they are originally so chosen as to be agreeable to them, they will not interfere with the school. Persons proposing to found schools naturally prefer the other arrangement, which entirely relieves them and their estates from the maintenance of the building. I have no precise knowledge of the conditions under which trustees are accepted as suitable, except that in the Ballycroy case, the parish priest proposed to the Messrs. Clive (who are Protestants), when they resolved to build and support the new schools there, that the trustees should be the parish priest and some other Catholic; and that he seems to have thought that in so doing he was behaving with unusual liberality.

3. Schools under teachers trained since inhibition.

327. (3.) To schools in which the teachers, *being Roman Catholics, have gone up for training in spite of the prohibition of the hierarchy.* It is sometimes said that many parish priests look on this regulation as excessively severe, and that if left to themselves, they would not be disposed to enforce it. I found five schools where Roman Catholic teachers had gone up after the prohibition, and where, in spite of this, no hostile action had been taken. But these are only exceptions, and the rule is enforced with sufficient strictness in the main. I have been constantly told by Roman Catholic teachers that they had been summoned for training, but that they could not go, and that they greatly regretted it, as it was a most serious bar to their becoming skilled workmen in their calling, and interfered with their advancement in life. The Inspectors, I believe, seldom summon teachers who, as they are well-assured beforehand, would be unable to take advantage of the training offered them, without cutting off the hope of returning to their own schools, or to any others in the neighbourhood, and without making it reasonably probable that they would not be allowed to hold any school whatever in Ireland.

Grounds of OBJECTION TO COMMON SCHOOLS not any active persecution of R. C. religion.

328. I have taken every opportunity to listen to the arguments of Roman Catholic clergymen on the subject, with a view to understand the objections they entertain both to the mixed system and to the training school. With respect to the former, it is seldom alleged that in the National schools there is any actual interference by Protestants with the rights of conscience. I have asked wherever there was a chance that I might hear of any, and I have found none. There was *only a single case* indeed where, with a majority of Roman Catholic children, there was a Protestant teacher. The Protestants, however, were a very respectable minority, and the school was one, recently converted, which had belonged to the Church Education Society, and which the teacher and patron had simply transferred to the National Board, agreeing to separate the secular from the religious instruction. In every other instance the teacher belongs to the religion of the majority, and the children of the majority receive their religious instruction from him. Further, in seventy-five per cent. of the schools (I take the figures from the National Board appendix for 1866, which contains the latest published returns) in county Galway, and in sixty-three per cent. of those in county Mayo, the patrons—whose powers in the school are absolute—are Roman Catholic priests. In the vested schools of both kinds, which include almost the whole number of those not under their direct patronage, access is expressly reserved to such pastors or other persons as shall be approved of by the parents or guardians of the children respectively in the school-room, for the purpose of their giving religious instruction there at times convenient for that purpose, *i.e.*, so appointed as not to interfere unduly with the other arrangements. These regulations appear to be found quite sufficient, at present, to protect the faith of the Roman Catholic majorities. I found considerable difficulty, indeed, in discovering any definite grounds of the complaints made, and I shall repeat all that were offered to my consideration.

Securities against this.

329. The *first* was repeated by several parish priests. They said that the system was extremely inconvenient, and that the fact that when they happened to visit the school at any time they were not at liberty to open their lips to the children on the subject of religion, unless their visit happened within the proper half hour, placed them in an awkward and unpleasant position. Some of them who had large parishes and much occupation said, that they could not attempt to arrange their various duties so as to find themselves at the schools at the suitable time. Grounds of objection stated.

330. The *second*, which two or three teachers have represented, is that to prevent the teacher appealing at once to the sanctions of religion whenever anything occurs in the school which would make it natural and appropriate to do so, is to interfere with the moral and religious upbringing of the young. It is the same objection which is stated from the other side in the distinctive rule of the Church Education Society—"That an appeal to the Authority of the Word may be made by the teacher on any moral question at any time of the day." On the other hand, the great majority of the teachers—at least three out of four of those whom I have asked—declare that they are not hampered in any way by the present rule. One of them pointed out to me that many of the Bible narratives found in the National school books, and which are there apparently with the approval of all parties, might be applied in support of morality. They declare generally that, in their opinion, the children get as much religious education, according to their own faith, under the present system as they would be likely to get under any other, or as their parents desire they should get.

331. The *third* is that the Irish people are extremely impressible, and learn a great deal from symbols and habits; that a few emblems or pictures in the school—a crucifix for example, or a statue or picture of the Virgin and Child—the habit of crossing themselves when the clock strikes—an act of worship, such as repeating the Angelus at twelve o'clock—would contribute considerably to their religious education, and that all these are, of course, rigidly excluded from the present National schools.

332. The *fourth* is a vague objection to the National school books. They are sometimes said to show an anti-Catholic and anti-national spirit; but it turns out usually that the old books, now displaced, are referred to. The new books are certainly more popular in these respects both with the teachers and the people, and one cannot help a smile when one learns "that the expunging of Pope's moral maxims, &c.," from the old ones are retrograde changes, and illustrate the "falling back of the Board into the old bad habits, from which they had been weaned for a short time, and to a trivial extent by the Bishops of the Roman Catholic Church having pronounced against their system altogether." I heard no more formidable charge than this. Of course the books omit anything distinctive in the beliefs of different denominations, and these faults of omission are incurable.

333. The only other (*fifth*) objection, which was put forward occasionally, was that the time actually devoted to religious instruction is too short. The usual practice is to give half an hour (3—3.30) on every day in the week, and half the day on Saturday. It is curious, by the way, that the attendance on Saturday, which is entirely occupied with religious instruction, is always thinner than on other days of the week. Whether this amount of time be sufficient or not, I have never heard that any difficulty is found in increasing it, when the clergyman insists on its being increased.

334. Several of the most intelligent teachers I met entertain a decided objection to the district and minor model schools on the ground of their expense, and they contrast their work and the salaries paid in them with the payments made and the work done in the best National schools. My district contained none of these institutions and gave me no opportunity to form any estimate of the value of the work which they did, or of the soundness of the opinions offered to me. On the other hand, the trained teachers had all passed through the Central Training school, and were themselves results of its influence. Objection to training schools. "Minor model," and "central."

335. I mentioned to a distinguished Roman Catholic parish clergyman, the fact that the Roman Catholic teachers who had attended it since the episcopal inhibitions, bore unanimous and cordial testimony to the very great attention they were required to pay to their religious duties. He said he did not doubt it in the least, as the authorities were likely in the circumstances to do everything of that kind in their power. The real objection, he said, was to the spirit of the place. The students returned from the Training college with "the poison of the mixed system" in their veins; no longer, for instance, showing the same unquestioning and child-like obedience which was their duty to their clergyman; and that in fact it was the same thing, in little, as the United States of America were on a larger scale. Devoted Catholics in Ireland crossed the water, and in a new society, the prevailing influences of which were distinctly anti-Catholic, they either lost their faith altogether, as many of them did, or were transformed by a spirit of lukewarmness and indifferentism, which produced results nearly as fatal. Not neglect of religious duties, but spirit of the place.

336. He referred me to a famous passage from Archbishop Whately, to show that the intention with which the mixed system had been founded and supported was essentially anti-Catholic, and the passage itself appears to have influenced feeling in the West so deeply that I may be permitted to quote it. In his life and correspondence, published by his daughter, in 1866, there is a long extract in which Mr. Senior reports a conversation which he had with the Archbishop in October, 1852, the year before that in which he retired from the National Board. The entire extract is of extreme interest (Vol. II., pp. 235–249). Feeling due to saying attributed to Archbishop Whately.

"I believe, as I said the other day, that mixed education is gradually enlightening the mass of the people, and that, if we give it up, *we give up the only hope of weaning the Irish from the abuses of Popery. I cannot openly support the Education Board as an instrument of conversion. I have to fight its battle with one hand, and that my best, tied behind me.*" (II. p. 246.)

337. Almost every Roman Catholic priest in Connaught who talked to me on the subject quoted this passage. I should desire to read it in connexion with another in the same extract.

"The great instrument of conversion, however, is the diffusion of Scriptural Education. Archbishop Murray and I agree in desiring large portions of the Bible to be read in our National schools; but we agreed in this because we differed as to its probable results. He believed that they would be favourable to Romanism, I believed that they would be favourable to Protestantism, and I feel confident that I was right" (p. 243).

338. I see in it no sufficient reason to suppose that whatever may have been his impelling motive throughout the twenty years of his connexion with the mixed system, he ever shaped its regulations with any object but that of giving the people of Ireland an education which would make them better, and more religious citizens, or that he ever employed it to make proselytes. No Government, at least, which requested its Roman Catholic subjects to co-operate with it, as the British Government did, could venture to ask that co-operation in an attack on their faith. I confess, however, that it was with surprise and regret that I read the passage I have printed in Italics. Archbishop Whately died just eleven years after the conversation which Mr. Senior records. Few things seem more likely to undo the principal work of his life than these words which have issued from his grave. They have produced an impression on the minds of the Roman Catholic clergy in the West that perhaps cannot be effaced. What the Archbishop may have meant.

339. It is not, and cannot be, the policy of the Government to "convert" the Roman Catholic majority in Ireland. They could not reasonably be taxed in support of a real though disguised assault upon their religion. But it is What the Government must have meant.

difficult to recognise in the mixed system or in its administration, anything of the kind. The Commissioners are Protestants and Roman Catholics in equal number. Two-thirds of the patrons, with their absolute local power, are Roman Catholic priests. I do not doubt that if the system were obviously used as a weapon to fight the battles of any Church or faith, its fate would be as certain as the justice of its doom. On the other hand it is naturally the aim of the mixed Government which exists in this country, to promote good feeling between Protestants and Catholics, to do everything which may tend to fuse the two races which divide the country into one nation, to prevent everything which could tend to deepen the river of separation that has flowed for centuries between them, the waters of which have so often turned into blood. Its defence, if it is to be sustained, must rest on the failure of the charge that it is employed as a weapon of denominational aggression—on the proof that it has tended and is now tending to assimilate the two sections of the people.

DIFFERENCES BETWEEN DENOMINATIONAL AND MIXED SYSTEM.

340. The essence of the denominational system is the recognition of existing differences as permanent barriers of separation, from infancy upwards. There are only two ways in which the average denominational Roman Catholic school which would succeed the present National one under the mixed system would differ from it. The schoolmaster would be the same, but he would be more the servant of the clergyman whose authority over him no one would henceforward attempt to dispute. The patron would be the same but the school, the scholars, the schoolmaster would be his in a kind of absolute ownership, of which he can only dream at present. The school would be full of pictures, emblems, and practices of outward worship, which would grow almost as much part of the children as the colour which is supposed to prove an ineradicable difference of species. Outside, if it was humanly possible to support it, which in many localities is doubtful enough, would be that of the handful of Protestants, taught daily not only that the system of Popery was an abomination in the abstract, but that their neighbour's children in the opposite school-room were idolaters. The feeling between the two would be very much what exists now between the National schools and those of the Irish Church Mission. The aggressive proselytism, which is the essence of the offence committed by the latter against the religion of the majority, would be the condition of existence of the small denominational school. It would be compelled to fight bitterly or to die soon, and it would probably succeed in doing both. In many cases of course it could never be created, and the children would be educated at home, if at all, would leave the locality, or would be de-Protestantized by the "National" school. It appears to me scarcely doubtful that the minority, deprived of all chance of an equal start in life with their neighbours, would gravitate to the majority, or leave that part of the country, or concentrate in the few and scattered towns. In the beginning, denominationalism would, I think, embitter religious feeling in the West, and in the end I should suppose that it would annihilate sectarian animosities in the rural districts,, by annihilating all but a single sect.

Possible results of establishment of former in separation of classes in Ireland.

In separation of Ireland and England.

341. Whatever may be thought of the prospects of such a separation of religions there is another separation to which its advocates in the West think it likely to be favourable—the separation between Great Britain and Ireland. Its most prominent supporters in West Connaught demand denominationalism in one breath and Repeal in the other. While I was there—I quote from the *Mayo Telegraph or Connaught Ranger* of August 12th—

Clerical meeting at Castlebar.

"A large and influential meeting of the dioceses of Tuam, Achonry, and Killala was held on Monday last, the 6th instant, in the Ball-room, Daly's Hotel, Castlebar, for the purpose of adopting a candidate worthy of the people to contest the county (Mayo) at the forthcoming election. Previously, His Grace the Archbishop of Tuam and the clergy held a private meeting in the hotel, and prepared resolutions for the public meeting.

"Amongst those present were—His Grace the Lord Archbishop of Tuam; the Very Rev. the Dean of Achonry, Dr. Durcan, P.P., Swineford; the Very Rev. the Dean of Tuam, Dr. Waldron, P.P., Cong; the Venerable the Archdeacon of Tuam, Martin Browne, P.P., Castlebar; the Very Rev. Dr. Costello, P.P., Crosmolina; the Very Rev. Canon M'Manus, P.P., V.F., Clifden; the Very Rev. P. Malone, P.P., Belmullet; the Rev. P. Conway, P.P., Headford; the Very Rev. P. Reynolds, P.P., Claremorris; the Rev. Richard Prendergast, P.P., Newport: the Rev. P. Lavelle, P.P., Partry; the Rev. John Fitzgerald, P.P., Islandeady; the Rev. Geoffrey J. Bourke, P.P., Keelogues; Very Rev. U. J. Bourke, President, St. Jarlath's College, Tuam; the Rev. Michael Curley, P.P., Louisburgh; the Rev. James O'Rourke, P.P., Kilmaine; the Rev. P. King, P.P., Hollymount; the Rev. Thomas Hardman, P.P., Ballinrobe; the Rev. J. Ronayne, Administrator, Westport; the Rev. James Waldron, P.P., Aghagower; Rev. J. Finn, P.P., Achonry; Rev. Mr. O'Donohoe, P.P., Curry, Achonry; Rev. Peter Geraghty, P.P., Becan; Rev. James Browne, P.P., Carnacon; Rev. Michael O'Donnell, P.P., Kilmeena; Rev. Edward Griffin, P.P., Turlough; Rev. Edward Gibbons, P.P., Balla; Rev. James Farrelly, P.P., Roundstone; Rev. William Farrelly, P.P., Crossboyne; Rev. James Magee, Administrator, Tuam; Rev. Thomas M'Walters, C.C., Castlebar; Rev. J. Sheridan, C.C.; Rev. C. Geraghty, C.C.; Rev. Hubert Finneran, C.C.; Rev. John O'Malley, C.C.; Rev. John O'Boyle, C.C.; Rev. M. Brennan, C.C.; Rev. P. Loftus, C.C.; Rev. B. M'Andrew, C.C.; &c., &c.

"Mr. George Henry Moore, one of the candidates, was present. Lord Bingham and Mr. Valentine O'Connor Blake, the other candidates for the representation of the county, did not attend."

342. It will be noticed that although the meeting appears to have been meant to include "electors of the county," only one layman, one of the candidates, is reported as present. On the other hand there appears to have been scarcely a single Roman Catholic clergyman in the three dioceses absent. The Bishop of Killala, the Right Rev. Dr. Feeny, sent a message, regretting that he was not able to attend the meeting; but he emphatically endorsed its principal object. The Bishop of Achonry was not there. The resolutions of the meeting were moved and seconded by "the respected dignitaries of the dioceses of Tuam, Killala, and Achonry," and the first resolution was passed unanimously. It was this:—

Repeal resolution unanimously adopted.

"That having met to confer together on the respective merits of the candidates for the representation of Mayo, in connexion with what we deem most necessary for the prosperity of Ireland and her people, we hereby pledge ourselves to give our strenuous support to those candidates only who shall advocate the fullest measure of tenant right, unqualified freedom of Catholic denominational education, the disestablishment and disendowment of the Protestant Church, *and above all, the Repeal of the Legislative Union;* and who likewise shall not enter into coalition with any candidate not holding these principles, or who shall decline to co-operate with the candidate who maintains them."

343. I need scarcely say that I have no opinion to express as to the policy of Repeal which is advocated in this resolution. What it is of importance to notice is, that its enthusiastic supporters are the same men who advocate denominational education, and that they regard these two objects as bound up together. One thing is certain. Under the denominational system, these gentlemen themselves would be effectively the only men whose influence would ever be brought to bear on the minds of the youth of West Connaught. The lay landlord would disappear from the schools at once, and the priest would take his place. In the three dioceses of Tuam, Killala, and Achonry, the presence of the one appears to be a symbol and support of the British connexion, the other proclaims himself to be the standard bearer of Repeal.

MODIFIED MIXED SYSTEM SUGGESTED.

344. Suggestions are often made in favour of a sort of modified mixed system.

"In localities" says one gentleman, "which may substantially be considered as altogether of one religion, the school should be denominational. In localities where the population is not exclusively of one religion there

ought to be a separate school for each religion, provided the number professing each religion be sufficiently large. When the number of one religion largely preponderates over that of the other, the school may be under the mixed system, or certain regulations may be laid down so as not to exclude the minority and yet at the same time provide for the religious instruction of the majority." Another of my correspondents advocates the same policy, except that he thinks that "the old rule for religious instruction should be strictly adhered to, namely that every child of a separate religious denomination from the teacher and the majority of the pupils, be obliged to leave the school as soon as the hour for religious instruction arrives." The first gentleman says "It is difficult to believe that in order to make good citizens, it is essential that in an exclusively Roman Catholic locality, all symbols of the Catholic Church for which Catholics have the deepest reverence, such as the image of our Saviour upon the Cross, the Statue of the Blessed Virgin, all religious instruction, should be rigidly excluded. This is naturally and necessarily calculated to create offence and create dissatisfaction. The very atmosphere of the schoolroom should be religious. In imparting secular instruction, the master should at every moment and at every opportunity instil religious principles as part and parcel of his secular teaching." It is difficult to see how this idea of a school could be realized under a mixed system, or how any regulations consistent with it could be laid down so as not to exclude the minority. In the forty schools of which I have spoken, the average minority on the roll amounts to four children, and I confess that I should not like to occupy their position, or that of their parents, if their obstinate determination to attend a school anxious to introduce denominational practices, alone stood in the way of its ceasing to be mixed and becoming denominational. Before a few years had passed they would have to choose between learning their multiplication table in schools saturated with Roman Catholic observances, or going to no school at all, or, if they were unusually fortunate, having a school maintained for them by the missionary energy of the denomination to which they belonged. Kept up as an effort of despair, without a real current of young life flowing through it, or real work for the teacher, and depending for its existence on the accident of a family more or less in the place, or of another having children too young or too old for school, it could scarcely fail to be inefficient and worthless.

Details of suggestions,

345. My correspondent's recommendations as to the proper relations of the State to the school, refer in the first instance to the mixed system, but they show with sufficient distinctness the position in which some of those who advocate denominationalism desire to place the State. "Dissatisfaction and complaints," he says, "often spring from a want of conciliating and courteous manner on the part of the Inspectors and schoolmasters, towards the patrons or clergy. Inspectors should be instructed to do all in their power to conciliate the patrons and clergy, to communicate freely and unreservedly with them on all questions relating to the management of the schools. *The rules of the Board should not be rigidly adhered to. They should be considered merely as general instructions to be acted on or deviated from, according to circumstances, in the discretion of the Inspector.* Considerable latitude should be allowed to the Inspectors in this respect. They should be instructed *whenever practicable to comply with the wishes of the patrons and clergymen, though such wishes should not be exactly in accordance with the regulations of the Board.* Of course this must not be allowed where inconsistent with the general good management and efficiency of the school." The passages I have italicised indicate a position for the Government of this country to which it has not been accustomed, and which could not fail, I should imagine, to render it ridiculous. If the regulations making it possible for the children of the minority to attend the school without injury to their consciences, were carried out in the spirit of these suggestions, they would not be likely long to attend it.

and what they come to.

346. In fact, if it is to be adopted at all, the denominational system may just as well be adopted frankly, and all at once. A part of it would be less satisfactory than the whole—and, after its principle is accepted, any limitations on it only imply a brief and injurious conflict, in which the State must infallibly be defeated a second time. It implies denominational Inspectors as a matter of course, and it is difficult to see how the last fragment of mixture in the central Board could be allowed to remain. My second correspondent says—"The controlling power and the Inspection Department might still remain mixed as at present, but they should be mixed in fair proportion, and so as to represent in comparative proportion the numbers professing the different religious sects in the country." A central Board, so mixed, that the majority should have power in proportion to its numbers, would leave the minority at its absolute mercy, and could not endure for a day.

Modification impossible.

347. The prospect of denominational inspection is not viewed with universal favour. A Roman Catholic teacher says that it is the one thing he fears most. He considers that Roman Catholic Inspectors, acting in concert with Roman Catholic clerical patrons, "being men inferior in status, and much less secure in their appointments" —would not be able to take up any position with reference to teachers, but that which the managers might dictate. That is a point on which, of course, I can offer no opinion. But I think there is real danger in the anxiety which Inspectors occasionally show even at present, not to do anything which could offend the clerical managers. The strictly denominational practice of the children crossing themselves when the clock strikes, has gone on (as I am informed by the patron and by the teacher) for the last five years in the school of A, and must have been observed by several successive Inspectors, who have left no record of their having taken any notice of it. These officers, indeed, are instructed to be polite to managers with a precision which, but for the statements of my correspondent, I should have thought certain to protect them effectually against all danger of falling into the opposite extreme. They are told "to seek to make themselves acquainted with them on their first tour of inspection, and on all subsequent occasions to call upon them regarding any matter of importance that may come under their notice in their schools. When managers are not at home, the Inspector should leave his *card* to intimate the fact of his visit."

Difficulties in relation between Inspector and Priest.

348. I have said that the relations between the Protestant and Catholic denominational schools would probably be similar to those actually subsisting between the National schools and those of the Irish Church Mission. What these really are, at the present moment, a case or two will illustrate.

FEELINGS PROBABLE UNDER DENOMINATIONAL SYSTEM ILLUSTRATED BY CASES; PRESENT NATIONAL AND IRISH CHURCH MISSION SCHOOLS.

349. In the village of A, the National and the Irish Church Mission schools, stand very near each other. The priest, who is patron of the former, tells me that he obtained an excellent teacher who had been dismissed from a National school in the neighbourhood, in March, 1867, for some imprudent expressions respecting Fenianism, used in open court. The Board of course, knew of the circumstances. There was a good deal of excited feeling in the village, in consequence of a habit which the Mission Agents had of forcing tracts on the people. They even went so far as to pitch them into his house, and the houses of the teachers, and the school-rooms attended by Catholic children. After a time they brought certain charges against the teacher, and an investigation was ordered by the Board, at which the charges utterly broke down, the accusers even denying that they had ever made them. Another investigation was instituted on charges forwarded by the Constabulary. A third was held, at which the sergeant of police stated that some children belonging to the school had called one of the Mission agents an insulting name. This was on an evening when the priest was entertaining some 500 pupils, who were all on the roll of his schools. Another policeman said that the teacher was coming up towards the school, along with some children, who were shouting, and that he was doing nothing to prevent them. There was a good deal of irritation because the Mission agents held an exceptional

Case A. Statement by priest.

meeting at seven on the evening of this entertainment (which commenced at four), in the same small village, distributing tracts, and so on. On this third investigation, the teacher was dismissed, not on the ground of any charge proved against him, but simply for the offence which had been the cause of his removal in the former case. I was informed from the office of the National Board that he "having subsequently obtained charge of a neighbouring school, was at the instance of the Lord Lieutenant, removed from the service of the Commissioners."

Statement by police sergeant.

350. The sergeant of police had his station three miles off. He says that one day, about twelve months ago (about August, 1867), shortly after the arrival of the new missionary and two new Scripture-readers, there was a great meeting of 400 or 500 children in the National school. There were speeches, music, dancing, and a bonfire. The meeting took place about six and went on till about eleven. The sergeant and four men were in the village during this meeting. There was the regular prayer-meeting in the Mission School on the same evening. When the people attending it were about to leave, the constable formed his men and escorted them out of the village. They passed the body of men and children from the National school, and there were many indications of bad feeling, so that the constable believes serious mischief would have been done had he not been present. After this the children marched up and down the street in military order, their teacher marching after them. They kept shouting nicknames and insulting epithets. On one occasion afterwards the scholars from the National school met one of the Scripture-readers, hunted him for two miles, pelted him with stones, and cut him about the head. During the whole of the winter following the constable and his men were every night going up to A (three miles off), and they used to remain there till two or three in the morning, for the sake of the peace of the locality, and in consequence of the annoyance given by the National school children and others to the mission children and all connected with the mission. The missionary and one of his readers had their windows broken. There were two night-schools—one connected with each of the rival seminaries—held all through the winter. Disturbances were constantly reported, and he had orders from his officer, and a magistrate's order, instructing him to patrol there every night when these meetings were likely to take place.

351. A police station, with a constable and four men, has been established at A, within the last six months. Up to that time the sergeant and his men had the duty he describes.

Statement by missionary.

The missionary clergyman writes that they had a good deal of annoyance last winter. "There were stones frequently thrown through my windows and those of one of my readers. The readers were twice severely stoned, once on the 1st, and again on the 8th of December. It is fair to say that we could not trace any of the stone throwing to parties connected with the National school. There is no doubt that the National school children took part in the hooting and shouting which used to follow us almost every day. On one occasion, especially when passing through the village, I was hooted by a large body of them in the presence of their priest, but we never thought much of the hooting and shouting. This we might expect in most parts of Ireland. We had evidence enough to show that whoever the parties were who committed the outrages they were only acting in accordance with instructions given from the altar. I do not believe that we ought to charge the National school or its teacher with being accountable for them."

Case B.

352. A more amusing conflict of evidence is connected with my visit to the Mission schools at B, two miles beyond A. On my arrival at A (my first appearance in the neighbourhood), I had meant to visit the Mission and National schools there and the Mission school at B. As it happened, the two Mission schools were closed that day, and I left word at the house of one of the teachers that I should return next day, arriving at B precisely at ten o'clock. I then saw the National schools at A, and another under the same clergyman's management, and I had the advantage subsequently of a very long conversation with him on the subjects which were interesting me.

353. It is frequently said that the Mission teachers are in the habit of "packing" their schools for an expected visitor. They complain on the other hand that the priests sometimes prevent attendance on the same occasions by violent measures. I was not, perhaps, fully alive to these facts when I entered Connemara.

354. When I reached B next morning I found seven children present, two of them the teacher's own. The master had prepared a list of those he expected, showing twenty. The school roll for the preceding week gave an

Statement by mistress,

average attendance of thirteen. After I had examined the seven, the master and mistress assured me that I need look for no more. The mistress said that she had herself met the priest going up past the school a few minutes before I came. Both were convinced that he was keeping the rest of the children away. They said that as I had left word that I should be there early, the master had gone round to his scholars on the previous night and had urged them to be in time, which they willingly promised. I walked down the rough footpath leading from the school to the road where my car was standing. When I got there I found five or six girls hanging back behind the junction of the two roads, and four or five boys in front. I stopped to inquire the names of the boys and found that two of them had been expected by the master that morning, though they had not been present in the previous week. Just as I was starting again, he came rushing after me with two girls, one about fourteen and the other

by scholars,

about ten. They declared that the priest had come up that morning and had prevented them and three others (naming them) who had been present in the previous week, and four more (naming them) who had not, but whom the master had expected. The elder girl said he carried a stick or a whip.

355. On the other hand I wrote to the priest, informing him of the general nature of these statements; he replies—

and by priest.

"I deny that I stopped any child attending that school from coming that morning. I was with you the whole of the day before until very late; you passed on almost at the very time I was getting up on that morning. The teacher of that school was out through the villages from daylight that morning asking for some children to come to the school. I can mention four families to whom he offered a bribe to send their children, even for the half hour you would be at the school. Such is the conduct they have to resort to when they hear of any persons coming to inspect the schools; were the English people to know the actual state of the case, such as you witnessed, they would not be constantly sending their money. I positively assert that I prevented no child from going to the school that morning."

356. It is obviously impossible to reconcile these statements. The state of feeling between the schools is equally obvious on either view. So small a school might, of course, either be annihilated or made to appear twice as large as it really was by a strenuous effort, and the statements on each side imply charges of deliberate and determined attempts to deceive. The assertion of the schoolmistress, that she met the priest two miles from his house and near hers, a few minutes before I reached her school, is directly contradicted by his statement, that he saw my car passing his house, two miles from it on the road, as he was getting up.

Case C.

357. Take a third case. A lady, who is related to one of the most prominent of the mission clergymen, had long taken a great interest in the C mission school. According to her statement, a number of the children attending it came from a district two or three miles off, along a road, fenced on one side by the demesne-wall of the proprietor of that part of the country, who is a Roman Catholic gentleman. The opposition and persecution they met with along this road frequently obliged them to turn back, or to fly up the mountain. Several of the parents, in consequence, entreated this lady to establish a school in their district. Three years ago she

did so, and this school has been in constant operation since. The narrative may help to explain how schools, smaller than it might otherwise be desirable to establish or support are occasionally brought into connexion with the mission.

358. The school was at first much interfered with. The priests visited it at least five times, sometimes three or four of them together, sometimes two, sometimes one. They tried to take down the names of the children, and it was believed that it was for the purpose of denouncing the parents from the altar. This caused so much terror, and their visits, &c., in the school gave so much annoyance that after a time the mistress was told, when she heard of their being in the village, to keep the door closed.

Assault on a lady's school.

359. The next time, in May, 1866, that the priest, "the Rev. Mr. ——, came, a shameful scene ensued. He attempted to break in the door with kicks and blows, and wanted some of the parents who gathered near to assist him, but they refused. Then he wanted them to go in through the windows and pull out the children, but they said they had no need of them till school should be over at three o'clock."

360. At this time the school was not under the mission, but was maintained at this lady's expense, and she was the only person who had any connexion with it.

Case D. Guides.

361. I was conducted by two mission teachers, young, active men, to the neighbourhood of a Roman Catholic school. They preferred to leave me some little distance from the enemy's camp, as they discovered that the children were outside, and they seemed apprehensive that I might be received with a little hospitable stone-throwing for the sake of my guides. One of them, who was a convert, avoided, as far as he could, crossing the potato-beds of the people, as he said that they would believe he had blasted them if the disease came, and he might have to suffer for it. Of course I can only say that they showed every sign that they really believed these things of the people among whom they lived.

Case E. Published correspondence.

362. I found the following forcible expression of his feelings in a letter published by the Rev. Father Lavelle, in the *Galway Vindicator* of August 29, 1868. He is speaking of the Scripture-readers, the text teachers, and the entire proselytizing agencies of the "Lough Mask Mission," which is in his parish.

"Readers and text teachers are shunned as something leprous. They dare not enter a house when a man is nigh, and only when they are sure of meeting none but an old crone of a woman in the corner. Even thus, after the most minute inquiry, I have ascertained that during the last twelve months they only entered four Catholic houses, and these on pretexts, once of lighting the pipe, once of buying potatoes, once of buying turf, and once of buying a young pig, where there was a litter. As for daring to produce a Bible or a tract, why it was just as much as their bones were worth. They are never spoken to on the high road—not even is their 'God save you,' returned. *The people strictly followed my repeated admonition, to keep altogether aloof from these common unchristian disturbers, whose mission is to create discord and ill-will, to exclude the ignorant and mere animal creatures from their homes, but to avenge on the spot, for example sake, any blasphemy uttered by these foul mouthed creatures in the hearing of the people, should the former attempt, on the high road, forcing their hated company on the latter, whose fidelity indeed could not for a moment be shaken, but whose religious feelings could be outraged by these good for nothing idling mercenaries.*"

363. I think that few of the Roman Catholic clergymen I saw would have expressed themselves with equal vigour, or would have admonished their flocks to adopt all or many of the steps suggested by Father Lavelle in the passage which I have printed in italics; but most of them regard active proselytizing with feelings of precisely the same kind. The proselytizers, being human, are likely to feel very little friendliness towards such opponents, and these bitter antipathies have been the curse of the country.

Two methods for preventing such quarrels. 1. Mixed system. 2. Denominationalism, and a law to make proselytising of children criminal.

364. There are only two ways in which the State can try to cure them—by the mixed system on the one hand, or by a denominational system, accompanied by a law, making proselytism penal, on the other. Were the Government to decide that the Protestants may have grants for their schools, on condition that they shall never admit Roman Catholics, and *vice versa*, the cause of what is called free education would be nearly gained. If it be resolute, so far as it may be in its power, to stop up the fountains of "religious" passion, it must go farther still, and prohibit proselytizing of children, even outside the schools to the support of which it contributes. Perhaps the idea is not in itself so impossible as it seems. A government, armed with despotic authority might plead that in carrying it out, it interfered with no legitimate missionary agencies. The school-room may not be the proper place to try to convince a child of the untruth of the religion of its family. It may not be for the good of the country, that people who wish to change the convictions of their neighbours on the most serious of all subjects, should be permitted to lay hold of them before their faculties have become sufficiently mature to apprehend either their truth or their falsehood. But there is no view which would be more decidedly rejected by the mass of clergymen of all persuasions, and if the Roman Catholics of Connaught accepted it, it would probably be because of their confidence that the law of gravitation would inevitably draw the minorities to their side. The letter I have quoted is not the only thing that suggests that animosities due to what are called religious differences may long survive any action of the education department in Ireland, or of the State, with respect to children.

Objection to method. (2.) Multiplication of needless schools.

365. This kind of denominationalism, however, is the "free education" which would so far pacify West Connaught. Under it, if it thought fit, the State might give a grant to a school for two families, or for one. Indeed it could scarcely refuse to do so, after preventing their access to larger schools. All its money, however, would be insufficient to maintain these toy establishments in life for any length of time, or to make them worth maintaining. The smaller denominational schools now kept up by voluntary action, are of little use. Some of them do positive harm. The State "minority schools," under this tranquillizing denominationalism, would stand to them in the same relations as to size and efficiency in which they stand at present to an ordinary National school.

Importance of securing the priest's action in favour of education.

366. A decided majority of the National teachers whom I consulted are opposed to denominationalism in any shape. In opposition to them it is often urged that no system of education in the west of Ireland can ever be successful without the hearty concurrence of the Roman Catholic clergy, and that everything ought to be done to "conciliate" them. No doubt, if these gentlemen brought their whole influence to bear in favour of education, the attendance would be greatly increased. A schoolmaster writes, that "There is sometimes a *dislike* on the part of the enlightened parents (the ignorant not being able to judge) of the present system, which is regarded as somewhat in the light of a *Protestant Government* system, by most of the enlightened people of this country. This latter view which many respectable well-informed people entertain, tends very much to lower the *status* of the teachers, who by many of this class of persons are regarded perhaps a shade better than 'Jumpers,' or 'Apostates.'" My observation would lead me to reverse the positions of those who take this view. The "ignorant, not being able to judge," appeared to be in the habit of learning it from their clergy. It was surprising, indeed, to what an extent they had not learned it, and how obstinately many of them continued unable to discover anything in the present arrangements with which the clergy have a right to be angry. "Most of the enlightened people" seem to be convinced that there is no proselytism in the National system. The worst that is said by them is this, that it is apt to produce a charity between persons of different religious beliefs, helping them to live in harmony as members of one community, which the State is most anxious to encourage, and which many clergymen on all sides appear to regard as the feeling

which of all others is the most hostile to genuine religious conviction. There can, I think, be little doubt that denominational schools paid by the State, but under the sole patronage and control of the clergy, would secure more of their countenance and support. But it may be possible to exaggerate the importance of these things. I should doubt whether half of the clergymen, now patrons of National schools, take any very lively interest in their daily working; and I question whether the proportion would be greatly increased by any change. The school is, after all, the teacher's business, and the manager, unless he has a natural turn for that kind of work, feels himself an outsider on ordinary occasions. It may be possible, besides, that the State may buy even their support too dear, if the children whom it is thought likely to bring in crowds, are to be taught hostility to the connexion between Great Britain and Ireland, and to unlearn the "general lesson" which has been hung up in the mixed schools for a generation: "Many men hold erroneous doctrines, but we ought NOT to hate or to persecute them."

Attitude of people to vested schools and trained teachers.

367. The attitude which is taken up by the clergy towards the vested National schools and the trained teachers, is just as hostile. It is sustained by an abstention from active support of them on the part of the people, sufficient to show the enormous influence that the clergy can exercise on education either for good or for evil. But the people themselves seldom exhibit active hostility, and at present there is frequently no visible object of attack in a rival school. Even in Ireland there must be two parties to a quarrel, and the mixed Government school has a Catholic master, in the main, Catholic supporters, and Catholic scholars. It would be doing injustice to the clergymen who direct the opposition not to say that they sometimes set up and sometimes encourage an adventure school for the use of those whom they keep away from the other, but it does not appear to hold its own in the competition. It is seldom more than a hedge school of a coarse type, and many of the people have discovered that attendance on such schools brings little reward of learning. Even when they humour their clergy by a languid support of these wretched makeshifts, they appear unwilling to enter into violent conflict with their brother Catholics, on a matter in which they seldom feel that any wrong has been committed. I have heard of no parties of police compelled to patrol to protect the Government or mixed night-school against the night-school of the priest, —of no bands from either, breaking into the other, tearing up the books and smashing the desks,—of no quarrelling between the children in their play hours, or throwing of stones on the roofs and through the windows of the rival establishment. I do not suppose that the clergy urge them to any such excesses as these. But merciful feelings are seldom allowed to interfere with their own sense of the duty of obedience to their bishops, and they use their *spiritual* weapons against offenders with a vigour for which I was quite unprepared.

Different attitude towards mission schools.

NATURE OF ACTION OF THE CLERGY AGAINST SCHOOLS.

368. It is so important that the Commissioners should understand what is the real state of feeling, that I give the facts of several cases as I was informed of them on the spot. I have avoided the publication of names wherever it was possible to do so, but I have taken pains to give everyone who might conceive himself to have a right to complain of the statements made as to his conduct, an opportunity to give his own account of the matter. Very few clergymen availed themselves of it, and one or two stated that they declined to do so, because they had acted simply in obedience to the Church, and were responsible to no other authority. All the statements on which my narratives rest, were made with the clear understanding that every person involved in them would have an opportunity to make his counter statement. I have reported the details of each case separately to the Commission.

1. Case at Partry

Authorities.

369. My first illustration is the school at Partry, under the patronage of Sir Robert Lynch Blosse, Bart., an Established Church layman. My narrative is founded on his statements, and on those of the teacher, and of the constable in charge of the constabulary station at the time referred to. I have also made use of letters published by the parish priest, who was absent from the parish at the time of my visit. On that occasion I saw and examined a school which he had erected during the winter by voluntary contributions, and where he had appointed a teacher in February of last year. He was then making application to the Board that they should receive it as a National school, and should pay salary to the teacher—a request which I believe has been since granted. The school was in the chapel yard, and there was an inscription on the stone above the doorway, "Partry National school. Site refused by Sir Robert Lynch Blosse, Bart."

Patron's statement.

370. Sir Robert Blosse writes that on his estate at Partree there was much need of a school. Four years ago he applied to the Commissioners for building grant, but they delayed a final decision because at the time of his application there was an outstanding grant to a neighbouring gentleman, for a school intended to meet the wants of the same population. After that grant had continued unused for three years, the Commissioners transferred it to him, and instead of building a new school, he bought, with their consent, an empty building which was in a very convenient situation, fitted it up thoroughly, and advertised for a trained Roman Catholic teacher, the population being Roman Catholic. Before appointing the schoolmaster, but not before issuing the advertisment, he had his attention called to the fact (of which he had not been previously informed) that the Roman Catholic Archbishop of Tuam had prohibited Roman Catholic teachers in his diocese from attending the training schools, but he did not think himself justified in rejecting the best candidate who presented himself on the ground that from professional zeal he had chosen nevertheless to undergo special training. This man had an excellent character from the patron of another National school, and also from the Roman Catholic clergyman of his parish. He appointed him and opened the school about the end of August, 1867. It was immediately well filled.

371. While he was arranging about this, the parish priest, the Rev. Patrick Lavelle, applied to him for a site for a school-house, but he thought himself justified in taking no notice of the application. Mr. Lavelle then opened a school within a quarter of a mile of the other, and applied for a grant in aid. Sir Robert Blosse informed the Commissioners that he should be happy as patron to afford Mr. Lavelle every assistance for giving religious instruction in his school, should he be willing to do so.

Success of school.

372. The other day (July, 1868) he found 80 pupils there—though he has made no attempt in any way to influence his tenants, either to send or to continue to send their children. The school has been well attended from the first (averages—August 45, September 57, October 59, November 46, December 56, January 63, February 64, March 58, April 45, May 54, June 61). He has never had any trouble with the Roman Catholic clergymen except in this case. He has always appointed Catholic teachers. At Ballintubber, on his property, the Roman Catholic clergyman is patron of a school, the site of which he gave at the clergyman's request, to which he regularly contributes, and where he built a house for the teacher. He tells me that it is well known in Mayo that he has never attempted to interfere with the religion of his Roman Catholic tenants, but has always expressed his disapproval of the system of proselytising.

Priest's action.

373. Mr. Lavelle forbade the children to attend his school; refused the rites of the Church to the parents of such children as went there, and turned several of them out of the chapel. The master says that the priest came into his school on the Monday after he began work, and said aloud in the presence of the scholars that neither the master, nor the parents of the children, nor any member of their families, nor any servant in their houses should attend mass or get the sacraments. He then made a list of all the scholars present, as he had previously given notice to their parents that they were not to send their children. Some of them who afterwards went to mass were ejected from the chapel and the doors were locked against them.

374. The constable in charge of the station there returned after a short absence, about a week after the school was opened, and on the Sunday following after mass he went to the priest outside the chapel, as the people were separating, and said that he should send his three girls to the new master unless he could promise him that he himself would have one settled there in a very short time. A kind of school had been held in the chapel, conducted by the clerk, but it was next to nothing; his children had refused to continue attending it, about two or three months before, and it was not in regular operation at this period. The priest said, in answer, "If you attempt to send your children there you'll be treated like the rest." No more passed, and next day he sent his children. Nothing farther occurred between them during the week. Next Sunday he was present in chapel with his wife and three children, and two of his men. They were all kneeling before the altar, and the priest said, "While Sergeant C. is in the chapel, I shall not read mass, so I shall give him one minute to retire." The Constable said, "I don't think it is the act of a Christian minister to treat a man in that form;" and he replied, "I want none of your chat, sir, retire." The constable's wife came over to him, and said, "Thomas, we'd better go out, for your prayers will do you no good;" and accordingly he went outside the chapel with her and his children, and knelt at the door, in the open air. Immediately after, the priest followed him to the door where he was kneeling, and said, "Go outside the chapel-yard, you shall not remain there," or words to that effect. They then all stood up, went out, and walked on the road, waiting for his men, as he had to march them back to the barrack. When the priest had put them out, he called to the curate's servant boy, "Shut that gate after him," which was done. Before he mentioned the constable's name expressly, he said that none of his parishioners must send their children to that "jumping"school, or if they did, they would get the same treatment as the others had got. Sir Robert Blosse's tenants were not at chapel that day, and the constable understands that they had been excluded previously. Father Lavelle added, that he would refuse his attendance as a priest to any person in his parish who should send his children to that school against his will. Instance of action of clergy.

375. Some months after, a very old man, eighty or ninety years of age, grandfather of some children who were attending the school, living nearly opposite the barrack, with his married son and family, and who, of course, had no control of any kind over the action of the children, died. He was refused the last sacraments at his dying hour, and there was a very deep feeling throughout the locality about it. The teacher says, "It was a frightful shock to the rest of the people, as well as to the relatives, and even now they talk of it in whispers." Second instance.

376. The constable afterwards went with his eldest daughter and his men, four or five miles away, to the nearest place of worship. He received a letter dated 15th December, 1867, from the clerk of the chapel, which to the best of his belief contained the following words—"I beg to inform you, Sergeant ——, that I am directed by the parish priest to say that neither you nor your contingents have any further accommodation to receive in the chapel of Ballintubber." That was the substance of the letter. He reported these occurrences to his superior officers, and he was transferred to his present station, a considerable distance away. He is a tall soldierly man, aged fifty-four, but his hair is getting gray, and he looks broken and in the opinion of his officer at least ten years older. The distress which he suffered, very seriously affected his health, and he is now applying, or about to apply, for retiring pension. Farther action by clerical authorities.

377. I am told farther that marriage was refused to a couple where the bride, an orphan girl, lived with a brother who sends his children to this school. The bridegroom consoled himself within a few weeks. Third instance.

378. The same course of action was still persevered in at the time of my visit.

379. The schoolmaster's offence had been that he had gone up for training from another school (having been summoned by the Inspector) against the wish of his clergyman and after the prohibition. He was warned that he would not find his school open for him when he returned. Within a month after, however, he got employment in the neighbourhood under a lay patron. The school began favourably and the attendance was about thirty. After a week, it was denounced from the altar, and the attendance disappeared, the master being there every day, but no children at all coming for a month or six weeks. Then they began to come back by degrees. When the number rose to, say, ten, the clergyman used to visit and take down their names, after which the attendance again disappeared. This continued for about a year—three or four of these visits intervening. The Board paid salary for the year, and then withdrew it, and the master had to leave. Teacher's history.

380. He says that when he went up to Dublin he was totally unaware of the nature of the penalty he had incurred. He had no idea that he would be denounced and followed from school to school with the view of preventing him from getting or retaining any situation. Had he foreseen it, he would have expected some express effort on the part of the Board to protect those whose only crime had been obedience to its orders. At present the feeling in the neighbourhood and even in his own town, partly excited by the continual application to him of words like "proselytizer," "souper," "jumper," &c., is such that he feels himself nearly an outcast. In consequence of all this his name has gone abroad so much that he is very much depressed, and the future looks to him very dark indeed.

381. In a letter dated Feb. 1, 1868, addressed to Sir Robert Blosse, and published in the *Irishman* of 30th May, 1868, the Rev. Mr. Lavelle says—

"Sir—A universal feeling prevails here that it is owing to threats of eviction your tenants of Partry are sending their children to a school expressly interdicted by His Grace the Archbishop of Tuam. Priest's position stated in his letters.

"Several of the poor people have with tears bemoaned to myself that it is through terror of eviction they thus violate the special mandate of their own Archbishop and the general authority of the Catholic Bishops of Ireland. If these injurious reports and impressions are groundless, I think it would be well to give them an authoritative contradiction—uncontradicted they cannot but be regarded as true. It may be well to mention that all these people are debarred from every ministration of their Church, even at the hour of death, without due repentance. Must it go before the world that you compel your tenants at will, on pain of utter ruin to violate the ordinances of their hierarchy? I sincerely trust that you will allow them full liberty of conscience and the use of the sacraments of their Church by according to them liberty of education."

382. In a subsequent letter to the Editor of the *Ballinrobe Chronicle*, he says—

"The parents who send their children to such schools are expressly shut out from all participation in the sacraments of the Church, so much so that were they all on the point of death this moment, I could not bestow on them those aids, so much needed at that awful moment, unless they had finally, irrevocably, and penitently withdrawn the children."

383. He says again—

"He (the patron) forces this conflict not on me, but on my superiors, whose injunctions I am bound loyally to carry out. He attempts to wrest the training of the Catholic children out of the hands of their spiritual guides. He thus usurps a power which never can be his. *It was not to landlords that the Great Guide of us all once said, "Go teach all nations."*" And his argument.

384. I have put the last sentence in italics, because the argument it contains is frequently reproduced, perhaps less concisely, in education controversies in the west.

And that he has the approval of his archbishop.

385. To prove that he is acting with the Archbishop's sanction he publishes a letter of recommendation with which he has been furnished, to enable him the more speedily to obtain the balance of the expense of building his new school (nearly £200, of which his Grace has forwarded him £20 and the poor people have contributed nearly £20 more).

"St. Jarlath's Tuam, May 14, 1868.

"The Rev. Father Lavelle, who has for several years successfully combated hostile efforts in protecting the faith of his flock, has been recently engaged in building a spacious school-house for the education of their children in a portion of the parish which required the continuous exercise of all his zeal and vigilance. Although he has received some aid to carry out this good work, the outlay has been so heavy and the people comparatively so poor that he could not expect from them the necessary funds to meet his liabilities. It is a strange and anomalous feature in the character of the present times, that whilst landlords are generally reducing their tenants to a degree of serfdom beyond any former example, they are, at the same time labouring to wrest from the clergy that control over the religious education of their flocks which belongs to them alone. It is to be hoped that a state of things so much at variance with sense and justice will soon cease. In recommending the claims of Father Lavelle to the faithful we are only labouring to establish that equitable relation which will enable the clergy, the landlords, and the people, to live peaceably together without encroaching on each others' mutual rights.

"✠ John, Archbishop of Tuam."

386. Mr. Lavelle states that previously to Sir Robert Blosse's opening the school, he had procured a teacher "to instruct the children in the handsome Catholic church, and in winter in its sacristy. Let it be borne in mind that here they were taught all they particularly needed in the way of reading, writing, and arithmetic." I presume that this is the school of which the constable had so unfavourable an opinion, and which he described as "next to nothing." The actual educational condition in which I found the children in both schools, but especially in that which had been more recently opened, was, I am free to say, very much what I should have expected to find it had there been no school whatever in existence previously.

The manner in which the Rev. Mr. Lavelle regards and speaks of the rival school will appear from one last extract from his published letters :—

"This school is the exact counterpart of the 'mustard seed' of souperism in Partry—a school established by Sir R. Blosse's honourable relatives, placed under the National Board, with an obnoxious teacher, under their own management —by degrees illumined by bits and scraps of 'the Word'—from that, purified by the ribald and blasphemous tract, until, as the result of an investigation by order of the Board, the fleece was torn off the wolf's back, and the animal appeared in its native deformity."

I have not thought it necessary to go at all into the history of the locality.

2. Garracloon school.

387. The story of the next of these schools, Garracloon, shows that some of the people took for some time a rather more active part in the opposition than I have generally found to be the case elsewhere. It is told on the authority of the teacher, and except occasionally, and for the sake of abridgment, in his own words. The resident manager also stated some of the main facts.

Patron's and managers' action.

388. The landlord, a non-resident gentleman, resolved twelve years ago to build a school there, containing two school-rooms, one for boys, another for girls. One-third of the expense of building, no doubt, fell on the proprietor, who gave the site, and two-thirds on the Board. A comfortable teacher's residence was also erected, at his sole expense, as the Board gives no assistance for such objects. The two principal neighbouring proprietors, Lord Arran and Mr. Pery—the former a frequent visitor to the district—the latter generally resident—were appointed managers for the patron. Jointly they contribute £20 a year. Lord Arran interested himself in getting suitable teachers, and a husband and wife from the North, one a first-class, the other a second-class teacher, both Roman Catholics, and with excellent testimonials from their parish priest and other Roman Catholic clergymen, were appointed. Dr. Sullivan, a well-known officer then in the service of the Board, wrote to the teacher that he had recommended him and his wife "to Lord Arran (as I was bound to do), as two of our best, most respectable, and most deserving teachers." They opened school in 1857. When they came, there was nothing of the kind within three statute miles except one, since cancelled, and a hedge school. No place in Ireland, probably, stood more in need of education. Out of his first thirty-six pupils, twenty-eight were unable to read beyond the First Book—monosyllables—and of the eight who could go farther several belonged to his own family.

389. Before the new school was opened, the patron had offered the management (under himself), to the parish priest, who would have nothing to do with it except on the condition that he himself should be patron, and that it should not be vested.

Teacher's statement.

390. On the previous Sunday the priest denounced the teacher and the school, cutting off the former, his mother, his wife, his children, his pupils, their brothers and their sisters, their grandfathers and their grandmothers from the sacraments. The teacher has heard these denunciations from the altar several times, and his family have done so more frequently. These are the people denounced. This system has since been rigorously carried out. A year ago, the teacher's wife, who had been female teacher till 1861, and who was succeeded by her daughter, the present mistress, became very ill. She was anxious to have the attendance of the priest, and her husband sent the following note to the curate :—

His wife's treatment.

"Rev. Sir,—I most respectfully request you will have the goodness to come and administer the *last rites* of the Church to my wife, who is so very ill that she seems past recovery.

"I remain, Rev. Sir, your obedient servant."

391. This note was returned to him, and he was told that he must send another, stating his *firm belief that his wife would never recover*, as otherwise the priest "dare not raise a hand over her," and would be suspended if he did. He had then to state, at his wife's request, what he believed to be false, for he entertained hopes of her recovery, which, however, were not realized. The priest, who was only a curate, stated that he should preserve the second note as a voucher to show his superiors, whose orders were and are that until the very "last moments" no spiritual aid can ever, so long as he (or one of his family) is teacher there, be given to any of them.

General nature of action taken.

392. For the first four years, denunciations were very frequent both in the parish in which the school is situated and in the neighbouring parish, from which the majority of the children come, and in which there is no other school. These denunciations might, perhaps, be repeated ten or eleven times a year in each. On the second Sunday after the master's arrival, in the parish church, while he was present, a sermon was preached about ravenous wolves in sheeps' clothing, referring in express words to him, and such that he felt compelled to leave the chapel, and vowed that he would never enter it again. He has kept that vow. Since the first four years the altar denunciations have not been frequent. In his belief they were checked in consequence of his telling another National teacher under the priest, publicly, and with the intention that he should repeat it in the proper quarter (and he believes he did), that he had been threatened that his house would be burnt down —that persons had followed himself and his family from town, hooting at them, and that he was in terror of his

life,—that he believed this to be due to these continued denunciations, so that if anything happened he would hold the priest legally responsible, and would appeal to the protection of his patrons and the laws of England. The denunciations subsequent contained no reference to the teacher personally. The principal opposition to the school since, has been at the stations, which are held two or three times a year, where confessions are not heard till the parents have publicly promised, on their knees, before their priest and their God, to withdraw their children from that school, ("as has been done both here and in the neighbouring parish within the last month,") and by means of frequent house to house visits. Many persons, in order that they may be allowed to confess and may receive absolution, &c., withdraw their children from school a few weeks before the stations, and promise never to send them back; but such is their thirst and desire for education that these promises are, with few exceptions, as often violated as made. Many persons have boldly told the priest that they will have their children educated in spite of priest or bishop. These persons, of course, have been treated "like my own family, including my mother, now deaf and doting, and nearly 100 years of age, who have not, during ten years past, knelt under a priest." Why modified.

393. For the first four years he was here, marriages were refused, except on the same conditions. All the usual priests' dues were refused until the people began to bear this privation with patience. Then these payments were accepted; but the arrears were insisted on, and in one case, where a bridal party were at the altar, the priest said to the bride's father, "You have not paid your dues for the last four years." He said he had always been willing to do so, but they had been refused. The bridal party were sent away till the father brought 19*s.*, the amount of arrears. None of the sacraments, except baptism and extreme unction, are administered without a solemn pledge that the children shall be withdrawn. People have latterly got so indifferent that they tell the teacher that they would not care "though they talked 1,000 years." Nephews and nieces of three neighbouring priests attend the denounced school. Instances of action.

394. When he came here the teacher showed the priest, who is since dead, a testimonial which he had received from the priest of his own parish. He was told that it was a pity to see anyone having such a character, coming from the north to oppose his bishop. He replied that when he left the north, he had no idea that either the priest or the bishop would be opposed to the school, more particularly as Lord Arran had informed him that he would most willingly leave the children's religious education altogether in the hands of the priests, and that he would be glad if they came two or three times a week to the school for that purpose. (This statement was afterwards publicly repeated to the people by the two managers.) On that occasion, the priest said in presence of four or five of his neighbours, that the Church had come victoriously through many scourges and persecutions, and that he would find she would carry her point about these schools in the end. Attitude of *a.* Teacher *b.* Managers. *c.* Priests.

395. Almost all the altar denunciations were prefaced by the oft repeated text "He that will not hear the Church, &c." The people were then usually told that the whole system of National education was "false and rotten to the core," got up to annihilate Irish patriotism, and to rob the people of what was most dear to them, their religion; that the Church therefore was opposed to all National schools, particularly to vested ones, and that the Garracloon schools were still worse, being under the patronage of "Protestant gentlemen;" that the bishop was against these schools, and would, as it was his duty, always be against them. Farther, that in accordance with his commands, no priest could or dare do anything for people countenancing them, except at their very last dying moments, when there would be no time for repentance. And that any person who, having arrived at the years of discretion, did not confess his sins at least once a year, and receive the Holy Sacrament of the Eucharist, was in a state of "mortal sin," in which dreadful state, should he die, he would, according to the doctrine of the Catholic Church, be "certainly damned for all eternity." Sometimes they were then told how much their forefathers, who "did very well without any education," suffered for their religion, and that they might rest assured it was not for their good that Protestant gentlemen now wanted to educate them. When an opposition "hedge" school was about to be got up—and several have been tried, and failed—they were told that the worst hedge school that ever was in Ireland (an expression the vigour of which no one who has not seen a few can appreciate), "was better than the very best of our National schools."

396. The teacher is in a position to state, without fear of contradiction, that throughout the eleven years, there never was any coercion direct or indirect exercised by the patron or managers. The children from the neighbouring estates, whose landlords never did anything towards the support of the school, attended as regularly as the rest of his scholars. That there was no pressure by managers.

397. The teacher adds—

"It is only God who knows how much of mortal agony and torture I and my deceased wife suffered here; were it not for the cruel and unchristian treatment we received, I feel almost certain my wife would still be living. She had always the best of health, and was only forty-nine years when she died; and I feel quite sure that my time of service under the Board will shortly be at an end, though I am only fifty-one years of age. I should have to write a large volume in order to give a correct idea of all that was written, said, and done to banish myself and family, and to 'crush down for ever' these schools. We had to fly from one house of worship to another, and for months at a time I could not think of going to any. If I left my own house, I was sure to be assailed with the question, 'If you be a Catholic, and I do not know how you can call yourself one, how can you think of teaching that school in opposition to Father —— and the bishop'? I was often saluted twenty or thirty times a day in this manner; but, thank God, few, if any, now annoy me about the schools, which are attended by the children of all the respectable families within miles of us."

398. The master of Garracloon is the only first-class teacher in the Ballina inspectoral district, and receives a good service salary, implying at least seventeen years good service, at the highest rate possible for his classification. His hair is nearly white, and he attributes this at his age (fifty-one) to what he has undergone. He is now applying for retiring gratuity, with the assent of the District Inspector.

399. Ballycroy is an extremely wild and poor part of the county of Mayo, shut in on three sides by mountains, and on the fourth by arms of the sea. Mr. George Clive purchased a large tract of land there in 1851. More recently his brother, the Rev. Archer Clive, acquired an estate adjoining it, and they are now the proprietors of all but the whole of that part of the country. They have the local reputation of being very good and considerate landlords. Mr. George Clive, in a letter to the *Times*, written in January, 1867, says— 3. Ballycroy case. Circumstances.

"I have resided on the estate from one to four months in each year, with the exception of 1862. No ejections have taken place, with the exception, perhaps, of two or three cases of obstinate non-payment of rent. Large sums of money (exceeding £15,000) have been expended in labour by myself and by an English gentleman who has leased a portion of the land; and, generally, I have exerted myself to the utmost to promote the welfare of the district."

400. On Mr. Archer Clive's property there used to be a school,—a wretched cabin,—at Doona Castle, under the management, I believe, of the Roman Catholic clergyman, which had struggled under great difficulties, which, had latterly, I am told, become extremely inefficient, which lost salary, because it could not keep up an attendance, and which had been discontinued for some years. There is still a school at Tallagh (two and a-half

or three miles from Doona), which I visited, in a miserable cabin which had been built, apparently without any lease, by a former teacher, who retired on gratuity. Mr. George Clive paid for the house and is now the proprietor and patron of the school, which was under the management of the parish priest and is connected with the National Board. He gives a considerable voluntary contribution and three or four acres of land free. The house is utterly unsuitable, one of the worst, in fact, that I have seen anywhere. Messrs. Clive resolved "to erect, with the assistance of the Board, new and good school-rooms for children of both sexes, and to provide proper Catholic teachers" at a place between Doona and Tallagh, so situated as to be suitable for the populations surrounding both. They propose to contribute, as usual, one-third of the expense of building; to support the schools, to superintend them, and to be patrons. On discovering, unexpectedly, that the parish priest entertained objections to these proposals, Mr. George Clive wrote to him as follows:—

Correspondence showing positions of landlord and priest.

"Perristone, Ross, Herefordshire, December 2, 1866.

"Dear Sir,—On reconsidering your letter on the subject of the objections of the Catholic Church to the school which, with the assistance of the Commissioners, my brother and I propose to erect, I am not sure that I clearly understand it, and I should be glad to be informed what your views are. I cannot suppose that you would withhold your assent to a measure calculated to introduce all the facilities for a good education into a district so much in want of them; but, if so, I should wish to know, before any further steps, what course you propose to adopt in the event of our proceeding with the undertaking.

"I remain, faithfully yours,

"George Clive."

401. Father Gilvarry's reply was—

"Ballycroy, December 22, 1866.

"Dear Sir,—In reply to your letter of the 2nd instant, I beg to say that, lest my objections to the school-house about to be erected in the townland of Drumslade be looked upon as captious, I waited on my bishop (the Most Rev. Dr. Feeny, Roman Catholic Bishop of Killala) who says, I must oppose it with all my might.

"No doubt, such schools are in conformity with the law of the land, but I am sure you will admit that clergymen have other laws, viz., Church laws to obey. The hierarchy of Ireland, convened at Thurles some seventeen years ago, condemned in the strongest terms such schools, and gave strict orders to all their clergy to oppose them. You were always kind in encouraging education, for which I am obliged, and for which reason I took the liberty of writing to Mrs. Clive, hoping she would use her kind influence in stopping a measure which, if proceeded with, will be calculated to create disagreeable feelings. You ask what course I intend adopting? First, to endeavour by advice to dissuade the children going, and if that be ineffectual, then to interdict both children and parents—that is, to withhold sacraments—an unpleasant course. Your anxiety for the education of your tenants' children I admire, but you can't blame me, their pastor, to see that the education be imparted in accordance with the rules of our Church. Trusting that not one word in this letter will give offence.

"I am, dear sir, your obedient servant,

"John Gilvarry, P.P., Ballycroy.

"G. Clive, esq., M.P."

402. To this Mr. Clive answered:—

"Perristone, Ross, Herefordshire, Jan. 5.

"Dear Sir,—I have only this day received your letter dated the 22nd of December. It is not for me to question the propriety of the course you propose to adopt, but I must express a hope that its extreme severity may be mitigated by your desire to encourage education in your very backward district.

"I can only pledge myself, that the issue between the law of the land and the law of the Church—if the latter be as you describe it—shall be fairly tried; and that my brother and I will persevere in giving to the population of Ballycroy, the offer of a good education, under teachers of their own faith. Should they reject it, which I do not for a moment believe will be the case, the continuance of the present state of ignorance must rest on themselves and their advisers.

"I shall publish this correspondence, taking it for granted you can have no objection to that course.

"I remain, faithfully yours,

"G. Clive."

403. Father Gilvarry's last letter was:—

"Ballycroy, Jan. 14.

"Dear Sir,—Your letter of the 5th ult. is just come to hand, in reply to which I beg to say that, I fear you misunderstand me, if you insinuate that I wish the population of the district to remain in ignorance. I believe you will admit that no one should feel a deeper anxiety about the mental cultivation of children than their spiritual guide, who must on the last day render for them an account. *To prove to you that I am for education*, I shall give the contemplated school my full co-operation, if you vest it in myself and some other Catholic—a latitude allowed by the Commissioners and Church.

"By your doing this it will prevent trouble, and perhaps, disagreeable measures.

"Faithfully yours,

"John Gilvarry.

"G. Clive, Esq., M.P."

And proposals by priest.

404. The words in this last letter which I have taken the liberty to italicise, carry one back into perplexing speculations. What was the nature of the terms which Father Gilvarry had intended to propose to Mr. Clive, till the language of his second letter induced him to make an effort to prove to him that he was for education? The offer which he thought could not fail to do so was simply, that the Messrs. Clive should transfer the absolute property of the school which they meant to build and maintain, to the parish priest and some other Catholic, and should content themselves either with an authority deputed to them by these trustees, and liable to be revoked at their pleasure, or with none at all. On the other hand, their promises and intentions could alike be judged by reference to their actual practice. The new schools were to be under Roman Catholic teachers. Probably, Father Gilvarry would have been the manager, with complete control over all details of administration, only without the power of appointing the master or dismissing him. At that very moment he was manager of the other two National schools in his parish, on Mr. George Clive's property. So little was Mr. Clive to be suspected of proselytizing, that he had previously refused, I was told, to contribute towards the setting up or maintenance of a Church Education Society's school, apparently on the ground that it would be so small as to be inefficient, and that there was ample protection for the rights of conscience under the National system, and in the National schools.

Opposition to building

405. So the matter remained till the spring of 1868. On the 26th April, a contractor—whose statement I shall give in his own words—undertook to build the school, and began work on Monday, May 4th. On the Wednesday or Thursday of the same week, he was at Special Sessions at Belmullet, and seven of his men were at work clearing the foundation. When he came back they told him that Father Gilvarry went past them about one o'clock, saying nothing to them then; but that he returned about half-past two, and told them to be off the ground, every one of them, immediately, and never to work there again. They all left at once. When the contractor came home, he went to the men, and induced five of the seven to return to work.

406. On the following Sunday, Father Gilvarry spoke from the altar about the school. The contractor, who

was a Roman Catholic, as all his men were, was present and heard him. He said that no matter who the contractor might be, he would not allow the men to work, and would deny the rites of the Church to any one who did so. After mass the contractor went to the priest, and said that had he known that there would be such opposition, he might not, perhaps, have undertaken the building, but that now he was bound to carry it out, and meant to do so. The priest said he'd wager a pound that he could not get a man by to-morrow night. He said that he should see about that. Next morning he set to work and anew secured the five and four more besides. About a fortnight later, Father Gilvarry begged him to delay the work for a week till he could return from Ballina, where he said he would see and have an understanding about the matter with the bishops and clergy. The contractor promised to delay the building, but said he would meanwhile go on collecting the material. Next day he found that some people were going to run up a lot of temporary things, pig styes, and such like, apparently for the purpose of using up all the stones on the spot, which would have compelled him to go four or five miles away for stones, and would have put him to great loss and inconvenience. These people had all heard the priest speak from the altar, and some of them had, he thought, reasons of their own, which made them hostile to the new school. He set to work to collect all the stones as fast as he could, and took two masons and three carts with him for that purpose, on the 9th of June. While he was gathering them, some of these people attacked him with stones, and turf spades. They smashed his watch, tore his clothes, and he believes that but for the men with him, they would have killed him, as they said in their presence that they would have his life. He managed to get away from them, leaving the carts and the stones in their possession. Next day he brought a larger force of men, about a dozen in all, and he had seven or eight more in reserve. There was a little more scuffling, but his party had the best of it. After the stones were all gathered, there was no further interference. Within a week after this occurrence, Father Gilvarry left the parish. The school is not yet completed, and a new priest has succeeded, whose policy with regard to it has not yet been declared by any public act.

of a violent character.

407. The Ballymonelly case occurred in the neighbouring parish. My account of it is taken from what I was told by the patron of the school, the teacher, two respectable tenants who attended on the day of my visit to it, and the Roman Catholic clergyman.

4. Ballymonelly case.

408. The patron, Mr. Carter, writes to me—"The greater part of Ballymonelly being my property, and my tenants there having about ten years ago applied to me to build them a school, I applied to the National Society for a grant, and in due time the school was built; but shortly after it was commenced, these same tenants came and told me that unless I gave the management of it to the Roman Catholic priest, they understood he would prevent them sending their children to it. I told them that however much I regretted their being Roman Catholics, it was not my intention to interfere with their religion, but that the school would be carried on under the rules of the National Board, I myself, or my agent, Mr. Crampton, acting as patron—and that I would not, as far as I could help it, permit the interference of any clergyman of any religious denomination with it. In fact I did not wish there to be any religious education at all in the school, but the rules of the Commissioners of Education, providing that it should be otherwise, at a certain hour of the day, the schoolmaster who is a Roman Catholic, instructs the scholars who are all (except occasionally one or two perhaps) Roman Catholics, in the tenets of their religion. I have had it intimated to me that if I would allow the priest to be joined with me as a patron, &c., &c., the school would be full, but that if I do not, the ban of the Church will be extended to all sending their children there, consequently not more than half a dozen families or thereabouts, of the Roman Catholic persuasion, who have more independence and knowledge than the rest, will send their children to the school." (I was particularly struck on my visit with the resemblance in features, bearing and character, between the tenants present, and the best type of the Ayrshire small farmers I used to see when I inspected schools in that county), "and instead of 80 to 100 scholars, we get but 15 to 20, or thereabouts. I do not believe the local clergy have any objections to the school, nor that the poor people themselves have any, but that the priests have to obey the hierarchy and their bishops, in denouncing those who would send their children to a school not under the Roman Catholic clergy. I have determined as far as possible, to keep the school out of the hands of the priests. I can refer you to the schoolmaster, as also to the tenants for corroboration of the above. There is no cause of complaint, no attempt at proselytizing—the Roman Catholic religion is taught at certain hours in the school—there are generally no Protestant scholars, and the only question is whether I am to be patron, having built and supported it" (Mr. Carter gives £20 a year to the teacher, and he has thereby been able to obtain one of the most respectable, and most efficient teachers I met in the West), "with the assistance of the Board of Education, and given the land, or whether I am to give up the patronage to the priest—whether a landlord may, with the assistance of the Government, build a school for his tenants without the interference of Roman Catholic priests or not. I object to being interfered with by the priests. I do not know of any Roman Catholic country where they are allowed to interfere in that way, unless it be in the Peninsula—certainly not in France or Italy, and, if not in France or in Italy, why in Ireland are we to submit to it? I founded the school myself. I have not directly or indirectly" (attempted) "to induce the children to go to school in spite of the opposition. I have left the school as much as possible to make its way on its own merits, and by non-interference on my part, hoping that after a few years the priests, seeing that the school was not established with a view to conversion of their flocks, would cease their opposition; but they, the priests are under orders, as also the bishops, and if they would they could not relax the rule they have to work under, or to disobey their superiors. I am myself a strong Protestant as far as my religious principles go, but in secular matters I wish to make no distinction. My tenants are very numerous, and for the most part Roman Catholics, and I have no quarrels with them."

Landlord's position

and success.

409. The school is vested and the teacher is trained. He attends his chapel regularly, and has heard his school often denounced; and all the Sacraments are refused to those who disregard these denunciations. There has been no case in which extreme unction was finally denied to any one. In four instances it was only given after the priest's conditions had been accepted. When the teacher's own wife was on her death-bed he had to promise to give up teaching the school. After her death, however, and after a short vacation which followed, finding no other means of livelihood, he returned to it. A tenant who was present told me that when his wife was dying, he was most unwilling to make the promise required, but his father-in-law made it, and he had not the heart to recal it. The children were withdrawn for about three months. There were two other cases of very much the same character, one of which happened two years ago, the children still remaining away. The strongest pressure is put on at the time of the "stations," and before and after them the attendance is low. The teacher believes that the priest does it simply in obedience to his orders.

Priest's action.

410. The constable in charge of the neighbouring police station at Bangor, who has known him for five years, tells me that the people like the schoolmaster, that he is very attentive, and that a more sober, correct man does not live in that part of the country.

411. The Roman Catholic clergyman stated that he simply did what it was his duty to do, and what every priest would be bound to do in similar circumstances.

Priest's view.

5. A runaway teacher.

412. In the next parish an amusing incident varied the monotony of these proceedings. A young teacher was offered a situation as pupil-teacher in the district model school in Limerick city. This offer tempted him greatly, as his income was somewhere altogether about £18, and he resolved to accept it, against the wishes of the priest, who is his patron. He got away twenty-five miles or so, but his mother, his brother and a cousin found out where he was, followed the runaway, captured him, and brought him home in triumph. As he told his story he could not help being amused with the figure he made in it, but he regarded the thing as a serious loss to him, and although he knew perfectly that if he had got to Limerick city, neither his own school, nor any other in the neighbourhood would have been open to him on his return, he says he thought he should have bettered himself both as a teacher and in life, if he could have got clear away.

6. A school kept closed, and unable to procure a suitable Roman Catholic teacher.

413. In the next parish again—the fourth consecutive parish which I have described—there is a long and miserable story which I shall condense as much as possible. Mr. Savage settled there about ten years ago, having obtained a lease, for several lives, of a large tract of country along the sea shore. He taught the people fishing, and did everything in his power to civilize them. His own clergyman (Established Church) applied to him for a site for a Protestant school, which he refused. Two priests made a similar application, with the same result. He was anxious that the school should be common ground for all classes of the people, and with the aid of the Commissioners, he built a vested school, some years ago, fitting up a residence for the Roman Catholic master he appointed to it, and giving him £14 a year voluntary contribution. A week after the teacher came (and he had high recommendations from the Roman Catholic bishop in Dublin, and several Roman Catholic clergymen), the priest denounced him both from the altar and in the village, denounced the parents of the children attending, and threatened to refuse them the rites of the Church. Many parents continued to send their children, notwithstanding, and the teacher remained in the situation for six weeks under the most violent persecution, when, through the favourable opinion of the Poor Law Inspector, he got another appointment. During the whole of that time he could not get anything to buy in the place, and the patron took him to live with him in his own house. After he left, a probationer, now a classed teacher, came, and the same system was pursued. He remained two years, but was unable to pass his examination, and the Board cut off his salary. After that the school was closed for two years. The patron had several applications from Protestant teachers, but declined them, as the children were Roman Catholic. The opposition was so violent, that he could not get a decently qualified Roman Catholic teacher. One was engaged, but just before he was to have arrived, he received a letter from him of which the following is, as far as he can recall it, a copy. He published it in the *Mayo Constitution* at the time:—

——— "National School.

"Dear Sir,—I would have felt happy if permitted to go down to ——— and take charge of your school, but the priest met me yesterday, and said he would interdict and anathematize me if I would attempt to go down. Under these circumstances, I deeply regret, but I shall never teach here any more under him—I shall go to America."

Shortly after this, the teacher emigrated.

414. During this interval the rector, the patron's clergyman, set up a school in a sod cabin, where the man who is schoolmaster had settled on a waste piece of ground. Mr. Savage neither removed nor encouraged him, but he was glad to see education of any kind given to the people. At the end of the two years, he at last got a master, who had been a classed National teacher in the neighbourhood, had been removed in consequence of the Inspector's unfavourable opinion of him, and who for a couple of years had been without work and nearly starving. After such an interruption of service, the Commissioners may order a man to begin again at the bottom of their ladder, and this man (43 years of age), who was a very nervous person, and had never probably been a "fine scholar," had to do so. He was popular in the place, appeared to be doing good work, and was as serviceable a master as the patron could procure in the circumstances. But he was frightened at the examination, and was dismissed because he had not presented himself for it, shortly before I arrived in the district. His nervousness was naturally not at all diminished by the constant denunciations and persecutions he had to undergo. These had gone on in all forms, throughout the history of the school. "One day, for example, an hour before the Inspector came to visit it, one or two of the neighbouring priests came down, and walked backward and forward along the road. It was evident and well known that this was to prevent or frighten the children from entering the school, so that on the Inspector's arrival there would not be any attendance. They remained on the road about or nearly an hour, until the arrival of the Inspector. On my hearing of this outrageous transaction, I immediately went up to the school, and found a good number of the poor children hiding in a cabin, and behind the ditches in the bog—went to them, told them not to be afraid, brought them into the school, and rebuked those who I considered were the cause of keeping them out. I assure you I felt much on the subject, as I never used any pressure to compel the people to send their children to school, or interfered directly or indirectly with their religious teaching, except that my wife purchased and paid for Roman Catholic catechisms for the children, and I offered to pay for all they would want if they wished."

Action against the school.

Patron's view of the case.

415. The patron adds, that the statement he gave me (which I have farther condensed), is only a meagre outline of the facts, and gives no idea of the amount of the persecution. He thinks further that it is absurd to insist on a re-examination of a man of 43 years of age when once he has been properly classified, after a fair examination by the Board's Inspectors, and that considerable allowance ought to have been made for his own position with a school which has suffered so much, for nothing but the support of the Government system in its integrity, and in a district where he has been prevented, through no fault of his, from getting such Roman Catholic teachers as he might have wished to procure, and where, after the school had in spite of all his efforts been closed for two years, he had at last obtained a perfectly well conducted, creditable, and very popular teacher. This man himself tells me that he has heard the priest say in the village, that any person who should send his child to the school was crucifying Christ,—and the communion has regularly been refused to such persons all the time he has been there.

Difficulties in remote localities, with salaries given.

416. The condition of the schools in this neighbourhood, when I visited them, will illustrate the difficulties of all attempts to procure and maintain fair teaching on probationer and third class salaries—and persons who possess higher qualifications are scarcely ever induced to come here. A line from Belmullet, north to Erris Head, another west by the Ballycastle road to Glenamoy Bridge, the Glenamoy itself which runs into the sea some three miles below, and the coast line, shut off from the sea some seventy square miles of irregular country. Leaving Belmullet, its capital, out of account, the educational wants of this district are supplied by seven schools—two of them in connexion with the Established Church, which are very poorly attended, and of which I have spoken elsewhere. Of the five National schools one flourishes. It is that from which the teacher made his ill-starred expedition towards Limerick city. Another is the school of which I have been sketching the story. A third is that from which the late teacher of the second was dismissed two years ago, and which had been closed for about three months when I was there. In a fourth the teacher had been dismissed a few days before my visit, for falsification of accounts. In the fifth, the present teacher took charge about a year since, and her predecessor had been dismissed on the same accusation. She crossed the bay, and has recently opened school in a cow-house, which

was given her by a tenant whose cow has gone out to the hill side for the summer pastures, and which will be available as a place of education till the animal returns. That is the only provision for a village with some sixty families. The landlord offered to build a vested school some six years ago, on the same terms as those on which Mr. Carter holds his at Ballymonelly—under a Roman Catholic teacher with himself as patron. The priest and his neighbours' experience prevented him from going farther, and he refused, I am told, to give a site to the priest for a school which the latter wished to build and keep under his own management.

Power of either priest or landlord to prevent education,

417. Occasionally the priest only exercises his influence in this way so as to prevent education. Parliamentary powers ought, I think, to be taken to compel landlords to grant sites for all necessary schools of the type of which the State approves, whether that be mixed or denominational; and there is something to be said in favour of giving them for any school which private persons are willing to build, where it can be shown that there is a considerable population requiring one, and not already provided. It is not often, however, as far as I could judge, that the difficulty might not be got over at present. Almost any cabin in the very far west, may be turned for a £5 note into a National school, It need not be floored, and a single window, with the help of the door on dark days, will be accepted as giving sufficient light. It is difficult to say how little will do in the way of desks, and everything else will come from the teacher or the State. This is the genesis of the simplest form of non-vested National schools. A teacher can be had on reasonable terms. A lad of 17, or a girl of 16, who knows as much plain work as a fairly taught child of 11, will be accepted as probationer, will cost the managers nothing at all, and lasts for at least two years. These are the simple conditions under which the Board distributes its support of National Education, and the patron need contribute nothing towards the maintenance of the school after its first start in life.

although National schools may be set up for £5 and maintained for nothing.

418. "It is really pitiful," writes a teacher, who is recommending "comfortable school-rooms, got up by the Board," as a means of securing regular attendance, "to see poor bare-footed children, often running perhaps a mile or two of a cold frosty morning, standing the remainder of the day on damp floors" (I have frequently stood on National school floors which were almost as damp as a bog in the middle of this dry summer), "shivering with cold, and the wind and rain blowing in through door and broken windows. Such children, along with endangering their health, could do no good at school. I have often sent them home while I was teacher of —— and —— schools, two of the above class. I have reason to be thankful to Providence that my health escaped the danger to which I was for a long time exposed in these places, and that I am now in charge of one whose very appearance is enough to cheer and to invigorate the most active mind."

7. Louisburgh case.

419. Louisburgh is a small town near the sea coast, at the south-western corner of the long rectangle which constitutes Clew Bay. It is the only place of any importance, except Westport, in the entire barony of Murrisk. In this way it is the centre of a very large tract of mountain country as well as of the populous and fertile districts which run along the shore at the foot of Croagh Patrick, and round the promontory facing Clare Island to the mouth of the Killary harbour. Some time ago large and commodious school-rooms were erected there by public subscription, with the help of the Board. They are vested in the Commissioners, which gives the State the privilege of keeping them in repair. The Marquis of Sligo is patron, and contributes towards the income of the teachers, and a local gentleman acts as manager under him. The same arrangements are adopted in half a dozen of the neighbouring schools, and no objection appears to be raised by the Roman Catholic clergy. The teachers are all Roman Catholics, and the clergy have perfect freedom of access to the scholars.

420. The present teachers of the male and female schools in Louisburgh, were appointed in 1851 and under them the schools have prospered exceedingly. The female school continues to flourish as much as ever. Both teachers were trained, I believe, after their appointment here, but before there was any talk of an express interdiction of the training college by the Roman Catholic hierarchy.

Cause of troubles.

421. In 1862 the Head Inspector, at one of his visits, informed the teacher of the boys' school that a navigation class had been opened in the training college, and that he thought it would be for his own good, and for that of the school, and the town, that he should attend. The master was subsequently summoned for training by the Board, and went up in May, 1862. The Archbishop of Tuam had himself prohibited clergymen in his diocese from sending forward Roman Catholic teachers for training in the beginning of 1861, and his policy was sanctioned and adopted by the unanimous vote of the Roman Catholic hierarchy of Ireland in May, 1862, the same month in which the master left for Dublin. He went there with the approbation of his manager, and with the full consent of his parish priest, and without a word of objection of any kind being hinted to him by any of the Roman Catholic clergymen in the place. At the time he had not heard that there was any opposition but that of the archbishop, which had continued for a great number of years. He returned in December, 1862, and everything went on smoothly in 1863 and 1864; the yearly averages being 82·3 and 82·8 respectively.

Beginning of troubles.

422. In the autumn of 1865, when the archbishop came to Westport, it was reported to him that in spite of the prohibition, a teacher, Mr. ——(§ 379), had gone up for training. He is believed to have ordered him and those supporting his school to be denounced from the altar; and he was denounced. Some clergyman present is reported to have told Dr. MacHale that two other teachers at Louisburgh and at Kelladoon came under the same head. Dr. MacHale is believed to have ordered them to be denounced also; and they were denounced; the first on September 3, 1865, the other a week later, by the curate of Louisburgh. The parish priest omitted to do so, and he was suspended by the archbishop's authority on the following Sunday, and remained so for three weeks, at the end of which time, on his promise of obedience, as it was believed, he was restored. I understand that the parish priest, who was not at home when I waited on him officially, is very much respected by all classes in the district, and that the people bear his exertions, during the time of the great famine, in most grateful remembrance. After his restoration he also denounced the school. This was in September, 1865. The average attendance for August was 77·8, and leaving out one day, which was before the denunciation, the average for the rest of next month was 12·3.

Parish priest suspended.

8. Connected case of Kelladoon.

423. The other school at Kelladoon, six miles off, was under the same management, and also very successful. The teacher was a former pupil of the master at Louisburgh, and had been brought up under his eye. He went up for training in January, 1864. At the time he went he was not aware that there was any but the archbishop's continued opposition to the whole system. The edict had never been read from the altar in the chapel he attended, which was a sub-chapel, served by the curate from Louisburgh. When he was on his way to the training school, he went to the curate for a certificate. That gentleman told him that the archbishop was very much opposed to teachers going up for training; that the proper person to apply to for a certificate was the parish priest, that he himself had nothing to say to it, but that he would be glad to learn what the priest did. When he came back with the certificate they had a little farther friendly conversation; the curate said, "God bless you, James," at parting, and the teacher went up to the training school. After he returned in June, 1864, the school "went on first rate" till September, 1865.

The average attendances were:—June, 74; July, 96; August, 93.

Denunciation.

424. A week after the denunciation of Louisburgh, Kelladoon was also denounced. The attendance went down to 22 for the three last weeks of September. The school was denounced by the curate—the teacher being present. He said that the children attending, and their parents also, should be excommunicated so long as the master continued there. The school was like a poisoned pool, from which issued streams which would poison anyone that might drink of them. The teacher had gone up for training, he said, perversely and contumaciously, and had he taken his advice he would not have been in his present predicament. Before that time he said that he had stood high in his estimation.

Effect on attendance.

425. The attendances in the week after were 15, 19, 20, 9, 6. In the next week, 25, 21, 26, 24. The attendance always fell off when the curate was expected out about the village, to collect his dues. It was influenced by the approach of the stations—*e.g.*, in January (Christmas), and April (Easter). The monthly averages were October, 1865, 22; November, 38; December, 40; January, 19; February, 29; March, 18; April, 11; May, 13; June, 14. These results do not seem to have been satisfactory. Repeated censures were resorted to every Sunday, and the priest came in, four or five times and turned the children out of school, so that they were afraid to come for months. In July the average was 1·5; in August, 1·2; in September, 1·7; all boys. In October, 3 boys, and 1 of a girl, as 3 came one day. In November it rose again to 13·1, and went on increasing. The people began to say they were determined to send their children. Some have said so openly, and have told the priest at the stations that it was a gross injustice.

426. The monthly averages for the year previous to my visit were, August, 51; September, 36; October, 23; November, 27; December, 69; January, 96; February, 97; March, 75; April, 27; May, 18; June, 35; July, 43. My visit happened a week after the archbishop's visit to Louisburgh, and the number present was 19. Many people had hoped that some relaxation of the system might have taken place on that occasion, but as things were rather worse than better, they were now sending them to Carrowniskey, over two miles away, which is crowded—and to Bunlahinch Irish Church Mission school, which is said not to have been spoken against from the altar since the attack on this school began.

Visit of two teachers to Archbishop.

427. After the parish priest had been restored, the two teachers—master and pupil—resolved to go together to the archbishop and represent their case. The Louisburgh teacher tells me that he showed him by the dates that it was impossible that he could have known anything of the prohibition before going up, except through the newspapers—as such a thing would generally be officially published from the altars at the Easter following its issue, before which time he had already returned to his school—and he declared that, as a matter of fact, he had not known of it. The Kelladoon teacher said it had not been read in his chapel, and he had not known of it. There was a good deal of conversation, in the course of which the archbishop said that, so far as he was concerned, he had published the prohibition properly; that he was sorry for the younger man, but could not help him—and that as for the elder, in consequence of all the scandal already caused by the suspension of the parish priest, and in connexion with the case, he would never sanction his continuance under the National Board. Since that the Louisburgh school has been regularly denounced in the usual way. The teacher has heard the denunciations; they are to the effect that neither the parents sending them, nor the children, nor anyone connected with the school, will receive the sacraments, or attendance of any kind from the Catholic clergy till the teacher leaves.

Successive steps taken by clergy.

428. At first the clergy were content, at the stations of confession, to exact promises from parents to withdraw their children, and on the strength of these promises they used to give the sacraments. It appeared that many of the children found their way back, and they had to do all their work over again at the next station, twice a year. Seeing no end to this annoyance they have latterly refused sacraments to those whose children have not been already purified by some months' completed absence from the school. The Archbishop was at Louisburgh about a week before me; and the teacher was told by his daughter and others who were present, that he himself turned out his daughter from among those presenting themselves for confirmation, and refused her that sacrament. He heard farther, and he tells me it is universally believed in Louisburgh, that the archbishop turned out of the ranks of those for confirmation all the children who within six months had attended the school, and all the grown people whose children had done so within the same time.

Effect on attendances in Louisburgh.

429. The attendances will show the effect of this course of action. In August, 1865, the average was 77·8; in September (excepting the first day of the month), 12·3; in October, 19·6; November, 13·8; December, 16·6; January, 13·2; February, 8; March, 11; April, 10·8—(in these months, which would naturally have been the best of the year, the Easter station of confession was either coming, happening, or just past). In May, 13·7; June, 21·4; July, 16·8; August, 15; September, 14·9; October, 11·3; November, 19; December, 17·8. In the first quarter of 1867, 22; in the second, 15·5; in the third, 37·1; in the fourth, 41. In the first quarter of 1868, 40; in the second, 30. On the day of my visit (which was quite unexpected), and which was in the week after the archbishop's, there were 11 present, of whom 6 belonged to the Established Church, 3 were the teacher's own children, and 2 others were Roman Catholics.

Where the children were sent.

430. The teacher at Garracloon informed me that he could scarcely believe his ears when he heard his own priest say that the worst hedge school that ever was in Ireland, was better than one of those denounced schools. The Roman Catholic Archbishop of Tuam appears to be of a similar opinion. The Louisburgh male school is capable of accommodating ninety-four boys; it is admirably equipped, well ventilated, as far as one could judge from the handful present excellently taught, and attended by eleven pupils. Upstairs there are eighty girls; but their brothers are not in the school-room below. In the immediate vicinity, however, there is a cabin with an uneven clay-floor, with scarce any light in it except by the door-way, with no ventilation; about sixteen feet square, but with a corner, eight feet square or so, boarded off—capable of accommodating, at the same rate of floor space, twenty-four boys (if it were not used, as it is, as the master's residence as well as his school-room), and packed with fifty-three. The teacher was a National schoolmaster in two places—one in the neighbourhood, one some distance away, in the Irish Church Mission field. There, he says, that the irritation caused by some private matters induced him to join the Irish Church Mission service, for which he was very sorry afterwards. He taught successively in three of their schools; then his health declined, and his religious convictions changed again, so that he returned to the Catholic faith, coming back finally to this, which is his native place, twenty-one months ago. I know nothing of his history but what he tells me himself. No man, whatever his ability or experience, could do much in such a hovel, with nothing but a few old forms and a kitchen table for school furniture.

Efficiency of rival school.

431. As it is, the scholars are of two classes—those who have probably never been taught elsewhere and those who still show results of careful and thorough training, and who show as plainly that they are losing them. Nothing could be more striking than the contrast between the looks of many of the boys, and the wretched cabin (the master pays 1*s.* a week rent for it) in which they are pursuing their studies under the sanction of their archbishop. The teacher tells me that he receives no aid from anyone except His Grace. The rest of his support he finds in school fees. In the one of the two rival schools I had 30 passes out of 33 possible; in the other, 62 out of 135. The orthodox seminary has one advantage over its

rival. The master tells me that he finds it very convenient, as it is so compact, that the children cannot be playing about in it.

Three or four of the children from Louisburgh walk, every morning and evening, to Kelsallagh, which is three miles away, and where they find an undenounced National teacher.

Character of denounced teacher.

432. The teachers of the male and female National schools at Louisburgh, were considered by the District Inspector among the best in his district. They were, no doubt, among the very best I saw in the course of my tour in the west. From the position of the town the schools had something of the character of a district academy. After his return from the navigation class of the training college, the master had a class of about nine in algebra, geometry, &c., which was very successful. I found that several of the best teachers (my informant enumerated eight, of whom I knew four, who were all excellent) in the neighbourhood, had been his pupils, and acknowledged their obligations to him very warmly. In fact, he has, no doubt, effectually done the work of a district minor model school for that part of the country. There seems as little suspicion of his being unfaithful to his duties as a teacher of religion to the Roman Catholic children, as there is of his interfering in any way whatever with the convictions of his Protestant scholars.

Pecuniary effect of action.

433. In these circumstances, of which I do not doubt it was fully informed, what has been the action of the National Board? The teacher's salary was £38, as he was in the third division of the first class. It was cut down, a year after the decrease, to £24, which corresponds to the first division of the third class, because the average had been diminished by the consequences of an act for which the Board was responsible. The master was in receipt of good service salary of about £10 per annum. When his average fell below thirty-five, that disappeared at once. The Board thus curtailed his income from £48 to £38, and for part of the time to £24, or just half of its original amount. It sustained him apparently for about six months, and then let him drop. If the action at the confirmation rails should have the effect anticipated, and should prevent the attendance from rising above its present level, it will withdraw its support altogether.

Average rules used as a weapon.

434. The rules about averages are the most effective weapons that could be put into the hands of the opposition; and although it would be of course impracticable to maintain a school and a schoolmaster for long, with no scholars to speak of, the regulations ought surely to be so far elastic as to enable the Board to sustain it long enough at least to give it a chance to resist successfully such a course of action as I have described. I understand from their proceedings in 1859 (Vol. II. of the Commissioners' published reports, p. 230, paragraph 19), that it is open to them to re-arrange the rules fixing the conditions as to average attendance, on which they allocate their grants, at their own discretion, and without submitting the new rules to the Lord Lieutenant.

435. They appear to have also sustained the Kelladoon teacher for six months; and that seems to have been sufficient to save him, as his average rose again after that period.

What attention is really given to religious instruction in the training school.

436. The opposition of the clergy to the training schools was so passionate, that I made inquiries as to the way in which the religious interests of Roman Catholic teachers are cared for there, of every teacher who was known to me, as having attended the training school since the prohibition by the hierarchy.

437. The teacher at Louisburgh tells me that there could not have been more attention paid to religious duties than while he was there for the second time. The only difference between the arrangements then and in 1852, was that clergymen did not then attend (because they *would not*) to the teachers in training. He believes that everyone who was there would agree with him.

Statements by teachers.

438. The teacher at Kelladoon "never saw a more regular place"—thinks as much religious instruction was given, and as much attention paid to religious duties as could be, and never heard a word against it in that respect from any person attending it.

439. The teacher at Garracloon female school says that religious duties were very strictly attended to, more so than she ever saw before or since. There was not the slightest interference of any kind. The correctness of the teachers in training, in respect to their religious duties, was more strictly regarded there than anything else. There were about forty Catholic mistresses under training at the same time with herself, and she believes that everyone of them would agree with her in these opinions. She knows them all pretty intimately and would have heard had there been the slightest feeling, on the part of any of them, that their religious duties were in the least neglected. The teachers, Protestant and Catholic, mixed with perfect freedom and made friends with each other, just as if there had been no religious distinction. Those of different denominations were not in the habit of talking about religion, or discussing their points of difference; that was the spirit of the place. I need not multiply instances, for everyone who spoke from personal knowledge of the training school within the last few years, expressed warmly and cordially the same opinions.

440. The teacher at Louisburgh informs me that the religious routine was as follows:—The Roman Catholic teachers went to mass on Sunday and Tuesday mornings, and on Tuesdays a man was stationed at the gate to see that they did go. On Sundays, in addition, they were allowed to go to mass as many other times as they chose. Every week-day morning they taught catechism for half an hour. They were expected to go to confession either once a month or twice during the course, and were sent in twenties or so every Saturday evening. Religious books were, in addition, provided for their perusal.

Credibility of foregoing statements.

441. The statements I have given are reported *on the authority of those who made them*, but I do not hesitate to say that I look on them as *substantially* true. I have given them in considerable detail, in order that it may not be imagined that I have selected cases of exceptional violence, or that individual priests are responsible for unusual excesses. They are taken impartially, in about equal number, from the two Roman Catholic dioceses which I visited, and clergymen whose names are involved in them have published independent statements, which I have quoted above, to the effect that they have been acting with the approval of their bishop and archbishop. I think they go far to prove—

Inferences from them.

442. 1. That no half concessions will content the opponents of the present system. It is difficult to conceive two points more vital to it than the two which are mainly in dispute. The State seeks no control at present over the vested schools, but in refusing to relinquish the buildings, two-thirds of the first expense of which it has paid and which it continues to keep up, it reserves to itself a liberty of future action. The clergy may fear the tendencies of modern states, but that their successors fifty years hence may be able and willing to encroach on the rights of the laity of that period, is just as probable as the reverse event. When they exclaim vehemently against the wrongs of the future, in the possibility of which mainly the vested schools differ from the non-vested, it is difficult to suppose that they are willing to listen to any terms to-day.

443. 2. That if the mixed system is to be maintained, it must be by those who have themselves practically learned its fundamental principle—that however they may differ in religion, men who love the same country and worship the same God, may grow up and continue friends. That is the conviction which seems to have been left by the training school and it is that conviction which it is designed to produce. Men need be no worse members of their own communion, I suppose, because they have learned by living contact with members of another, that they have many feelings in common with them. The mixed training school is a vital part of the mixed system and must stand or fall with it.

444. 3. That the sum of the demand for "free education" is that the Roman Catholic clergy shall be left free

to educate their own people as they choose, that no person but themselves or their agents shall have access to the minds of the children, and that every lay element or idea that is not in subordination to the clergy, and especially the landlords, must be unconditionally excluded from the school. Also, that the State shall pay the whole expense of this education.

445. 4. That the State has done the clergy no wrong, or at all events, is doing them none at present, unless the attempt to teach anything without intermingling it with religious lessons, be an act of hostility in itself; and that the ecclesiastical action which has been directed against the mixed system has been so violent as to make it difficult to yield to it, and certain that concessions would be held to have been extorted by that violence. They would be taken to show that the Government had made an insidious attempt to destroy the Catholic religion and Irish sentiment—had been detected in it and foiled—and had withdrawn only when it had been shown conclusively that all their strength was inadequate to the task.

PROSPECT OF CONTENTMENT UNDER PRESENT SYSTEM.

446. If the narratives I have given truly represent the state of feeling and the character of action with respect to the various offences which the National schools may commit against the clergy, it will naturally be asked whether there is likely to be peace in Ireland, if the demand that is made for what is called "Freedom of Denominational Education" be not conceded. I have seen no sign that the opposition of the clergy is likely to slacken so long as there is a chance that it may ultimately succeed. None of the vested schools I visited have been definitively closed by it—but there are some which maintain a precarious existence only by extreme vigilance and by great zeal. The teachers of the schools under the ban, are as a class—perhaps it is a consequence of their adversities—undoubtedly, the best of the National school teachers. In Mayo those of their patrons whom I have seen, are, as it happens, men interested in their schools, liberal in supporting them, and not believed by the people to have the slightest desire to proselytize. Three of the persecuted schools which I saw have survived the period of their probation and are flourishing—three others appear to pass through successive phases of success and failure—another has been closed, but not by the clergy—the last of those I have named is at its lowest ebb. Is it possible to maintain these long and desperate struggles against an influence so preponderating as that of the Roman Catholic clergy?—and if it be possible, is it worth while? Might it not be better, as the bulk of the people at least show no inclination to oppose the action of their priests—to thank the landlords and laymen generally for such support of education as they have given in the past, and to hand over the children to their clergymen, who are not likely to be contented on other terms? The opinions of the teachers themselves on the matter count, at present, for little, as they are too poor and too utterly dependent. Would it be possible, with the steady support of a Government abstaining with scrupulous care from everything which could give a colour of proselytism—placing the rights of conscience under the safeguard of an Act of the Imperial Parliament—with the teachers taken from a better class of the community, less dependent, more respected, more influential—to maintain a system continuing the present restraints on the majority for the sake of a fraction of the minority? If it were possible, is it necessary, or right? If the attempt is abandoned, are peace and mutual good will likely to spring up at once, spontaneously, between what have hitherto been hostile denominations?

General results of opposition on schools opposed.

SPECIAL ARGUMENT FROM BRITISH PRECEDENT.

447. In the course of the arguments which I was in the habit of hearing on the subject, it was usually urged that a mixed system could not be maintained in Ireland along with a denominational system on the other side of the Channel. No one, it is said, can persuade the Irish people that it is not established as an instrument against the Church of the Irish majority, and for the purpose of weaning her people from her, so long, at least, as England refuses for herself what she prescribes to her sister. Statesmen cannot, of course, ignore the existing situation in either country, or attempt to legislate as if everything in both were now to be made anew. But there is little doubt, I think, that a difference so fundamental as that between mixed and denominational education cannot become permanent, except by the consent of both. If Ireland demands denominationalism, on the ground that she is determined to be treated as an integral part of the empire, and refuses to have a system administered to her for her cure, which England and Scotland have rejected and continue to reject, it is difficult to see how her demand can fail to be conceded in time. If the State considers that to grant it would tend to deepen the lines between rival sects in a country which has been cursed by sectarianism for centuries, and be resolute, so far as her action can influence it, to prevent such a result, she must be ready, and ready soon, to give up the denominational system in the sister country. How far it would satisfy the demands of the religious sentiment in England and Scotland to allow the master, for whose secular work only the State may be supposed (§ 319) to pay, to teach religion to those of his scholars who belong to the same persuasion as himself, it is for others to judge. I doubt the possibility of sustaining a mixed system in the west of Ireland permanently, or long, against the vehement professional opposition it encounters there, the apathy of the mass of the people, and the precedent of Great Britain. Perhaps any one of the three systems, the secular, the mixed secular and separate religious, or the genuine denominational system—*i.e.*, *without a conscience clause*—might be established for all the three countries, by an organic law, and in obedience to the deliberate will of the Imperial Parliament. Systems essentially different cannot, I think, be maintained permanently in the three kingdoms, except on the understanding that each country shall be permitted to elect that which it itself prefers. I have nothing to say of the opinion of the rest of Ireland. But there is little doubt in my mind that West Connaught by itself, and especially the persons who call themselves its "natural leaders," and whose energy and vehement resolution mostly carry the bulk of the people with them, would vote at present for denominationalism.

GENERAL RESULT OF OBSERVATIONS. A. AS TO EDUCATION.

448. The net result of my observations may be stated very briefly. In West Connaught, as elsewhere, the teacher is the principal factor in the education question. Good schools, producing regular attendance, and supported by a cordial public recognition of their value to the community, are only to be secured by giving the teacher reasonable payment, enough, in the actual state of wages and employment in the country, to make his situation an object of desire; by placing him in a position fairly independent of individual caprice; by settling him as a permanent and important element of the society where he does his work; by supervising him strictly, but not in a spirit of suspicion; by providing a refuge for him under the stress of broken health or the infirmities of age. With such attractions to induce a young man to enter the profession, it would not be necessary to punish him perpetually afterwards. Settled in comfort, with his household growing round him, and reasonably secure so long as he did his work properly, he would look upon his school as his home, and would not be the discontented vagrant, ready to shift at a day's notice, or to pack up and leave the country, that he too often is.* Attachment to the Government under which this tranquil and useful life would be passed, would be the proper and probable consequence of such arrangements.

B. AS TO RELIGIOUS QUESTION.

449. With regard to the religious question, I believe that in the circumstances of Ireland the separation from infancy of the different sections of the people, the vesting of absolute authority with respect to the upbringing of youth in the ministers of religion, the exclusion of the laity from all connexion with it, would tend to fix the antipathies which exist in this generation in the minds of their successors, or to annihilate them by the removal or absorption of the dissident minority. It seems to me to be desired, in West Connaught, *partly* as

* I find that twenty-seven per cent. of the teachers have been one year or less in their present schools, and twenty-one per cent. more have been there between one and two years.

a means to an end, with a view to the ultimate realization of a separate national existence, and the creation of an Irish Roman Catholic Government. I see no reason to believe that the clergymen who met at Castlebar, thoroughly acquainted as they are with the circumstances of the country and the feelings of the people, were mistaken in connecting the cause of freedom of denominational education in that part of the country with Repeal of the Union. It is not for me to discuss the question whether Connaught might be better governed than she now is by an independent Irish Executive, or, the farther question, whether such a Government would be likely to carry out the educational policy which Connaught would probably adopt if left to herself.

450. I hope to be allowed to express my sense of the courtesy with which my inquiries were met, and of the obligations under which school managers, inspectors, and teachers, have alike laid me by their readiness to afford me every information in their power. I venture to solicit the special attention of the Royal Commissioners to the selections from the answers of schoolmasters which I have given in Appendix B, and to the papers and letters (Appendices C and D), in which lay and clerical patrons, and inspectors of schools, have stated their views. They seem to me to give eloquent and adequate expression to almost every feeling or opinion which deserves attention, on the general subjects of the inquiry.

I have the honour to be, my Lords and Gentlemen, your very obedient servant,

WILLIAM JACK.

APPENDIX A.

LIST of PUNISHMENTS in the INSPECTORAL DISTRICT of BALLINA (containing on an average 90 National Schools), for Two and a half years, from 1st January, 1866, to 30th June, 1868.

DISTRICT 20.—BALLINA.

List of REPRIMANDS and ADMONITIONS from 1st January, 1865, to 30th June, 1868.

No.		Date.
1.	On accounts,	25 . 6 . 66
	b. For non-suspension of Commissioners' Rules,	26 . 2 . 57
2.	On accounts,	9 . 4 . 68
3.	On backward state of school and neglect of Practical Rule IV.,	20 . 7 . 65
4.	On accounts,	2 . 1 . 68
	b. (Assistant) for non-attendance at examination,	22 . 8 . 66
5*.	On low proficiency,	9 . 8 . 65
6.	Do.	18 . 6 . 67
7	*a.* On neglect of Practical Rule VII.	12 . 5 . 65
	b. On neglect of Practical Rules VI. and VII., and on accounts,	11 . 8 . 65
	c. On neglect of Practical Rules VI., VII., XIII., and disregard of suggestions,	30 . 11 . 65
	d. On neglect of Practical Rule IV.	27 . 7 . 66
	e. On neglect of Practical Rule XIII.,	3 . 8 . 66
	f. On neglect of free stock,	19 . 10 . 67
8.	On low proficiency of pupils,	2 . 6 . 65
9	*a.* On low proficiency of pupils,	18 . 5 . 65
	b. On accounts.	14 . 9 . 66
	c. Do.	7 . 6 . 67
	d. Do.	13 . 11 . 67
10.	On low proficiency,	30 . 10 . 65
11	*a.* Do.	30 . 10 . 65
	b. On accounts,	19 . 11 . 66
12	*a.* On low proficiency, accounts, &c.,	12 . 5 . 65
	b. For misrepresentations,	9 . 2 . 66
	c. On accounts,	16 . 11 . 67
	d. On accounts, discipline, &c., &c.	28 . 2 . 68
13	*a.* On low proficiency,	24 . 11 . 65
	b. On accounts,	7 . 11 . 66
	c. On want of punctuality,	13 . 2 . 68
14.	On low proficiency,	27 . 7 . 66
	b. Do.	7 . 11 . 66
15.	On low proficiency and want of books,	2 . 6 . 65
	b. On low proficiency,	27 . 10 . 65
	c. On neglect of 13th Practical Rule,	12 . 4 . 66
	d. Do.	15 . 5 . 66
	e. On low proficiency,	10 . 8 . 66
	f. On frequent absences from school,	6 . 6 . 67
16.	On low proficiency,	23 . 6 . 65
	b. On neglect of suggestions,	27 . 8 . 66
	c. On low proficiency, &c.	2 . 10 . 67
17.	On low proficiency and neglect of suggestions,	27 . 8 . 66
18.	On low proficiency,	13 . 4 . 65
	b. Do.	21 . 6 . 65
	c. Do.	27 . 10 . 65
	d. Do.	21 . 6 . 66
	e. Do.	27 . 8 . 66
	f. On neglect of Practical Rule XIII.	23 . 8 . 67
19.	Do.	31 . 8 . 65
	b. On late attendance,	14 . 12 . 66
20.	On low proficiency, neglect of 13th Practical Rule, and want of books,	31 . 8 . 65
21.	On neglect of 4th Practical Rule,	26 . 10 . 65
	b. On low proficiency,	14 . 4 . 66
	c. On low proficiency and want of discipline,	20 . 6 . 67
	d. (Assistant) for late attendance,	10 . 6 . 68
22.	On low proficiency, want of books, accounts, neglect of 13th Practical Rule,	12 . 4 . 66
	b. On low proficiency,	27 . 8 . 66
	c. On low proficiency, accounts,	7 . 1 . 67
	d. On low proficiency and neglect of free stock,	7 . 6 . 68
23.	On breach of 13th Practical Rule,	12 . 11 . 67
24.	On low proficiency,	26 . 5 . 65
25.	On accounts and breach of Rules, &c., &c.	2 . 6 . 65
26.	On low proficiency,	7 . 7 . 65
	b. On neglect of suggestions, want of books, &c.	14 . 11 . 67
27.	On late attendance and accounts,	23 . 6 . 65
28.	On breach of 7th Practical Rule,	12 . 5 . 65
	b. Do.	13 . 4 . 66
	c. On neglect of monitor,	24 . 10 . 67
29.	On breach of 7th Practical Rule,	12 . 5 . 65
	b. On low proficiency,	18 . 7 . 66
	c. On irregular closing of school,	19 . 2 . 67
	d. On low proficiency,	18 . 4 . 67
30.	On breach of 13th Practical Rule,	31 . 8 . 65
	b. On low state of school,	13 . 11 . 67
31.	On want of sale stock,	20 . 7 . 65
	b. Do.	22 . 6 . 66
32.	On want of punctuality,	26 . 6 . 68
33.	On low proficiency,	19 . 5 . 65
	b. On low proficiency and accounts,	19 . 11 . 66
34.	On breach of 13th Practical Rule,	9 . 2 . 66
35.	Do.	9 . 2 . 66
36.	On low proficiency,	18 . 5 . 65
	b. Do.	12 . 4 . 66
	c. On neglect of suggestions,	26 . 2 . 67
37.	On low proficiency,	13 . 4 . 65
38.	Do.	3 . 8 . 66

Of 84 school-houses in Ballina District (containing 88 Schools), 24 are *rented* by the *Teachers*, and 7 are the property of the Teachers. Total, 31.

Appendix B.

I issued a circular to school-managers and school-masters, of which the following is a copy:—

Offices of Royal Commission on Primary Education, 46, Sackville-street, Upper,
Dublin, 25th June, 1868.

Sir,—The subjects to which I beg to call your attention are such as these:—

1. The means of education in your neighbourhood. Are they sufficient for the poorer classes?
2. Reluctance of parents to avail themselves of the existing means. When it exists is it due to—the distance of schools—the amount of school fees—want of confidence in the teacher's skill—religious and conscientious objections—inability to forego children's wages—or any other cause that you can assign?
3. Industrial occupations that prevail in your neighbourhood, and their effect on school attendance.
4. Plans for securing increased or more regular attendance.
5. Local aid that may be expected in providing proper and efficient schools.
6. Government aid. Is it ever abused or misapplied.
7. Comparison of schools aided by the State or unaided, in reference to efficiency.
8. Mixed education—*i.e.*, education of children of different religious denominations. Is it beneficial or otherwise?
9. Gratuitous education.
10. Schools for boys and girls. Is the popular feeling in favour of the head teacher being a master or a mistress?
11. Evening schools.
12. Ragged schools.
13. Infant schools.
14. Inspection. Advantages or disadvantages of the present system.
15. Dismissal or removal of teachers within the last three years.

On any one of the questions suggested, or on any subject connected with the question of Primary Education, I shall feel obliged by the full expression of your views.

I shall treat any part of any communication with which you may favour me as private, if you prefer it; but evidence accompanied by names, dates, or particulars, will be of special value for the purposes of the Royal Commission.

I have the honour to be, your most obedient servant,
William Jack, Assistant Commissioner.

The school-masters in most cases answered the questions in order, and I have selected the following from an immense mass of replies which I have received, in the hope that they will show what are the views of the National teachers of the west on the subjects discussed. I have attempted to give a true picture, and nothing more, and I need not say that in extracting passages from the communications with which I have been favoured, I indicate no approval or disapproval of the views expressed in them.

No attempt was made in many cases to answer the eighth question, with respect to mixed education, for obvious reasons. It is not unnatural that a teacher of a school, which has fallen under the displeasure of the clergy, should express himself with reserve. "In a temporal point of view, I am of opinion that mixed education is the more beneficial. In a spiritual point of view I will not interfere," said one of the persecuted teachers whose story I told in the text. Many more had no objection to state their opinions orally, but preferred not to commit themselves to a public expression of them.

Irish Church Missions.

Cloonluane—Mr. W. Murray.

2. The people have no conscientious objections to send their children to this school; the only reason why parents do not avail themselves more of the educational advantages offered them, is the terror produced in their minds by the threats of the parish priests.

Among the many means employed by those to force parents to withdraw their children, the following may be adduced:—

1. Altar denunciations.
2. When parents of pupils are tradesmen, by cursing anyone who gives them employment.
3. By waylaying the pupils on their way to school and beating them.
4. When parents are dying, by refusing to anoint them unless they withdraw their children.
5. By refusing to hear the confessions of parents until they have taken an oath that they will never again send their children to this school.
6. When any epidemic visits the district, and that any of the parents of the pupils dies, the priests tell the people that it is by the power given them by God, they have caused the death of such an one, in order to make an example.

Cashel, Achill—Mr. Inslay.

The trustees of the Achill Mission Estate have provided ample means for instructing the youth in this locality, by giving gratuitous education—school requisites one penny per week to each child—and a suit of clothes yearly to each child who attends for nine months of the year. The reluctance of the parents to avail themselves of these means is due wholly to priestly influence. The priest is an inveterate enemy of education in this island. It is a known fact that there are upwards of ninety children, who could attend school in this village, sixty of whom are receiving no instruction, and were it not for dread of being publicly denounced by the priests, would gladly send them to my school.

The plan therefore to secure increased attendance at the schools is, in my opinion, to decrease the power of popery in the British Isles.

In conclusion I beg to suggest that no rebel is qualified to teach a loyal British subject to fear God and honour the king.

Moyard.

8. *Mixed Education*.—I believe that ultimately there *must* be a separate grant given to each religious denomination; while there are *Protestants* in Ireland religious instruction will be taught in their schools. The great point to my mind is this, whether popery, which Protestants believe to be *soul destroying*, should be allowed to be taught in schools receiving Government aid.

Errislannon.

1. I mean to inform you that we are plentifully supplied with schools, and the means are sufficient for the poorer classes. It is owing to the blessed effect of Irish Church Mission, because when the latter society establishes a school the priest sets up in opposition as in Deralea and Streamstown, and indeed all the other districts. As long as the people remain in ignorance the priests know that they will not leave them.

14. Inspected twice a year in secular subjects, and once in Scripture. When I taught in connexion with the National Board I was under the impression that the children in mission schools learned nothing but Scriptures, but to my surprise I find that the secular instruction given is as good as that given in connexion with the Board. The school hours are more, and although the Bible is taught yet I have as many school hours as when I taught the National school.

Tully—Mr. Carleton.

2. Parents are sometimes unable to forego children's work. Some few may have religious objections. But I speak from experience when I say that eighty per cent. have *no* religious objections, and would gladly avail themselves of the benefit of our schools, but are denounced from the altar if they would do so.

4. To impart a good education is to my mind the best for securing a good attendance. At least this is the plan I adopt.

8. I believe a mixed education to be most *beneficial for society;* otherwise it would be as it were training up two parties to meet in hostilities some future day.

Levalley—Mr. A. Fadden.

8. I consider mixed education in which religious teaching based upon the truths of Holy Scripture is given to all the pupils to be most beneficial, and calculated to promote good-will among them in afterlife. While mixed education, based upon a deliberate exclusion or perversion of the teaching of Holy Scripture has a tendency in my opinion either to beget indifference to all religions, or to create a bigoted intolerance of the convictions of others.

National Schools.

Newtown-White National—Mr. Brimstone.

4. Let the teacher be able to live independently of the people in the neighbourhood—let the character of the instruction be good—let the labourers' children be taught free, and let the wealthy farmers and other artisans be compelled to pay school-fees, or school-tax; and I have no doubt in saying that this will secure an increased and more regular attendance.

8. Mixed education is highly beneficial to the present condition of Ireland. My own school is a good example of this. Of the Ninety-two pupils now on the rolls forty-six are Protestants and forty-six Roman Catholics. The greatest harmony prevails. Not a single dispute of any kind between any two children of a different religious persuasion, has come before my notice since I took charge of the school, which was in August, 1863. And although the parish priest has often denounced my school from the altar, and even refused to raise his hand upon any of his hearers who had (at that time) their children at my school, still I find the people willing and anxious to send their children to the school. I am now sixteen years teaching under the National Board, and I have known very many teachers of different denominations in the counties Donegal, Fermanagh, Tyrone, and Mayo, and I never knew two teachers to differ on account of religion. These facts tell their own story and need no comment from me. But if the denominational system be established it will tend to create and foment those religious animosities which have proved so baneful to Ireland. Under the denominational system every sect will have different class books, and the present books now in use will be thrown aside as useless, and the two children or two teachers in the same neighbourhood will scarcely walk to the next market town together without looking upon each other with hatred and disdain.

9. By all means let the poor labourers' children be taught free. I know from experience that they are quite unable to pay anything. At least one-third, if not one-half of my pupils would be obliged to withdraw from the school if fees were exacted. But let the wealthy farmers, merchants, artisans, &c., be compelled to pay something in aid of the State grant.

Leenane—Mr. Brennan.

To secure a more regular attendance a registering fee of one shilling or so paid by each child when registered would be beneficial; and secondly the money so collected to be added to what I would also suggest—a premium fund to reward the most deserving. In my opinion rewarding meritorious pupils with suitable presents would have a good effect on the children of the poor as well as the rich. Monitorships in schools have a good effect. But monitors appointed through the influence of the managers, which too often takes place, are many of them an injury. The appointment should rest as a rule with the Inspector and teacher.

Separate education is preferable, and would be more successful than mixed. I believe no system of education will be successful in this country without the full sanction of the clergy. Some of them favour the present system, some are indifferent, but most of them are against it. With the latter the teachers are very unpopular, and are treated with less respect than the meanest in the parish.

The collection of local aid towards his payment by the teachers is highly objectionable. It leads to disputes between parents and teachers, lessens the teacher's popularity, and tends to withdraw the childrens' affection and respect from him. Owing to the poverty of the poorer classes the demand for school-fees tends to decrease the attendance. To the grown-up youth whose education has been neglected, and even to those who have a fair share, evening schools would, I am sure, be very beneficial. From my experience in Galway and Mayo, I know that night schools would be much appreciated. For a time at least they are required, and if encouraged would be successful in operation during six months of the year. The appointment, removal, and dismissal should not be within the power of any one party. Managers do not often dismiss and remove teachers; teachers leave of their own accord when they get cause to distrust the manager's disposition.

Managers make the teachers feel their power, and this pressure forces teachers to submit to tyranny till they manage to get another school, in which probably the treatment is worse.

There should be no probationers. Three grades and no divisions are sufficient for classification of teachers.

Carrowmore Palmer—Mr. M'Gurrin.

2. The reluctance of parents to avail themselves of the present means of educating their children, arises from an aversion to pay the teacher the much reasonable sum as school-fees. It is true that many of the parents of the school-going children can plead poverty as an excuse for non-payment of fees; but even those whose means enable them to pay, are reluctantly compelled to do so, from a notion that all National schools should be free from charge.

15. Now the position of a teacher between his Inspector and manager is quite unenviable. Should a difference arise between them, the teacher is awkwardly situated. The manager naturally counts upon the co-operation of the teacher, which, if the latter refuses, results in his removal, while the Inspector on the other hand has it in his power to make him feel the weight of his authority. The official authority of the one, and the absolute power vested in the hands of the other, are two evils that constantly menace the poor teacher. To incur the displeasure of the manager makes him liable to instant removal, while to displease the Inspector is a sure means of keeping him without promotion, premium, or a good report during the official's stay in the district. Of the two grievances which is the least? I would answer, the official power of the Inspector, for should he report a teacher wrongfully, it is probable the Commissioners would give the matter a hearing, and thus give the teacher the opportunity of righting himself; but should the manager take a notion to have the teacher removed, he has no tribunal to appeal to. I would also give it as my opinion, that the fewness of the number of teachers who have been removed by the caprice of their managers, arises not from the forbearance of the managers, but from the necessary slavish obedience which the teachers must at all times render to their slightest wish or command. It is quite true that there are some noble exceptions to the class of managers above designated; but it is equally certain that with the kindest of them if a teacher shows a reasonable share of independence, he would be sure to suffer, if not removed, at least the pain of an unsparing reprimand.

Louisburgh School—Mr. Sweeny.

8. In a temporal point of view, I am of opinion that mixed education is the more beneficial, as love created among children at school is generally cherished through life, and the most inexperienced must know that children of different schools never agree so well as those educated at the same school. In a spiritual point of view I will not interfere.

10. The popular feeling is in favour of the head teacher being a master. A mixed school (boys and girls) conducted by a female head teacher, is in my opinion only better than no school at all; it has rather a tendency to bring other efficient schools into disrepute.

15. Appointment, dismissal, and removal of teachers at present, seem to me the greatest obstacles to the working of education. I say so with respect, and not by way of dictating to my superiors. A teacher, at present, except he has a little spirit, must act as an engine, I mean just as all parties wish to act on him, he must act; if not, he is sure of dismissal, removal, fine, depression, or ecclesiastical censure. Managers can appoint and remove teachers of their own authority. Under such circumstances some schools are in the hands of men who have no taste for teaching, and who to avoid dismissal keep away from examinations till they have got a few salaries to take them to America or elsewhere, and as soon as they leave, a similar man takes charge of the school, on similar principles, and so it goes on for years. Consequently no teacher should get charge of a school except he be previously pronounced competent. Competent, and once appointed, no *individual* ought to have power to remove him. If he grow negligent, or misbehave in any manner, let him be reported, let his case be

fully and impartially investigated by at least three, and then let him hear the consequence. No one will then dare to attack him because he strictly complies with the rules of the Board, and fearlessly carries out its principles, for I positively assert that I know a teacher who because he did so, fell under ecclesiastical censure and suffered. When the teacher I allude to was asked by a clergyman to admit books, during secular instruction, which were objectionable to some pupils, the teacher replied that such a course was "against the rules," and that he could not allow it; the clergyman replied, "And you will comply with rules condemned by the Church." I ask, if that clergyman was the manager should he comply? Yes, the teacher should comply or travel.

Therefore a teacher should have protection, and not be, as he is at present, the most passive official in the British empire. Teachers should be reasonably remunerated for their services; for although the office proclaims the man, without means to maintain position, the man is thought but very little of, and a teacher thought little of, his school is thought little of; for as the schoolmaster, so will be the school.

Letterfrack—Mr. Cawley.

Government aid is misapplied in the building of new schools, too convenient to other schools, or in more populous localities, it is also grossly misapplied in the building and maintaining of district and minor model schools. These schools are useless as models for country teachers, for the great bulk of us seldom or never have an opportunity of seeing how they are conducted. Every teacher before taking charge of a school should have received a regular course of training in one of the central model schools, and all the other model schools should be either reformed or done away with altogether.

The power which managers have of removing teachers has done a great deal of mischief, and should be taken out of their hands at once. It is a well known fact that the majority of managers take no interest whatever in education, and yet to such men the Commissioners intrust the arbitrary power to dismiss their teacher. In consequence of this power many excellent teachers leave the service of the Board in disgust.

Westport—Mr. Macnamara, late of Molranny National School.

4. The most successful plan for securing an increased or more regular attendance, would be, in my opinion, to begin by removing the grievances under which Irish National teachers labour at present. They are the most unjustly treated body of men in existence, they see the gauger, the policeman, not a whit more meritorious than they themselves, in receipt of salaries adequate to their wants, and when they have ceased to be able to perform their respective duties, granted a pension for the remainder of their lives, while they (the teachers) are doomed to drag out a miserable existence, harassed by debts which they are unable to discharge, owing to the scantiness of the pittance they receive, their only alternative in case of sickness being the workhouse. If these disabilities, were removed, then if their salaries were increased, and a pension granted them after a certain term passed in the service, it would rouse their now dormant energies into action, cause them to address themselves to the duties of their position with greater zeal, and in fine be, in my opinion, the most successful plan for increasing a regular attendance.

11. It would be very desirable, in my opinion, to have evening schools established in the more remote parts of the country, during the winter months particularly, as opportunities would be afforded in consequence to many grown-up young people, of learning to read and write, who are unable to avail themselves of the ordinary day schools.

Cloongee School—Mr. John M'Carrick.

2. *Refusing to pay school fees—unsuitable school-rooms, and want of teachers' willingness to work.*

The last of these causes which is so injurious to the state of the school, may be justly laid down, in many cases, as the result of the other two. Local aid in such schools there is none; the people have no inclination to remunerate the teacher; the patron takes no interest in its welfare, scarcely or never pays a visit, except for the purpose of satisfying parties who make complaints, but never makes the smallest exertion on behalf of the teacher. The building is both miserable and unwholesome, and furniture inadequate, and to complete the picture, the teacher has to pay rent for it along with, perhaps, keeping it in repair. It is easy to see he cannot keep it in that condition which will satisfy the inspecting officer. That gentleman makes his visit, and, of course, reports unfavourably of the schools almost in every respect; for in such a school it is impossible to teach with success. A reprimand to the teacher, and notice to the patron that unless the school be repaired before Inspector's next visit the grant will be suspended, are the result. Then, again, that unfavourable report disqualifies the teacher for going forward for promotion for twelve months; nor can the Inspector recommend him for any of those premiums at his disposal for "neatness, efficiency, and order." Hence his class is low, his pecuniary circumstances embarrassed, and his aspirations for promotion dead. Under these circumstances (and the number of these schools in this province is many) how can it be expected that a teacher will come to his school with cheerfulness and earnestness to do an honest day's work? It is contrary to human nature to expect it, and the fact is, he endeavours to just *half satisfy* the Board, and makes no effort to gain the confidence of the people.

4. *First of all*, I would suggest that the teacher's position be made both independent and respectable, and that he should not have anything to do with the parents of the children in the way of cash demands. It is utterly impossible to work any system advantageously, no matter how efficient in itself, if the teacher does not feel satisfied, and placed in that position that should he lose it he believes he would have sustained a great loss. According to how they are now circumstanced, many of them, particularly those free from the care of a family, would deem it a blessing to be dismissed. It is vain to expect that the teacher can ever collect anything respectable in the form of school fees from the people with a good will. It is the most disagreeable part of his duty to have to deal with them at all in this way, for they are under the impression that teachers are not allowed to charge, so that often have I been insulted for only making a demand.

Again, the Commissioners of National Education while anxious that teachers would go even to extremes with the people to enforce their dues, have actually, by a late rule of their own, regulating the salaries by the number of attendance, made it impossible for them to do so with safety. Should he go to law with the people, they are sure to send their children elsewhere, and teachers knowing that if their attendance fall below the number fixed by the above rule, their salaries are sure to be cut short, will gladly receive them. Hence the small amount of school fees, and the difficulty of remedying it. Hence, also, the practice, too common among country teachers, of *coaxing* the people to send their children to *their* schools; and the latter, knowing the object and drift of this, take advantage of it, and in place of offering money to the teachers, they rather expect compliments from him. In the face of these facts, can it be wondered at if a poor teacher, who by hard study has attained a respectable class, having a little family to support, and seeing his salary in danger of being reduced by, perhaps, one-half, should yield to the temptation of the moral degradation of falsifying his school accounts, and run the risk of being thus ignominiously dismissed, a fate which has frequently been the lot of many an excellent teacher,

Secondly. I would recommend comfortable school-rooms, got up by the Board. It is really pitiful to see poor bare-footed children, after running perhaps a mile or two of a cold, frosty morning, standing the remainder of the day in damp floors, shivering with cold, and the wind and rain blowing in through door and broken windows. Such children, along with endangering their healths, can do no good at school. I have often sent them home again, while I was teacher of —— and —— schools; two of the above class. I have reason to feel thankful to Providence that my health escaped the danger to which it was for a long time exposed in those places, and that I am now in charge of one whose very appearance is enough to cheer and invigorate the most inactive mind.

Thirdly. I would strongly recommend a yearly public examination, conducted by the patron and Inspector, at which *prizes* would be given for good answering and regular attendance.

Fourthly. The teacher's ability, earnestness, and manner are powerful instruments in commanding a good regular attendance. The patron should have a particular eye to the teacher in this respect, which I consider the most important duty connected with his office.

8. Inspectors should be compelled to act with respect and courtesy towards a teacher, particularly in a school. Many of even what teachers call "good Inspectors," have a most commanding and brow-beating way about them in a school. If a teacher has an occasion to call upon one of them at his depot, many of them will keep him, perhaps, for hours standing in the hall, or may be kitchen, and at the end, perhaps, order him to send the full particulars of his mission through their servants. Again, many of them are loquacious enough to tell their opinion of a school and teacher, not only to other teachers, but to their car-drivers.

9. While patrons and Inspectors claim such arbitrary power, as they now enjoy, it is impossible to guard against abuses.

The Inspector's report of a teacher and his school on the most vital subject affecting his position is received by the Commissioners as Gospel truth; nor can the poor teacher appeal unless through his patron, he being strictly prohibited to hold any direct communication with the Commissioners. That any man, who in private or public life may be a tyrant, should have the power of throwing anyone supported by the State, and whose services are required and appreciated by the public, adrift, without judge or jury, is an insult to the people, and a scandal to a free constitution. This very power in the hands of managers has been levelled at the very existence of the system of National education by the Roman Catholic hierarchy of Ireland, and has enabled them to condemn the training establishment with but too much success. I make not the smallest doubt, if the National teachers of Ireland opened their minds freely on this subject, but a number of instances could be given of teachers who have fallen victims to this power, which, for injustice and tyranny, can scarcely be equalled in any other civilized country. It is to be presumed that no teacher whose character is tarnished will get charge of a school. Why, then, turn him away without a just cause? In the army and navy, &c., the lowest in the ranks is entitled to a court-martial; the police, and even our own Inspectors, to full inquiry, while the teacher can be peremptorily ordered about his business. It is vain to expect that teachers can be satisfied with such treatment. Nothing short of a full and impartial investigation will please them in this respect.

Kingston School, Clifden—Mr. Hallaran.

9. Moreover, their dislike to National teachers is great on account of their small salaries, for all the people say it is the most beggarly life for any young man to pursue now extant. The common day labourer is paid at the rate of 1*s.* 6*d.* per day, whereas a poor teacher has only 9*d.* or 11*d.* The generality of teachers has only about 11$\frac{3}{4}$*d.* a day. To be clothed, fed, and boarded by 11$\frac{3}{4}$*d.* per day, surely his maintenance is scarcely beyond that of a common street-cleaner. The Mission schools are paid at the rate of from £3 to £5 10*s.* per month. It is simply scandalous to expect that any rational being should spend his time at so arduous and worrying a duty for so miserable a pittance.

15. Teachers should have the right to correspond with *the Board* in certain special cases at least, so as to be able to defend themselves by letter from, for instance, a malicious or unfair report from an Inspector or manager, sent in against them. Some cases have occurred in which teachers were most unjustly treated, because they neither knew how nor could they defend themselves from unfair attacks made upon them by inspectors or managers. In cases like these, teachers should be entitled to claim the right to make a personal appearance before the Board at the Education Office.

The humblest sub-constable has the means to defend himself from his superior officers in the constabulary force, and get them (officers) punished if they deserve it. Is there anything more rational than that National teachers be possessed of similar rights?

Mr. Moran—Aglish School.

8. The Roman Catholic clergyman (with the Roman Catholic master, whom he appoints and dismisses).
   1. Objects to separation of religious and secular instruction.
   2. Objects to the National school books, as omitting—
      1. Religious teaching (Catholic).
      2. National sentiment.

The present books, published two years ago, are much better liked in this district, and not liable to the last objection. The people like the new books wonderfully well.

9. Many teachers get payment in kind from parents who don't pay in coin—potatoes, meal, or labour, turf, &c.—but that is not carried to any great extent except where teacher holds land. Two days in a quarter would be given freely for a pupil. There are a good many cases of this kind in the country. As the old National books contained no patriotic sentiments, and as those who have been educated in these schools entertain them strongly, either their education must have opened their eyes, so that they came to do so, or they must have got them from the teachers, or, which is more probable, a little of both. The teachers, some of them at least, were ready to go in for Fenianism, or any "ism," being very much dissatisfied, never getting any redress of grievances.

2. Schools, however, of a denominational character are also becoming popular, and although parents generally assign no "religious or conscientious objections" to the National system, the attendance of pupils is lowered, owing to the influence exercised by their respective pastors.

8. There is overwhelming evidence to show the vast benefits which have resulted from "mixed education" in this country; but certainly the social condition of the people has not kept pace with their educational progress. So far, however, as the poorer classes of all denominations are concerned, they would rest satisfied with any system, but in matters of importance they are guided by the advice of their respective pastors.

One of the greatest grievances which weigh upon the teachers is the want of suitable residences for themselves and their families. Accommodation for the teacher, either adjoining the school or at a convenient distance from it, should form one of the main features of any system of popular education. The teachers also feel acutely how inadequate their present salaries are to meet their daily wants. This grievance, coupled with the dreadful consequences which ensue from their not having retiring allowances to depend upon in old age, render many discontented, and eager to leave the service whenever opportunity offers.

Westport—Mr. J. M'Clintock, E.C.

The only plan that seems practicable is to better the present condition of the teaching staff, who would then feel in a condition to be more urgent upon parents, as they would have little to lose and everything to gain. Should a teacher at present practice such a course, the people think he is merely doing so to advantage himself by securing the Board's salary by his average, and bettering himself by the school fees he may expect. One of the most general complaints amongst teachers is delay which has always occurred in the payment of salaries. Teachers have often to wait for a whole month after their quarter's salary being due before they can have the Board's salary. Monthly payments, paid at certain depots by the Board's officers, in a similar manner to the army, would be a great boon to most teachers.

The annulling of the grants of free stocks of books, &c., which the Board formerly granted triennially, are much felt amongst male schools.

Garracloon—Mr. Traynor.

Mixed Education.—With regard to mixed education, as it now exists, my opinion is, that if the *people of all* denominations, for whose benefit the system was established were permitted to judge for themselves, they would never think of asking for any change. They know well that, even if any teacher was inclined (and I have known no teacher who was) to tamper with the religion of his pupils, the rules of the Board are at present so framed that he could not do so under pain of immediate dismissal. They know that the moment any attempt at proselytism in a public school-room would be made, it would be detected and made public. In fact I consider proselytism to be a thing almost impossible in a National school. As this vexed subject of denominational education has been kept up in continued agitation by the hierarchies of the two rival Churches almost since the National system was established, I have had ample opportunity during the almost twenty years I was teaching in my native county, Tyrone, of learning the opinions of the teachers not only of Tyrone but of Armagh, Down, Monaghan, and Derry, upon this subject, and I can truly say that everyone of these teachers with whom I spoke upon the subject was opposed to the change now called for by those high ecclesiastics and selfish place-hunting politicians. And at a few teachers' meetings held in Ballina, I had an opportunity (which I embraced) of finding out the opinions of the teachers of this district upon the subject, and I found that they were and are of the same opinions as the northern teachers. Indeed I think I may safely conclude that almost all the teachers of Ireland hold only one opinion upon this subject, and humble and low as their social status is, I do not know any other body of men of the lower (or perhaps the middle) order, better qualified to form an opinion upon the subject.

During the space of almost twenty years my wife (now dead) and I taught the Altmore National schools; about one-third of the pupils were Protestants of various denominations, the other two-thirds were of course Catholics, and during that long period no angry feelings ever rose in this school regarding religious matters. Many Protestants left their own schools and came to me from a distance of from two to four miles. And when my wife was called to the training establishment in Dublin, in 1848, a wealthy and respectable Protestant gentleman allowed his daughter to teach the female school, while she (my wife) was being trained, nor would he take any remuneration for his daughter's services. And the patron of the school was and is a Catholic.

National Education.—So far as I have been able to learn from both observation and inquiry, I find that the greater number of patrons —more particularly since the late outcry for denominational education has been got up—consider that they sufficiently discharge their duties as such, by simply tolerating by their sanction the schools under their control, for I cannot call it management, as in general that simply consists in appending their signatures four times a year, to the teachers' receipt for salary from the Board, and also in signing the "application sheet" for school requisites, at such time as the poor teachers can themselves scrape up the price of them.

Perhaps in no civilized free nation in the world could there be found such an example of uncontrolled power being vested in any class of men over the destinies, means of existence, and in some cases, indirectly, over the very lives of another class—of both sexes—as that exemplified by the unlimited power conferred upon the patrons and managers of National schools over the National teachers of Ireland. And what seems strange and unaccountable is that to this power is not attached one single responsibility or duty; nor is there a single tribunal of appeal to apply to from any decision they, the patrons, may choose to make regarding teachers. These men could turn out of their schools all the National teachers in Ireland in forty-eight hours—all except those under the patronage of the Commissioners—nor would they be bound to give the Board or Government any explanation for so acting. It would be of no use for the teacher so turned adrift that he could show he had been ten, twenty, or even like myself thirty years teaching, and that during all that time, he had faithfully discharged his duties to the satisfaction of the Board's officers. No, the patron having *fiated* his fate and that of his wife and family, (if he had such), they must all go under the brand of dismissal, and perhaps without the last quarter's salary, though earned, because the patron may refuse to sign the receipt, and if not signed by him the Board will not pay the money.

A patron can deprive a teacher of his salary when earned, deprive him of a gratuity, premium, or good service salary when awarded, and granted by the Board; can deprive him of the necessary services of a monitor or assistant when either is recommended and appointed by the Inspector; can compel him, without reward or fee (if a Catholic), to serve at the altar on Sundays, to teach the catechism, &c.; can compel him from taking any school-fees from even those who are both able and willing to pay; can compel him to do any service he wishes *gratuitously*; in a word, the patron can, and often does, treat the teacher worse than if he were his own paid servant; he can with impunity insult and apply physical force to the teacher; and in case of a female *even do worse!* Almost everything I have mentioned above I have myself known to be done, and could mention the names of *some* of both acting and suffering parties; but delicacy forbids my doing so, as they are all still living. (The acts referred to took place in Tyrone.) Of course there would not be found many patrons capable of acting in the manner described, but all I wanted to show was, that these men *may with impunity do so.* Lastly, I should remark, that I never knew a man worthy of the name of patron (so often a misnomer), who did not say he had too much power given him.

Inspectors.—With some exceptions—two of which I have met here—I have found *all* the Inspectors to be kind, sympathizing, and gentlemanly in their demeanour. A teacher should not be dismissed by whatever an Inspector *may choose to write against him.* Inspectors after all are only men—some good, some bad—and if a teacher unfortunately offend (and one rash or unthoughtful expression, even true, may do so) a bad or unfeeling Inspector, he can, by one or two reports get the unfortunate man dismissed FOR EVER; because a teacher when dismissed through an Inspector's report will never again be taken into the Board's service. This is another of the many grievances of which the National teachers complain.

Any person who entertains spite or malice against a National teacher, can very easily at any time get him dismissed. He has only to draw up any number of charges he pleases against the teacher—it does not make the slightest difference if even every one of such charges is false and unfounded—and send them to the Secretaries of the Education Office. An investigation is ordered, and though it seems almost incredible—at all such investigations, of which I have heard, and one of which I witnessed here, the teacher is told to stand aside, and will not get leave to say one single word in his own defence.

No person receiving any salary under the British Government, or in any public office, will be dismissed without a just cause, or without a *fair trial. The poor National teacher is the only exception.* I trust he shall not be long so.

Incidental visits.—The teachers consider that an Inspector can in almost all cases, by means of the ordinary inspections, inquiries from the patron, the opinions of the people of the locality, &c., discover with sufficient accuracy whether they are properly discharging their duties or not, and that therefore there is no occasion for "incidental visits." And when a teacher finds out that the Inspector goes a mile or two out of his direct way (as is often the case) to make those visits, he cannot be made easily to believe that the visits were purely incidental. Of course the Inspector is only carrying out his instructions. But when such visits become frequent in a district, all mutual confidence and harmony between teachers and Inspectors ceases; and when this is the case, education cannot prosper as it otherwise would. And I may here remark that nothing can be more hurtful to the feelings of a teacher, who is conscious that he is doing his utmost to discharge his duty.

Note.—My candid opinion is, that the National teacher will never be satisfied, nor will the system prosper, until they are treated in all respects as *civil servants of the Crown*—in fact *appointed as such.* This opinion I formed twenty years ago, and have since expressed it at many meetings of teachers who all agreed with me. So much are the teachers at the mercy of all parties, that they are little *better than slaves;* and so low is their social status (in this district at least), that the five-acre tenant-at-will-farmer thinks himself a far more respectable man, and looks down upon them with contempt.

Their treatment is a National disgrace; they are the educators of the people of Ireland—they are of the people, looked up to by the people when information is required, and scattered amongst the people in all parts of the kingdom, and therefore their power to do national good or evil is very great, and should not in my opinion be overlooked any longer by British statesmen. Justice at least should be done them: I hope I shall live to see this the case.

Burriscarra School, Ballyglass, County Mayo—Mr. Egan.

Reluctance of parents to send children arises sometimes from a *dislike* on the part of the enlightened parents (the ignorant not being able to judge) of the *present system,* which is regarded somewhat in the light of a *Protestant Government* system by most of the enlightened people of this country. This latter view, which many respectable well-informed people entertain, tends very much to lower the status of the teachers, who by many of this class of persons are regarded as, perhaps, a shade better than "Jumpers."

4. I believe that as irregularity of attendance is generally traceable either directly or indirectly to the poverty of the small farmers and cotters in country districts, the want of *good land laws,* of a *good system* of *tenant right,* lies at the foundation of the existing state of things. If therefore the attendance is to be rendered regular in country schools, the Government must commence the good work at the very foundation by granting the tenant farmers of this country a *good system* of *tenant right.* This is an agricultural country; therefore its prosperity, if it is ever to be prosperous, must be based on *good land laws,* which will secure to the poor tenants fixity of tenure, and an encouragement to improve their holdings. It is evident to every thinking mind, that a reformation of the present system of land laws in this country is absolutely necessary to raise the social comfort of the cotters and small farmers to what it should be, and to what it is in every well governed European country. It therefore follows that it rests with the Government to take the first essential step towards securing regularity of attendance in the primary schools of the country. The next step should be to redress the many *galling grievances* of the teachers, so as to encourage them to love their profession, and to take a *real interest* in their schools. There should also be a small school-fund, out of which the most deserving pupils should get premiums for *regularity* of *attendance,* &c.; and out of which the poorest children should occasionally get the price of a suit of clothes, so as to enable them to come to school tidy. A modification of this system is practised in the Balla schools under the patronage of Lady Blosse with the best possible results. All the children pay a small amount of school-fees, which however does not go to increase the teachers' income, but is kept as a school fund, and is refunded again to the children every Christmas in the shape of premiums of clothes, &c., to the most deserving of the poorer class of children.

8. Mixed education—I believe that it is more beneficial than no system, but not so beneficial as the denominational system would be, and that it never will succeed in bringing about the ends to which the Protestant supporters of it think it will, namely, that they call *liberalism* in religious matters, but what all sincere orthodox Catholics must call *indifferentism,* as far as Catholics are concerned. All Catholic teachers and managers, I believe, are at present alive to the fact that the late Archbishop Whately used the system in an indirect way for prosleytising purposes; and I know myself, in addition to this, that all the Protestant managers I ever taught under would use the system, if permitted, for the same purposes.

Manulla School—Mr. Higgins.

10. In winter a number of grown-up boys attend, and if the head teacher is a mistress, the boys will not respect her orders in such a way that discipline can be properly carried out. Besides, a mixed school is always more difficult to manage than one for males or females *alone.* The popular feeling is in favour of the "head teacher" being a master.

11. If evening schools were *aided* by the State, a *very great benefit* would result from them. Grown-up boys would attend, and as such boys are always eager to learn, and cannot attend the day schools, an evening school would be *very* popular, *very* efficient, and the surest way for educating the young men of Ireland. A respectable amount of school fees could be calculated upon, as no pupils pay as generously and voluntarily as "evening school pupils."

13. For improving the education of the Irish people, I strongly recommend the following, and without several of these changes or improvements, I am certain that education in Ireland will remain as it is, or get still lower than it is. The several improvements have their relative values shown by the numbers opposite each.

1. The present salaries of National teachers to be largely increased,	100
2. Evening schools to be established (aided by the State),	80
3. Non-vested schools to be placed on the same footing as vested schools,	70
4. The "Inspector" to visit at least once in every two months,	60
5. A local depot for books; requisite apparatus to be set up in all large towns,	50
6. That school fees be abolished, and salary of teacher be wholly provided by the State,	50
7. Premiums to be awarded to rural National schools,	40
8. That a teacher be not liable to dismissal by any person whatever without cause,	90

Drumgallagh School—Mr. Cormack.

14. The oftener the children are visited and examined, especially in rural districts, by a gentleman or lady, or a Board's officer, the more advantageous to them, the more the teacher will be on his sharps, the more orderly and cleanly will the children endeavour to be, and the more improvement will be effected in the discipline, regularity, order, conduct, and general welfare of the country schools.

——— *National.*

As regards the sufferings of teachers on account of the scanty pittance they receive from their Honorable Secretary of National Education, I will not dwell nor go into any particulars presently, as indeed I could give innumerable instances in which teachers can scarcely procure the cheapest and worst diet, but upon this painful subject I will dwell no longer. I will just say a few words concerning my own course in life. Having evinced an early taste for teaching, I was appointed in July, '67 at the rate of £15 per annum, out of which I was obliged to pay for lodging, board, washing, clothing, maps, stock of books, &c., &c. And here I am to this date, September, '68, on the £15, of course, running into debt daily, still depending on the examination for promotion. I sincerely desire that your honour will excuse this meaningless harangue, which I have in some sort of excitement indulged in.

Rossgray School—Mr. P. A. T. Gibbons.

2. I often heard people say this:—that the pupils in National schools are sent too soon to learn grammar and geography, and that they should devote the principal part of their time, which they spend in learning those subjects, to the study of writing, reading, and arithmetic.

Ballymonelly—Mr. Richard Finn.

4. If the co-operation of the local clergy could be secured the desired end would be accomplished. The present existing school is admitted on all hands to meet fully the requirements of the district, if it had not been established on the basis of a vested school. I cannot say what aid the Roman Catholic clergy would be prepared to guarantee towards the erection of an ordinary National school.

Derrygimla School—Mr. Faherty.

2. Parents in general are desirous of having their children educated, but in this locality are constrained to forego its advantages owing to bad mearings. Hence to prevent trespass, and consequently litigation, they keep them at home herding, regretting at the same time their being obliged to do so. Again, as a general rule, parents are averse to paying school-fees to the teachers of State schools, though should a hedge school teacher, or even the pupil of a National school set up a night or any other sort of school, parents pay double, and in some cases treble the sum required of them in National schools. I have made it my business to pry into and know the cause of this prejudice, and am of opinion that it is done through charitable motives, though they are fully aware and cognizant that the information imparted to their children is far inferior to that which they would receive at the very worst State school.

4. In order to secure a regular attendance I would abolish school-fees altogether. I would also charge each pupil at the time of his registration a fee of sixpence, and not exceeding one shilling; this to be paid every time the pupil presents himself for registration. The benefits arising from this would be twofold; it would prevent children leaving one school and going to another every time they pleased. Also it would, I am of opinion, prevent their being absent for a lengthened time. I would further suggest that this fee, together with some additional aid either from the State or the manager, be given as premiums at an annual examination held on the last quarter in each school, the regular attendance of the pupil as well as his answering to be taken into consideration.

8. The object of mixed education is well known, but if persons are properly educated, though in separate schools, the same object will be effected, as education gives "mutual respect, and to each self respect."

Fahey School—Mr. Patrick Kelly.

2. A pretty general cause of popular dissatisfaction is this: It is the wish of the parents, at least in rural districts, that their children, for the short time they can spare, should be occupied exclusively with reading, writing, and arithmetic; and they think that grammar, geography, &c., which they consider quite useless to the labouring class, interfere with those branches.

5. I beg to disavow any selfish views, when I state it as my opinion that the surest way to provide efficient schools is to provide and *keep* efficient teachers The schools will soon fall into the hands of raw or inferior men. And how can it be otherwise? Who can expect the services of efficient officers for fifteen or eighteen pounds a year? And this is the pay for a probationer or one in the lower grade of third class. Such are the men on whom will devolve the education of the rising generation. For the teacher after about six or eight years service begins to consider in earnest how he is to wrestle with the future. He has now, after many a weary hour's study, qualified himself for the duties of a good primary instructor, and when he sees himself, in spite of his exertions,

"Doomed to that hardest task of man alive,
To make *three* guineas do the work of five;"

when he sees the precarious tenure of his office, and that sword of Damocles threatening him every instant (the average rule), and his helpless age unprovided for, he resigns, and a probationer takes his place, whose inferior acquirements and inexperienced drudgery can command neither respect nor confidence.

Lecanvey School—Mr. William Moran.

2. I know that the reluctance of the people to avail themselves of the existing means arises principally from the causes—first, the people look upon any school and upon every teacher that is not strongly recommended to them by their clergy, with very great disfavour, and such recommendation is very seldom given. Secondly, the entire burden of keeping the schools supplied with requisites is left on the teacher, and (as it is now admitted) he in almost all cases cannot spare the money to do so out of his small income.

8. A tax for educational purposes would be much better than school-fees, both for the children and for the teacher, for under the present rules of the Commissioners of National Education in Ireland the teacher cannot enforce his school-fees, as he must keep up his average attendance, which he cannot do if he insists on school-fees,—or let the attendance down, and then lose a part of his salary from the Board. Secondly, the teachers ought to be relieved from the arbitrary control of the managers. As the case stands at present those gentlemen have the power of dismissing any teacher however deserving, without even assigning any cause whatever. Thirdly, something in my opinion ought to be done by an enactment of Parliament to give the teachers a support in old age.

Belcarra School—Mr. M. Chalk.

P.S.—I most respectfully beg leave to bring under your notice the inadequacy of the teachers' salaries to supply them with the mere necessaries of life, and those of the most inferior description. I have known teachers to be often in a starving condition.

Carrownisky School—Mr. Sweeny.

5. Upon the principle that "Three removes are as bad as a fire," National school localities often suffer; for it is impossible for a school to work efficiently while a teacher has no security of tenure. It is true that some managers never abuse their privileges of appointing and removing teachers; still, such privilege is mischievous, as a poor teacher is always in doubt, consequently he will not take that lively interest in his school which he otherwise would if he were secure.

Doohoma School.

2. Except in a few cases of boys taught by me who got situations in the navy, constabulary, and clerkships in America, I never heard of any person who attained a livelihood through his education. It is not rare to find a man here to say "that he would prefer his son to know the art of tilling potatoes to a knowledge of the sciences." I remonstrated with a man on the very irregular attendance of his children; his reply was, "that himself and several of his neighbours, who never went to school, were better off than myself." Yet there are several circumstances to be mentioned which would tend to promote a desire for education which does not now exist.

4. In fact, the low state of rural schools may in a great measure be attributed to the teachers' poor pittance; it is barely sufficient to supply the most common necessaries of life, hence the inadequacy of the supply of school requisites. I know the case of a teacher who for four years could not afford to purchase a new *coat*—even a cheap one—and who was fined, notwithstanding his poverty, the sum of £1, for want of having sufficient sale stock in his school.

Aughlean School—Mr. P. O'Malley.

7. Hedge schools should not be tolerated, as the teachers endeavour to bring the National system into disrepute. The teachers of hedge schools, as a rule, live with their pupils, a night in each house; he there works upon the minds of his illiterate hosts.

Ballintober School—Mr. C. Flanagan.

1. You are aware that the framers of National education in Ireland supposed that school fees would form a very important part of teacher's salary, but teachers could not collect or enforce school fees, and managers would not help to enforce payment, or pay anything in lieu. The teachers, therefore, have nothing to look to for support but the small salary from Board or Commissioners of National Education, and hence it is that the teachers are in debt, and have to pawn their coats until next pay day, in order to make all ends meet, or to support life. This is no exaggerated picture, but often too true—there are few exceptions. In my opinion, the teachers never will be independent or efficient until the State or Executive pays their whole salaries, and taxes the people.

Knappa School, Westport—Mr. Langan.

I am in receipt of good service salary from the Board, and I have been told by the Inspector that unless I have an average attendance of at least thirty-five pupils for this year, that it will be discontinued. Considering the great number of National schools in the neighbourhood, and the constant decrease in the population, I think it a great injustice to be threatened with the withdrawal of a benefit which I have not forfeited by any want of zeal or faithfulness in the discharge of my duties. It is not my business to say whether the second National school were required in the poor, unpopulous townland of Knappa; but this I state, that in my National school the children of every persuasion could be educated, as they had been for years, in strict accordance with the rules of the Board; and that if it were not taken into connexion, I would be sure to have the annual average attendance required by the rules. I give it as my testimony that during the long period that the Protestant children attended my school, there was not the slightest dispute, religious or otherwise, to my knowledge, between themselves and the Catholic children. I trust, sir, that you will do your best to prevent the multiplication of National schools in such unpopulous localities as mine; and should you assist in doing away with the rule of "averages," you would confer a great benefit upon many a poor teacher.

It is my opinion that parents should be compelled to send their children to some school for at least three months of the year. Any parent who would fail to do that should be fined at least £1 every year, which pound should be handed over to the manager for the repairs of school, and for premiums to children who would attend regularly.

The people are aware that the teacher requires a certain average attendance to entitle him to his salary, and if he insists upon school fees, they keep their children at home. The poor teacher, fearing to lose any portion of his salary, soon invites the children back, and promises not to charge them. As the teacher cannot insist upon school fees without injury to himself, I think it is better that there should be no such thing at all. Let the State pay the teacher a salary which shall enable him to live respectably among the people, and both the State and the people will be the gainers in the end.

I think that two inspections of a school every year would be quite sufficient. The Inspector could then pay more incidental visits at present. I also think that if the manager, or some respectable person in the neighbourhood, were invited to attend during one of the inspections, and if some little premiums were to be distributed on the occasion to the best children, it would tend very much to induce them to attend school.

There are no teachers in this locality out of debt. I know one who had to incur debts on account of sickness and deaths in his family. This poor teacher has to pay two or three pounds of instalments every quarter to his creditors. Anything less than £1 a week is insufficient for the support of any teacher with a wife and family, at the present rate of provisions. One of the Royal Constabulary died in Westport about a fortnight ago, and I have been told by a member of the force that his wife is to receive ten pence to the pound, and each of his children two pence to the pound for every pound he was paid since he joined the service. Would it not be justice, sir, to put the National teacher and his family upon the same level with the constabulary, to be paid in the same manner, and to be compensated or pensioned in the same manner?

Trienbeg, Newport—Mr. Flynn.

4. Unless attendance be rendered compulsory, I believe the most effectual plan would be to induce the clergy, by meeting their views on education to some extent, to become more generally managers of schools; as the great influence they possess with the people, and the pressure they would exercise on the parents, would be certain to procure a much larger and more regular attendance.

5. Local aid cannot be calculated on, as the wealthy classes, who alone can afford aid, are either too selfish or too regardless of the education of the poor. If a small tax were levied on property, including that of landlord and tenant, in school districts, and school fees entirely abolished it would much aid the efficiency of schools and also tend to increase the attendance.

8. Mixed education I consider to be productive of the most beneficial results. There is no more powerful agent in promoting harmony and social intercourse between young persons of different creeds, and of removing sectarian prejudices. An object most desirable to be attained in this country.

Maam—Mr. John Cunningham.

The collection of local aid towards schools by the teacher is objectionable, it leads to disputes between parents and teachers, lessens the teacher's popularity, and tends to withdraw the children's affection from the teacher.

Ballycastle—Mr. Golden.

5. A better remuneration to teachers would give more efficient schools, for where teachers would be well paid, young men, wishing to adopt teaching as a profession, would improve themselves in proportion to the remuneration offered. Instead of which, young men now-a-days only teach for a few years, and as soon as a more remunerative employment offers, they resign. I knew two young men who were monitors in my school, and who were afterwards appointed to schools, to leave off and join the constabulary; and the consequence is that managers and inspectors will often appoint persons as teachers who are incompetent, rather than have schools closed.

Belmullet—Mr. Egan.

I respectfully beg to state that until the managers of National schools are deprived of the unlimited and arbitrary power they possess at present, teachers can never be contented or happy. We want to be the immediate servants of the Government, or their *reformed* Commissioners, in whom alone ought to be vested the power of appointing and dismissing teachers — no dismissal to take place without sufficient cause being shown. Unless teachers are paid respectably, from £50 a year for a probationer to £100 a year for first class, no young men, who are ever likely to become useful or successful teachers, will join the profession; besides, all the clever young men, who have been trained at the public expense will leave the service and emigrate, or look out for some more remunerative employment.

Teachers wield a great moral power—they are *educating* the men of a future day; and if the Government expects them to instil sentiments of loyalty into the minds of those who will be the men on the stage of life in ten years hence, why (in the name of justice) not pay the educator?

Certificated masters ought to be promoted solely for the proficiency of their pupils, and ought not to be allowed to waste so much of their energies in preparing for examination on abstract subjects (scarcely ever taught in their schools) as they are at present.

I would suggest that there be first, second, and third class teachers, with no grades; and that the salaries should be as stated above, and that all teachers get pensions after a reasonable term of service, and not be obliged to retire to the workhouse as some of them are at present.

Derrygorman.—Mr. Hynes.

I further beg to add that teachers ought to be better paid by the State, and some provision should be made for teachers who, from age or infirmity, are no longer able to teach efficiently—even should a small portion of the present salary be deducted as aid towards such a fund. I am aware of a teacher whose four sons were in the Board's service, and all left—one is a marine, another in the constabulary, and the other two, within the last eight months, gone to *America*. By a late rule of the *Board* schools are not furnished with maps, tablets, &c., free, except in the case of new schools, and then only the first grant is free. Teachers generally feel that they cannot teach efficiently without school apparatus, which must generally be supplied by themselves. The teachers also feel very insecure, as the manager may dismiss a teacher without assigning any cause. I admit that such cases are rare; but the teacher should not be dismissed at the whim of manager or Inspector. When a teacher is a considerable time in the Board's service it is a great hardship to him that he knows not the day his salary is stopped. Such is not the case with the constabulary, or even with a footman in a gentleman's employment. The sword of Damocles is always hanging over his head.

Glencastle School, Belmullet, Mayo—Mr. Carney.

15. I have six Irish miles to travel every day, which I have kept up for the last eleven years, through winter's storms and summer's parching heat. For five years previous I travelled ten miles a day in the same manner, so for the last sixteen years I have travelled over 30,000 miles on my daily avocation as a school teacher. Since my connexion with the National Board, I have travelled over 40,000 miles; this in itself shows the great necessity that exists for providing adequate dwellings convenient to the schools.

Derrycroff School—Mr. Hynes.

Teachers have very often to purchase maps, tablets, &c., out of their small salaries; heretofore the Board of Education supplied such at the end of every three years, which was a great boon. No clerk will be called upon to furnish anything for the use of the office.

Ballina.—Mr. Thomas Ruddy.

6. May it not be considered misapplication of Government aid, though indirectly, not to give teachers such salaries as would enable them to settle down contentedly at home, rather than give the benefit of the Marlborough training establishment to the governments of foreign countries? It is a fact that classed teachers, "trained" and untrained, are leaving the *service* owing to their nominal salaries failing to provide them the common necessaries of life. Four such classed teachers have, within the last twenty months, resigned their schools in the Ballina district, and have emigrated.

7. Having some knowledge of the working of schools not in connexion with the Board, and contrasting their efficiency with those aided by the State, I believe the balance is much in favour of the latter.

Lisaniska School—Mr. Taaffe.

3. A gentleman in the neighbourhood, carrying on cultivation of turnips, pays poor children from 4*d.* to 6*d.* a day, without meat or drink. Small farmers have bad fences between tillage and pasture, and even between themselves and their neighbours, and must necessarily keep their children taking care of cattle. A good many of them have no cartways to their houses, and must keep the children driving asses to and from a bog, bringing home turf and mud (a kind of auxiliary for manure).

4. I find making arrangements with parents whose children attend irregularly, to pay so much yearly or quarterly whether they attend or not (say half what they should pay if they were attending regularly) a good plan; but if small farmers had a tenure of their lands, so as that they could make improvements on their little farms, and so keep the adults of their families who go to England every year, at home, then the children would not be kept at home as they have been, taking care of it in the absence of their father or elder brothers; and if they could with confidence build good fences, put gates to their fields, and make cartways, or if their landlords would remunerate them for so doing, children would not be engaged as I have stated, in a word, local gentlemen and landlords can almost do all in this respect, for a word from a landlord to his tenant about keeping his children at school, would be a greater inducement to do so than if we promised and could perform making Newtons of them in a month. Gentlemen should visit schools more frequently, and give poor children little premiums in proportion to the number of attendances made within the previous year, quarter, &c., taking care to give nothing to any child not attending at least half time; or if we could afford giving little encouragements of this kind, I think it would be the means of securing better attendance. I give little books, pens, &c., to children who attend regularly, and though my circumstances are so limited as that I can give but what is very trifling, still I find it a cause of animation.

Appendix C.

The patrons and school managers who have favoured me by the expression of their views refer to the same circular in several instances.

Sir Robert Lynch Blosse, Bart.

Has resided for upwards of twenty years in the country, and is patron of three National schools, and contributes to the support of one other.

Mixed Education.—The great bulk of the people are Roman Catholic. In the school nearest his own residence, there have generally been a few Protestant children. Has never heard of any quarrelling or difficulty of any kind among the children in or out of school. Is certain from his own observation, that mixed education creates better feeling between the two classes. Would consider any scheme for treating the Protestants as one denomination and the Roman Catholics as another as mischievous. Any tampering with the present principle of the National system of combined secular and separate religious instruction, would do incalculable harm.

Difficulties which arise are generally due to the clergy of both denominations. The people themselves have no objection to the principle of mixed education.

Gratuitous Education.—His feeling and experience would be strongly against it. The plan adopted in his own school is that *all* pay; but the poorer children—a very few—get the money given them by him to pay with. There would be danger under a system where many do not pay, while some do, that the former might receive less than their fair share of attention. Thinks it probable that in many cases where fees are not paid at present, an equivalent is given in kind. The fact of paying, makes both parents and children value more the education given and insures greater regularity in the attendance of the children at school.

Local Funds in supplement to Government Payments.—Thinks the rule that there should be one-third raised locally (which applies to building grants) perfectly sound. Believes that it is most important that in this and other matters Ireland should be made more self-reliant, and should neither be encouraged to beg for, nor receive, pecuniary aids not granted in England. At the same time perhaps this principle *could not be applied with regard to salaries.*

Inspection.—Believes inspection most beneficial. Should not expect to find that teachers resent incidental visits, or consider themselves watched. People of their class have been accustomed to be watched, and generally speaking, require it.

Compulsory School Attendance.—Is quite in favour of the principle of compulsory education, but fears it could not be carried out in Ireland, from the strong sectarian and political feeling existing. It would be represented to the people as an attempt on the part of the "Saxon" to proselytize their children, and would form a political grievance as well as a religious one, and would probably have the effect of putting both parents and children against that education which at present they so highly prize, and which they are determined to have.

The Archdeacon of Tuam.

The Venerable John Cather, Rector of Westport, Archdeacon of Tuam, has been connected with National schools in Ireland, since the year 1840.

He has resided during the last seventeen years in Westport, and for several years, beginning from 1851–2, he was the manager of ten National schools, of which the Marquis of Sligo is the patron, and all of which had Roman Catholic teachers. The management of these schools he resigned, partly from the pressure of many professional duties, and partly because he arrived, from experience, at the conclusion that trouble in the management was less likely to arise were the schools in the hands of laymen.

He is now the patron of three National schools within his parish, and desires to establish a fourth, the teachers all being of the Church of England.

From an observation of more than twenty-five years, he holds a settled conviction in favour of the mixed system in preference to a denominational one.

Throughout the west of Ireland it is almost impossible to maintain a school for the Protestant minority, and in cases where it is maintained it is seldom a good one. Without the National system the Protestant children must remain ignorant or go to denominational schools, avowedly proselytizing, filled with Roman Catholic emblems, and Roman Catholic practices, thus making the denominational system the means of establishing the ascendancy of the majority.

In the National schools under his management, the teachers being Protestant, and the children mainly so, and the religious education Church of England, he has never seen any reason to believe that the religious instruction was retarded or lessened in the very slightest degree, or that the children lost any portion of the benefit to be obtained from a sound religious training in youth; and he has been and still is, in the constant habit of visiting and examining in largely attended schools, in his own parish and elsewhere.

He recognises the difficulty of working the system of mixed secular, and separate religious instruction, except through the willing co-operation of local managers; and he doubts whether the Education Commissioners themselves have found it possible to carry it out impartially.

Still he believes that if embodied in an Act of Parliament, and steadily carried out in every particular, as by the Government it ought to be, the greatest possible benefits would be secured to the country by the mixed system of education.

The advantages already accruing from it, can in his opinion, be hardly overstated; and can only be appreciated by one who in a remote and partially civilized district is able, as he is, to mark the difference between the intelligence and civilization of the children of to-day, as contrasted with those of thirty years ago.

Westport Rectory, September 10, 1868. J. C.

A Roman Catholic Clergyman who prefers that his name should not be published,

Thinks that the reluctance of parents is due greatly to religious and conscientious objections. The parents dislike schools in which it is impossible to have the Catholic emblems, and in which they are liable to interference with their religious practices.

He might give an illustration. In a school now under him, but before he became patron, a Roman Catholic Inspector noticing that the children were in the practice of marking themselves with the sign of the cross when the clock struck twelve, called the attention of the mistress to it, and left some remarks on it in the Observation Book. No doubt the practice goes on there and elsewhere in many instances, but the Inspectors have too much discretion to notice or report it if they are men of sense.

Another illustration was in a convent school receiving Government aid, which he knew, where a little girl went home to her mother, and told her how the nuns had let down a screen before the image of the Virgin, or a Crucifixion, or some Catholic emblem, when the Inspector came in, the image being of course exposed regularly, except then, and her mother was very much distressed that they should be compelled to act in this way, as if they were ashamed of their Saviour. In the same way the children had strict orders not to carry on any Catholic practice, such as saying a little prayer, or crossing themselves, when the officers of the government were present. These things hampered and annoyed them in the management of their schools, and the Roman Catholic clergy wished a denominational system under which they would have no such difficulties. With regard to the General Lesson, it had been at one time reported that it was not hung up in one of his schools. The Commissioners wrote down angrily on the subject, and referred him to one of their rules. He found that they attached much more importance to it than to the Ten Commandments, and told them so, and was not farther troubled. He thought it perfectly useless and frivolous to require its continual exhibition, but he should not be disposed to take it down where he found it up when he became manager, nor to put it up where he found it down.

As for the abuse or misapplication of Government aid, he considered that it was abused or misapplied when it went to support Roman Catholic teachers who had gone up to training in disobedience to the decision of the hierarchy. A teacher went for training, and was appointed on his return to a school. Of course the clergy prohibited the Roman Catholic children from attending, and for nine months he was without any or only with a nominal attendance. During that time he was paid salary by the Board. The school was under a lay patron, and it could not be ascertained for some time whether the salary from the Commissioners continued. Afterwards, his predecessor, the Roman Catholic clergyman, wrote to two Catholic members of Parliament, who promised to bring the matter before the House, and under pressure of this, the salary was withdrawn. He considers that a Roman Catholic teacher who has disobeyed the express order of his own spiritual authorities, is not fit to be a teacher of youth.

With regard to dismissal of teachers, he does not see his way to any change, and regards it as essential that he himself should have such a power as he now has, as otherwise he could not control a wide district, containing some remote schools which he can only visit occasionally. And without the power at present in the hands of managers, he thinks many of the teachers would be indifferent or careless about religious knowledge.

P. Denis Browne, Esq.

128, Baggot-street, 4th September, 1868.

My Dear Sir,—Since I had the pleasure of meeting you, I have been thinking much on the subject matter of our long conversation, and though my opinion on the main question and the many by-questions necessarily linked with it can be of very little value, I think that as an educated man it is my duty to add my mite of weight to the side that I believe to be right.

I shall, therefore, as shortly and as plainly as I can, answer the substance of such of the questions in the printed paper you were so good as to send me, as I have been able to form any opinion on.

I can hardly conceive that any man, whose mind is free from party bias, can look upon the National school system in and for Ireland otherwise than as a national blessing, or than as the system above all others adapted to promote a kindly feeling towards each other

in the scholars, and a feeling of loyal reverence for a government which provides equally for all children under it the means of becoming honoured and useful members of the great commonwealth.

Every denominational school must of necessity, in my opinion, tend to widen (in its district) the distance that divides its pupils from those of any and every other denominational school; and but slight knowledge of human nature is required to be sure that the smaller the difference between any two, the sterner will be their mutual abhorrence of each other.

That the National schools in Ireland, as they actually teach and act, as they are taught and acted on, require modification and even reform, is, I think, clear; and this modification or reform, to be radical and useful to the rising generation and coming times, must begin above, viz., with patrons and masters.

The patrons are in some few cases—very few I fear—men free from religious party views, to whom primary education is in itself interesting, and who have sufficient feeling of their duty as citizens, by frequent visits to the schools, and attention to the well-being of teachers and pupils, to endeavour to help to raise up about them a tolerant and loyal class of fellow-subjects. In other and more numerous cases the patrons or managers are only such from their social position. They take no interest whatever in schools, education, children, or teachers, and leave things to shift as they may, the only sign of patronship they give being the signing of the master's papers, to enable him to get his salary.

The third and remaining, and by far the most numerous, class of patrons are men of the strongest and most uncompromising party views in religious questions, who, as a body, disapprove of the National system, and then often accept the management of a school as the surest means of defeating the objects of the system itself.

To my mind, no man whose profession makes strong denominational views a matter of necessity should ever be the manager of a National school. In plain words, I would have parson and priest debarred, by the fact of their profession, from being patrons.

But as this might expose the schools to more direct and keen opposition than they have to encounter at present, perhaps the wiser plan might be at once to curtail the power of all managers and patrons, to have more constant and frequent supervision from head-quarters, and to make the dismissal of a teacher in every case a question to come before the Board, only giving the manager the power to suspend arbitrarily in case of some gross delinquency, but leaving the final decision to head-quarters.

The position, the uncertain tenure of place, and the poverty of the teachers make them in many cases mere "*proletaires.*"

No change can injure them much, their pay being little above that of a common day-labourer. They have generally neither house nor land, nor indeed anything else, that cannot be summarily taken from them.

Their learning and intelligence in the meanwhile, make them powerful for good or evil among the peasant class, with whom they pass their leisure hours.

Publications, often not the most loyal, are agreeable to their restless and discontented minds, and they naturally become the exponents of disturbing views to the relatives of their pupils, and thus often positively undo in one part of the day the negative moral good that has been done in school during another part of it. The remedy for this evil appears to me very plain:—

1. Increase the pay of the poorer teachers.
2. Give them all dwellings, and, where it is possible, a small plot of ground.
3. Make their tenure of place more secure.
4. Furnish them, gratis, with agreeable and useful reading. Newspapers they will have, and it would pay far better to supply them for nothing with truth than that they should buy cheap and hurtful lies for themselves (and their hearers). I truly believe if these things were done that the National schoolmasters would become centres of order and loyalty, instead of what they very often are.

The question of the payment of small fees by the children is one that would, perhaps, not have been raised at all if the whole system worked as it ought, and, I think, still might. Yet, it is now one involving some doubt and difficulty; but, on the whole, I am disposed to think that we value more and attend with more diligence and perseverance to what we pay for than what we get for nothing.

On the other questions I have had no means of forming any opinion.

Believe me, my dear sir, yours very truly,

P. Denis Browne,

To Professor Jack, 46, Sackville-street. Manager of Treenbeg National school, near Newport, Mayo.

Edmond Pery, Esq.

Belleek Castle, Ballina, July 20th, 1868.

Dear Sir,—As you were good enough to request me to do so, I have endeavoured to set down the substance of my conversational remarks to you the other day, merely premising that if some of the expressions should seem too forcible, they sufficiently correctly set forth my own opinions, and will possibly be found more generally entertained than has been anticipated.

I have been a constant resident in Ireland for fourteen years, during which time education has been frequently the subject of my anxious consideration.

There are three National schools, long established, on my property, and one on an adjoining property, to which I am an annual subscriber. In the first mentioned schools the parish priest is the patron, and my assistance is limited to occasional small donations of money for purposes connected with the physical comfort of the children.

With the last mentioned school I have had more to do.

On its opening I called on the then parish priest, a Mr. Monelly, and solicited his co-operation in the work. Mr. Monelly informed me that he was directed by his superiors to oppose the school, unless it were placed under the patronage of the bishop, and that he had no option but to obey.

I am aware that he did carry out his instructions, by prohibiting the parents from sending their children. Some parents did, and do continue to send their children to said school. I should have mentioned that this school is under lay patronage exclusively.

The success attendant on this school has not been of a too encouraging character. So much for my personal experience. With regard to my general opinions on the subject of National education I will state them as concisely as I can.

I am of opinion that the scheme of National education has worked surprisingly well, considering the inadequacy of the teachers' pay, and want of pension, the want of really efficient supervision and fostering encouragement by the landlords—in lieu of which is the dwarfing influence of a Romish priest—and the calls on the children for performance of agricultural work.

With regard to the teachers' pay, it is the same now with Indian meal at £11 per ton as it was when meal was at £6 10*s.*, and labourers' wages have increased about fifty per cent.

Children's wages are now from 5*d.* to 6d. per day, which makes them presently valuable to their parents, and accounts for one of the difficulties.

I consider that the cry of a Godless education is only an "*ad captundum*" one—that no real religious teaching is acquired at schools of any denomination, and I would put it to the six hundred and odd members of the House of Commons, whether such is not their own personal experience. The Catechism learned by rote—the chapter of the Bible listened to with indifference, the prayer gabbled through at the rate of a hunt, constitutes the religious instruction given at most schools, with, perhaps, hypocrisy superadded.

A denominational system of education would but draw a darker line of demarcation between the respective persuasions, embitter sectarian animosities, and retard—if not render impossible the fusion of races and parties, nowhere so likely of accomplishment as on the common form and common play-ground of a school.

If it be urged that the denominational system being in vogue in England, the same must needs be meted out to Ireland, as an improvement on the National system, I reply not so; the National system is only another instance of legislation in Ireland being in advance of that in England, possibly also, in advance of the Irish themselves.

Ireland being comparatively a "*tabula rasa,*" it was easier to start right at once than to graft on an existing establishment,

It is but human nature to set little store by what is cheaply attained, and I am of opinion, that if parents in general paid more for the education of their children, they would take more care than at present, that the attendance was more regular, and that they got value for their money.

The advantages of education are nowhere more keenly appreciated than in Ireland, and the Irish are very apt to learn.

I approve of the suggestion that a rate in aid of education—to be supplemented by a Government grant—be added to the county cess.

I consider that the Grand Jury should be responsible for the education of their respective counties, and that a standing Committee of that body, assisted by a Government Inspector, take cognizance of all questions relating to the schools in their county.

A minimum valuation should be fixed, as in rating for the relief of the poor, below which the occupier should not be liable to pay such county cess.

I should approve of a model farm being attached to each school.

I consider that £50 per annum should be the minimum pay of a schoolmaster, and that a house and garden rent free should be provided near the school-house.

I believe that the spread of education has had a tendency to Fenianism, Red-republicanism, call it which you will, but I fail to find in that a reason against education, still less do I find in it a reason for placing the education of 5-6ths of the Irish people under a hierarchy that cannot be loyal to a Government representing and supporting "heretical and damnable" doctrines.

No doubt the clergy will discountenance purely secular instruction, but the State can only legitimately subsidize such, and the sooner she withdraws from all interference with religion, the less will her motives be impeachable.

I think I perceive a growing impatience under the domination of the clergy. I take this to be a sign of political regeneration, and if at the outset it should run into licentiousness, I conceive it is no more than might have been expected, and that time will effect the cure.

The subserviency of the people to the Romish priesthood is, to my mind, the chief obstacle in the way of a voluntary and equitable settlement of the land question. The priests' interest lies in the multiplication of hearths, the landlords' in the diminution, hence the conflict. The situation of the unfortunate possessor of the franchise reminds me of the sea-story of "pull devil pull baker."

I have known an instance of a voter coming to his landlord to beg for a notice to quit, which would furnish him with an excuse for refusing his vote to the priest's nominee. I have also known a voter to run away and hide himself during a canvass.

I do not think the ballot would give any real protection, as the wife would find out which way her husband voted, and she would certainly tell it to the priest.

I believe the great majority of the rural voters would go with their landlords if they dared.

Romish priests in Ireland have a tremendous power, and thoroughly understand "ploughing with the heifer."

In these few remarks on a very momentous subject, if I should seem to have launched out into a diatribe against the priests of the Romish church, it is only because I find in them the extreme example of what is more or less applicable to those of other denominations.

Begging pardon for the length of my letter,

I have the honour to be, yours obediently,

EDMOND H. PERY, J.P.

To Professor Jack, Assistant Commissioner,
Royal Commission on Primary Education in Ireland.

Charles Kelly, Esq., Patron of Newtown National School, Tuam.

Dissatisfaction and complaints often spring from a want of conciliating and courteous manner on the part of the Inspectors and schoolmasters towards the patrons or clergy. Inspectors should be instructed to do all in their power to conciliate the patrons and clergy, to communicate freely and unreservedly with them on all questions relating to the management of the schools.

The rules of the Board should not be rigidly adhered to. They should be considered merely as general instructions to be acted on or deviated from according to circumstances, in the discretion of the Inspector. Considerable latitude should be allowed to Inspectors in this respect. They should be instructed wherever practicable to comply with the wishes of the patron and clergyman, though such wishes should not be exactly in accordance with the regulations of the Board. Of course this must not be allowed when inconsistent with the general good management and efficiency of the school.

It is difficult to believe that in order to make good citizens, it is essential that in an exclusively Roman Catholic locality, all symbols of the Catholic Church, for which Catholics have the deepest reverence, such as the image of our Saviour upon the Cross, the statue of the Blessed Virgin, all religious pictures, all religious instruction should be rigidly excluded. This is naturally and necessarily calculated to give offence and create dissatisfaction.

The very atmosphere of the school-room should be religious. In imparting secular instruction, the master should at any moment, and at every opportunity, instil religious principles as part and parcel of his secular teaching.

Catholic children will not be worse citizens or less loyal subjects for being good Christians.

In localities which may substantially be considered as altogether of one religion, the schools should be denominational.

In localities where the population is not exclusively of one religion, there ought to be a separate school for each religion, provided the number professing each religion be sufficiently large.

Where the number of one religion largely preponderates over that of the other, the school may be under the mixed system, or certain regulations may be laid down so as not to exclude the minority, and yet at the same time provide for the *religious* instruction of the majority.

The plans and models issued by the Board for the building of schools are too expensive, and generally unsuitable. The cost of building a good school-room in a rural district ought not to exceed £100.

CHARLES KELLY.

P.S.—The model schools being condemned by the Roman Catholic bishops, the pupils who are there educated acquire a spirit of irreligion and insubordination, and a disposition to set at defiance all Church authority. This of itself renders them unfit to be instructors.

The model schools throughout the south and west should be exclusively Roman Catholic, and in the north Protestant or Presbyterian, and they should be so constituted as to give satisfaction to the heads of the respective Churches.

Certificates of competency as teachers should not be given to pupils only of model schools, they should also be given to pupils of other schools, such as the convent and Christian Brothers' schools, provided they are found to be competent on an examination, and a probation of some short duration at one of the model schools.

Hugh Wilbraham, Esq.

Hugh Wilbraham, esq., Boathaven Lodge, Westport, has resided constantly near Louisburgh for seventeen years. Is manager of six National schools.

Thinks the means of education quite reasonably sufficient in the neighbourhood, with the exception that there is no school in a district between the head of Doo Lough and Louisburgh, where one is much wanted.

Not much local aid can be expected or relied upon there.

Has a decided opinion in favour of mixed education. The schools of which he is manager are all under Roman Catholic teachers, and except in the case of the two Louisburgh schools, are attended solely by Roman Catholic children. In Louisburgh he thinks he has seen the good effects of mixed education. The children of the two denominations make friends with each other freely, and there is no feeling of animosity permitted to grow up between them.

His feeling is opposed to gratuitous education, on the ground that people don't value what they don't pay for. He has encouraged the exaction of school-fees in his schools, and he thinks with good effect on the attendance. So far as he has observed, teachers are too ready to let people off for nothing.

He does not think a county-rate would be popular, and the assignment of the proper proportions to be paid by the innumerable small tenants—assuming that all over the poor-rate line were charged—would be troublesome. At the same time he quite allows that it is not desirable that the entire management of schools should be in the hands of the Government, as it certainly would tend to be more and more, the larger their proportion of the total school-charge. They must depend on the reports of the District Inspector, and it is impossible that they should be as familiar with details which are innumerable in schools, as managers should be.

The subject of the payment of teachers is no doubt important, but he is not sure that they are on the whole badly paid. In all his schools they have nothing to do with rent or repairs, and several have free residences. One of his teachers, for instance, is the son of a herd, and is better off than the rest of his family. He walks three miles each way to and from school to his father's house. Another was a very poor boy, whom he encouraged to continue at school a year or two longer than usual for the express purpose of getting him to be a teacher. There is £30 per annum distributed by him from Lord Sligo, among the six schools, the great bulk of which amount goes to the teachers. Accordingly, with fees and this sum, each has perhaps £4 or £5 in addition to the salary paid from the Board, besides the free residence in some cases. Besides the salaries, clever teachers often receive gratuities from the Board for educating monitors, and for cleanliness and order in the schools.

The question of the teachers' tenure of office is equally serious and difficult. There is no doubt that the power of the managers is perfectly unlimited, and that an ignorant or capricious manager can dismiss at a moment's notice, for disobedience to an unreasonable order, or for no reason whatever, a teacher of any number of years' good service. The difficulty arises from the fact that it is necessary in his opinion that there should be some authority, *purely local*, which should be able to determine all the important questions in the last resort, and without appeal to Government, and that it is scarcely possible to get such an authority at once safe and powerful. The idea of school-committees is equally impracticable, so far as he sees it, in country districts, and the only possible way might be to give some second local authority an absolute veto on the dismissal of teachers, except when that dismissal was supported by a Government officer of some high position (*e.g.*, a Head Inspector), on consideration of all the circumstances of the case, leaving the dismissal in the hands of the present managers so long as this second authority, being appealed to, agreed to their decision.

He has not known the power of managers to be exercised in any arbitrary way, and he does not suppose that the teachers in his neighbourhood would complain of them, though they might prefer a more secure position naturally enough.

Rev. Hubert Fineran, R. C. C., Manager of Tully and Letterfrack Schools.

Tully, Letterfrack, co. Galway,
September 15th, 1868.

DEAR SIR,—In accordance with your wishes, I make the following statement concerning National education in Ireland, and especially concerning its working in these districts that come within my own observation.

First, then, concerning education in this district. There are about 150 children deprived of education. Why? Because the landlord will not give a lease for building a school. He assigns no reason. Again we have in Connemara, the Law Life Company, proprietors of a very large tract of country. I understand they will give no lease. Consequently hundreds of children are deprived of education. It is to be desired that the Government would compel landlords to give leases for a reasonable rent in the same way as they compel them to sell land for railways. It is bad that they will not endow or assist in building schools for their tenantry, but that they should refuse even a place for a school is a thing that should be well considered by the Government if they have the education of children at heart.

The next thing that I would direct the attention of the Government to is the condition of the National teachers. Nothing could be more deplorable, nothing can have a more injurious effect on education than the present payment of teachers. Why? First, those that undertake the office of teaching will be always discontented and dissatisfied. A person in this mood will be always looking for something to better his condition, and consequently never will discharge his duty as he ought. Second, if the teacher be not able to appear somewhat respectable in the eyes of his pupils and of the public he will not be able to conduct his school with that confidence which is necessary to secure success. Third, managers cannot get teachers unless very indifferent or positively bad ones. Why? Every other person is better paid. Nay, more, the common labourer in this district is better paid. Mr. Henry, of Kylemore House, is giving to his men 1*s.* 6*d.* per day. No teacher unless he be classed first of third will have so much. Now let us take the probationer, a very large number of which class are teachers. He gets £15 a year, £3 of this are for his lodging. He must then support himself for 8*d.* per day, which is not at all sufficient for support. Now this is the great reason why there are so many bad teachers. A teacher will not come from a distant district. Managers are then forced to get young boys brought up in the district for teachers. The £15 will be able to do something for them as they are living with their parents or friends. In many instances it is better to have the schools closed than have them conducted by such teachers. But then the managers cannot remedy this state of things, until the teachers are better paid. In this district there is no endowment, except in one instance. There are no school fees, neither can they be enforced. If they be enforced the children will not come. I should think that it would be better not to enforce them. I have known teachers to take better care of those pupils who paid fees. The next thing to which I would direct attention is the want of accommodation for teachers. In this district this is a thing much to be deplored. I have known a school in this district (Roscrea) to be for a long time without a teacher, merely because there could be no place of residence procured. It was so with Tully school, and even now I am forced to keep it closed, failing to procure a place for a teacher. I have known this to be the case with many schools.

But let us take the case where lodgings can be procured. Is a house where there are many in family, and consequently where there is much noise and bustle, a fit place? A teacher should have a place where he could study. This evil is to be remedied by having a place for the teachers built on the school grounds, if no other can be procured. This is a thing that demands as much consideration as the payment of teachers.

As to plans for making the attendance of children more punctual, and for making the parents take a greater interest in the education of their children than they do. The first great obstacle to attendance in the schools in this district is the severity of the police force, in enforcing the law to keep cattle off the public road. If the cattle be seen on the road there is a summons.

The parents must work for support owing to the poor circumstances of the district, then the children must be kept to look after the cattle. There are no fences, there is no fence to the mountain upon which they generally keep their cattle. The landlord will not make them, neither will he encourage them. The tenant will not, as he does not know at what moment he is subject to a notice to quit.

Unless this can be modified there can be no attendance at the schools. The law certainly is a good one, but there ought to be certain modifications of it in this district, as the circumstances are entirely different from those of other districts. I state positively there will be no education here unless this law is either repealed or modified or the severity of the constabulary restrained. On this day I spoke to the magistrates about the circumstances of having so many children deprived of education. They stated that "they could do nothing whilst the law stood. When the police brought the matter under their notice they should act." I think it would be unjust to tax the people (as was suggested by some) for education, unless the Government would first consider this matter.

It would be difficult to tell the exact plan that would ensure punctual attendance. But I will give you one which I myself tried, and which I found to be successful. I promised in the commencement of the year some clothes to those that would attend best during the year. I had a greater attendance that year than was before. This plan has only reference to the poorer classes, but these are the persons to be induced to come to school. I would think that a pressure ought to be brought to bear on the parents for the attendance of the children. But this should be only up to a certain age, and not in the harvest or spring time in the poorer districts. As to what that pressure would be, I am not prepared to state.

I would be of opinion that managers residing at a very great distance from the school are injurious to the school. I know one to be forty miles distant.

I have not known of any instance of great severity of manager with regard to teachers. I would be of opinion that teachers should be left entirely under the control of the manager, for the following reasons:—1st. The opposite would be of no advantage to the teacher, for if a dispute arose, and that the teacher was protected by the State, it would be better for that teacher to leave the school at once. 2ndly. Teachers are a class of persons that must be looked after well. Who is to do this but the manager? 3rdly. Even supposing that there may be some few cases of severity, still the evils arising from the opposite would far outnumber the former.

As to the subject of mixed education, it is my opinion that education will not be efficiently carried out until the denominational system is granted.

From Mitchell Henry, Esq., Patron of Lettergesh School.

Stratheden House, Hyde Park, S.W.,
2nd October, 1868.

Sir,—In reply to your note I am happy to state the circumstances connected with the school now being built at Lettergesh, Connemara.

Finding a deficiency of schools in the neighbourhood I desired to assist in the erection of one on the National system. The whole population is Roman Catholic, and having been appointed patron and manager of the school, I intend to place a Roman Catholic school-master and mistress in charge. It would be contrary to my views of justice to nominate a Protestant, and if I did so no doubt the school would be rendered less useful.

You are aware that Dr. MacHale, the Roman Catholic archbishop of the diocese, objects to National schools, and inhibits his clergy from becoming connected with them.

At first I thought that it would have been possible to overcome this difficulty, and that I could have appointed the parish priest to be manager under the ordinary rules of the Commissioners. As this, however, cannot now be done, I must content myself with such assistance and co-operation as can be given by the Roman Catholic clergy in their private capacities. It is certain that if the archbishop's views were not so very strong on this point little opposition would arise from his clergy.

I am, sir, your obedient humble servant,

Mitchell Henry.

William Jack, Esq.

T. M. Carter, Esq., Erris, County Mayo.

Mixed System.—In addition to the views which Mr. Carter states in the text p. 399, he says, "I think that it would be very desirable that the Government school should be of so entirely secular a character, and so free from any interference of a religious character in Ireland, that there should be no objection on the part of anyone to the schools on the subject of religion. If any one denomination in a mixed community interferes, and the religion of one sect is dominant, of course the others object, and mixed education becomes impracticable.

Gratuitous Education.—Education must, in the poorer districts, be gratuitous, but when the parents were rated to the poor at above £10 a year, or were worth an equivalent otherwise, I should think ½*d.* or 1*d.* per week would tend to keep up the attendance more regularly—which I have found to be the case in England, on the principle of getting value for their money. In large families this might be reduced to ¼*d.* a head. I suggest this more for the purpose of keeping up a regular attendance, than for financial results.

Master or Mistress.—I am unable to state the popular feeling, but should for children under thirteen years of age prefer myself a male teacher, and a mixed school for boys and girls, except in large and populous places, where sufficient scholars and means could be had for two schools.

Inspectors.—I do not understand the present system of inspection, but I think that it is not advisable to have the same Inspector always. Assuming that there are three Inspectors available, I would send them alternately, this not by way of objecting to the present Inspectors; but on the principle that what might escape the notice of one, as objectionable or otherwise, might not occur to another.

Local Aid.—I am sure that all schools in these remote districts require Government aid, or the aid of some society, or charitably disposed people of wealth, to aid local means.

Robert R. Savage, Esq., Deep Sea Fishing Station, near Belmullet.

Is eighty years of age, and has lived thirty or forty years on the coasts of Mayo, and is well acquainted with the people and their habits, and with the good which the present National schools have effected. He believes that there is not anywhere a more peaceable or better disposed people, and it was his greatest ambition to see the children in his neighbourhood improving under such a system as that of the Irish National schools. With that view he established a school (Fishing Station, or Tip), vested in the Commissioners, under his own patronage, and he appointed Roman Catholic teachers. He has not encouraged Protestant education in the locality, having refused a site for a proselytising school, and taking no part in supporting the Mission school, which now exists there. The history of his school is told in the text, p. 400.

From his experience he would express himself on two points of detail. First, that he would recommend a female teacher in any school far from towns, to instruct the female children in sewing. Second, that in his opinion, teachers once classed, after a sufficient examination should not be liable to be "depressed," or to be summoned to new examinations for the purpose of depressing or removing them.

His experience leads him to speak most strongly in favour of the mixed system. He has lived twenty years in Achill, knows every cabin in it, and is familiarly acquainted with the feelings of the people. The National schools there, where both Catholics and Protestants go, are extremely popular among the people, and have done, and are doing great good in the way of making the people more disposed to live peaceably together. At Doolough, Mr. Bingham, E.C., his son-in-law, is proprietor, and sends his own children (5) to the National school, taught by a Roman Catholic teacher, and under the patronage of the Roman Catholic priest. Any other Protestants about the place send their children in the same way, and they are all thoroughly satisfied with the teaching, and they believe that it tends to make their children grow up much more friendly with their Roman Catholic neighbours. Mr. Savage knows the people of the entire coast of Mayo intimately, and he is certain not only that the mixed system creates this friendly feeling, but that every intelligent man among them wishes the mixed system God speed.

I am of opinion from my experience and a perfect knowledge of the present system, that it only requires some alterations to make it almost perfect. I would relieve all *patrons* from their arduous duties—in fact I would not permit clergymen of any denomination, or laymen of any sect or creed, to be patrons of any National school in Ireland. I would, as a matter of real necessity, have the present Inspectors to visit and inspect them, but something oftener, and I would increase their salaries accordingly.

I would not alter the present system of mixed education, as it is the greatest boon Ireland has ever received from the Imperial Government, for if the children should unfortunately be separated, each party having a school of its own, it would be the means of sowing hatred amongst them. A Protestant and a Roman Catholic school in the same village would cause the children as they grow up to look on each other as real enemies, so that as they arrived at man's estate, they would feel mortal hatred to each other, not to be removed, while the present mixed system of education, (if clear of the patrons,) would lead the children to look upon each other with brotherly affection.

It is a well known fact that cannot be contradicted, that the teachers in Ireland are obliged to please their respective patrons. None will dare to gainsay this statement, as this fact from common observation is well known. The fact of forty or fifty teachers of National schools being Fenians tells with certainty what their patrons' views are, and the fact also, in the north, of numbers being Orangemen, tells the truth with equal certainty.

I have seen teachers plodding their way to school with a number of disaffected journals under their arms, and, as a matter of course, the boys read and hear of articles that are not fit for the ears of the rising generation. This is the same in the north; the masters of other creeds obtain from their patrons, or some one connected with them, papers as violent in the other direction. The masters of Ireland would be, I believe, to a man, more loyal, more independent, more useful, and better members of society, if only under *the control of the Inspectors, without the aid of patrons.* Besides, it is the duty of the Government (I care not whether Whig or Tory), with a high hand to alter this most monstrous abuse of a noble system.

P.S.—If the Government could not carry this, they might make it imperative on all patrons to pay £10 per annum to the teachers over whom they may hold the *tyrannical* sway of *patrons.*

I hope this may reach you before you leave Achill, as you will see there the dangerous effect unmixed schools have on the rising generation.

Miss Pringle.

1. Within the range of two miles there are three National schools, namely, Ballinglen Presbyterian Church, Ballinkeleterah and Creeves, besides Glenedagh, supported by funds raised by the Rev. Thomas Armstrong, Ballina, Superintendent of the Irish Presbyterian Connaught Mission, and the one on Castle Farm, Ballinglen, established above twenty years ago by the Scottish Ladies' Mission Society to Roman Catholics in Ireland, and all along wholly supported by that society, with a first-class male teacher, a morning school and a night school. The existing educational wants of this locality would be fully supplied by *one* excellent school.

2. No school fees have ever been charged at the mission school on Castle Farm. All the children, including those of the Presbyterian minister of Ballinglen, availed themselves fully of the advantages of the school on Castle Farm until the National school was opened by the Presbyterian minister.

3. Tenant farming on small holdings, when the services of the children are required by their parents at certain seasons of the year.

6. Applying for and appropriating Government funds not required, seeing one school, that of the Ladies' Society, was fully sufficient to meet the wants of the locality when the population was three or four times as numerous as at the present time.

CHARLOTTE PRINGLE.

In addition to the information given to you by our teacher on your visiting the school here referred to in July last, and leaving with her Schedule A C 6, 25th June, 1868, as secretary of the Scottish Ladies' Society's Mission to Roman Catholics in Ireland, I may state that my experience of *mixed education* in this country, by means of mission schools, for above a quarter of a century, is, that when the parents are dealt with openly and honestly, making full and free use of the whole Bible, and unrestricted as to hours, is no drawback to the attendance of the children, nor opposed to the wishes of parents, all the children being of Roman Catholic parents in this school, excepting four.

CHARLOTTE PRINGLE.

NOTE.—The Ballinkeleterah school is returned to me as having an average attendance of 30 in the best quarter of the year, and 76 on the roll; the Creeves school an average of 48 in the same quarter, and 100 on the roll. These are the non-National, non-Presbyterian schools. W. J.

From Rev. Weldon Ashe, M.A., Prebendary and Vicar of Kilmore Moy, Established Church Ecclesiastical Union of Kilmore Moy, Diocese of Killala.

There are four parochial schools in Kilmore Moy Union, viz., a male, female, infant, and a school for boys and girls. All the teachers are of the Established Church; the pupils number 98—Established Church, 62; Presbyterian, 6; and Roman Catholics, 30. The schools are in connexion with the Church Education Society, in whose training schools three of the four teachers have been lately trained. This society trains teachers at a very moderate expense, and supplies annual inspection; but I am not aware that it gives, as a general rule, any other assistance—I have never received any other. Its funds do not enable it to give any support towards the payment of teachers. The "General Reformation Society" helps towards the payment of two of the schools, but the stipends of the teachers are mainly provided by local aid.

1. I do not know any part of the parish or union in which there is a want of the means of education for the poorer classes. In the town of Ballina there are perhaps too many female schools. Some of the pupils wander from school to school.

2. The reluctance of parents to avail themselves of the existing means arises chiefly from their want of appreciation of the benefits of education. Being for the most part uneducated they but lightly esteem them. Parents who pay set a higher value on that for which they pay; but to the poor occasionally the amount of school fees is a hindrance. A plan similar to that on which the medical relief is administered would remove this difficulty.

6. Where Government aid is given payment ought to be made direct to the teacher, and not through managers. I have known instances of teachers having been kept so long out of their stipends, which the managers had received, that they were involved in the greatest distress. In one case the teacher enlisted in despair.

The position of the teacher ought also to be made more secure, and be if possible attended with a higher scale of payment. The stipend of a teacher in a National school in country districts is too low to command the services of a man capable of giving first-class primary education.

7. In a comparison of schools National and Scriptural, the study of the Bible, in the habits of thought and reflection which it produces, has given an advantage to the latter; and I believe I am speaking without prejudice when I say that Scriptural schools are in every way more efficient. They have, as a general rule, a better class of children to instruct. My comparison extends only to the ordinary schools of a parish. In my schools I do not make the Bible a school-book, but a portion of it is daily carefully studied.

8. If mixed education be continued in any form, the school-house should, under no pretext whatever, adjoin a place of worship, nor be attached to a religious house, nor should the teacher belong to a religious order. I have a strong opinion of the benefit of mixed education in our colleges and in our higher schools. I do not see how it can be efficiently conducted in primary schools.

WELDON ASHE, A.M.,
July 18th, 1868. Prebendary and Vicar, Kilmore Moy, Diocese of Killala.

Rev. R. Ryder, Incumbent of Derrygimla Mission Church, Clifden.

1. I think in my parish the means are sufficient, as there are six schools—four Protestant and two National schools.

2. I believe it is due to the apathy of parents and their ignorance regarding the benefits of education.

3. The parents take the advanced boys and girls from school to assist in field work in spring and autumn. Gathering sea-weed for manure in spring, saving turf and drying it in May and June, and herding sheep in June and July, interfere generally with the attendance.

4. I know of no plan but the instructing the parents with regard to the advantages of education, and this we inculcate. I cannot say whether it is adopted with regard to the priest's schools, which are the two National schools.

5. We never received a penny for local aid for my four schools.

6. I believe the Government aid ought to be given to the four Protestant schools; they never received one penny of it. I remark a large attendance at the National school when the Inspector is expected, but a very bad attendance in the intervals between his visits.

7. I do not like to give any opinion on that subject.
8. We have no trial of the system here, as the National schools here are thoroughly denominational. I dare not enter them. I was warned by the present teacher not to attempt it, as he would assault me if I did so.
9. All our schools are gratuitous.
10. In favour of the head teacher being a master, most undoubtedly.
11. Evening schools do not succeed well; that is my experience.
12. All our schools are more or less ragged schools, and I believe the National schools are ragged schools also.
13. We have infant schools always; they are most useful.
14. I believe the present system of inspection of the National school is a thorough humbug—hollow to the core. Numbers present on the day of inspection and not efficiency, I understand, is all that is valued.
15. Many schoolmistresses have been removed from the National schools within the last three years very suddenly. I do not know the reasons for it, but I think it is injurious to the National school.

Yours very truly,

William Jack, Esq., Royal Commissioner. Rev. R. Ryder, Errismore.

Rev. Patrick Malone, P.P.

Belmullet, July 29, 1868.

1. There are seven National schools in this parish. One more is required for a remote locality, with this the means of education for the poor would be then pretty fair.
2. The reluctance of parents to avail themselves of these means arises from several causes. In this part of the country there are no prospects for boys or girls of good education, no trades or professions for them to enter, and they resign themselves to the use of the spade and the sickle which requires no amount of education. In some places distance retards them. Want of proper clothing prevents others, and want of confidence in the *system* prevents many. The people imagine that the teacher is highly paid by the Board, and therefore indifferent to the interests of the children, and if he attempt to exact fees, the parents withdraw the children. This happens only in cases of parents of little means. The books of the National Board are objectionable, as they teach neither history nor religion, and are therefore less interesting.
3. In country places the people are generally so poor that the children, from the age of seven upwards, are employed in the spring time in putting down seed, drawing manure, &c.; others of them take charge of house whilst both parents are employed in the fields, and in the harvest and summer time many are employed in herding sheep and cattle to prevent them from destroying the crops, for unfortunately, owing to the insecurity of tenure, there are no fences or ditches made where there are large villages. I have often seen as many as a dozen children employed in herding two dozen sheep the whole day long. This system causes a great diminution in the attendance at the schools at those very seasons when the attendance ought to be greatest.
4. A small tax upon parents for not sending their children to approved schools would be useful to increase the attendance.
5. Local aid, very little.
6. Government aid is often abused. I have known hundreds of pounds expended by the Commissioners in the erection of schools on the application of some interested proprietor, which remained for ever after comparatively useless for want of attendance.
8. Mixed education highly injurious to the schools.
15. In reference to the dismissal of teachers, I cannot see any just grounds for interfering with the present system, although it may happen that a manager would act capriciously in some cases. The instances, however, are very few. In fact in my experience I have not known more than one such instance.

Patrick Malone, p.p., Belmullet.

Rev. P. O'Reilly, P.P.—Kilmore Erris.

August 2, 1868.

1. No; two or three more schools required.
2. Reluctance due, partly to the distance of schools, partly even to the small amount of school fees, partly to the want of sufficient clothing, and partly to the fact of the children being employed in herding cattle. The parents being poor and their holdings of land small, they are obliged to keep the children at home for the purpose of saving the little sowing, and protecting it from their own or their neighbour's cow.
3. Agriculture, and every child able to work is generally employed, especially during the spring and harvest seasons.
5. Not one shilling have I ever received in this parish from any local source.
6. Yes, when the patronage and management are in the hands of parties with whom, for certain reasons, Catholic clergymen cannot co-operate, an example or two of which I could easily adduce.
7. There are no unaided schools. All are National schools.
8. All the children at my schools are, with very few exceptions, Catholic. Any of a different persuasion are the *rari nantes*.
9. Useful, and in this district essentially necessary.
10. Indifferent, unless the boys are advanced in years and education, then the male teacher is preferred.
14. Inspection useful and necessary.
15. One teacher removed by the Inspector of National schools.

The foregoing remarks are forwarded by

Your obedient servant,

William Jack, Esq., Assistant Commissioner. P. O'Reilly, p.p., Kilmore Erris, Belmullet, county Mayo.

Rev. James T. Fowler, Vicar of Ballysokeery.

Ballysokeery Vicarage, Ballina, November 2, 1868.

2. The reluctance of parents arises from two causes. The Protestant schools give a superior education, but the Roman Catholic clergymen seek to prevent the younger members of their flock from attending them. The parents themselves are anxious, and I have known of an instance in which a respectable farmer's wife was refused confession for keeping her children with a Protestant teacher. She however persisted, and was obliged to go away some fifty or sixty miles to get the rites of her Church elsewhere, where the rules are not so stringent against mixed education.
5. It would be difficult to obtain *much local* aid, there has been such competition to educate in this district. The landlord, the Earl of Arran, is a munificent patron of schools under the National Board, and also under Erasmus Smith's Board. The Presbyterian Missions have two schools liberally supported by their Board. Where so much has been done for the people by others, they are not willing to do much for themselves. I believe the independence of our people has been injured by the ample funds provided for them by others.
7. I can only speak for my own parish. The best school in it is the Newtown-White National school—patron, Earl of Arran—teacher, Mr. Brimstone. The efficiency of a school depends chiefly on the teacher. Whatever gives us good teachers, and retains them in the country, will benefit education. Everything in my opinion is subordinate to the teacher.
8. I believe mixed education is most beneficial. I should be sorry to see the denominational system substituted for it.
9. Gratuitous education seems to me to be overdone in this district. I believe education would be more prized by the parents if obliged to pay school fees.
10. The feeling in this district is in favour of male teachers. My own opinion is that for young children female teachers are desirable, and that masters are to be preferred for those who are more advanced.
15. The inspection of schools I regard as of great importance. I would wish to see a system of competition established, *by which the schools of a district might be brought together and examined.* It would stimulate teachers and pupils, and be gratifying to parents and managers.

There are many things in connexion with the wide subject of primary education which have practically come before me, and having had some practical experience, I have been led to form opinions of my own upon them. I will write freely on some of them.

As to the establishment of Schools.—There has been great laxity in the practice of the National Board trying to conciliate patrons, and also to return an increasing number of schools in each annual Report. Thus, school on school has been multiplied without any real necessity, and money squandered. On the other hand, in poor districts with the population widely scattered, assistance should be given even where there are only a few pupils.

In more populous districts where a school is already in successful operation, the Board should be slow to establish another to its injury. Where there is a minority requiring separate religious instruction, the Board would act more wisely in giving aid to build a separate apartment for religious instruction, rather than establishing a new school.

The Teachers.—The success of any system depends on the teacher; with a good teacher any system will succeed, with a bad one the best system will fail. Anything that tends to improve the status of the teacher will improve the education of the country. Much might be done—rewards might be given, honors, titles, scholarships in the Queen's colleges, to the teachers who have been *most successful in educating.* I should like to see the profession of teaching duly organized, and every step in it from that of monitor to that of Professor, Inspector, or Commissioner of the National Board, open to the honest ambition of the humblest teacher. There should also be a retiring allowance which might be increased by contributions from the teachers themselves. This would attach them to the system and give them an interest in it.

Lastly, as to the Board of Education—The members of this Board seem to me to be appointed as the members of no other Board, from political influence, family connexions, or official situation. Why should it be so? The men who should conduct the machinery of education ought to be practical men, conversant with the subject—teachers, professors, Inspectors. Party spirit should find no place at the Board of Education.

As a Protestant, and one who formerly was favourable to the National Board, I am indignant at the changes made in it apparently for party purposes.

It would seem as if a number of Commissioners have been added, whose duty it is to register and carry out the commands of the Roman Catholic prelates. Why should not the rules of the Board be as free from party spirit as the rules of the Poor Law Board?

My opinion is, the Board of Education should be composed of men conversant practically with education, that their rules should be free from bias, and should not be binding till approved by the Privy Council, and laid before Parliament.

As to the question of religious education, it is too large to be treated of in the present communication. I will in a future letter give my opinion upon it.

JAMES T. FOWLER, Vicar of Ballysokeery.

Rev. James T. Fowler, Vicar of Ballysokeery.

I shall endeavour to supplement my previous communication in respect to the three chief questions of the Commissioners.

1. How can the profession of National teacher be elevated?
   - A. By periodical examinations *imperative on* ALL *teachers* under the Board.
   - B. By increased emoluments arising from local contributions, payment by pupils, and also by a judicious reduction of the present number of schools, making those retained more efficient and better endowed.
   - C. By honors, medals, titles, &c. Why should not an efficient teacher who has trained, say 500 or 1,000 pupils, and imparted a good education to them, be as worthy of a medal as the soldier who has been in battle? Why should he not have a title as Master Teacher, Assistant Professor, or some such recognised rank and title?
   - D. By scholarships and exhibitions in the University or Queen's Colleges. I don't know any means so likely to advance the position of a teacher as the prospect of a collegiate education and degree.
   - E. By promoting teachers to be Inspectors, Commissioners, &c. Every office under the Minister of Education ought to be open to the National teachers, and the majority of appointments confined to them. This would retain the best men in the employment of the Board.
   - F. By adequate retiring allowances, &c.

These I suggest for consideration. The merit of a teacher depends not so much on scholarship as ability to impart knowledge to children in general, the best teacher being not the man who can turn out occasionally a prize pupil, but he who can bring on best the greatest number of average boys. Any man can teach a smart lad, but the perfection of teaching is to be able to smarten and brighten up dull and stupid boys. Public Boards make a great mistake when they overlook this, and it is this aptitude for teaching which should especially entitle its possessor to reward.

II. *With respect to the Constitution of the Board.*—My opinion is—That the Board should consist of men who are *practically* conversant with the details of education, the majority of the Board consisting of former teachers and Inspectors, elected solely for merit and efficiency. That religion and politics should be ignored in the selection. That such a Board, so constituted, should frame rules, to be submitted to the Minister and Council of Education, and that these rules should be laid before Parliament, and should not be binding till they received the sanction of the Houses of Parliament.

Nothing short of this will ever prevent the abuses which have crept into the administration of National Education.

Now as to the changes in the Board, they are—

First. The increase in the number of Roman Catholic Commissioners of extreme views. This increase was made to conciliate the Roman Catholic clergy, and procure their support for the Ministry of the day. By this accession the old Commissioners of moderate views suddenly found themselves swamped by a party able to attend in greater force, and to carry everything their own way. See Archbishop Whately's Address to the Clergy, 1860.

Second. The rules have been altered. The "Scripture Lessons" agreed upon at first, the "Book of Sacred Poetry," &c., have been excluded from united education. I need not refer to the history of these changes, it is too well known. Other changes of an ultramontane tendency have been made. Conventual schools taught by members of the religious orders of Rome receive assistance, whilst Scriptural schools are excluded from all support. The last effort was to transform the conventual schools into training schools, and flood the country with teachers trained in them, thus bringing the system under the complete control of the priesthood. It is well known that the Roman Catholic clergy at present discourage their teachers from going to Dublin for training. They look forward to the time when they will succeed in getting them trained in the convents and schools under the religious orders of their Church. These efforts have been resisted by the Presbyterians, and so far with success. Again, in some of the convent schools there are representations, images of the Virgin and Child, which are tolerated, whilst a copy of God's Word is rigidly excluded.

The reports of the Inspectors are manipulated in the office, so that I am justified in saying I have no confidence in a Board which has departed from its original basis of impartiality, and has thrown its influence into the hands of the ultramontane party in the Roman Catholic Church.

III. *Religious Education.*—With respect to this question I will endeavour to condense my views. There are three parties concerned in the question. The Government, the clergy, the parents.

1. Ours is a mixed Government, Roman Catholics being admitted to power and office. The question for our rulers is how can they, professedly Christian, reconcile their duty to the Great King with that perfect religious liberty guaranteed to all classes of the community? Two principles should guide them,

1st. The absolute control of the parent over the religious instructions to be imparted to his child.

2nd. Consistent with this, the recognised duty of imparting such an amount of Christian instruction as all bodies of professing Christians are agreed upon.

This seems to me as far as the State can go. In case proselytism should be attempted, it is easy to suspend the grant or dismiss the teacher. And the clergy of all denominations are sufficiently watchful not to permit it without remonstrance.

In fact, the Board should return to its first principles as regards united secular and religious instruction.

2. To look at this question from the clerical stand point our first duty as ministers is to preach the Gospel to every creature, to poor and rich, young and old.

But there must be regard to time and place and manner in the fulfilment of this duty. We are not to thrust our message on those who will not hear. We are not to cast pearls before swine. We are not to set aside parental authority, nor to degrade the Word of God to a level with ordinary school books, nor to turn the National school-room into a controversial class. But I do claim to have restored to us, the liberty formerly enjoyed under the Board, of speaking at proper times to all the children of the great truths of our Catholic faith, of the love of God in the gift of His Son, of the death of Jesus Christ for us sinners, of the different articles of our common creed and religion.

If I were a missionary in India, and the Government to invite my co-operation in educating the natives on the same conditions I believe I could accept them.

There is one restriction at present which I feel so much, that it alone would prevent me cordially co-operating with the Board. During the hours of united education the patron, visitor, or teacher may refer to any book except the Word of God. He may refer to Moore's Melodies, Cobbett's History of the Reformation, but he dare not refer to Scripture. This I regard as an insult to the Bible and unworthy of a Christian State. To us in the nineteenth century the written Word is what the Living Word was when He lived here on earth. Would any of the Apostles or Disciples be willing to go into a place where Christ would be excluded or his mouth closed? Such I must acknowledge is my feeling when I go into a place where I am prevented all allusions or reference to the Word of God. Opposed as I am to every unworthy attempt at proselytism, I feel that a practical dishonour is done to my Lord and Master by the rule which banishes His Word from our National schools.

3. In looking at this question from the parental point of view, all parents, and especially Roman Catholic parents, wish to get the best education possible for their children. From twenty years' intercourse with them I can testify I have never found them indisposed to permit their children to be taught the Holy Scriptures. It is only when they are compelled by their clergy, and the terrors of the confessional are brought to bear on them, that they withdraw their children from Scriptural or Protestant schools. I do not say they wish their children to be made Protestants, or that they are indifferent to the question of proselytism; but I do assert that the Roman Catholic parents, when left to themselves, do not object to have their children taught their own version of the Holy Scriptures.

The proper mode of protecting a child's faith is, as I conceive, that the parent when applying should have the power to specify what instruction his child should receive, and where this did not interfere with the order of the school the application of the parent should be received, and his wish carried out.

If I were in France, a parent, and in limited circumstances, with no other mode of educating my children but letting them attend a school taught by some of the religious orders, I should like to have the privilege of sending my children there to learn secular things. It would be my duty to go with them and make the best arrangement possible, and also to counteract by home instruction anything I might deem erroneous.

Such privilege as I would seek for myself in France, I think should be accorded to those who differ from the majority in State supported schools. Some regulations for the protection of the faith of the minority are absolutely required. When I came to this parish I found several

Protestant children attending Roman Catholic National schools. Some of these children were taught in the Roman Catholic Catechism, others were taught to cross themselves and say Roman Catholic prayers. Other instances I could mention proving the necessity of some control. How this can be effected without trenching on Christian liberty is the great question which I trust the Royal Commission of Primary Education (Ireland), will assist to solve.

Appendix D.

I have been favoured by a statement of the views of three of the Inspectors of the National Board. The Inspector of District A says :—

A mixed school committee could not work in a district like this. A denominational school committee, if it existed nominally, would come round to the supremacy of the clergyman in the end. He alone would probably interest himself in it.

Were schools *denominational* instead of *mixed*, there would be just as much local support probably, in this country district, (there *is* next to none), and just as much interest in schools as there is now, and no more—in town districts probably a good deal more.

It would be chimerical to expect that a conscience clause, however worded, or however it might be attempted to enforce it by inspection, could protect the consciences of the minority under a denominational system which did not accept the principle of the mixed system, *i.e.*, the separation of secular and religious teaching.

There are 120 incidental visits a year here for 90 schools. The rule that the payment depends on the average attendance is at the root of the system. The attendances, out of which the averages are made, must be checked. One effect of this rule at present is, that any local opposition has a weapon put into its hands. When it cuts down the average, it either lowers the salary—as in A—or cuts it off altogether, as it probably will, in B.

I am decidedly opposed to the continuance of a rule giving payments on average attendance, considering these circumstances, and that the test of average attendance is not an adequate test of efficiency. I am of opinion that the rule must still be used to prevent schools too small to be proper recipients of aid obtaining it.

I believe the payments should be made according to the principle of results, in reading, writing, and arithmetic—extra payments being made for extra subjects. This system would imply one inspection in the year with notice, and many incidental visits. I am strongly of opinion that the system of incidental visits cannot be dispensed with, and should, instead, be greatly developed.

I think that there would be considerable advantage in a gratuitous system, free to all, for primary subjects, if all now liable to rates were rated in addition for education. It would be a very small rate which would be needed to replace fees, and people would feel that they got value for their money on the spot. That rate would secure local interest and regular attendance.

I think the present rule, by which a manager has absolute power to dismiss a teacher without reason assigned, is inexpedient. The manager ought to be allowed to retain some power of removal, subject to certain control and review, satisfactory reasons being assigned. It would be desirable that in such cases the Head Inspector should make a special report, and that the concurrence of the manager and Head Inspector should determine removal. In all cases the central office should retain the absolute power to dismiss, for reasons assigned.

If the grant for evening schools were given for schools held for the four winter months, many of them would be maintained, and the effect would be very good. They would be more numerous even now, except that many masters are reading for examinations. They could only be held in towns and populous villages, as in the country districts people are afraid in this part of Ireland to be out far at night.

Increase of salary should depend solely on the improved efficiency of the school. After once passing a reasonable examination, sufficient to secure a proper literary qualification, before he is admitted, a teacher should never be required to pass another. Men over forty seldom do themselves justice, and frequently, in attempting to pass these successive examinations, damage their health and usefulness for a time.

No one should be admitted as a National teacher without the qualifications of at least III[1]. At present a third of the teachers in the district are probationers, who are, as a class, useless; and not a third of these are ultimately certified as competent. Of 48 teachers summoned to the recent teachers' examination, 19 are recommended for promotion, and no fewer than 12 (all probationers) for dismissal; the other 17 are left as they were. The two-thirds of the probationers ultimately dismissed were for one, two, or three years under the stigma of incompetency after their first failure, and are ultimately dismissed on that ground.

The qualifications for III[2]. are pitched too low. Cases have been known where a man rose from probationer to first class in four years. The term during which a man who seeks to improve his position is liable to examination, varies from four years to forty. There ought to be only two grades of teachers, in my opinion (lower and higher), and the higher grade should only be given to teachers who have been regularly trained for their profession.

Teachers who have not been educated or trained according to the mixed system are not likely to enter into the spirit of it.

In several cases when I have been talking with the people of the locality about teachers who had left, I have been told that they were dreadfully at a loss, now he had left, for political news—*e.g.*, especially about America. In fact, I believe that in many cases in remote districts they are the principal disseminators of political news. It is well known that they often go to fairs and markets (the Board prohibits this); and many of them have bits of land, and must go. In that case they must write to the Inspector, and get the manager's leave to go. I get three or four such notices before every fair.

Sale stock parcels are often delayed unnecessarily. Often the office seems out of the commonest stock—*e.g.*, slates, copy-books, or common readers; and frequently they send things not ordered instead of things that are. For instance, a teacher ordered 120 copy-books and a number of slates—there were no slates in stock, and she got back copy-books to serve her for two years.

There seems to be no valid reason why the teacher should not get his money directly from Dublin by post-office order.

The Inspector of B District sends me the following expression of his opinions :—

Inspection.—The present system of inspection is vexatious, unnecessarily expensive, and far from being the best adapted to realize the objects of inspection. Both Inspectors and teachers agree that it is vexatious, lowering to both, and making the relation similar to that between the police and the ticket-of-leave men. It is unnecessarily expensive, not from over payment of the inspecting staff (they are underpaid), (compare pay of Inspectors under Council of Education in England and Scotland), but from excess of inspection. Forty Inspectors, without any Head Inspectors, could do the work well under a more practical system. Each Inspector has about 100 schools to inspect three times a year—300 inspections. Make his work 150 schools twice a year, simplify the school records, amend the forms of report, and do not ask the Inspector to go out of his way *unnecessarily* to visit the manager. Incidental visits cannot I fear be done away with at once. I would however gradually lessen the number, with a view to their ultimate abolition.

Maps, &c.—Educational requisites of a permanent character, such as black boards, wall-maps, together with a clock for each school, should be furnished at the local expense, in the same manner as the local proportion of the teacher's salary. The present system is most unreasonable.

Salary of Teachers.—The commencing stipend of teachers is too low to induce an adequate number of suitable persons to apply for vacancies. Twenty-six pounds a year from all sources should be the very *minimum*. Various considerations point to this conclusion—the present prices of provisions, the rate of wages, the social position of the teacher, the desirability of drawing the supply of teachers from the more respectable of the poorer classes, the teachers' literary needs, &c.

The salary should in part arise from local sources, *other than school fees*. The teacher should not be degraded into being his own tax-gatherer. Where the payment is both voluntary and variable, the unpleasantness of such a position is extreme, and is prejudicial to the teacher's influence. The voluntary local *endowments* moreover cannot be depended on, and in principle are unfair.

All should contribute to the education of the poor, especially the landlord class, whose interests are involved in the progress of education among the poorer classes. An education-rate should be levied on *property*, either by Grand Jury, Poor Law Guardians, or other local authority.

Aids to Schools.—Many localities have been and will be for many a year unprovided with schools under the present system. Means should be adopted to build schools where necessary—say an advance from the State, to be in part repaid from local tax within a limited number of years, or by special presentment on the townlands for whose benefit the school is raised, or on the barony (or say *on the barony* with a *larger proportion on the townlands* interested).

Qualification.—No one should be appointed (in future) to the office who has not had some *practical* preparation for the duties of teachers, by having been under a trained or experienced teacher as monitor for some years, or by having been *trained himself* in a model school or other suitable establishment. The serious opposition offered by the Roman Catholic clergy to the "trained" teachers, renders it desirable, not only that the teachers now in office should remain in possession during good conduct and efficiency, but also that some provision be made for untrained teachers where the "trained" teachers will not be accepted. Let untrained teachers then be admissible at a low salary (say £20), but be ineligible for promotion till trained.

Promotion.—The standard of literary attainments is pitched at an absurdly low point. It should be made as high as that now required for admission to second class—subsequent promotion to be by annual increments dependent on good conduct and efficiency.

At present there are *in point of fact* eight classes—Probationers, III[2]., III[1]., II[2]., &c.—let these be reduced to *four*. The untrained class at £20, third class at £26, rising £— per annum to £36, second class £40 to £50, first class £55 to £70. Promotion from class to class

not to take place without five years' service at least in the lower class, and then to follow not as a matter of seniority or right, but as the result of merit. Promotion into first class should perhaps be preceded by an examination of a high standard—to include the most useful branches of natural philosophy and drawing—perhaps also a language—Latin or French.

Punishments.—I have little to say on this subject, save that the punishments now inflicted on teachers are unequal and not regulated by a fixed code, too frequent and often mixed with threats never to be carried into execution.

Tenure of Office.—The uncertainty of the teacher's tenure of office is one of the most serious evils affecting the working of the National education system. It will be of little use to raise the salary and standard of literary proficiency if the tenure of office be dependent on the will or caprice of an irresponsible individual, generally quite ignorant of school management and often guided by views quite independent of the success of the school and general character of the teacher. The teacher once appointed should have a right to his post, only to be taken away for imperfect discharge of his duties, or immoral or unbecoming conduct. But how to attain this end is a question of great practical difficulty.

I cannot help thinking that in a *mixed* system of education there should either be *no* clerical manager, or at least two, of different persuasions. I would either take the dismissal of teachers out of their hands, and place it in the hands of the Commissioners of National Education, or place it in the hands of the two managers and a local magistrate. In no case should the Inspector have this power.

But I must confess I do not clearly see any *practical* way of solving the difficulties of this question, which I can put forth as perfectly satisfactory.

The Inspector of C District writes as follows. The numbers refer to the questions in the circular I have already printed, p. 406.

2. The necessity which the parents' poverty imposes of employing the children in manual labour is, in my opinion, the only one of the causes enumerated under this head, which operates to any great extent in producing an unwillingness to avail of the existing schools—the latter are, generally speaking, situated at convenient distances from the homes of the children; when parents are unable or unwilling to pay for education, the teachers, owing chiefly to the rule of the Board which makes public aid to the schools depend on the extent of the average attendance, are easily induced to waive their claim to fees. There being here but little trade, and no manufactures, and the situation of National teacher presenting, consequently, to such of the more intelligent young persons of the humbler classes, as do not emigrate, almost the only means of bettering their condition; this district possesses a comparatively large proportion of skilful and efficient teachers.

3. During eight months in the year the National schools in this neighbourhood are thinly attended. This is due not alone to the fact that agriculture is the employment of the great bulk of the population, but to the backward state of agricultural knowledge, the unimproved condition of the soil, and the great poverty of the people. Ordinarily in the rural parts of Ireland all the children who are fit for field labour are kept from school to assist on the farms during the hurry of spring and autumn. To this cause of irregularity are here superadded, (1) The absence or the badness of fences, and the consequent employment of children at all times in herding; (2) The house feeding of cattle being much neglected—the scarcity of manure, to supplement the supply of which children are busy, from the time the spring sowing is completed until the corn and potato crops are ripe, in conveying in panniers from the bogs, turf mould, or "black mud," as it is called here; (3) Owing to the stony nature of a great portion of the soil, and still more to the inability of the people to purchase a proper stock of working cattle and farming implements—the all but universal practice of spade tillage, which in proportion to the extent of land under cultivation, requires a much larger number of hands than the use of the plough; (4) Employing the aid of children during summer in the business of the turf harvest; and, finally, (5) The scarcity of labour here in autumn, when it is usual for the heads of families and other adult males to seek employment as agricultural labourers in England. In addition to these five sources of irregularity of attendance may be noticed the occasional visitation of peculiar distress, arising from the partial failure of the potato, on which root, as is well known, the agricultural population of Ireland, particularly of the west, depend mainly for subsistence. On one unhappy occasion of this sort I knew children to have been kept from school by the want of sufficient clothing, all the resources of the poor people, aided by public charity, having been barely sufficient to provide a scanty supply of food.

4. From the nature of the causes just detailed, it is evident that the remedy of the state of things which they produce must be mainly the result of social changes, the consideration of which comes within the province rather of the statesman than the educationist. I am quite aware that highly efficient teaching combined with, and in no small degree the effect of the active benevolence of influential local parties who frequently visit the schools to stimulate and encourage teachers and pupils is, to a large extent, capable of counteracting the operation of these causes, and of inducing parents to sacrifice to the educational interests of their children the pecuniary advantage derivable from those children's labour.

The instances, however, are unhappily so rare in which a combination of circumstances so beneficial to the schools is found to exist, that it would be vain to look to this as the sole or even the principal source of the correction of the evil of irregular and insufficient attendance.

9. Without sharing in the usual opinion that education is commonly estimated at the money value set upon it by those who impart it, and that instruction for which nothing is charged, is generally regarded as worth nothing, either by the recipients or by their parents, I should be sorry that free admission to school should ever be a recognized feature of any system of education established by the State in this country. Requiring all who are in receipt of earnings, and who avail themselves of the teacher's services, to fee him in proportion to their means, while not withholding gratuitous education from the children of the really destitute, would produce a moral effect which in Ireland, whose people are generally but too much disposed to look to the aid of others where they should rely on their own independent exertions, I hold to be of national importance.

14. With regard to the practice of visiting schools incidentally, and of withholding, except once a year, notice of the regular inspections. After mature consideration, I retain the opinion that the abandonment of either of those practices, especially the former, would give encouragement to many serious abuses.

The great defect of the present system of inspection is, that the time of the Inspector is too much occupied in mere scrivenery, and too little devoted to the business of inspection. A late Head Inspector has truly stated in one of his published reports that in the course of a year many a hard-working clerk has not a greater amount of penmanship to perform than ordinarily falls to the lot of a District Inspector. The result is that the more important part of his duty suffers. I believe there is no Inspector in the service who does not feel that the time he is able to devote to the inspection of schools, is quite insufficient to admit in each case of an investigation so searching and complete as to form the basis of a thorough appreciation of the character of the school. Then to say nothing of recreation, for which during eleven months of the year Inspectors can rarely find time, I believe the instances are not numerous, in which the requirements of their engrossing public duties permit them to indulge in private reading of even a desultory kind; and I have never heard of more than one who, under the present system, was able to pursue a regular and systematic course of study. Often have I painfully felt the force of an observation which occurs in a published report of one of Her Majesty's Inspectors of schools in England: "There is no such thing as standing still in knowledge. He who does not daily add to his stores, is destined at no distant period to lose even his original possessions." If the application of this truth leads to inferences to be regretted for the sake of the Irish Inspector, they are surely to be deplored in their bearing on the general interests of Irish National Education.

A plain remedy for these defects—a remedy so plain and natural that I have known it to occur to more than one who separately and independently considered the subject—would be to have only two principal inspections of each school in the year, instead of three, as at present. This, allowing for an increased number of incidental inspections, would diminish by nearly a third the amount of clerking labour, and would afford ample time for the thorough and effective examination of the schools.

Nearly all the teachers who have been removed from their situations here by the Board during that period were probationary teachers, who, after the annual examinations, were dismissed for incompetency. Dismissals from this cause may be looked upon as unavoidable under existing arrangements. So long as National teachers are so poorly remunerated as at present, so long will the necessity continue of admitting to the service an inferior class of candidates, who, barely competent to stand the preliminary test, will be found to fail at the ensuing annual examinations.

Rare as are happily the instances in which the irresponsible power of dismissal possessed by the school managers over the National teachers is harshly or unjustly exercised, I have long felt that it is in the last degree desirable to relieve the teachers from that harassing sense of insecurity which even the occasional abuse of this power has excited in their minds. At the same time, I must confess that in connexion with the administration of the Irish National system of education, I know of no question more difficult than how to reconcile with the just interests of the teachers in this important particular the right which most of the managers claim of exercising a censorship, and an active control in all matters pertaining to faith and morals over the conduct of those to whom the education of the youth of the country is intrusted. The curtailment of the arbitrary power under consideration is plainly incompatible with the exercise of this right, and the experience of many years has shown that power to be at least perfectly harmless in the hands of the vast majority of those who possess it. Herein consists the entire difficulty, and I know of no direct way of grappling with it. The only question then that remains appears to be, how, while leaving the right referred to perfectly untouched, can such a clog be placed on the action of the very few managers who may be disposed to abuse the absolute power intrusted to them, as may have the effect of reducing to the smallest possible limits the number of dismissals of teachers on unjust or insufficient grounds. The plan of providing free residences for the teachers within easy distances of the schools, recommends itself by its practical benevolence, and would probably produce the desired effect by extending to the unjust dismissal of a teacher, a portion of the popular odium which attaches to the tyrannical eviction of a tenant from his holding.

ROYAL COMMISSION OF INQUIRY INTO PRIMARY EDUCATION (IRELAND).

REPORTS OF ASSISTANT COMMISSIONERS.

M.

REPORT

UPON THE STATE OF

PRIMARY EDUCATION

IN THE

KILLARNEY DISTRICT,

BY

J. PERCIVAL BALMER, ESQ.,

ANALYSIS OF MR. BALMER'S REPORT.

Paragraph

Introductory, ... 1
Limits of the inquiry, ... 2
Method of procuring information, ... 3

EXISTING MEANS OF PRIMARY EDUCATION IN KERRY.

Existing means of Primary Education, ... 4
Table exhibiting the Area, Population in 1861, and Present number of Primary Schools of different descriptions of each Barony of the County of Kerry, 5
Additional means, ... 6
Schools not primary, ... 7
National schools conducted by "*religious*," . . 8
Workhouse schools, ... 9
Extent of "National" *education*, ... 10
Rugged character of Kerry, ... 11
Towns and country districts, ... 12
Districts where schools are deficient: Tralee Constabulary district, ... 13
Dingle Constabulary district, ... 14
Cahirciveen, do. 15
Killarney, do. 16
Listowel and Kenmare, do. 16
Milltown, ... 17
Prior parish, ... 17
Kilcrohane, ... 17
Kenmare and Tuosist, ... 17–18
General *sufficiency of schools*, ... 19

SCHOOL BUILDINGS—THEIR AREA AND ACCOMMODATION.

General character of existing *school accommodation*, . 20
Area space of National schools, ... 21
Accommodation in Workhouse schools, ... 21
School accommodation estimated by *average attendance*, ... 22
Female schools smaller than male, ... 23
Male and female schools on different floors, . . 24
Table exhibiting the tenure, accommodation, and structural condition of seventy-three National schools in Kerry, ... 25
Cubical contents, ... 26–27

GENERAL CONDITION AND CHARACTER OF BUILDINGS.

Non-vested school buildings, ... 28
Schools *vested* in *trustees*, ... 29
Schools *vested* in the *National Commissioners*, . . 30
The *Board of Works*, ... 31
Schools vested in the Commissioners more common in the south than in the north of the county, . . 32
Schools vested in the Commissioners generally disliked by the Roman Catholic clergy, ... 33

LOCAL AID TO BE EXPECTED FOR PROVIDING AND MAINTAINING SCHOOLS AND TEACHERS.

Grant of school *sites*, ... 34
Compulsory powers for taking school sites, . . . 35
Local monetary contributions, ... 36
Building grants by National Board, ... 37
Funds for repairs of buildings, ... 37
Funds held in trust by Roman Catholic clergy, . 38–41
Voluntary *annual* subscriptions, ... 42–44
The *Lansdowne* estates, ... 45–47
Alleged misapplication of endowment of Killury School, 48

SCHOOL FURNITURE, APPARATUS, BOOKS, &c.

State of school *apparatus*, ... 49
Inconvenience of school *buildings*, ... 49

Paragraph

Plan for hanging maps, ... 50

NUMBER OF CHILDREN ATTENDING SCHOOL.

Table showing by baronies the number of male, female, and infant children attending different descriptions of primary schools in Kerry, on June 25th, 1868, . 58
Number of children attending schools not primary, . 59
Excess of males over females, ... 60
Number of males and females in 1861, . . . 61–62
Education census of 1861, ... 63–64
Increase in numbers at *Primary* schools, . . 65–66
Increase in number of pupils at *National* schools, 67–68
Table exhibiting the number and sex of children attending different descriptions of schools on May 17, 1861, and June 25, 1868, ... 69–70
Diminution in number of pupils at other schools, . 71
Table exhibiting the proportion per cent. of children attending different descriptions of schools to the whole number present on May 17, 1861, and June 25, 1868, ... 72
Comparison of number of children attending primary schools with the whole *population*, ... 73–74

RELIGIOUS DENOMINATION OF CHILDREN ATTENDING PRIMARY SCHOOLS.

Failure of National system to effect *mixed* education, . 75
Table exhibiting, according to religious denomination (Established Church, Roman Catholic, Presbyterian, or otherwise), the number of children attending each description of school in the several baronies of the county of Kerry, on June 25, 1868, . . 76
Religious census of 1861, ... 77–78
Mixed education in *Scriptural* schools, . . 79–81
Table of twenty-three National and three Scriptural schools, illustrating the extent of mixed education, . 82
Small extent of mixed education in National schools, . 83
Protestant *Dissenters*, ... 84
Muckross National School, ... 85
Parental wishes and *clerical* influence, . . 86–88

OPINIONS RESPECTING MIXED EDUCATION.

Advantages and disadvantages of *mixed* education, . 89
General approval of the National system no proof of approval of mixed education, ... 89–90
Theories of education little attended to, . . . 91
General desire on part of Roman Catholic clergy for religious education, ... 91–92
Roman Catholic *laity*, ... 93
Views of the *Anglican* clergy, ... 94
(1) In favour of mixed education, . . . 95–102
(2) Against mixed education, ... 103
Opinion of Sir R. Orpen, ... 104
Anglican dislike of the National Board, . . 105–107
Suggestion as to application of *Church Education Society's* funds, ... 108

COMPARISON OF THE ATTENDANCE OF BOYS AND GIRLS.

Excess of male over female pupils, ... 109
Schools in places where there are no convents, . . 110
Separate schools for boys and girls, ... 111–114

Paragraph

Table exhibiting the average number on rolls and the average number present, from July 1, 1867, to June 30, 1868, in thirteen ordinary National Schools having separate apartments for boys and girls, . 115
Table exhibiting the average number on rolls, and the average number present, from July 1, 1867, to June 30, 1868, in seventeen ordinary National schools in which the boys and girls are taught in the same apartment, ... 116–117
Numbers of boys and girls in mixed schools, . 118–120
General conclusion, ... 121
Causes of the excess of male over female pupils, . 121
Comparison of numbers of boys and girls at school in *towns* where convents are established, . . . 122
Table exhibiting the average number of boys and girls on rolls and present at National or Christian Brothers' schools from July 1, 1867, to June 30, 1868, in eight towns in which the female schools are connected with convents, ... 123
Great excess of female over male pupils, . . 124–125
Causes of the *popularity* of *convents*, ... 126
Their religious character, ... 127
Their moral influence, ... 128
Social refinement, ... 129
Reputation of *superior teaching*, ... 130
Gifts of *food* and *clothing*, ... 131–139

Causes which affect the Regularity of Attendance of Children at School.

Causes which affect *regularity* of *attendance*, . . 140
No reluctance on the part of parents, ... 141
Detailed evidence relating to attendance in the different baronies of Kerry, ... 142
Iraghticonnor, ... 142–144
Clanmaurice, ... 145
Trughanacmy, ... 146–148
Corkaguiny, ... 149–152
The Irish-speaking population, ... 153–155

Iveragh, ... 160–164
Dunkerron, ... 165–167
Glanarought, ... 168–174
Result of the evidence, ... 175
Social and *economical* causes which affect attendance, ... 176–177

Means for securing increased and more regular Attendance.

Plans for *increasing attendance*, ... 178
School premiums, ... 179–181
Religious pictures and medals, ... 182–183
Compulsory education, ... 184
Practice in Christian Brothers' Schools, . . . 185
School-fees, ... 186

Gratuitous Education—Opinions respecting it.

Opinions on *gratuitous* education, ... 187
(1) Of Anglicans, ... 187
(2) Of Roman Catholics, ... 188

Age of Children attending School.

Early removal of children from school, . . . 189
Average age of children going to and leaving school, . 190
Average age of children in different classes, . 191–192
Different *standard of classification* in Scriptural, Christian Brothers', and National schools, . . . 193

Gratuitous Education—its Extent.

Extent of gratuitous education, ... 194
Difficulties attending payment of School-fees, . . 195

School-fees—their Rate and Amount.

Rate of *school-fees*, ... 196
Rate lower in female than in male schools, . . . 197
Differences of male and female schools in respect of fees, ... 198
Payment of fees dependent on reputation of teacher, . 199
Accounts of fees received, ... 200
Amount of school-fees, ... 201–202
National schools without school-fees, ... 203
Mode of enforcing payment, and application of school-fees, ... 204–205

Paragraph

Comparative Efficiency of Schools aided and unaided by the State.

Comparison of schools *aided* and *unaided* by the State, 206–207
General opinion of superiority of aided schools, . 208–209
Kenmare Parochial School, ... 210–211
General superiority of National schools, . . . 212
Opinion of the *Bishop of Kerry*, ... 213
Primary education in relation to commercial life, . 214

Results of Examination.

Results of examination, ... 215–216

Reading.

Defective style, ... 217
Classification of scholars according to proficiency in reading, ... 218
Reading in lower classes, ... 219
Reading in convent schools, ... 220
Pronunciation, ... 221
Difficulties of pronunciation, ... 222
Table exhibiting the results of examination of National and Christian Brothers' schools, ... 223
The letter "h," 224
The letter "r," preceded by "a," 225

Writing.

Indefiniteness of standard of good writing, . . . 226
Deficiency in writing, ... 227
Writing in second class, ... 228
In third class, ... 229
Writing on slates, ... 230
Copy-books, ... 231
Matter of headlines, ... 232
Writing in *Christian Brothers'* schools, . . . 233

Spelling.

Spelling in *Church Education schools*, . . . 234
Dictation in second classes of National schools, . . 235
Words of similar sound with different meanings, . . 236
Difficulty for the children to understand the English accent, ... 237
Fourth class in National schools, ... 238
Method of teaching spelling, ... 239
Syllabic spelling, ... 240
Name of the letter "a," 241

Arithmetic.

Deficiencies in Arithmetic, ... 242
Arithmetic of upper classes in National schools, . . 243
Deficient grasp of arithmetical principles, . . 244–245
Arithmetic in Christian Brothers' school at Tralee, 246–248
In *female schools*, ... 249

Geography.

Geography in first class, ... 249
In second class, ... 250
In other classes, ... 251
Defective method of teaching, ... 252
Programme of National Board, ... 253
Political and religious aspect of geographical lessons, . 254
Christian Brothers' schools, ... 255
Church Education schools, ... 256

History.

Want of history in National schools, ... 257
Historical summaries in books of National Board, . 258
History in Kenmare Convent, ... 259
In Presentation Monastery at Killarney, . . . 259
In Christian Brothers' schools, ... 260
In Church Education schools, ... 261

Grammar.

Importance of grammatical training, ... 262
Programme of the National Board, ... 263
Construction of sentences, ... 264
Conjugation of verbs, ... 265
Parsing of poetry, ... 266
More rational teaching requisite, ... 267

Geometry, Mensuration, Algebra.

Mathematics, ... 268–271

Paragraph

NEEDLEWORK.

Needlework, ... 272
Convents, ... 273
No *workmistress* in some mixed schools, . . 274–275

MUSIC.

Vocal *music*, ... 276–277
Instrumental music, ... 278–279
Christian Brothers' schools, ... 280

DRAWING.

Drawing, ... 281

GENERAL INTELLIGENCE OF CHILDREN.

General *mental ability* of Irish children, . . . 282
Comparison of *Irish* and *English* children, . . . 283
Intelligence displayed by candidates for confirmation, . 284
Public examinations, ... 285
Intelligence not sufficiently cultivated, . . . 286
English composition, ... 287–288

RELIGIOUS INSTRUCTION.

Subjects of *religious instruction* in National schools, . 289
In Scriptural schools, ... 290
Sunday schools, ... 291
Preparation of Roman Catholics for confirmation, . 292
Time of religious instruction in National schools, . 293
In schools conducted by "religious," 294
Christian Brothers' schools, ... 295

Report on the State of Primary Education in the County of Kerry by J. Percival Balmer, Assistant Commissioner.

Introductory.

1. My Lords and Gentlemen,—I have the honour of laying before you the result of my inquiries into "the state of Primary Education in Ireland"—"the practical working of the system of National education"—and the "means to be adopted for extending more generally to the people the benefits of education"—which I have made as Assistant Commissioner in the "District of Killarney." The time occupied in my inquiry extended from June 27, when I arrived in my district, to September 9, when I commenced my homeward journey, and during the whole of that time I was closely engaged in the examination of schools, or the prosecution of the various inquiries directed by my original instructions. The topographical character of the country, and the small extent of accommodation afforded by railway, necessitated nearly all my journeys being made by car; and much time was consequently consumed in travelling, which might have been more profitably spent in the pursuit of my investigations.* The schools not unfrequently lie very far apart, and many miles had to be travelled before the day's work of examination could be begun. The number I visited is, therefore, less than, under different conditions, it might have been. I have reason, however, to believe that a wider examination would not have produced any results substantially different from what are embodied in this report.

Limits of the inquiry.

2. The county of Kerry is divided, for the purposes of the Constabulary, into seven districts—viz., Listowel, Tralee, Dingle, Cahirciveen, Kenmare, Killarney, and Killorglin. Copies of the returns of primary schools, made to the Royal Commissioners by the Sub-Inspectors of six of these seven Constabulary districts, were furnished to me, and practically determined the geographical limits of my inquiry. The seventh district—that of Killorglin, which lies north of Killarney and south of Tralee, and is situated near the head of Dingle Bay—was not assigned to me; but as the country comprised in it, and through which I was obliged to pass, presents no special characteristics to differentiate it from the rest of the county, the following report may be taken as adequately representative of the condition of primary education in the whole of the county of Kerry. It should be noticed, on the other hand, that two of the schools returned by the Sub-Inspector at Listowel, are situated in the county of Cork—viz., Knockaclarig and Rock Chapel National schools, both in the barony of Duhallow and the parish of Clonfert. These exceptions, however, are so trifling that notwithstanding them, the northern, eastern, and western† limits of my district may be considered identical with the same limits of the county of Kerry.

Method of procuring information.

3. With a view to obtaining information from every source which I deemed trustworthy, I called upon as many of the clergy, whether belonging to the Established or the Roman Catholic Church, as I possibly could, and also upon such of the resident gentry as, from what I learned by previous inquiry, either took an active interest in education—unfortunately a very small number—or from their position as landlords in the county had granted sites for schools, or otherwise contributed to their material support. I moreover availed myself of every opportunity which presented itself of conversing with members of the poor and lower middle class, to which the children attending primary schools chiefly belong. The circular of queries with which I was furnished from the office of the Royal Commission, I found exceedingly useful as a point of departure in conversation on the various circumstances affecting education. Comparatively little service, however, was rendered by it, in obtaining information from those clergymen and laymen to whom I sent copies of it, but whom I had not the opportunity of visiting. Very few replies to it have reached me, and of these the majority are very meagre, being either written on the margin of the page containing the questions, or at the most, on the fly-sheet of the circular. I regret this the more, because, with scarcely an exception, all, both clergy and laity, from whom, personally, I endeavoured to obtain information, were most ready to give me whatever they could, and many promised to furnish me with statements in writing of facts within their knowledge, or of their personal opinions and wishes. These promises, however, are in too many cases still unfulfilled; and there is a danger, therefore, that some of the nicer shades of sentiment or opinion expressed to me orally may receive a less accurate expression in this report than if they had been committed to paper by the persons entertaining them. For any inaccuracy of this kind of which I may unintentionally be guilty, no apology is needful other than this statement of its cause.

Existing Means of Primary Education in Kerry.

Existing means of primary education.

4. The amount and variety of means provided for primary education in Kerry with reference to the area and population of the county are approximately exhibited in the following table, which, so far as it relates to the number of schools, has been compiled from the Constabulary returns. In distinguishing separate and mixed National schools I have availed myself of the Appendix to the Report for 1866 of the National Commissioners.

[Table.

* Vacations also considerably interfered with the examination of schools. Upwards of fifty schools were closed at the only time when I was in their neighbourhood. I found it difficult to obtain certain information whether a given school was open or not. The times mentioned in the Inspectors' books for the summer vacations of National schools, are subject to alteration at the caprice of managers and teachers. Two schools to which an Inspector had sent notices to remain open were closed on my arrival in company with the Inspector. More than once I could not hear of any school within reach of my head-quarters for the time being which was not closed.

† I assume that in those directions, the Constabulary districts, or at least the districts to which their returns relate, are conterminous with Kerry, and that no part of that county is within the limits of the Constabulary districts of either Limerick or Cork counties.

5. TABLE exhibiting the Area, Population in 1861, and Present Number of Primary Schools of different descriptions of each Barony of the County of Kerry.

Barony.	Area.	The same, less water.	Total Males and Females.			National Schools.				Scriptural, Male, Female, and Mixed.	Christian Brothers.	Hedge.	Private and Boarding.	Total.

Additional means.

6. To the schools enumerated in this table there must be added, in order to obtain a complete idea of the existing means of education, three evening schools for adult males (aided by the National Board) in Tarbert, Killarney and Sneem, a similar evening school for females in Tarbert, and an industrial school for females in Killarney, established and supported by Lady Castlerosse. There are also some hedge schools not included in the constabulary returns, which, either from the remoteness and obscurity of their position, or the wandering propensities of their teachers, escaped the observation of the returning officers. Of such schools, I was informed that two existed in the neighbourhood of Kilgarvan, in the barony of Glanarought, another in Dunkerron South, near to Westcove on the road between Sneem and Waterville, and another near Tarbert in the barony of Iraghticonnor. Besides this, it is the custom in the winter season for the small farmers living in the glens in Tuosist and Kilcrohane parishes, and probably also in other districts, to unite in hiring teachers to instruct the children of four or five neighbouring families. These hired teachers are frequently boys of fifteen or sixteen years of age, who at other parts of the year are pupils in the higher classes of National schools. Their tutorial functions are confined to the period during which the swelling of mountain streams or the severity of the weather prevent the attendance of the younger children at regularly constituted schools.

Schools not primary.

7. In addition to primary schools, strictly so called, there are comprised in the constabulary returns four schools in which a higher training is given. These are St. Brendan's College (intended mainly for boys destined for the Roman Catholic priesthood or the learned professions), which is situated at Killarney, and is under the immediate supervision of the Bishop of Kerry; a boarding school for girls taught by the nuns of the Scartlea Convent, near Killarney, where pupils from different parts of Ireland receive instruction in modern languages and the other branches of a liberal female education; and two classical schools at Tralee and Listowel. The former of these is conducted by Dominican monks, and is a "superior" school. The time of the boys attending the latter is divided between it and the National school in the same town.

National schools conducted by "religious."

8. Of the schools in connexion with the National Board twelve are conducted by religious, namely—two for boys at Killarney and Milltown, under the care of the Presentation monks; one at Kenmare, belonging to the Poor Clares; two (at Killarney and Tralee), belonging to Sisters of Mercy; and the remaining seven being attached to convents of the Presentation Order of nuns at Killarney, Cahirciveen, Milltown, Castleisland, Tralee, Dingle, and Listowel. The schools taught by nuns are mainly intended for girls, but in several of them children of both sexes are admitted to the infant departments.

Workhouse schools.

9. Nine of the National schools in Kerry are of a special character, namely, the workhouse schools at Killarney and Dingle, where the boys and girls are instructed in separate apartments by teachers of their own sex; mixed workhouse schools at Listowel, Tralee, Cahirciveen, and Kenmare, and a gaol school at Tralee.

Extent of "National" education.

10. The extent of the means provided for primary education in the same district by the National Board is shown in another form in the subjoined table:—

Barony.	Area in square miles.	The same, less water.	Average Number of square miles to each National School (Separate or Mixed).
Iraghticonnor,	159·40	135·84	6·47
Clanmaurice,	188·87	187·75	5·37
Trughanacmy,	305·89	304·56	7·26
Corkaguiny,	217·18	215·78	8·64
Magunihy,	268·75	259·49	6·18
Iveragh,	255·08	246·74	8·26
Dunkerron, North,	115·67	111·43	18·58
„ South,	151·75	149·78	6·08
Glanarought,	190·42	189·06	10·51
Total,	1,853·01	1,800·43	General Average 7·44

Rugged character of Kerry.

11. In order to make a correct estimate of the figures here presented, it is necessary to recollect that a great part of the county, and particularly the southern and western portions of it, are very mountainous, and consequently have a thin and widely dispersed population. The northern division of the barony of Dunkerron, in which it appears that a less provision, both absolutely and relatively, is made by the National Board than in any other part of the county, has an area nearly two-thirds of that of Clanmaurice, in which the largest relative provision is afforded. Its population, however, in 1861 did not amount to a fifth of that of the latter barony. But the great inequality between the 18·58 square miles of Dunkerron and the 5·37 square miles of Clanmaurice, to which, on an average, a National school is allotted, becomes less conspicuous on recollecting that MacGillicuddy's Reeks, the Gap of Dunloe, and the mountainous country to the west of the Killarney Lakes are comprised in the former barony, whilst Clanmaurice is comparatively a flat country. So, too, it must be recollected that Glanarought, which appears to rank second in the scale of scarcity, consists in part of the hilly and thickly-wooded district intervening between Killarney and Kenmare; and Corkaguiny, which stands third, but which

contains probably the most backward portions of the population of Kerry, is intersected throughout its length by parallel chains of mountains.

Towns and country districts.

12. If comparison is made between towns and rural districts, the towns, as might be expected from the greater density of their population, are the best provided with schools. All the most important towns in the county—Tralee, Listowel, Killarney, and Kenmare—and several of secondary rank, have convent schools for the education of girls, and schools for boys under the care either of the Christian Brothers, the Presentation monks, or National schoolmasters of the first class.* The deficiency of school accommodation, where it does exist, is entirely in country districts. The deficiency, however, appears to be not very great.

Districts where schools are deficient: Tralee Constabulary District.

13. The Constabulary returns indicate only the following localities within my district where there is any considerable tract of country, in which no National schools are in operation. The Inspector of Tralee mentions, without specifically indicating two localities within his district, which, I was informed, are (1) the country between Causeway and Ballyduff in the western part of Clanmaurice, a distance of about five miles, in which there is a thick population; and (2) a region lying between Listowel on the north, and Tralee and Castleisland on the west and east respectively. This second region, which lies in the barony of Trughanacmy, and is intersected by Stack's mountains on the west, and the Glanaruddery mountains on the east, is partially supplied by two or three hedge schools.

Dingle Constabulary District.

14. The Dingle Inspector reports that there is no school within seven miles of Castlegregory from east to west, except the National schools at Castlegregory, and a hedge school at Aughausla south, in the parish of Killiney. No return is made of the numbers attending this school on June 25, 1868, so that it is not easy to judge even partially of the real needs of the district, but both the Rector and the Parish Priest of Killiney testify to the want.

Cahirciveen Constabulary District.

15. The Cahirciveen Inspector reports that in the Portmagee constabulary sub-district, and also at Ahort, in the Glen in the same neighbourhood, there are two large tracts where school accommodation is insufficient, and adds that hedge schools at Behaghone (or Liss and Graigues), both in a very wild and mountainous district at the head of the Waterville Lake (Lough Currans) are the only schools accessible to the children in their vicinity.

Killarney Constabulary District. Listowel and Kenmare Constabulary Districts.

16. From Killarney the Inspector reports that there is a wide tract south-east of the parish of Killaha, in which there are no schools. No return of any deficiency is made by the Listowel or Kenmare Sub-Inspectors, but the latter informed me that what few children were in the wide and thinly populated region intervening between Kenmare and the Mulgrave Police Station on the road to Killarney have no National school within convenient distance.

Milltown. Prior parish. Kilcrohane. Kenmare and Tuosist.

17. These probably are the portions of the county in which the most serious deficiency exists; and as regards them, the returns of the constabulary—authorities of very moderate account in matters of education—were generally confirmed by persons better qualified to form a correct opinion. But in addition to these, the written answers I have received to the circulars I distributed indicate some other localities in which schools, if not absolutely wanting, are at least insufficient. From Milltown the Rev. W. D. Wade writes that he considers "the means of education are insufficient; that the distances from them in many of the outlying districts are too great in so wet and uncertain a climate as ours, particularly in the north-west part" of Kilcolman parish, "called Calinaferry," and he thinks that "an infant school is required in Milltown." The Rev. D. Browne, P.P. of Prior, thinks two or three more National schools are needed in his parish. From the adjoining parish of Dromod, Mr. J. F. Fitzgerald, J.P., writes that "the means are sufficient, though more schools are to be built;" as to the sufficiency of the means the priest of the parish entertains a different view. In the next parish, Kilcrohane, the Rev. Denis O'Sullivan says the means are "not sufficient." In this case the deficiency is partially supplied by the before mentioned hedge or private school at Castlecove, which receives a large annual donation from Mr. Hartopp, the landlord, on whose estate it is situated. The Rev. Thomas Davies, P.P. of Sneem, in the same parish, considers "the means of education in his parish are not sufficient, owing to the small number of schools." This number, however, he hoped shortly to augment by the erection of two schools—one in the mountainous district previously referred to,† and another near the Blackwater Bridge, on the road between Sneem and Kenmare. The Venerable Archdeacon O'Sullivan, P.P. of Kenmare, who, of all the Roman Catholic clergy whom I met, appears to take the keenest and most active interest in the spread of education, writes that the means of education in his district are not sufficient, "because, though there are a number of National schools in this neighbourhood, more in respect of the population than perhaps in any part of Kerry, yet that population is distributed over such an area as to render education impossible, by reason of the distance of a very large number of children from the schools." In the contiguous district of Tuosist, the Rev. C. M'Carthy, P.P., says the means "afforded by the National system" are "sufficient for all classes, except in two or three places, which are at such a distance from the schools that the younger children could not come to them." On the other hand, the Rev. E. J. Wade, Rector of Kenmare, writes, "As far as the parishes of Kenmare and Tuosist (to which I may add Bonane and Templenoe) are concerned, I think there is a sufficient provision of schools; and that no child need be uneducated, unless it is owing to parental neglect, a rare fault as regards education in this county." The discrepancy of the last two statements may be probably reconciled by the opinion of Mr. Macnamara, the National Inspector of that part of the county, who, in speaking of the whole of his district, expressed an opinion that though the number of schools was fairly sufficient, an increase in it would probably be followed by an increased number of pupils. In this case, as in other parts of the county, the demand is, in part, dependent on the supply.

18. From Listowel, Tarbert, Tralee, Blennerville, Kilgobban (the two latter places are in the neighbourhood of Tralee), Cahirciveen, Valencia, and Kilgarvan, I have received reports that the schools in the neighbourhood are sufficiently numerous. The Rev. J. M'Donnell, P.P. of Listowel, stated, that according to a calculation he had made a short time back, there was a teacher for every 100 persons in his parish—rather a small one, and this calculation was exclusive of the large staff of paid monitresses in the convent school. There are, however, some other districts of the county where the children have to walk very long distances to reach school. In rough weather I was informed that the children of the parish of Marhin, in the western part of the Dingle peninsula, are quite prevented by the swelling of two or three mountain streams from taking the nearest route to the neighbouring schools of Ballyferriter and Smerwick.

General sufficiency of schools.

19. I believe that, on the whole, the existing means of education, if judged of by the number of schools, as distinct from their area and accommodation, is fairly sufficient for the county; and that any existing deficiencies are likely to be supplied before long. The increase of schools appears to be proportionately faster than that of population.

* As to the means of education of children belonging to the Established Church or Protestant communities, *vide* paragraphs 331–354.

† See paragraph 11.

School Buildings—their Area and Accommodation.

General character of existing school accommodation.

20. The extent and character of the existing accommodation for teaching in Kerry will appear in greater detail upon inspection of the annexed Table, relating to seventy-three National schools which I visited and which I have no reason to doubt are fairly representative of other National schools in the county.*

Area space of National schools.

21. From this table it appears that in a very great majority of schools the amount of area space, according to the National Board's allowance of eight square feet for each pupil, is insufficient, if judged by the average number of children "on rolls" during the twelve months ending June 30, 1868. The degree of insufficiency, would, of course, appear still greater if tested by the greatest number of children at any time appearing on the roll during the same period. Assuming, therefore (which, doubtless, is not the case), that the highest number "on rolls" is not less than the number of children who in any given district are of the school age, it follows that the existing school accommodation would quickly prove inadequate for the present population, if poverty, sickness, parental indifference, and other obstacles to school attendance could be modified or overcome. When it is recollected that forces, such as these, not only affect the attendance of those whose enrolment makes them nominally scholars, but also diminish the number "on rolls," the conclusion is confirmed that for the most part National schools do not afford sufficient accommodation for the number of children in their respective districts who ought to be at school, and are not drawn to schools of other descriptions. In the minority of schools in which the accommodation exceeds the needs of the contiguous district are included workhouse schools and most of those connected with religious orders. In the former the space allotted for school purposes was determined when the number of paupers was many times as great as at present, and is, moreover, unavailable save to the inmates of the workhouse. In the case of schools belonging to religious bodies, the additional space consists partly of class-rooms, in which a few children are from time to time taught, away from the noise and excitement of a large school-room, and partly, as in the case of the schools of the Presentation Order, at Listowel, and of the Sisters of Mercy, at Killarney, of rooms used almost exclusively for needlework.

Accommodation in Workhouse schools.

School accommodation estimated by average attendance.

22. If the amount of accommodation is estimated, not by what ought to be the popular demand, but by what average attendance proves it actually to be, there is less ground for complaint. The only schools in the foregoing table in which the number of pupils in average attendance exceeds that for which the National Board's minimum of eight square feet for each child, is supplied are sixteen, namely, the male and female schools at Clogher, the two convent schools at Tralee, the mixed schools at Ballinacartin, Derry Quay, Minard and Ferriter, the female school at Tiernaboul, the mixed school at Ballycarberry and Portmagee, the male and female schools at Sneem, the male school at Kilgarvan, the mixed school at Dauras, and, in a very trifling degree, the mixed school at Cahir. Of these schools, those at Clogher are situated in a district in which there has been till lately a great want of National schools—a want which has been partially supplied by the two new schools at Bally-M'Thomas, and which is likely to be still further supplied by other new schools in the same parish. Although these new schools will, doubtless, increase the total number of scholars attending National schools in the county, they will also, it is not improbable, tend to draw away a few pupils from Clogher schools. Two other schools (Minard and Ballycarberry) are likely to be replaced before long by superior structures. These two, together with those at Ballinacartin, Derry Quay, and Portmagee, are the very worst National schools, so far as buildings are concerned, which I met with in the course of my inspection. At Ballycarberry the rain was pouring in through the roof, or beating in at the door or windows (which were necessarily left open for the purpose of ventilation) during the whole of my examination, to such an extent, that it was impossible to shelter even the chair on which I was sitting. In such a building it was not surprising to find the number present did not exceed a dozen, although, during the previous quarter only just terminated, the average number "on rolls" amounted to 99·4. In this, as in other cases, the area of the building is insufficient even for those whom its miserable condition does not deter from attendance. The crowded school-rooms at Sneem, Dauras, and Cahir, are, in part, the result of the high local reputation of the teachers for efficiency.

Female schools smaller than male.

23. The inadequacy of area at Sneem and Tiernaboul female schools, arises in part from a practice (which appears to have been dropped in the most recent erections) of dividing the school space unequally between the male and female departments. It is not uncommon to find that where a male and a female school stand side by side under the same roof, the space allotted to the latter is only about half that allotted to the former. It does not appear whether the promoters of such schools attached less importance to the education of girls than of boys, or whether they simply recognised the fact commented on hereafter,† that the attendance of girls is generally less than that of boys. At any rate the difference between the number of girls and boys attending school is trifling in comparison with the disproportion between the areas of the female and male schools at Sneem and Tiernaboul. It should be noted that the responsibility for this unequal division at Sneem rests in a measure with the National Commissioners, in whom the buildings are vested.

Male and female schools on different floors.

24. At Tarbert, Gortnaskehy, Clashnagarrane, Foilmore, Valencia, and Kilgarvan, the female schools are built over the male and have the advantage over them of such additional height as a pitched ceiling has over a flat one. Notwithstanding the equality of their floor accommodation, the number of cubic feet of atmospheric air provided in the female is greater than in the male school.

* The condition and character of the buildings of scriptural and other schools not receiving Government aid are described in the sections relating to Scriptural and Hedge schools. The buildings of the Christian Brothers' school at Cahirciveen are very fair. Those at Dingle I did not see, but I believe them to be inferior. Their best buildings are at Tralee. The accommodation in both their establishments in this town is very ample.

† *Vide* paragraphs 60 and 109.

25.—TABLE exhibiting the TENURE, ACCOMMODATION, and STRUCTURAL CONDITION of Seventy-three NATIONAL SCHOOLS in KERRY.

BARONY AND NAME OF SCHOOL.	Vested or Non-vested.	Number of Rooms.	Number of Children for which there is accommodation at 8 sq. ft. per Child.	Average Number on Rolls during year ending June 30, 1868.	Average Number present during year ending June 30, 1868.	Number of cubic feet for each Child in average attendance.	Repairs.	Lighting.	Ventilation.	Outbuildings.	Residence of Teacher.	Remarks.
IRAGHTICONNOR.												
Listowel, Convent,	N.V.	6	455	564·87	377·5	—	Fair.	Good.	Good in upper rooms only.	Good.	School is attached to Convent.	Of the six rooms, three are school-rooms, two are class-rooms, and one is a work-room.
Listowel, Male,	V.T.	2	297	292·07	167·3	167·8	Good.	Good.	Fair.	—	Master lives in the town.	Part of lower school-room not fitted up. It would afford accommodation for one-fourth more pupils.
Tarbert, Male,	V.T.	1	88	86·82	80·65	70·3	Moderate.	Fair.	Fair.	None.	Residence for master attached to school. Assistant pays £4 per annum for lodgings in town.	New buildings likely to be erected.
Tarbert, Female,	V.T.	1	88	124·92	76·57	88·	Moderate.	Fair.	Fair.	Fair.	Mistress and assistant live with their husbands in town.	Female school above male—more lofty.
Tarmon, Male,	V.T.	1	56	91·77	51·02	99·98	Fair.	Good.	Good.	Good.	Master pays 50*s.* per annum for lodgings two miles from school.	—
Tarmon, Female,	V.T.	1	56	79·57	52·95	96·31	Good.	Good.	Good.	—	Mistress pays 2*s.* 6*d.* a week for lodgings three miles distant. Assistant lives with parents five miles off.	Mistress unable to get decent lodgings near school; talks of making up a bed in school-room.
Gortnaskehy, Male,	V.T.	1	92	130·35	63·82	119·1	Moderate.	Good.	Good.	Clean.	House in village given rent free by a landed proprietor.	—
Gortnaskehy, Female,	V.T.	1	92	132·57	68·9	110·4	Good.	Good.	Fair.	Clean.	Mistress lives with husband in village.	Mistress would probably obtain a residence, if she made application to Mr. Hewson, who has given residence to master.
CLANMAURICE.												
Killury, Male,	V.T.	1	—	109·4	73·8	—	Fair.	Good.	Good.	—	Master and assistant each live three miles away.	See statement, p. 439, *infra*.
Killury, Female,	V.T.	1	—	—	—	—	Fair.	Good.	Good.	—	—	—
TRUGHANACMY.												
Brosna, Male,	N.V.	1	96	122·25	72·15	65·19	Bad.	Moderate.	Moderate.	None.	Master lives two miles away in lodgings, for which he and his brother pay £4 per annum. Assistant lives with his father.	Master repairs the school; average annual cost of repairs stated by him to be £2; master pays annual rent of 10*s.* for school. Male and female schools in different parts of the village.
Brosna, Female,	N.V.	1	—	90·35	43·82	—	Fair.	Moderate.	Fair.	None.	Pays £3 12*s.* per annum for lodgings close to school.	Mistress pays annual rent of £2 for school; new schools likely to be built.
Clogher, Male,	N.V.	1	54	112·57	70·92	67·005	Fair.	Fair.	Moderate.	None.	Master rents a house one mile off.	Manager does more for female than male school.
Clogher, Female,	N.V.	1	45	136·57	72·97	54·26	Good.	Good.	Good.	Good.	Two rooms for residence attached to school.	—
Bally McThomas, Male,	V.T.	1	75	—	—	—	Good.	Good.	Good.	Good.	Lodges two and a half miles off with a farmer, whose children he teaches in lieu of rent.	A new school, opened three weeks before my visit.
Bally McThomas, Female,	V.T.	1	75	—	—	—	Good.	Good.	Good.	Good.	Lives three miles off with sister, who is teacher at Clogher.	A new school, opened three weeks before my visit.
Presentation Convent, Tralee,	N.V.	3	376	567·	410·	—	Bad.	Good.	Good.	Fair.	School is attached to Convent.	The sisterhood in want of funds to make repairs, which are very much needed.
Convent of Mercy, Tralee,	N.V.	2	207	250·75	142·75	—	Very good.	Very good.	Very good.	Good.	School is attached to Convent.	—
Ballinacartin, Mixed,	N.V.	1	51	135·6	70·74	40·96	Very bad.	Very bad.	Very bad.	None.	Master pays 1*s.* 6*d.* a week for lodgings one mile off.	Annual rent of £3 paid by teacher, for school buildings.
Blennerville, Male,	N.V.	1	75	98·2	62·07	86·99	Fair.	Fair.	Good.	Good.	Master lives two miles off at his own house of business.	—

TABLE exhibiting the TENURE, ACCOMMODATION, and STRUCTURAL CONDITION of Seventy-three NATIONAL SCHOOLS in KERRY—*continued.*

BARONY AND NAME OF SCHOOL.	Vested or Non-vested.	Number of Rooms.	Number of Children for which there is accommodation at 8 sq. ft. per Child.	Average Number on Rolls during year ending June 30, 1868.	Average Number present during year ending June 30, 1868.	Number of cubic feet for each Child in average attendance.	Repairs.	Lighting.	Ventilation.	Outbuildings.	Residence of Teacher.	Remarks.
CORKAGUINY.												
Derry Quay, Mixed, . . .	N.V.	1	36	93·64	47·75	36·2	Very bad.	Moderate.	Moderate.	None.	Master pays nothing for lodgings, which are near school.	—
Ardmore, Mixed, . . .	V.T.	1	100	174·97	92·15	108·51	Moderate.	Good.	Fair.	None.	Master and his wife (who is assistant) live close to school, in house for which they pay £1 5*s.* per annum.	Expenses of whitewashing, glazing, and other occasional repairs done by master. Annual outlay stated to be about £1.
Minard, Mixed, ...	N.V.	1	48	140·92	72·1	—	Bad.	Moderate.	Moderate.	None.	Master and his wife (who is assistant) lives near school, in a house for which he pays £1 per annum.	A new school about to be built.
Presentation Convent, Dingle, .	N.V.	4	784	364·5	222·75	—	Moderate.	Good.	Good.	—	School is attached to Convent.	—
Dingle Workhouse, Male, . .	N.V.	1	111	26·97	20·92	466·9	Good.	Good.	Good.	Good.	Master has a bed-room in workhouse.	School-room forms part of workhouse.
Dingle Workhouse, Female, .	N.V.	1	111	24·75	13·22	738·8	Good.	Good.	Good.	Good.	Mistress has a bed-room in workhouse.	—
Ventry, Male, ...	N.V.	1	54	56·5	30·25	121·3	Good.	Good.	Fair.	None.	Master lives six miles from school with his parents.	—
Ventry, Female, . . .	N.V.	1	54	58·47	33·92	108·25	Good.	Good.	Fair.	None.	Master lives one mile from school, with father, at Coastguard station.	—
Ferriter, Mixed, . . .	N.V.	1	100	181·9	110·32	83·39	Indifferent.	Good.	Fair.	None.	Master lives two, literary assistant three, and workmistress four miles from school.	Master spent about 30*s.* during 1867 on repair of school.
Vicarstown, Mixed, . . .	V.T.	1	115	86·3	56·92	194·9	Moderate.	Good.	Fair.	None.	Master lives near school, at his mother's house, with his wife, who is assistant-teacher.	Master spent about 30*s.* during 1867 on repairs of school.
MAGUNIHY.												
Presentation Monastery, Killarney.	N.V.	3	383	372·75	242·5	395·21	Very good.	Very good.	Very good.	Good.	School is attached to Monastery.	One of the three rooms is used as a class-room. The two school-rooms are very lofty, measuring forty feet to the roof-tree and thirty feet to the wall-plate. In measuring the cubical contents no account has been made of the contents of the vaulted roof. The red and brick tiles of the floor are favourable to cleanliness, but are very cold to the bare feet of the children.
Presentation Convent, Killarney,	N.V.	5	383	467·	301·	—	Fair.	Good.	Good.	—	School is attached to Convent.	Two of the five rooms are class-rooms, and one is devoted to the infant school. Repairs are paid for out of grants by National Board. The residue (if any) is spent on clothes and food for the children.
Convent of Mercy, Killarney, .	N.V.	3	249	—	—	—	Indifferent.	Good.	Good.	—	School is three-fourths of a mile from Convent.	Present buildings were formerly used by Presentation monks, at which time the nuns taught their pupils at the Convent, which is less convenient in situation. Present buildings are old and unsatisfactory. Originally cost £830 to build. One room is used as a work-room.
Workhouse, Male, Killarney, .	N.V.	1	187	61·67	50·	360·	Fair.	Good.	Fair.	Fair.	Master has residence in workhouse.	Repairs executed by Poor Law Guardians.
Workhouse, Female, Killarney,	N.V.	1	187	—	—	—	Fair.	Good.	Fair.	Fair.	Mistress has residence in workhouse.	Repairs executed by Poor Law Guardians.
Tiernaboul, Male, . . .	V.T.	1	82	96·62	50·42	137·64	Good.	Good.	Moderate.	None.	Teacher lives two miles from school with aged relatives whom he supports in return for his lodging.	Repairs paid for by Lord Castlerosse.
Tiernaboul, Female, . . .	V.T.	1	40	93·	47·72	80·44	Good.	Good.	Moderate.	None.	Mistress lives with parents three miles from school.	Repairs paid for by Lord Castlerosse.

TABLE exhibiting the TENURE, ACCOMMODATION, and STRUCTURAL CONDITION of Seventy-three NATIONAL SCHOOLS in KERRY—*continued.*

BARONY AND NAME OF SCHOOL.	Vested or Non-vested.	Number of Rooms.	Number of Children for which there is accommodation at 8 sq. ft. per Child.	Average Number on Rolls during year ending June 30, 1868.	Average Number present during year ending June 30, 1868.	Number of cubic feet for each Child in average attendance.	Repairs.	Lighting.	Ventilation.	Outbuildings.	Residence of Teacher.	Remarks.
MAGUNIHY—*continued.*												
Clashnagarrane, Male,	V.T.	1	83	80·6	50·32	130·36	Fair.	Bad.	Indifferent.	Fair.	Master has a house rent free from Lord Castlerosse.	Master spent 12*s.* or 15*s.* in 1867 on repairs. This is above the average expenditure. Lime for whitewashing is given gratis by Lord Castlerosse.
Clashnagarrane, Female,	V.T.	1	75	92·82	58·4	—	Indifferent.	Moderate.	Moderate.	Bad.	Mistress lives with parents half a mile from school.	Repairs cost mistress about 10*s.* per annum.
Muckross, Mixed,	N.V.	1	69	38·9	21·24	—	Good.	Good.	Good.	Moderate.	Residence attached to school.	All expenses of repairs borne by Mr. Herbert, M.P.
Gortagullane, Mixed,	V.T.	1	125	—	—	—	Bad.	Good.	Good.	None.	No residence.	Floor of school formed of round stones. A new school likely to be built.
Glenflesk,	V.C.	1	—	—	—	—	Under repair.	—	Good.	Wants a drain.	Master and his wife, who is workmistress, live near the school in a house for which, with grass of three cows, he pays £9 per annum.	Repairs much needed, although school had only been built about a year.
IVERAGH.												
Presentation Convent, Cahirciveen.	N.V.	3	340	336·37	225·67	—	Fair.	Good.	Fair.	—	School is attached to Convent.	—
Cahirciveen, Male,	V.T.	1	139	112·32	67·77	197·6	Good.	Fair.	Fair.	Very bad.	Master lives in town, where he has a shop managed by his wife.	All the trustees are dead.
Cahirciveen Workhouse, Mixed,	N.V.	1	97	39·47	28·05	194·65	Moderate.	Fair.	Good.	Good.	Mistress has bed-room in Workhouse.	Repairs made by Poor Law Guardians.
Foilmore, Male,	V.T.	1	76	—	—	—	Fair.	Fair.	Fair.	None.	No residence.	Lower part of building devoted to boys—less lofty than girls' school above.
Foilmore, Female,	V.T.	1	76	58·45	36·55	134·58	Fair.	Sufficient.	Sufficient.	None.	Mistress lives with parents one mile from school.	Room wants whitewash.
Killurly, Mixed,	N.V.	1	114	116·5	64·75	155·95	Fair.	Good.	Fair.	Bad.	Master lives a quarter of a mile from school.	A second room not used—might be altered to form residence.
Kells, Mixed,	V.C.	1	56	99·65	53·75	83·7	Bad.	Fair.	Indifferent.	Fair.	Master lives a quarter of a mile, and assistant one mile from school.	School is damp. Walls want cement.
Ballycarberry, Mixed,	N.V.	1	40	99·4	64·17	37·86	Very bad.	Bad.	Fair.	None.	No residence.	Present building temporary. Master says he has spent £8 on it since his appointment in 1865 (*sed quære*).
Portmagee, Mixed,	N.V.	1	45	92·6	65·07	44·75	Very bad.	Insufficient.	Insufficient.	None.	No residence.	Master pays £2 10*s.* per annum, for rent of school, to a middleman holding under Trinity College, Dublin.
Valencia, Male,	V.T.	1	77	107·47	59·5	94·5	Very bad.	Fair.	Insufficient.	Very bad.	No residence.	Must be closed in winter for want of repair. Dust comes through ceiling from upper room, which is used as female school.
Valencia, Female,	V.T.	1	77	—	—	—	Very bad.	Fair.	—	Very bad.	No residence.	All the trustees are dead.
Knightstown, Female,	V.C.	1	57	48·25	30·22	306·13	Good.	Fair.	Moderate.	Bad.	No residence.	—
Knightstown, Male,	V.C.	1	57	59·10	39·23	235·87	Fair.	Fair.	Moderate.	Bad.	No residence.	—
DUNKERRON SOUTH.												
Lohar (Tour), Mixed,	N.V.	1	—	115·82	70·57	—	Very bad.	Very bad.	Very bad.	None.	Master lives four miles from school with his parents, whom he helps in return for his board.	A new school is about to be built. Present building (which had been disconnected from National Board on account of its insufficiency) had been received again into connexion just before my visit. School forms one-half of a house, the other portion of which is used as a dwelling by a family, one member of which was dangerously ill with an infectious fever.

TABLE exhibiting the TENURE, ACCOMMODATION, and STRUCTURAL CONDITION of Seventy-three NATIONAL SCHOOLS in KERRY—*continued.*

BARONY AND NAME OF SCHOOL.	Vested or Non-vested.	Number of Rooms.	Number of Children for which there is accommodation at 8 sq. ft. per Child.	Average Number on Rolls during year ending June 30, 1868.	Average Number present during year ending June 30, 1868.	Number of cubic feet for each Child in average attendance.	Repairs.	Lighting.	Ventilation.	Outbuildings.	Residence of Teacher.	Remarks.
DUNKERRON SOUTH—*continued.*												
Cahirdaniel, Male, . . .	N.V.	1	76	59·45	50·32	121·62	Bad.	Moderate.	Indifferent.	None available.	Master lives in house, for which, with grass of two cows, he pays £3 10*s.* per annum.	Master spends about 6*s.* per annum on repairs. No separation of outbuildings for male and female schools.
Cahirdaniel, Female, . . .	N.V.	1	64	63·3	44·12	117·2	Fair.	Moderate.	Indifferent.	None available.	Mistress pays £1 10*s.* per annum for single room near school.	Expense of whitewashing and mending windows borne by teacher.
Sneem, Male, ...	V.C.	1	69	129·97	70·15	93·16	Fair.	Good.	Good.	Fair.	Master lives in a house which he built for himself.	Visited by Inspector of Board of Works about two years before my visit.
Sneem, Female, ...	V.C.	1	41	87·02	49·02	80·73	Good.	Good.	Good.	Good.	Mistress pays £5 per annum, rent of house.	—
GLANAROUGHT.												
Poor Clare Convent, Kenmare, .	N.V.	4	534	460·65	346·7	—	Good.	Good.	Good.	Good.	School is attached to Convent.	—
Kenmare, Male, . . .	V.C.	2	86	151·25	78·97	86·02	Good.	Bad.	Bad.	Good.	Master pays £7 per annum for rent of house.	Visited by Inspector of Board of Works in August, 1868. £19 18*s.* recently spent in repair of buildings.
Kenmare Parochial, Mixed, .	N.V.	1	84	33·65	28·7	176·04	Good.	Bad.	Fair.	Good.	Lower story of building serves as Master's residence. The rent and taxes are paid by Lord Lansdowne.	—
Kenmare Workhouse, Mixed, .	N.V.	1	92	Not kept.	Not kept.	—	Moderate.	Fair.	Bad.	—	Mistress has rooms in workhouse.	Repairs made by Poor Law Guardians. School about to be repaired.
Cahir, Mixed, ...	V.C.	1	90	149·	90·25	—	—	Good.	Good.	Fair.	Master pays £7 per annum for house, one mile from school.	School undergoing repair, the whole ceiling having fallen down one morning shortly before assembly of school.
Kilgarvan, Male, . . .	V.C.	1	56	155·67	94·77	47·37	—	Bad.	Fair.	Fair.	Master pays £1 per annum for house, near school.	School undergoing repair.
Kilgarvan, Female, . . .	V.C.	1	56	—	—	—	—	Bad.	Fair.	Fair.	—	Female school in upper story of building.
Dauras, Mixed, . . .	V.C.	2	76	131·2	83·25	80·86	Good.	Good.	Good.	Good.	Master, with assistant, who is his wife, lives in house near school, for which he pays £1 10*s.* rent.	School recently repaired. Visited since the repairs by Inspector of Board of Works. Buildings originally intended for separate schools, which have been thrown into one.
Lansdowne, Mixed, . . .	V.C.	1	79	117·3	65·42	106·34	Bad.	Good.	Good.	Good.	Residence in course of erection by Lord Lansdowne.	School not visited for upwards of two years by Inspector of Board of Works. Master has repaired windows and whitewashed the school.
Lehid, Mixed, . . .	V.C.	1	78	109·85	48·87	115·11	Bad.	Good.	Fair.	Fair.	Master rents a house for which, with grass of five cows, he pays £9 per annum.	School not visited for some considerable time by Inspector of Board of Works. Master has whitewashed the school.
Lauragh, Male, ...	V.C.	1	74	82·27	37·55	170·43	Good.	Good.	Good.	—	Master lives two miles from school in house for which, with grass of ten cows, he pays £20 per annum.	School not visited for four years by Inspector of Board of Works.
Lauragh, Female, . . .	V.C.	1	74	63·17	40·32	158·73	Fair.	Good.	Good.	Good.	Mistress has lodgings rent free in a neighbouring house, belonging to Lord Lansdowne.	School not visited for upwards of two years by Inspector of Board of Works.

Cubical contents.

26. In most of the schools where there is a deficiency of area space, there is a corresponding deficiency of cubic feet of atmospheric air for each child in average attendance.* This is true of the two schools at Clogher, of the mixed schools at Ballinacartin, Derry Quay, Ballycarberry, and Portmagee, and of the female school at Tiernaboul, and the male school at Kilgarvan.

27. In the male and female schools at Sneem and the mixed school at Dauras, although there is a deficiency of area, the cubical contents of the rooms give more than eighty feet to each child in average attendance, though in the female school at Sneem and that at Dauras the excess is only fractional. On the other hand, in Tarbert and Brosna male schools, where the area space is sufficient for the average attendance of pupils, the cubical contents are not so; the defect in the former of the two, however, being very trifling.

General Condition and Character of Buildings.

Non-vested school buildings.

28. As regards the general condition and character of school-buildings, there can be little question that, omitting schools in connexion with religious communities† or workhouses,‡ non-vested schools are far less suited both by their original construction and their state of repair, for their purpose than those vested in trustees or the National Commissioners. The majority of them—as, for example, the schools at Brosna, Ballinacartin, Derry Quay, Minard, Portmagee, and Lohar—are little better than sheds, and have little or nothing in their external appearance, save a board with the inscription "National School" to attract a casual observer to them as different from the farm buildings and cabins with which the country abounds. For some of these miserable buildings the teacher has to pay rent§ out of his small salary, and in most has to bear the expense of the repairs which are absolutely necessary, in order to keep his scholars together. There are, perhaps, exceptions to this rule in schools which I did not visit. Amongst those included in the foregoing table, that at Mucross owes its superior condition exclusively to its patron, Mr. Herbert, M.P., for Kerry, who built and maintains it chiefly for the children of the labourers and workmen employed on his domain.

Schools vested in trustees.

29. The condition of schools vested in trustees varies considerably. Where the trustees are still living, as in the case of Tiernaboul and Clashnagarrane schools, of which Lord Castlerosse is a trustee, the necessary repairs are generally made at least in part by one or other of the trustees. But where, as is not uncommonly the case, the trustees are all dead, their very names being in most cases unknown to the teachers, and being rarely entered in the school-books, it depends almost entirely on the activity of the parish priest or manager whether sufficient repairs are executed or not. If the parish priest takes keen interest in the schools, he not unfrequently exerts his clerical influence to procure contributions from his parishioners for the repair of the buildings. But to do this, as was more than once observed to me, tends to diminish the amount of voluntary contributions, which might otherwise be made for his own private support. In other cases where the parish priest, from less active regard for education or any other cause, makes no effort for the repair of the school, the burden is cast upon the teacher, who can ill afford to provide the whitewash or few panes of glass, which are grudgingly given, and are all but absolutely necessary.

Schools vested in the National Commissioners.

30. Schools vested in the Commissioners are, as far as I could learn, very irregularly visited by the officers of the Board of Works. Unless a school happened to have been visited within a few weeks of my inquiry, I was rarely able to obtain any information respecting these officers, or the amount of money which had been expended in consequence of their report. In the part of the barony of Glanarought which lies to the south of the Kenmare river, no Inspector of the Board of Works was known by the teachers to have visited their schools for upwards of two years. At Lauragh the male teacher said it was four years since that officer had visited the school, but this statement was at variance with that of the female teacher, who spoke of two years only.

The Board of Works.

31. There is very general dissatisfaction with the Board of Works, and both National Inspectors and school managers complain of the very great delays which habitually occur in all matters relating to schools with which that Board is concerned.

Schools vested in the Commissioners more common in the south than in the north of the county.

32. Schools vested in the Commissioners lie chiefly in the south of the county.‖ Such there are at Knightstown and Kells, both in Iveragh, the managers of which it may be noted are laymen. But the majority lie in a district of which Kenmare forms the centre. It is the boast of the Ven. J. O'Sullivan of that town that he has fourteen National schools under his management, of which all¶ but the convent and workhouse schools at Kenmare are vested in the National Board. To them must be added the male school at Kenmare, under the management of T. Trench, esq., agent to Lord Lansdowne. So far as I was able to learn it appears to be owing to the influence of the Ven. Archdeacon that such of the schools in the parishes adjoining his own district, namely, in Kilcrohane, Tuosist, Kilgarvan, and Killaha, as are under the management of Roman Catholic clergymen, are with scarcely an exception vested in the Board. The new school at Glenflesk in the latter parish has taken the place of an older one which was either non-vested or vested in trustees. The priest of that parish told me that the poverty of his parish was such that his people would be quite unable to provide the funds necessary for keeping school buildings in repair.

Schools vested in the Commissioners generally disliked by the R. C. clergy.

33. In most other parts of the county where the influence of the Archdeacon of Kenmare is neither acknowledged nor felt by the Roman Catholic clergy, there is the strongest objection on their part to have the schools vested in the Commissioners. In this objection they are more or less definitely encouraged by the Bishop of Kerry. His objections, however, were in a recent case overcome. A scheme had been prepared for erecting on a site granted by Lord Castlerosse in the parish of Killarney a new school, which was to be vested in trustees. When the lease came to be executed it was found to be made not to trustees but to the Commissioners. The administrator of the parish (the Rev —— Griffin) thereupon declined to proceed further in the matter without the sanction of the bishop; and he, on appeal, supported the refusal of his administrator. Lord Castlerosse, on the other hand, when he discovered that by having the school vested in the Commissioners he would be free

* The number of cubic feet of atmospheric air appearing in the preceding table to be afforded for each child in average attendance is in very many instances somewhat less than the actual amount. In those rooms of which the ceiling is pitched in a greater or less degree, the height to the wall-plate, and not to the roof-tree, has been taken as an element in calculating the cubical contents. The difference in some cases may be considerable, but in none sufficient to give eighty cubic feet, the minimum allowance for each child in English National schools under the Revised Code.

† *Vide* paragraphs 306–314.

‡ There is little in the accommodation and condition of workhouse schools calling for observation except what appears in the foregoing table.

§ *Vide* last column of table on pp. 433–36, *ante*.

‖ There are other schools within my district vested in the Commissioners which I did not visit, *e.g.*, those at Smerwick and Magharees, both in Corkaguiny. There are also several in the Killorglin constabulary district of the county (beyond my limits), *e.g.*, Glenbeigh, Keelnabrack, and Castlemaine schools.

¶ These schools are the following, namely, Cahir, Shelburne No. 1, Goulane, Letter, Ruscussane (male and female Geraghsallagh, Direen, Dirreendarragh (male and female), and Direenanar (male and female), and the convent and workhouse schools at Kenmare.

from the responsibility for repairs which he would have incurred if he had become a trustee of the school, according to the original design, insisted that the school should be vested in the Board. All obstacle to this on the part of the bishop was eventually overcome when it was discovered that the leases contained a clause (which was not usual in the early leases of the Commissioners, and which till this occasion had escaped the attention of the National Inspector of the district) providing for the determination of the estate of the Commissioners on their being recouped by the promoters of the school the moneys expended by them on the buildings over and above the amount of the grant they would have made towards erecting a school vested in trustees.

Local Aid to be expected for providing and maintaining Schools and Teachers.

Grant of school sites.

34. Little local aid is to be expected in any part of Kerry for the supply of schools in districts where the existing accommodation is defective, except so far as the grant of sites is concerned. Most of the chief landlords are willing to grant portions of their estates rent free for the erection of school buildings. The Marquess of Lansdowne, Viscount Castlerosse, and H. A. Herbert, esq., who together own great part of Iveragh, Magunihy, Glanarought, and North and South Dunkerron, have given numerous sites, and the last named of the three expressed to me his willingness to do so wherever a school was wanted. Other sites have also been given in various parts of the county by the Earl of Cork, by R. Mahony, esq. (of Dromore Castle), and F. C. Bland, esq. (of Derryquin, near Sneem). In Corkaguiny, where most of the land belongs to Lord Ventry, there was until quite lately great difficulty in obtaining a site for a National school, as the late lord (who died in the early part of the present year) always declined to give a site for any but a Scriptural school. On inquiry from the present lord of his views on this point, I understood him to say he should be willing to grant school sites where necessary. One parish priest to whom I spoke on this subject stated that he had been unable to obtain a site from Lord Ventry for a school which he wished to build.

Compulsory powers for taking school sites.

35. Having regard to the difficulties in obtaining school sites which the opinions or prejudices of particular landowners on the subject of National Education may interpose, it is the wish of some persons interested in education that compulsory powers for taking school sites should be given by the Legislature. On this point the Ven. J. O'Sullivan (of Kenmare) says :—

"I have now seven National schools in a district where for many years I had not one at all, by reason of the proprietor's hostility. Sites for schools where necessary should not be left to the caprice, ignorance, or bigotry of a proprietor. They should be compulsory as they are for roads, prisons, and other public buildings."

The idea of such compulsory powers is, however, not very familiar.

Local onetary contributions.

36. The portion of the funds requisite for erecting a school for which a site has been obtained over and above the grant made by the National Board, is not unfrequently raised through the personal or clerical influences exerted by the parish priest. When money is not forthcoming, and the Irish peasantry are stated to be very reluctant to part with hard cash, labour is frequently given voluntarily for the cartage of building materials, to an extent more than equivalent to what would be deemed a liberal money payment by those who give it. But such labour can only be given when farming operations are slack, and cannot be reckoned upon with certainty. The Roman Catholic curate of Clogher, in which parish the new schools at Bally M'Thomas had been recently opened, assured me of the constant supervision he was obliged to give to his people to obtain from them in labour what he could not obtain in money.

Building grants by National Board. Funds for repairs of buildings.

37. More than one witness said he considered that the two-thirds of the expense of erecting a school, which are allowed by the National Board, are calculated in a very liberal manner. There is little or no permanent provision made or to be expected for the repair of schools which are not vested in the Board. The hopelessness of obtaining any is indicated in the opinion of the Rev. J. Healey, P.P. of Cahirciveen, who writes—"I know of no local aid except a portion of the tithe-rentcharge be thus applied."

Funds held in trust by Roman Catholic clergy.

38. Some trust funds, however, of small amount, are under the control of some of the Roman Catholic clergy, and are by them applied for the purposes of education. The particulars of these funds, so far as I was able to obtain them from the Roman Catholic Bishop of the diocese, are the following. In the parishes of Castlegregory and Cloghane (Killiney), the interest on £1,000 is held in trust for the benefit of the poor children of the district, and this sum is applied towards education and the maintenance of school-houses.

39. An annual sum of from £20 to £30 is available for the education of the poor, and for charitable gifts in Milltown and Listowel. Since the passing of the Poor Laws in Ireland, the greater part of this fund has been devoted to education.

40. In Dingle an annual sum of £40 is held in trust for the benefit of poor children attending the schools of that town.

41. The greater portion of these funds, it would appear, goes to the children attending school, and is of little use in providing or maintaining the necessary means of education.

Voluntary annual subscriptions.

42. Voluntary annual subscriptions are another but still less permanent source of local aid.* Such subscriptions are, in many cases, made by landowners to National schools, for which they have granted sites. But these subscriptions are determinable at the will of the donors, and except in convent schools, are applied, not to the repair of the school buildings and apparatus, but in augmentation of the teachers' salaries. In convent schools, such subscriptions swell the fund provided by the salary grants of the National Board, and are applied along with it, in the first place, in the repair of school buildings and apparatus, and then, if a surplus ever remains, in charitable gifts to the children. The latter application, it is obvious, is of questionable validity.

43. Such subscriptions to National schools are unusual, except as coming from the owners of land on which the schools are built.† Their amount is very variable, and perhaps depends in many instances on the reputation of the teachers who benefit by them. In more than one instance I found the teacher of a male school enjoying some local subscription, when there was none for the teacher of the female school in the same village. The superior fortune of the male teacher seemed due to greater boldness in applying to the landowner of the neighbourhood for assistance.

44. A sum of £9 4*s.* 6*d.* is annually divided in equal parts between the four teachers of the male and female schools at Clashnagarrane and Kilcummin (Inch) by Lord Castlerosse. At Cahirdaniel, the male and female teachers each receive £5 a year from Mr. Hartopp, the lord of the soil ; and an equal sum is expected from him by the teacher at Lohar, when the new buildings are erected. The teacher of the male school at Listowel receives £20 annually from Lord Listowel, and the convent in the same town has received a promise of £10 a year from the same nobleman. The site of the convent was given by his predecessor in estate and title. At

* Subscriptions to Scriptural schools are of greater amount, and if Erasmus Smith's schools are excepted, are almost the sole sources of their support. They mark, for the most part, the hostility of their donors to the National system, and if State aid were given to denominational schools, would probably be in many cases withdrawn.

† A subscription of £1 to Kilgarvan male school from a lady, and the subscriptions to Kenmare Parochial National School, which consist of £10 from Trinity College, Dublin, £10 from Lord Lansdowne, and £5 from a lady, are exceptions.

Vicarstown, in the extreme west of Corkaguiny, the male and female teachers of the mixed school each receive £2 annually from Lord Cork, in addition to their salaries from the Board, and they stated that they received this sum in common with the teachers of all other National schools built on Lord Cork's estates. The number of such schools in Kerry is, however, not large.

45. The following are the National schools on or near the Lansdowne estates in Kerry, which receive aid from the Marquess :— The Lansdowne Estates.

	£	s.	d.	
Convent School, Kenmare,	10	0	0	per annum.
Kenmare Parochial,	10	0	0	,,
,, Male,	10	0	0	,,
Tulloha Male,	10	0	0	,,
,, Female,	5	0	0	,,
Dauras Male,	10	0	0	,,
,, Female,	5	0	0	,,
Lauragh Male,	10	0	0	,,
,, Female,	6	0	0	,,
Spunkane Male,	2	10	0	,,
,, Female,	2	10	0	,,
Emlaghmore Male,	3	0	0	,,
,, Female,	2	0	0	,,
Foilmore Male,	1	0	0	,,
Female,	1	0	0	,,
Glencar Male,	3	0	0	,,
,, Female,	3	0	0	,,

46. Besides these subscriptions to these schools small farms have been given by Lord Lansdowne to most of the teachers on his estates, and for some of them (*e.g.* the Lansdowne school in table on p. 436, *ante*) residences have been built and given rent-free near the school houses.

47. The whole of the expenses (inclusive of the teacher's salary) of the National school at Cloghreen (Muckross) are defrayed by its patron, H. A. Herbert, esq.

48. The following statement by the male teacher of the National school at Killury relates to an alleged misapplication of an endowment provided for the school. As it reached me some time after I left Ireland I have been unable to investigate it. The complainant writes :— Alleged misapplication of endowment of Killury school.

"This school was founded and endowed by a clergyman of the parish, and after all expenses of building, &c., were paid, there remained a sum of £550, which, according to the wish of the endower was to be devoted to the exclusive benefit of the teachers, save whatever was expended from time to time on repairs. These £550 were funded in the three per cents., and the interest accruing, namely, £16 10*s.* was thus divided :—male teacher received £12 per annum, female received £4, and the remaining 10*s.* was set apart for repairs, and was, so far as I could learn, quite sufficient for that purpose. It appears from the school-books that the teacher, ever since the school first opened, did actually get the £12, no change occurring, except that the management of the funds was transferred to the nephew of the reverend gentleman who endowed the school, and whose name is Nicholas King. I took charge of the school in January, '64, and though I did not enter into a tacit (*sic*) agreement with the manager, Rev. T. Enright, I was quite sure I was to enjoy all the privileges which my predecessor did, but I found after a time that I was completely mistaken. For as I since learned upon good authority, about the time that I took charge, Dr. N. King having occasion to go for some time on the Continent, transferred the management of the funds to the Commissioners of National Education, and almost immediately after, as I could learn, their Head Inspector, John E. Sheridan, in concert with my manager, reduced the male teacher's part of the funds to £5, the sum which I at present receive, and even that in a most irregular manner, not having received a single farthing yet for the years 1867 or 1868."

School Furniture, Apparatus, Books, &c.

49. The same difficulties which exist in the repair of school buildings apply to school furniture and apparatus. Indeed it may be affirmed generally that the state of repair of buildings is a tolerable index of the state of desks, forms, and other apparatus necessary for the efficient working of the school. Desks and forms rarely undergo repair, and maps, lesson-tablets, and diagrams of various descriptions are the first to suffer when defective walls or roofs let in the damp. The wall space of most non-vested schools (other than those connected with convents or workhouses) is quite unsuitable for the suspension or display of maps, and even in vested schools which had been specially designed for their present purpose, little regard is in general shown in the disposition of windows, doors, and fireplaces for the necessary uses of the walls. In very many schools the disposition of the desks in relation to the vacant floor space, makes it necessary to suspend a map on the wall over the fireplace, and a map so placed being continually drawn down in front of the fireplace to be used in a class lesson is invariably spoiled by smoke. There seems no reason why the Board of Works should not have prepared specimen plans for school buildings, in which the best arrangements of floor and wall space might be indicated. In a county like Kerry, where land is plentiful and easily obtainable for school sites, the architect cannot often be at a loss to adapt his plans to the given site. In any case more attention might be given to this particular, before the sanction of the Board is given to a proposed plan. State of school apparatus. Inconvenience of school buildings.

50. In schools where the disposition of the wall space renders the plan feasible, a simple arrangement for the better preservation of maps can be made—for the suggestion of which credit is due to Mr. Murphy, the teacher of the male school at Kenmare. A round roller, instead of being fastened to the bottom of the map in the ordinary way, is fastened to the top, a flat piece of wood being affixed to the bottom to keep the map down when exposed to view. The roller is then fixed to the wall in the manner of an ordinary window blind, like which it can be rolled or unrolled by means of wheel and cord. This plan has been copied by the teachers of several schools in the neighbourhood of Kenmare with good effect, their maps being thereby preserved from unnecessary wear and dirt at times when not actually in use. As the condition of the school apparatus depends so much on the care of the teacher, it is due to Mr. Murphy to state that his school was one of the best cared for in these respects, of any I visited. The best teachers are generally most careful of their apparatus. * Plan for hanging maps.

51. The original supply of school apparatus depends apparently in no slight degree on the interest taken by the manager in the efficiency of the schools under his charge. Its preservation so far as it is not affected by the character of the school buildings, depends on the care of the teacher. Supply of apparatus.

52. The renewal generally presses heavily on the teachers—more than one of whom complained of the cessation Free stock.

* Kenmare convent school contains, in addition to the ordinary school apparatus, a large globe suspended from the roof of the principal school-room ; and also a collection of philosophical instruments of various kinds (valued at £20), which were obtained from the National Board by the manager of the school (Ven. J. O'Sullivan) as a sort of reward for some practical suggestions made by him as to the structure of penholders.

of the grants of "free stock," formerly made periodically by the National Commissioners. New maps are often purchased out of the teachers' scanty salaries. In some cases contributions in aid are made by the parents of the children.

Sale stock.

53. The supply of "sale stock" depends a good deal on the professional zeal of the teacher. An indifferent master too often neglects the necessary outlay to obtain a supply of books. The expense of carriage from the nearest depot or railway station—and railway stations are very few in Kerry—which has to be borne by the teachers, causes them to limit the number of their orders for books and apparatus as far as possible. The amount of each order is also limited by their fear lest another of the too many and embarrassing changes which have of late been made in the National Board's school-books should throw a large quantity of old and useless stock on their hands. The teachers can ill afford the pecuniary loss which the piles of old and useless sale stock in their store cupboards frequently indicate.

Supply of books among pupils.

54. So far as reading books are concerned, the pupils of National schools are in general provided with one or other of the many editions issued by the National Board. Parents naturally object to purchase new editions of the same book, and the difficulties of teaching are increased by the variety of the books under the same class. It would be only reasonable if the issue of a new edition of any National school book were for the future preceded by six months' notice of the change.

55. The supply of text books of grammar, geography, or arithmetic amongst the pupils is affected by the greater or less degree of poverty of the parents. A parent who cannot pay school fees limits also his outlay on school books.

Copy books.

56. In one or two schools (as at Gortnaskehy) I found copy books not issued or sanctioned by the National Board; but in no other kind of book did I notice any departure from the list published by that body.

Ink.

57. It is, perhaps, too trivial to notice that the ink used in a very large number of National schools is bad. This was sometimes explained by the ignorance or carelessness of the teachers in using the ink-powders supplied by the National Board.

Number of Children attending School.

58. The following table, drawn up from the Constabulary returns of June 25, 1868, will show how far the people of Kerry take advantage of the local means provided for the education of their children.

Table showing by Baronies the Number of Male, Female, and Infant Children attending different descriptions of Primary Schools in Kerry, on June 25, 1868.*

* This Table has been compiled from the Constabulary Returns. In the returns from several of the Constabulary districts, no distinction was drawn between male, female, and mixed schools. I have rectified the omission as far as possible from personal knowledge, and the information supplied by the Appendix to the Report of the National Board for 1866. Under the head of "Mixed Schools," however, a few are included which I have failed to identify with any in the National Board's list, and about which I am consequently uncertain whether they are separate or mixed.

Under the head of "Scriptural" are included all schools which in the Constabulary lists are returned as Parochial, Protestant, Church Education, Islands and Coast Society's, Erasmus Smith's, or Wesleyan. My own experience showed me that the distinctions drawn by the Constabulary between schools under this head are too inaccurate to found any inferences upon them.

I have assumed all schools returned by the Constabulary as Private or Boarding to be Primary, except when, as in the case of St. Brendan's College at Killarney, the Loretto Convent School at Scartlea, and the Dominican School at Tralee, I knew them to be "superior."

The disproportion in the number of infants attending male schools (130) as compared with those attending female schools, is partly due to the circumstance that, in the Constabulary lists, no separate return is made in the case of fifteen school-houses having separate apartments for boys and girls, of the number of infants (279 in the aggregate) in each department. In these cases I have assigned all the infants to the female school. The returns would have been more valuable, did it not appear from them that no uniform meaning has been attached in their compilation to the word "infant." Nor, again, is any notice taken of the number of male infants attending the Kenmare Convent, and the Mercy Convent at Killarney.

Number of children attending schools not primary.

59. This total of 21,979 children, all of whom were, on the day the returns were made up, attending schools that can only be classed as primary, must, in order to present a complete view of the numbers receiving education in the county, be supplemented by 184 (110 males and 74 females) who on the same day were at schools of a superior or special character. This supplemental number is thus made up:—In the barony of Iraghticonnor,

41 boys attending a private classical school at Listowel; in Trughanacmy, 28 boys attending the school of the Dominicans at Tralee; and in Magunihy, 25 boys attending St. Brendan's seminary at Killarney; 62 girls in the Loretto Convent at Scartlea; 12 girls in Lady Castlerosse's industrial school at Killarney, and 16 adult males in an evening school in the same town.

Excess of males over females.

60. One of the first results which these figures exhibit is, that omitting the schools of the Christian Brothers, which are designed exclusively for boys, the attendance of males is in excess of that of females in every class of schools except separate schools connected with the National Board. This will be found true, not only of the total number of children attending each description of school throughout the county, but also of the numbers present in each of the several baronies, except that in the Scriptural schools in Iraghticonnor and Corkaguiny the girls exceeded the boys, and in those of Glanarought the numbers were equal. As regards separate schools under the National Board, the exception just noticed is considerably diminished in force, if, indeed, it is not even made to confirm the rule, when we recollect that in Kerry there are no female schools of a kind, so far as their external relations are concerned, at all similar to those of the Christian Brothers, all the primary convent schools being in connexion with the National Board. The Christian Brothers, therefore, teach children who, with very few exceptions, would, were it not for them, attend National schools. If, then, the 852 boys attending the Christian Brothers' schools are added to the number (5,393) of boys returned as attending separate male National schools, the total (6,245) shows an excess of males attending the better descriptions of primary schools over the 6,158 girls present at separate female National schools.* It must, however, be noticed that in Glanarought the total number of girls in attendance at school was in excess of that of the boys, and on closer inspection it appears that this excess was entirely confined to the separate schools. To reconcile this in some measure with the other facts just noticed, it is only necessary to remark that the National male school at Kenmare, the average attendance at which in the 2nd or June quarter of 1868 was 111·5, was closed for repairs at the time of the constabulary enumeration being made, and consequently the attractive forces of the convent school in that town were left to operate without the counterpoise (whatever it may be) which usually tends in other parts of the county to give a preponderance to the number of male pupils.

Number of males and females in 1861.

61. This excess of male over female pupils is the more remarkable when compared with the census returns of 1861, which show that in the whole population of Kerry there were 99,997 males, and 101,801 females, that is an excess of females amounting to 1,804. There seems no reason to doubt that the same proportion of males to females obtains in the county at the present time, though the data from which to ascertain the fact are very insufficient. It should, however be noticed, as a circumstance opposed to this assumption, that in 1861 the numbers of males and females under 15 years of age were as follow :—

	Males.	Females.
Under 1 year, ...	2,280	1,727
Above 1, and under 5 years, ...	11,862	10,786
Above 5, and under 10 years, ...	11,079	10,750
Above 10, and under 15 years, ...	10,279	10,065

62. In other words, of those who in 1861 did not exceed 15 years of age (and from whom, with the addition of children since born, the greater number of children attending school in Kerry on June 25, 1868, must have been taken), the number of males exceeded that of females at every quinquennial period.

Education Census of 1861.

63. But whether the ratio of males and females is or is not the same now that it was in 1861, the greater proportion of boys attending school on June 25 than that of girls is quite in accordance with statistics previously obtained. Thus, according to the Census Commissioners, out of a total of 17,180 children attending schools of all descriptions in Kerry on May 17, 1861, there were 9,280 males, and only 7,890 females; and out of 16,758 attending primary as distinct from superior schools on the same day and in the same county, 8,964 were males, and only 7,794 were females.

64. The actual numbers of boys and girls in comparison with each other, are all that it is necessary to advert to here. Their bearing on the feelings of parents respecting the education of their sons and daughters, respectively, will be more appropriately considered hereafter.†

Increase in numbers at primary schools.

65. As regards the total number of children at school on June 25, 1868, the figures presented in the foregoing table when compared with the results of previous calculations, give a favourable view of the extension of education in the south-west of Ireland, even on the improbable hypothesis that death and emigration have not outweighed the number of births. The probable falsity of the hypothesis only renders the figures more encouraging. The number attending schools of all kinds in Kerry on May 17, 1861 (of whom 422 were at "superior" schools) was 17,180, which, if compared with the 21,979 present on June 25, 1868, shows an increase in the latter year of 4,839, to which, if the 184 persons attending superior and special schools is added, the increase will amount to 5,023. The increase will appear still greater if the 21,979 of the present year are compared with the 16,758 returned as attending primary schools in the former year. It is possible, however, that the constabulary have not in their lists made a return of all the superior schools in the county, or of the children attending, although it is evident the distinction between primary and secondary schools, was in many instances disregarded, even if it was understood by them.

66. Unless this is the case, the number of children at superior schools in Kerry has diminished since 1861, which, if we except the Irish Society's training college at Dingle, which has ceased to exist, there is no reason to suppose to be the case.

Increase in number of pupils at National schools.

67. A similar increase is likewise exhibited as regards children attending National schools by a comparison of the constabulary returns with those of the National Board for 1866. In that year, according to the Board,‡ there were on the rolls of National schools 18,673 males, and 19,060 females, being a total of 37,773 (*sic* in report, but 37,733?), and a daily average of 15,526. If these numbers are compared with the 19,240 children of both sexes attending National schools on June 25, 1868, it appears that on the latter day 4,014 children were at National schools more than the daily average during 1866.

68. The extension of the National system since 1861, through the county, as well absolutely as in comparison with other modes of education, is further shown by the appended table which has been compiled in part from the Census Returns, part IV., vol. II., p. 657.

* In this calculation no account is made of the "Infants" in attendance at separate National schools. For the reason see paragraph 58. The 6 girls found at male schools and the 23 boys at female schools are also omitted, as their attendance, doubtless, depended on exceptional circumstances. A comparison of their numbers, however, incidentally illustrates the facts mentioned in the text.

69. TABLE exhibiting the Number and Sex of Children attending different descriptions of Schools on May 17, 1861, and June 25, 1868.*

DESCRIPTION OF SCHOOLS.	On May 17, 1861.			On June 25, 1868.			
	M.	F.	Total.	M.	F.	I.	Total.
National,	5,890	5,076	10,966	8,695	8,828	1,723	19,240
Christian Brothers,	1,006	—	1,006	840	—	12	852
Other Roman Catholic Communities,	15	1,076	1,091	—	—	—	—
Church Education and Parochial,	274	296	570	296	280	90	666
Other Societies and Boards,	236	234	470				
Private,	1,543	1,112	2,655	715	412	94	1,221
Totals,	8,964	7,794	16,758	10,546	9,514	1,919	21,979

70. From inspection of the table it appears that an increase of 8,274 has taken place in the attendance at National schools since the Census of 1861. But on the other hand it must be observed that the six convent schools, which in that year were classed as "other Roman Catholic communities," are now connected with the National Board. The increase of 8,274 must therefore be reduced by 1,091. The residue (7,183) shows the net increase of children attending National schools.

Diminution in number of pupils at other schools.

71. A diminution of 154 (or more than 15 per cent.) has taken place in the numbers of boys under the care of the Christian Brothers. The reason of this is not obvious. A very much greater reduction has taken place in the number of scholars attending private schools. This is doubtless the result in great measure of the extinction of hedge schools by the National system, and is, therefore, highly satisfactory, if regard is had to the educational powers of the present hedge teachers. A decrease is also shown in the number of pupils at "Church Education and Parochial Schools" and those of "other Societies and Boards," but if the 129 children† who, on May 17, 1861, were attending the Prison and Regimental schools at Tralee, and the "Patronage" and "Subscription" schools are omitted, the gross decrease of 374 will be reduced to 245, which probably represents with greater certainty the real decrease in the number of children attending this class of schools. The increased importance of the National system, as well as its relative importance to other means of education existing in the county, may be further illustrated by a comparison of the centesimal proportions of the number of pupils attending different descriptions of schools and the aggregate number at school on May 17, 1861, and June 25, 1868, as presented in the following table.

72. TABLE exhibiting the proportion per cent. of children attending different descriptions of schools to the whole Number present on May 17, 1861, and June 25, 1868.

DESCRIPTION OF SCHOOLS.	Proportion per cent. of Children attending each description of School to total number present on	
	May 17, 1861.	June 25, 1868.
National,	65·428	87·539

Private and Boarding,	15·843	0·991
Hedge,		4·564

Comparison of number of children attending primary schools with the whole population.

73. Satisfactory as these figures are, they will appear in a still brighter light if taken in connexion with the population of the county. It is true there are no accurate statistics of the present numbers of the people of Kerry; nevertheless, some conjecture can be formed. The population of all Ireland in 1861, according to the census report, was 5,798,967, viz., 2,837,370 males and 2,961,597 females. Of this total number the population of Kerry amounted to 201,798 persons, viz., 99,997 males and 101,801 females. The population of all Ireland at the end of June, 1868, has been estimated by the Registrar-General‡ at 5,543,285 persons, viz., 2,673,515 males and 2,869,770 females. Assuming, therefore, that Kerry bears the same ratio in respect of the number of its inhabitants to the whole of Ireland which it did in 1861, and that the proportion of males to females within its limits remains unaltered, its population must now amount to 192,901 persons, viz., 95,588 males and 97,313 females. It follows from these assumptions that the number of persons in Kerry has, since the census of 1861, suffered a decrease of 8,897, viz., 4,409 males and 4,488 females. On the other hand, it has been already shown that a larger number of children was in attendance at primary schools on June 25, 1868, than on May 17, 1861, the numbers at the two periods being 21,979 and 16,758 respectively. The increase of 5,221 has therefore taken place, notwithstanding a diminution in the total population of the county, which, if, as has probably been the case, it has been produced mainly by emigration, must have told most strongly on those strata of society to which the pupils of National and other primary schools chiefly belong.

* In this table the schools which by the Census Commissioners were classed under the separate heads of "Church Education and Parochial," and "Other Societies and Boards," correspond to the schools which, in the table in paragraph 58, ante, are classed as "Scriptural." The schools comprised under the heads of "Other Societies and Boards," were (in 1861) as follows, viz.:—Two schools at Dingle of the Irish Society; three Island and Coast Society's schools in Kilcrohane, Templenoe, and Valencia; the General Assembly's Mission in Kilcrohane and Killorglin; the Presbyterian Mission at Ballymacelligott and Killorglin; the Wesleyan Mission School, the locality of which is not mentioned; Erasmus Smith's schools at Tarbert and Tralee; the Prison and Regimental schools at Tralee; and two schools returned as "Patronage" and "Subscription." All of these, except the last four (at which, on May 17, 1861, 129 children were present) are evidently "Scriptural schools." The Prison school at Tralee is now under the National Board, but the Constabulary returns do not include it or the "Regimental," "Patronage," and "Subscription" schools.

In the columns of the table relating to 1868, all the schools are collected under the head of "Private," which in the foregoing table, in paragraph 58, were separately returned as "Hedge" and "Private and Boarding."

† See previous note.

‡ See the Registrar-General's Quarterly Return of Marriages, Births, and Deaths in Ireland, dated 15th August, 1868.

74. The degree of increase will appear more clearly if the per-centages of the children attending school to the whole population at each period are compared. In 1861 the per-centage was 8·343; in 1868 it was 8·776. Much stress must not however be placed on this comparison, as it ought hardly to be assumed in addition to the assumptions already made, and each of which involves its own elements of error, that the number of persons within the school-age bears the same ratio to the total population of the county which it did in 1861.

Religious Denomination of Children attending Primary Schools.

75. Whilst, however, the foregoing facts show that National schools play by far the most important part in the primary education of the mass of the people of Kerry, a cursory glance at the following table is sufficient to show that the National system has wholly failed, at least in this county, to bring about the mixed education of children of different religious denominations which was the prime object of its institution. Failure of National system to effect mixed education.

76. Table exhibiting according to Religious Denomination (E.C., R.C., Presb., or otherwise), the number of Children attending each description of School in the several baronies of the county of Kerry, on June 25, 1868.*

* The number of children appearing in this table is slightly in excess of that in the table on p. 440, ante. The discrepancy is still greater in the copy of the Constabulary Returns furnished to me, but in order to reduce it as far as possible I have corrected a few obvious mistakes. In this copy, the numbers of E.C. and R.C. children taken together are, in more than one instance, greater than the numbers of (presumably) the same children distinguished as males, females, and infants.

77. The religious condition of the people is, of course, the nearly sufficient explanation of this failure. The census returns of 1861 show that out of the population of Kerry at that time (201,798), the Roman Catholics amounted to 195,159, and in the minority outside the Roman Catholic pale was undoubtedly included the greater part of the upper classes of society, who do not send their children to be educated at National schools. There are no data on which to found a comparative estimate of the numbers of those who at the present time belong to each of the different religious bodies in the county; but having regard to the superior social position of the mass of those who reject the Roman communion, there can be no doubt that emigration has since 1861 told less upon the latter than upon their religious opponents, and that consequently among the classes for whom National schools are primarily designed, there is a slightly less disproportion than there was then between the numbers of Roman Catholics on the one side, and of the members of the Established Church or of the Protestant sects on the other. Religious Census of 1861.

78. In 1861 the number of Roman Catholics attending National schools on May 17, was 10,837, while that of members of the Established Church was 129, no children being returned as attending National schools who belonged to the Presbyterian or other Protestant communions. These figures on comparison with the corresponding figures for June 25, 1868, exhibit a positive increase of 8,075 children belonging to the Roman and 70 belonging to the Anglican Church, but at the same time indicate that the relative increase has been greater in the former than in the latter case. To state the matter differently the comparison shows that the tendency has been rather to diminish than to increase the degree of mixed education. But, on the other hand, the six convent schools, with their 1,091 pupils, which in 1861 were not connected with the National Board, must not be forgotten. There is no record of the religion of these 1,091 children, but having regard to the same convent schools now, when they are under the Board, it is probable that they were all, or very nearly all, Roman Catholics. Had these children been included in 1861 among the pupils of National schools the present comparison would have yielded a slightly different result. At neither time, however, has Kerry exhibited any important degree of mixed education. Looking then to the great preponderance of the Roman Catholic element in the population of the county, mixed education could hardly be expected to exist in it, except in a very small degree.

79. The figures however show what probably would not have been anticipated, that mixed education, so far as it does exist, has a place in Scriptural schools rather than in those under the National Board, or in other words, that the number of Roman Catholics attending schools where the Bible is read every day, has a larger ratio to the whole number of children in that description of school, than the combined number of Anglicans and Protestant Dissenters in National schools has to the mass of pupils attending them. The centesimal proportion of Roman Catholics to the aggregate number in the former case is rather over 5·6, while in the latter, that of Anglicans and Protestant Dissenters together is less than 1·1.* Mixed education in Scriptural schools.

* The corresponding per-centages in 1861 were slightly over 28·2 and 1·1 respectively. Hence it appears that there is about the same amount of mixed education in National schools in the county now as in 1861. Its apparent decrease in Scriptural schools since that date, could probably be modified in some degree if there were any returns of the religious denomination of the 129 children at the four schools (Prison, Regimental, Patronage, and Subscription) which, in 1861, were included under the head of "Other Societies and Boards." See note, paragraph 69.

80. It may, however, be urged that the comparison should not be founded on the data furnished by the collective body of schools in the county, but only on those which are furnished by schools where, as a matter of fact, children of different denominations were receiving instruction on the day when the enumeration was made by the constabulary; and the fact that numerous National schools are situated in districts where, with the possible exception of some landed proprietor, or a clergyman of the Established Church, the population is exclusively Roman Catholic, may be adduced in support of the argument. But if the comparison is made within these narrower limits, although the amount of mixed education existing in National schools will appear larger, yet relatively to that in Scriptural schools it will appear smaller. In only 58 National schools,* which, on June 25, 1868, were in operation in Kerry, was there a mixed attendance of Roman Catholics and children of other denominations, the numbers being 5,286 Roman Catholics, 199 members of the Established Church, 4 Presbyterians, and 1 other not specially designated. The non-Roman minority amounted therefore to less than 3·8 per cent. of the whole number. In seven Scriptural schools, on the other hand, where 47 Roman Catholics were found along with 99 children of the Establishment, the former amounted to rather more than 32·6 per cent. of the whole number.

81. No facts coming within my observation or hearing presented a different picture from that of the constabulary returns. The following table exhibits a list of all the schools visited by myself in which either the constabulary or I found mixed education existing in any degree at all. Any difference to be found between the two sets of figures is only such as might be expected on comparison between the number on roll during a given period, and that actually present on a particular day.

82. TABLE of twenty-three National and three Scriptural Schools, illustrating the extent of Mixed Education.

Small extent of mixed education in National schools.

83. In this table no notice is made of schools which I did not visit, but which were found by the constabulary to contain a mixture of children of different creeds; neither is mention made in it of the number of Roman Catholics in any of the National schools (except Muckross and Kenmare parochial), as it can be easily calculated from the average number on rolls, or the total number present when the constabulary return was obtained. It is obvious that, according to neither my observation nor the constabulary returns, does any important amount of mixed education exist. Where Anglicans or Protestant Dissenters are found in schools substantially Roman Catholic, their presence is generally explicable by the distance of their homes from any Scriptural school. The presence of Roman Catholics again in Scriptural schools is generally due to special causes, with which the acceptance of the principle of mixed education has nothing to do. For example, in one Scriptural school the Roman Catholics present were stated to be the children of a labourer, whose occupation on the demesne of a neighbouring landowner brought him into close contact with the chief supporter of the school in question. In another case certain parents, who had lately joined the Roman communion, in consequence of some petty feud between themselves and the rector, continued to send their children to the school which they had attended before the nominal conversion of their parents—a conversion so sudden or so shallow that it was unknown to and discredited by the parish priest.

Protestant Dissenters.

84. So far as Protestant Dissenters are concerned, the figures in the preceding table appear to indicate that in the constabulary returns the distinction between Anglicans and Protestant Dissenters, whether Presbyterians or of some other denomination, has not been carefully observed. The number of such Dissenters in the county is, however, so very small that the comparison would, for the present purpose, be absolutely unimportant, had it not been that, in one instance at least, I found that in a Scriptural school all the pupils were members of the Establishment, although the curate in charge of the parish stated there were many Protestant Dissenters in it who sent their children not to the Scriptural, but to a neighbouring National school. It did not appear whether this arose from a desire to protect their children's dissent from Anglicanism, by means of the National Board's rules relating to religious instruction, or from a conviction of the superiority of the teaching in National over other schools.

Muckross National school.

85. Until a short time prior to my visit Muckross (Cloghreen) presented a specimen—I believe a solitary specimen in Kerry of any considerable importance—of mixed education; but the Roman Catholics had been

* No distinction is made in this calculation between separate and mixed schools.

withdrawn by the administrator of the parish. I made close inquiry into this case, both of the patron, manager, and master of the school, all of whom were members of the English Church, and also of the Roman Catholic Bishop of the diocese and the National Inspector, also a Roman Catholic. All these witnesses made substantially the same statement—namely, that the Roman Catholic pupils were removed because there was no possibility of their receiving religious instruction in the school, which was non-vested. No suspicion was entertained that any infraction had been made of the rules of the National Board relating to religious instruction. On the contrary, a high character was given to the schoolmaster by the Roman Catholics who had been concerned in the matter; and as far as secular education went, it was admitted that the children were now necessarily sent to an inferior teacher. That drawback, however, was likely to be compensated by the appointment in his place of one more efficient. The special circumstances of this school make it a good instance to illustrate the distrust of mixed education which is entertained by the majority of persons whatever be their religious creed. It is true that the parents of the children removed them at the bidding of their clergy, and not of their own motion. But it must not be concluded that when they first sent them to that school they were knowingly acting in opposition to the wishes of their clergy. Persons who are in the habit, in all the chief concerns of life, of following the directions of their spiritual advisers, might well think that in sending their children to one school rather than to another less convenient in situation, and reputed to be less efficient, they had sanction for their conduct until disapproval of it was openly expressed. As soon as they became aware of such disapproval their habitual submission was proved by instant obedience.

Parental wishes and clerical influence.

86. In a matter such as mixed education, to which encouragement is never given by the clergy, whether Roman Catholic or Anglican, and as to which the only question is whether it receives direct discouragement or not, it is impossible to estimate how far the conduct of parents is the result of spiritual influence. This should be recollected in estimating the two following pieces of testimony respecting parental action in regard to mixed education. The rector of Ballymacelligott writes, in reference to a Church Education school under his management, in a district in which, until lately, there had been a dearth of National schools:—

"The Bible being taught in the school, and the master being a Protestant, the parents are frequently compelled by the priest to withdraw their children. They generally send them again after the lapse of a little time, but many more would attend had they liberty."

87. In this case indifference on the part of the parents to religious instruction in school, so long as they get their children educated, clearly accords with the facts stated quite as well as a desire for mixed education. The Rev. W. D. Wade says, in relation to the Church Education school at Milltown, that—

"About a year and a half ago it was closed for nearly a year, and during that time the National schools were attended by only five or six Protestants."

88. There are at present forty-nine on the roll of the Church school, with an average attendance of thirty. Mr. Wade adds:—

"So anxious are Protestants for *daily* religious instruction for their children, that eleven of the children attending my school pass by a National school at their own doors at Castlemaine, nine of them coming a distance of two Irish miles and a quarter. The reason given by their parents is the one I have indicated."

Mr. Wade is himself strongly opposed to mixed education.*

Opinions respecting Mixed Education.

Advantages and disadvantages of mixed education.

89. The results of the previous calculations are in fair practical agreement with the opinions expressed to me, either orally or in writing, on the theoretical question of the advantages or disadvantages of mixed education. Speaking generally, indeed, the Roman Catholic and Anglican clergy are for once unanimous in expressing a preference for a denominational system. Both alike in their anxiety for the spiritual well-being of their own flocks, are very properly and fairly willing to let their religious opponents alone, if only they may be unfettered in their own domains. Almost universal was the approval of the National system which I found expressed by the Roman Catholic priests; but on closer examination, I found their approval proceeded, not from acceptance of its theory, but from experience of its practically denominational operation.

General approval of the National system no proof of approval of mixed education.

90. In only one instance did I find opposition to the principle supported by a direct appeal to Papal authority. The Rev. J. Healy, P.P., of Cahirciveen, writes, respecting it, "The question for Roman Catholics has been decided by the Pope," a statement which, as made by him, is perhaps more remarkable than if it had proceeded from any other parish priest in the county, inasmuch as Cahirciveen alone, of all places in Kerry, contains both a Christian Brothers' and a National male school, of which the reverend gentleman is manager, and which, as I was informed, he always supports† in preference to that of the Christian Brothers, albeit the latter is both in theory and in practice strictly denominational. On the meaning of the denunciation which mixed education in Austria and elsewhere has recently received from the Papal See, and the exact bearing of it on the question in Ireland, I more than once endeavoured to obtain some statement of opinion; but where a bishop and a professor at Maynooth failed to give a definite answer to my question, success was hardly to be anticipated from inferior members of the hierarchy.

Theories of education little attended to.

91. In fact, on this point, as on almost every other connected with education, I found that questions of theory are very little studied by Roman Catholics or Anglicans. Practical results and practical means of attaining them are alone deemed to be important, although it would probably be too much to say that the time necessary to be spent in elaborating a theory, is considered too heavy a price to pay for the practical advantage possibly to result from it. The importance of the religious instruction of children is constantly present in the minds of the Roman Catholic clergy, and the necessity of its being given at least in part during school hours, is assumed almost as a matter of course. It is clearly in this sense that the Rev. D. O'Sullivan, P.P., of Cahirdaniel, pronounces for "unmixed education certainly, and religious education well attended to," adding, that "an educated person without religion, is like a ship in full sail without a rudder." One chief reason why the National system receives approval, or at least tacit acquiescence on the part of the Roman Catholic clergy in Kerry, seems to be that the distinction between the times of religious and secular instruction which the rules of the National Board require, is hardly felt, so long as the programme of studies is confined to subjects to which, for the most part, even the most enthusiastic devotee could hardly give a religious, let alone a theological or polemical aspect. Under different social and religious conditions I believe that the clergy who now give a scarcely qualified approval to the National system, would use different language: their practical approval would be less cordial and frequent, their theoretical antagonism would be more vehement. The Rev. C. M'Carthy, P.P., of Tuosist, expresses the opinion of nearly all the clergy of his own creed, when he says—"Though in this almost exclusively Catholic district, we have not much to complain of in reference to mixed education, still, I must say, the

General desire on part of Roman Catholic clergy for religious education.

* *Vide* paragraph 95.

† A witness in another part of the county, to whom I mentioned the circumstance, stated his belief, that the continuance of the National school side by side with that of the Christian Brothers, was due to personal or family obligations under which the parish priest was to the National teacher.

denominational system would be much preferable as being vastly more popular and consequently likely to work more beneficially, chiefly as regards attendance, because parents in general would be more anxious to send their children where the religious element could be mixed with the secular."

92. In strong contrast to this view is that of the Ven. J. O'Sullivan, P.P. of Kenmare (the parish adjoining Tuosist) and vicar-general. He writes—"I was educated in a mixed school, and I found it useful in afterlife, and I would like to see it now;" at the same time, however, admitting the singularity of his own position by the remark, that "I am quite aware it would find no favour whatever among our clergy."

Roman Catholic laity.

93. One or two Roman Catholic laymen, with whom I conversed, also expressed their approval of mixed education, but it is doubtful whether they sufficiently distinguish the theoretical principle of the National Board from the educational benefits which its schools have conferred on the country. Perhaps, too, their religious orthodoxy, quite independently of their views on education, would be called in question by their spiritual superiors.

Views of the Anglican clergy (1) in favour of mixed education.

94. Notwithstanding the general unanimity of Anglicans in their condemnation of the National system, there is an important minority among them, who approve the principle of mixed education, though they are dissatisfied with the mode of its application under the National Board.

95. The Rev. E. J. Wade, rector of Kenmare, writes—

"I believe genuine mixed education to be most beneficial; but it is impossible to regard convent schools, schools under exclusively clerical patronage and management, and those under lay patronage and management, as all equally calculated to afford a true mixed education. I believe the National system to be generally fairly carried out in this district; but it must be evident that Protestants cannot feel satisfied to send their children to schools conducted by monks or nuns. It would be well if in all schools receiving Government aid, not only permission, but invitation were given to the respective ministers to visit, and at fixed times, instruct the children belonging to their respective denominations. At least it would be possible to require service of notice of the names of any children registered as belonging to their religious denomination on the different clergy; and returns of their visits, or of their refusal to instruct or provide for the instruction, might be annually made by the inspectors. Whatever may be now practicable, I would record my full conviction, that one of the greatest boons which could be conferred on the country, would be a free and fearless system of education of children of all denominations together, and a broad and distinct separation of the common secular, and the special religious teaching."

96. The Very Rev. the Dean of Ardfert says:—

"I altogether approve of mixed education as best suited to Ireland," suggesting that "secular education *alone* should be given in the school or by the schoolmaster, each religious denomination being at liberty to provide a place and persons to give religious instruction to the children of their own persuasion, and one day in each week to be allowed for that purpose."

97. The Rev. T. A. Moriarty, curate in charge of Dromod and Prior parishes (Waterville) says:—

"The only advantage I can see in mixing children of different denominations of religion is, that it lays oftentimes a foundation for friendship and the absence of bigotry in years to come."

98. In a similar spirit Mr. Herbert, M.P. for Kerry (who, in an address to the electors, some time ago, pronounced himself in favour of a denominational system) informed me that he was now more favourable to mixed education, and expressed an opinion that it would be useful if Roman Catholic and Protestant children could be educated at the same time by teachers of their respective creeds in separate apartments of the same building. By this means they would necessarily be brought into contact during play hours, and on their road to and from school. Such contact, he thought, would allay religious animosities. In illustration of the influence of mixed education in softening party feeling and removing prejudice, he referred to the advantages of public schools and universities.

99. The Rev. E. L. Sandiford, rector of Valencia, "sees no harm arising from mixed education." This negative approbation seems susceptible of a more positive meaning, inasmuch as it appears by the constabulary returns that all the children, not Roman Catholics, who on June 25, 1868, were at school within his island parish, were, with a single exception, at National schools, and that at a school of the Island and Coast Society, within the same limits, fourteen out of fifteen children were Roman Catholics.

100. Some of the clergy of the Established Church would approve of mixed education, if only the system recognised their own views of the necessity of the Bible being read in school every day. The Venerable Anthony Denny, archdeacon of Ardfert, writes:—

"On the subject of mixed education I consider it would be desirable, provided the minister of religion be not required to compromise the principle to which he is pledged by his office of instructing those under his charge in the knowledge of the Word of God."

101. The Rev. J. H. Collins, rector of Ballyheigue, whose schools (two in number) are connected with the Church Education Society, says:—

"It is one of our leading principles that the Holy Scriptures should be read daily by the pupils. The Scriptures are not read in a controversial spirit, and, in the cases that have come under my notice of Roman Catholics attending our schools, I have never seen any instance of bickering, ill-will, or bad feeling. I would prefer mixed education of this kind, and, in my opinion, it would be attended with the best effects."

102. In a similar spirit the Rector of Ballymacelligott expresses his opinion that—

"Mixed education is decidedly advantageous, when God and religion are not ignored in the vain attempt to secure it."

(2) against mixed education.

103. It is obvious that these expressions of approval of mixed education, such as they are, imply, with scarcely an exception, disapproval if not of the theory, at least of the practice of the National Board. Disapproval, however, is frequently shown in stronger colours. Thus the Rev. W. D. Wade, of Milltown, writes:—

"I think that mixed education, if even it were possible in this district and at the present time, would be attended with such evils as to more than counterbalance any good. The evils I allude to are loss of daily religious instruction, injury in various ways to one or other denomination in morals and manners, and frequent heartburnings and fears, and anxieties, lest the religion of the children should, in any way or degree, be tampered with."

Opinion of Sir R. Orpen.

104. Sir Richard Orpen does not

"Consider that the so called National system does in fact effect the *mixed* education of children of different religious persuasions."

He adds:—

"There can, I think, be no doubt of the benefit of mixed education, that is, of the educating together of the children of different religious denominations; but I do not think *that* is secured by the National system. It was secured by the so-called 'Kildare Place Society,' but that was overthrown by the withdrawal from it of Government aid and the establishment of the so-called 'National Board.'"

Anglican dislike of the National Board.

105. One clergyman of the Established Church told me he strongly disapproved of the principle of the National Board, and wondered how any man who was conscientious could have anything to say for it. No modification of its rules, as to religious teaching, would make it acceptable to him. He believed that most of the "Protestant clergy" were in favour of the National system, and that the bishops gave no preferment to any who were opposed to it. Another, whilst admitting that the primary schools in his district which did not receive Govern-

ment aid were most unsatisfactory, would not, as a "Protestant clergyman" receive any assistance from the National Board. Even though he could have a school under his own management, with a master and scholars all of his own creed, he would not connect himself with it, because, by so doing, he should be making himself a party to a system which, by its toleration of all religions alike, sanctioned the teaching of error. The same witness, with a candour which it seems hard to reconcile with his strong sensitiveness as to making himself a party to the propagation of the Roman Catholic faith, professed his anxiety that the National system should be retained, because he believed that, except in the cases of conventual and monastic schools, it afforded some check to Roman Catholic teaching and influence. For the sake of this supposed result he would oppose the introduction of a strictly denominational system. In common with a few other Anglicans whom I met he seemed willing that the members of his own communion should have to put up with the admitted gross deficiencies of the Scriptural schools rather than give the Roman Catholic clergy a more complete control over the religious instruction of their flocks.

106. The Knight of Kerry, himself the manager of schools in which the great majority of the children are of the Roman Catholic creed, expressed his concurrence with the views relating to mixed education, of which exposition has been recently given by Master Fitzgibbon. He thought that religious differences, instead of being allayed, were rather fostered by bringing together children of different denominations. The exclusion of some children at the time of religious instruction was likely to impress on the minds of all the fact of religious difference at an age when the fact alone could be apprehended and not its reason.

107. Entire approval of the National system in its theory and practice I did not once meet with. Its practical operation, on the one hand, is approved by many, because in spite of theory and design it is denominational. By others, its professed purpose is with more or less modification approved, though they condemn it for its failure to bring about mixed education. The former class of objectors are either careless about change, or (if their mental habit makes them desirous of conforming theory to practice) are advocates of a purely denominational system, without, however, concerning themselves with conscience clauses or other devices to bring a rigid system into harmony with social requirements. The latter class of objectors are more anxious for change; but few of them have any practical scheme to suggest. Some few of the Anglican clergy, however, avowed their willingness to accept a system of strictly secular State education, the teachers to be entirely free from clerical control, and the religious training of children (which none of them thought should be left to the parents alone) to be left to their respective clergy, who would either give it in person or by deputy.

Suggestion as to application of Church Education Society's funds.

108. One clergyman suggested that, in order to meet the difficulties which the Anglican clergy have of furnishing religious instruction to a few children of their own communion attending National schools with Roman Catholic teachers in outlying parts of their parishes, the funds of the Church Education Society might be utilized by their application in payment of Scripture readers, parish clerks, or other deputies to be approved by them, to give religious instruction to such children. It is not likely that the "supporters" of the Church Education Society would sanction the application of their moneys to supply the deficiencies of a State system which they altogether condemn, because they believe it to be practically unjust to their co-religionists.

Comparison of the Attendance of Boys and Girls.

Excess of male over female pupils.

109. Attention has been already drawn* to the excess of boys over girls in attendance at school not only in the whole county of Kerry, but also with some trifling exceptions, in each barony and at each description of school, save that in separate schools under the National Board the balance is the other way. It is important to examine these facts a little more closely, because of their bearing on the desire manifested for female education, and also as I shall endeavour to show, on the position occupied by convents in the educational machinery of the county. Convent schools in Kerry all come under the category of National separate schools, and from comparison of the statistics exhibited in the three following tables it will appear that the exception to the ordinary rule which National separate schools present is almost entirely due to the influences, whatever they may be, brought to bear under the conventual system.

Schools in places where there are no convents.

110. The first two of these tables contain the quarterly averages (extracted from the Report Books) of the numbers on rolls and the numbers present for the year commencing July 1, 1867, and ending June 30, 1868, in thirty National schools taken indiscriminately from different parts of the county, but all so situated in respect of towns where convent schools are established as to be practically unaffected by them. The former of these two tables relates to schools in which there are separate apartments for boys and girls, either under the same roof, or (in the single case of Brosna) almost immediately contiguous. The latter comprises mixed schools only, which, as is generally implied in the united education of boys and girls in National schools, are situated in rural districts having a sparse population.

Separate schools for boys and girls.

111. It appears from the former of these two tables that in two schools only (Clogher and Clashnagarrane) did the number of girls on rolls exceed that of boys in each of the four quarters. In four schools (Tarbert, Ventry, Dingle Workhouse, and Tiernaboul) the girls on rolls were in slight excess in the third quarter of 1867, and in one of the four (Ventry) they were also in excess in the first quarter of 1868. They show a like preponderance in a small degree at Gortnaskehy school in the second quarter of the same year.

112. The instances in which the average number of girls *present* exceeds that of boys appear more frequent than is the case with the average number *on rolls*.† In three schools (Gortnaskehy, Clashnagarrane, and Lauragh) this excess appears in all four quarters. In four others (Tarbert, Tarmon, Clogher, and Tiernaboul) it is shown in the third quarter of 1867; and in two of these it occurred at other parts of the year also, viz., at Tarmon, in the fourth quarter of 1867, and the second of 1868, and at Clogher in the second quarter of 1868.

113. The result of this examination is that in five schools out of the thirteen (Tarbert, Gortnaskehy, Clogher, Tiernaboul, and Clashnagarrane) the average number of girls both *on rolls* and *present* during the period comprised in the table was greater than that of boys; at Ventry and Dingle workhouse the numbers *on rolls* and at Tarmon and Lauragh the numbers *present* were in excess. In four (Brosna, Knightstown, Sneem, and Cahirdaniel) the males were in excess of the females both "on rolls" and "present" during the whole twelve months.

114. It further appears that in all the schools where an excess of girls "present" is shown it existed in the third quarter of 1867 (July, August, and September), if at no other part of the year, and in the two schools (Ventry and Dingle workhouse) where this excess is shown only "on rolls," it was in the same quarter. Amid the variety of local circumstances which determine the attendance of children at school, much reliance must not be placed on a fact of this sort; but the time of year at which an excess of girls over boys is shown suggests at least that the operations of the hay and corn harvest, in which the boys are more useful than the girls, are in part its cause.‡

* *Vide* paragraph 60.

† This may possibly serve to indicate that girls once entered on the school register are more regular in attendance than boys. The instances, however, are scarcely numerous enough to warrant a confident induction.

‡ This rule does not however obtain in the mixed schools (comprised in the second table) which are mostly similarly circumstanced with the separate schools.

115. TABLE exhibiting the AVERAGE NUMBER on ROLLS, and the AVERAGE NUMBER PRESENT, from July 1, 1867, to June 30, 1868, in thirteen ordinary NATIONAL SCHOOLS having separate apartments for Boys and Girls.

117. Other and deeper causes, however, have doubtless operated on particular schools to bring about these results. Thus, in Tarmon, Gortnaskehy, and Lauragh schools the female teachers, as I discovered both from personal observation and local repute, are certainly far more attentive to their duties than the male teachers, and their

schools are consequently held in higher estimation in the neighbourhood. At Clogher, the female teacher works more harmoniously than the male with the parish priest, who is manager of the school; and at Clashnagarrane, where the female teacher is two divisions higher in classification than the male, a better result was yielded on examination of the girls than of the boys. In the cases of Tarbert, Ventry, and Tiernaboul I know of no special circumstances to produce the result; but in that of Dingle workhouse the greater readiness with which occupation can be obtained for boys than for girls affords a probable explanation.

Numbers of boys and girls in mixed schools.

118. On examination of the table relating to mixed schools it will appear that in Cahirciveen Poor Law Union school alone was there an excess of girls over boys "on rolls" throughout the year; but in four others (Ballynacartin, Derryquay, Cloghreen, and Killurley) there was also an excess during part at least of the same period —at Ballynacartin, in the second quarter of 1868; at Derryquay in the third and fourth quarters of 1867; at Cloghreen in the same two quarters, and also in the first of 1868 and at Killurley in the first of 1868.

119. As in the case of separate schools, so too in that of mixed schools, the instances of an excess of girls over boys "present" appear more frequent than of excess in the number "present." In the Poor Law Union school at Cahirciveen only is this excess shown throughout the year. It also appears in all the schools which showed an excess "on rolls" during the same period, only more frequently; and in addition to these, at Minard, Ardmore, and Lehid. The time of the excess was, at Ballynacartin the third and fourth quarters of 1867, and the second of 1868; at Derryquay, the third of 1867; at Cloghreen, the third and fourth of 1867, and the first of 1868; at Killurley, the fourth of 1867 and the 1st of 1868; at Minard, the first and second of 1868; at Ardmore, the second of 1868; and at Lehid the first of 1868.

120. What may have been the causes producing an excess of girls over boys in these schools and at the particular times when it existed, it seems hard to conjecture. It is obvious that in mixed schools the attractive forces of the teachers on the pupils are more nearly equal in respect of boys and girls then in separate schools where there may be considerable disparity between the qualifications of the master and mistress. The amount of the excess is however very small, and (omitting the Poor Law Union school at Cahirciveen, which is necessarily subject to special influences entirely absent from schools of the ordinary class) in only a single instance (that of Ballynacartin in the second quarter of 1868) did the difference in the average attendance of boys and girls exceed five. These instances therefore constitute very unimportant exceptions to the rule which the last table establishes, that in mixed schools the attendance of boys is much more numerous than that of girls, and they become still less important when notice is taken of the much higher degree of excess which the table exhibits in the schools where boys are more numerous than girls.

General conclusion.

121. The general conclusion, therefore, to be drawn from the two preceding tables and the table on p. 12 is that in ordinary National schools, whether separate or mixed, the number of male pupils tends to be greater than that of females throughout the county, and that exceptions to this law, if as such it may be regarded, are in most instances capable of special explanation. I have no corresponding data relating to Scriptural schools from which to draw any inference, as the registers and other books of these schools are kept in a different and less perspicuous form than those of National schools. The table on p. 440 however indicates that the same rule does not obtain among the children attending Scriptural as among those in National schools; and this, as the figures in the table on p. 443 indicate, is equivalent to saying that it is amongst the Roman Catholic population solely that greater anxiety is manifested by parents for the education of their sons than of their daughters. I assume that the difference in the respective numbers of boys and girls is really due to parental sentiments on the subject, because in answer to numerous inquiries which I made of the Roman Catholic clergy and the school teachers in Kerry on this subject, no other reason was ever suggested to me which was probable in itself or likely to be generally operative. The male teacher at Cahirdaniel, indeed, suggested that the early age at which marriage takes place in Kerry, as well as other parts of Ireland, would partly account for it, and he mentioned an instance of a girl being at school in the morning, and being married in the afternoon of the same day. I heard of one or two other similar instances; but the result of inquiries on this head was that the marriage age of females has little or nothing to do with the numbers attending school. A more probable influence, and one which doubtless operates in many instances, belongs to the domestic economy of the cabin, in which the female members of the family are more useful than their male relations in minding the baby or the potato-pot. The mother more frequently employs her daughters than her sons as her deputies, whilst she herself is working in the fields. The clergy with whom I conversed on the relative numbers of boys and girls at school, seemed not to be aware of the great difference which existed, having never made the requisite comparison of the report books. One of them, the Rev. D. O'Sullivan, P.P. of Cahirdaniel, said that if he were to be more urgent on his parishioners to send to school their children of one sex rather than the other, he should more strongly advocate the claims of female education, believing that by educating the future mothers of families, he should in the end be securing the education of males and females alike.

Causes of the excess of male over female upils.

Comparison of numbers of boys and girls at school in towns where convents are established.

122. A very different picture will be seen on reference to the next table, which exhibits, so far as I have received the necessary statistics, the average numbers "on rolls" and "present" at the principal primary schools, both male and female, in all the towns in Kerry in which convents are established for the purpose, either wholly or in part, of instructing children of the poor and lower middle class. Of the eight towns included in this, two, namely, Tralee and Killarney, have each of them two convent schools conducted respectively by nuns of the Presentation Order and Sisters of Mercy, and the female education of these places is therefore divided, whilst the boys are, for the most part, dependent on a single school. In Tralee, indeed, the Christian Brothers have schools in two parts of the town; but the returns furnished to me from them make no distinction of the separate establishments. At Cahirciveen the boys attending school are divided between two schools—those of the Christian Brothers and of the National Board. In the case of these three towns, consequently, it is necessary to add together the averages of the two male or female schools (as the case may be) before comparing them with the averages of the schools for the opposite sex.

123. TABLE exhibiting the average number of Boys and Girls on Rolls, and Present at National or Christian Brothers' Schools, from July 1, 1867, to June 30, 1868, in Eight Towns in which the Female Schools are connected with Convents.

Great excess of female over male pupils.

124. On inspection of this table it will appear that the convent schools throughout the county (with the exception of that at Dingle) have averages both "on rolls" and "present" greatly in excess of the corresponding averages in the male schools of the same town, the difference in some cases amounting to more than 100 per cent. The table shows no return from the National male school at Castleisland, but it is probable that the same preponderance of numbers at the convent school exists there also; for, by the constabulary returns, it appears that on June 25, 1868, there were 163 boys at the male school as against 215 girls at the convent, where there also were (besides twenty boys) 100 infants, of whom it is at least improbable that more were males than females. At Killarney a greater average of girls than of boys is shown even without account of the pupils of the Sisters of Mercy, from whom no returns on this head have reached me.

125. Besides the girls included in the returns, exhibited in this table, some of the convents (*e.g.* Kenmare, Castleisland, and the Mercy Convent at Killarney) have a considerable number of boys attending, some of whom, in the absence of the convent, would probably be found in the male school of the town. They are, however, with hardly an exception, infants, and all of them in the infant school. The greater part of them would probably be kept at home if there were no infant school under female care to receive and shelter them.

Causes of the popularity of convents.

126. The reasons, which may be assigned to account for this marked peculiarity of convent schools, are relative to the religious character of the institutions, the moral as distinct from the religious influences brought to bear by the sisters, the refinement of their manners in comparison with the female teachers of ordinary National schools, the superiority (real or supposed) of the education imparted, the substantial inducement of food and clothes, sometimes given to the pupils. On each of these points something may be said.

Their religious character.

127. I. Most persons outside the Roman Catholic pale, with whom I conversed on the subject, even those whose liberalism exceeded their Protestantism, entertain some suspicion of convent schools. Without charging the sisters with violation of the rules respecting religious instruction imposed by the National Board, they believe that the nuns acquire and exercise a spiritual sway over the minds of their pupils, which is unknown in other female schools; and, of this sway, it is supposed, the Roman Catholic clergy avail themselves, either as preparatory or supplemental to their own, by inducing the parents to send their daughters to convent schools, in cases where otherwise they would do little or nothing to promote education. In opposition to this view, which my experience makes me believe to be tacitly held by many who do not openly avow it, I would observe that no facts to warrant a suspicion of this kind were ever alleged to me with sufficient definiteness to place them on a higher level than that of hearsay evidence. Nevertheless, I believe it is highly probable that the religious do, in part by their superior manners and education, acquire a hold over the minds of their pupils, which gives them almost unconsciously an ascendancy in religious as well as secular matters. But that the clergy avail themselves of this ascendancy, and are more anxious, merely on religious grounds, that education should be in the hands of religious than of lay teachers (or, as some Protestants would say, are less opposed to it on that condition), is,

I think, a view not warranted by, if even it is not opposed to, evident facts. In a county like Kerry where the Roman Catholic element bears so large a ratio to the whole population, proselytism on that side of the religious arena has not, nor could have, an object or a place. From a secular standpoint it appears that the value of a single convent would fall short of the cost of obloquy and illwill which would accompany the gain. Besides this, the most important part of the direct religious instruction, received by children during their school career, is given them in the few weeks preceding their confirmation; and in order to impart this they are withdrawn to the neighbouring chapel no less from convent than from other schools. Again, the statistics relating to the towns, where Christian Brothers' or monks' schools are open for the boys whose sisters are under the care of nuns, will not bear out the opinion which I am venturing to dispute. The same suspicions are entertained respecting schools conducted by Presentation monks as are shown respecting convent schools, and in Christian Brothers' schools, where the National Board's fetters on religious instruction are unknown, the whole course and method of instruction are deeply tinctured, it may almost be said are saturated, with religion. Yet it does not appear from the figures that the clergy avail themselves of these supposed nurseries of their creed on behalf of the boys in a degree equal with or greater than that in which they avail themselves of the convents on behalf of the girls. Dingle may be an exception; but the exception is solitary and not remarkable in its degree.* As both the convent and the Christian Brothers' schools were closed at the time of my visit to that town, I cannot judge whether the character of the instruction in the one school as compared with that in the other proves more attractive to the boys than to the girls.

Their moral influence.

128. II. In regard to the moral as distinct from the religious influences of convents, it seems not improbable that the spectacle of women who, as in the case of the Presentation nuns and the Poor Clares, have taken perpetual vows of enclosure and devote themselves exclusively to the work of education, has an attractive power which, by its singularity, places the convent schools in a position of superiority over ordinary National schools. The ordinary National teachers, both male and female, bear a high character for morality, and in most cases, for assiduity. But vows of enclosure probably convey to the minds of the mass of the people, an idea of devotedness to their undertaking, on the part of the nuns, greater than is ascribed to the most moral and most assiduous of ordinary teachers, greater even than is ascribed to Presentation monks and Christian Brothers, whose vows, though no less perpetual, are not sealed with the outward and visible (or rather invisible) sign of lifelong and voluntary imprisonment.

Social refinement.

129. III. The refinement of manners which naturally characterizes ladies by birth and education, is one of the most striking features presented on entering a convent school after leaving a school of any other description; this refinement, when coupled with feminine gentleness, which is heightened by love for a work undertaken rather as a religious duty than as a professional occupation, constitutes, as far as I was able to trace, one of the chief elements in the attractive forces of convent schools.

Reputation of superior teaching.

130. IV. The examination I made of convent and other schools, showed me there was no constant and unvary-superiority in the education given in the former, although I believe the real superiority of one or two of them over all others, conventual or ordinary, has in the minds of the people conferred a spurious reputation on convent schools as a class, which they do not necessarily deserve. This reputation of superiority is shown not only by the distances (six or eight miles, and occasionally even, as I was told in the case of the Presentation Convent at Killarney, ten miles) which girls are made to walk in order to reach the convent, but still more by the not unfrequent instances in which children are sent from country districts to board in town and become pupils of the nuns. The numbers of such boarders at the time of my inquiry were as follows: at the Listowel Convent, 58;† at the Presentation Convent in Tralee, 12; and at the Mercy Convent in the same town, 14; at Milltown Convent, 8; at that in Castleisland, 30; at Dingle, 3; at the Presentation Convent in Killarney, 6; and at the Mercy Convent in the same town, 25; and at Kenmare, 33. At Cahirciveen, the only other town where there is a primary school in connexion with a convent, there were no country girls boarding in town, but many children, I was informed, come great distances in the summer, in the evening returning home, where "in the absence of servants who are now scarce and expensive," their services are required. These figures show in the clearest manner the existence of some special attractive power in convent schools. But on the assumption —and I heard nothing to make its admissibility doubtful—that no similar practice of boarding country boys in town, for the sake of the monastic or Christian Brothers' schools exists, the numbers of female boarders must be deducted from the averages of their respective schools before any comparison is instituted between the numbers of boys and girls receiving instruction in each town. This deduction, however, will not render the male scale heavier than the female, an excess of females over males will still remain, which requires explanation.

Gifts of food and clothing.

131. V. Another influence which convent schools alone exercise makes itself felt in a most material shape. At all, or nearly all the convent schools, food or clothing, or both, are distributed among some of the children during the whole or part of the year, and these gifts doubtless attract large numbers of children of the poorest class, and increase the regularity of their attendance. The following particulars on this head have been furnished to me from different convents. At Listowel, "different articles of clothing, according to the wants and merits of the children, are given *several* times in the year." The season of the gifts varies, as it was found that "giving them at stated periods was taken advantage of by some parents, who used to send their children regularly for some time previous to the distribution, and soon after keep them at home." At this convent, out of an average number on rolls of more than 500, "about 100 children get daily a luncheon of *best* bread and milk, or coffee (soup in winter). During several years past, 60 grown up girls got a full meal daily of best bread and soup." Want of funds, however, obliged the sisters "to give up this charity for the last twelve months; however, occasional relief was often given to the very poor. The plentiful harvest of last year made this *falling off* less felt both by the poor children and the *nuns*."

132. At the Convent of Mercy, Tralee, "80 children get bread (½lb.) and broth (a pint) two days in the week; bread and gruel (same quantities) three days." This food is given in the first quarter of each year, as the sisters "generally find there is most distress, and least employment about that time. Forty children get woollen frocks and check bibs."

133. At Milltown only two children received food. This was given them throughout the year, and consisted of bread and milk and meat for dinner. As many as 56 received during the year 1867, clothing, "consisting of dresses and inside garments," the time of distribution varying "according to their progress and necessities."

134. At Castleisland the number of children receiving clothing was 76, and receiving food, 40. The clothing consisted of "dresses, bibs, and under-clothing;" the food of "Indian-meal stirabout and milk. No *given* quantity of food is portioned out, as much is given at first as it is thought will be consumed, but if not enough, the children are helped again." This relief is given in winter, spring, and summer.

* *Vide* table in paragraph 123.

† This was the number for two quarters preceding my inquiry. In the course of the two preceding years the number had amounted to 96.

135. At Dingle, "about 150 children get dresses, pinafores, and other wearables, generally in winter." The children also receive bread during playhours "in times of distress."

136. At the Presentation Convent, Killarney, the number of children who receive clothing "varies according to the resources. Last year 100 were clad. Christmas and Easter are the usual seasons of distribution. Twelve get breakfast daily."

137. At the Convent of Mercy in the same town, 26 received food daily, and 32 received clothing "when merited for regular attendance," &c.

138. The Presentation nuns at Cahirciveen give "premiums to the most deserving in success, and clothing to about 100 children, who value the most trifling articles circumstances permit to be bestowed on them. Infant children in the scarce season, with a few other distressed ones, receive a small lunch of shop bread, of which no accounts were kept. If breakfast could be afforded, a far larger number would attend."

139. At Kenmare, £30 was expended at Christmas, 1867, in the purchase of clothing for the children, of which £15 was spent in print, £5 in long cloth, and £10 in gray calico; 160 daily get breakfast, consisting of stirabout and milk, and a piece of bread, in the middle of the day, to the amount of about £2 10*s.* weekly.

Causes which affect the Regularity of Attendance of Children at School.

Causes which affect regularity of attendance.

140. In the absence of statistics to show what number of children there are at present in Kerry of an age when they ought to be at school, it is impossible to arrive at any definite conclusion whether or not the increase in the actual number which has taken place since the Census of 1861* has reached a point beyond which, if comparison is made with other parts of Ireland, or other countries, no further advance is likely to be made. But a comparison of the average numbers "on rolls" and "present," exhibited in the three previous tables, shows that a considerable difference generally prevails between the numbers of those who might be expected to be, and of those who actually are found in attendance. It is impossible to account altogether for this disparity by the practice which exists in National, and, I believe, also in Christian Brothers' schools, of keeping a pupil's name on the rolls until he or she has been absent uninterruptedly for three months. If, then, as I believe was the case, the enumeration of children at school on June 25, 1868, was made without previous notice having been given to the teachers, and if consequently no special effort had been made by them to collect a larger number of scholars than would under ordinary circumstances have been attending school at that period, it is clear that the returns of the Constabulary do not represent the numbers who ought to be regularly at school in Kerry. Complaints were continually made to me by the teachers of the irregularity of their scholars' attendance, but as these complaints were mostly apologetic for the deficiencies of the children, they must not, of course, be received without caution.

No reluctance on the part of parents.

141. Generally speaking, I discovered little trace of reluctance on the part of parents to avail themselves on behalf of their children of the existing means of education. The testimony of all classes of society, of the high no less than the low, of the clergy and the laity alike, pointed to a general desire for education. Of actual carelessness on the part of parents in the matter of education I seldom heard, except that in Killarney and its immediate neighbourhood, it seems that tourists, during the summer, exercise a corrupting influence. The beggar children who run after the cars on the most frequented roads clamouring for coppers are, in many instances, as residents in the district told me, the sons and daughters of farmers who have no need of the few pence which travellers give, as much for their own amusement as in charity, in answer to the importunities addressed to them. But even these children incidentally testify to the popular desire for education. One of their most favourite petitions is "Please, sir, give me a penny to buy a book."

Detailed evidence relating to attendance in the different baronies of Kerry: Iraghticonnor,

142. It will possibly be useful to produce in detail the evidence which I have obtained from each barony of Kerry respecting the attendance of children at school.

143. *Iraghticonnor.*—The Rev. J. M'Ewen, Vicar of Listowel, writes "I am not aware of reluctance on the part of any parents to avail themselves of any one or other of the schools (Scriptural or National) for the education of their children. Except agriculture, there is no other occupation likely to keep the children from school."

144. The Rev. D. Foley, P.P. of Tarbert, says "Poverty only keeps the children from school." Tarbert, in common with the rest of the region along the Shannon, I imagine, is one of the poorest parts of Kerry. The people of the town mostly depend for a precarious livelihood on the river trade of a small port. The main roads of the district run for miles through wide expanses of dreary bog which border them on each side, only here and there interspersed with small patches of potatoes or meadow grass.

Clanmaurice,

145. *Clanmaurice.*—From Ballyheigue, the Rector, the Rev. J. H. Collins, writes "I think the advantages of education for their children are better appreciated by parents than they have been. It often happens that the children of small farmers and labourers do not attend with regularity, as their parents, at any time they have a press of business, keep them from school for the purpose of assisting them at work. I believe, also, they are often removed altogether from school when they are able to earn wages. The pupils attending the schools here are in most cases the children of farmers and labourers. There are, however, in a few cases, the children of coastguards and retired coastguards in attendance."

Trughanacmy

146. *Trughanacmy.*—From Blennerville, close to Tralee, the Very Rev. the Dean of Ardfert, writes, "Some of the poorer classes are indifferent to the education of their children, and it is not urged on them by their clergy. There is no such industrial occupation for the young in this neighbourhood, as should prevent their attendance at school."†

147. From Ballymacelligott, the Rector, the Rev. W. H. Disney writes, "The Bible being taught in the school, and the master being a Protestant, the parents are frequently compelled by the Roman Catholic priest to withdraw their children. They send them again after the lapse of a little time, but many more would attend had they liberty. All are occupied in farming, and this interferes with the attendance of the children in spring and harvest." This, of course, refers to the Scriptural school. Bally-Mac-Elligott is a well populated district, and lies in the midst of a fertile tract of corn-land. The parish priest is an old and very feeble man, quite incapable of parochial work. To his feebleness may in part be attributed a lack of National schools, which has for some time existed in the neighbourhood, but which is, however, being supplied through the exertions of his curate, by the erection of two or three new school-houses, one of which, at Bally-Mac-Thomas, had been opened

* *Vide* paragraph 72.

† The great difference between the average numbers "on rolls," and "present" at Blennerville National male school, fully accords with this statement. The numbers are as follows:—

	Average on Rolls.	Number present.
Third Quarter, 1867,	101·8	66·7
Fourth ,, ,,	101·8	63·3
First ,, 1868,	94·2	58·3
Second, ,, ,,	95	60

about a fortnight before my visit. This supply may probably satisfy the demand which a Scriptural school cannot meet. The low average attendance compared with the numbers on rolls at Clogher school * (till recently the chief, or only National school in the parish), coupled with the excess of girls over boys, confirms Mr. Disney's statement, that farming occupations interfere with school attendance in spring and harvest. The average attendance of boys at this school was much lower in the third, or harvest quarter, than at any period of the twelvemonths, while that of girls was stationary throughout, except that in the second quarter, *i.e.*, during the interval between sowing and reaping, pupils, both female as well as male, were more numerous than at any other time.

148. From Milltown the Rev. W. D. Wade writes—"The attendance of children is very irregular, and if I were to judge from the numbers of children at all hours on the roads, and about the cabins, I should say that the numbers attending school were very small as compared with what they should be. The distance of the schools and the inability of the parents to forego the labours of their children has much to do with it. The chief occupations are agricultural, and interefere at certain seasons very much with attendance." It must be recollected that in Milltown both the male and female National schools are conducted by religious orders. From the ordinary standpoint therefore of Irish Protestants, it cannot appear that any religious difficulties diminish the attendance of children at Milltown.

149. *Corkaguiny.*—The Rev. A. Denny, Archdeacon of Ardfert, writes from Kilgobban Rectory, a few miles from Tralee—"The parents are sufficiently willing to avail themselves of the means provided for the education of the poorer classes, for young children, but as they are generally engaged in agricultural pursuits, the male children especially are removed as soon as they are of an age to render them assistance." Corkaguiny

150. The Rev. A. Isaac, Rector of Killiney, writes—"Generally speaking, I do not think any reluctance" on the part of parents to send their children to school "exists. As the only religious instruction given in the National schools of this neighbourhood is Roman Catholic, some of the Protestant parents reluctantly send their children to a school in which the only religious instruction is of the above mentioned character. The parents of one family send their children to reside with a relation in a distant parish, where they have the opportunity of attending a Scriptural school. I do not, however, see a remedy for this, as the Protestant children are at present too few to have a separate school. The industrial occupations that prevail in this neighbourhood are connected with farming, which, during the heavy seasons, keeps a number of children at home." At Derry Quay school, which is in the same district as Kilgobban and Killiney parishes, and where the parents of the pupils are mostly labourers, very few having land of their own, the teacher said that from October to April a very large number of his scholars were occupied in gathering sea-weed to be used as manure. The averages† of this school fairly tally with this statement, but at no part of the twelvemonths do the pupils in attendance much exceed fifty per cent. of those "on rolls," and for half the period they fall below this.

151. At Minard, where the averages both of boys and girls are lower in the first two than in the other two quarters of the year,‡ the boys are said to be kept from school to work on the land; and the girls to "save" the hay and bind the corn. If these are the chief occupations of the children, the attendance of the girls, at least, ought to be lowest in the third quarter, whereas it is highest at that period. The district is a very wild one, and severity of weather in the early part of the year accordingly operates with special force, as a hindrance to school attendance. This cause was assigned for the low averages in the first quarter of the year at the neighbouring school at Ardmore.§ The combined influences of severe weather and agricultural occupations are shown in the returns from Dingle Workhouse,‖ where the largest number of scholars is found in the first half of the year. When winter is over, and farming work begins, the inmates of the house go out to seek occupation, and only return when driven back by severe weather.

152. At Ventry National school, where the average numbers "present" bear a very low ratio to the numbers "on rolls," the male and female teachers both stated that a large number of the children in the neighbourhood did not attend school, the male teacher thinking that about a third of the children in the parish never went to school. In this parish the female teacher thought the people were not *very* poor. The rector of this parish, the Rev. — Foster, said that in spring and harvest time he found it very hard to get any children to attend the parochial school, except the little ones. Fishing and farming are the chief occupations of the people, and the children are kept from school to cut seaweed or work on the land. The members of the Established Church in this parish are about 206; and the average attendance of boys and girls collectively at the parochial school in the year ending July 1, 1868, was 30. Some 4 or 5 children who would otherwise attend this school (where there had been no Roman Catholics for the last six years), remain absent because of its distance from their homes.

153. The low attendance of children at Ventry National school accords with the backward state of the district, which is generally considered the wildest part of Kerry. As far as my experience went, it contains a larger proportion of Irish-speaking population than any other part of the country.¶ In many places the children were somewhat puzzled with my English accent; but in no other did they fail in understanding simple English words and sentences. In Ventry male school English seemed a foreign language to all the children in the first, second, or third classes. Even the master after some ineffectual attempts in English, was obliged to address the youngest children in Irish before they could comprehend some very simple orders. This was the more remarkable, because there was no similar difficulty still farther west, at Ballyferriter and Vicarstown. But the people of these places, I was told by more than one Roman Catholic clergyman, who had lived in the district, notwithstanding their additional remoteness, have more intercourse than those of Ventry with the town of Dingle, and consequently have greater opportunities of learning English. In the opinion both of the rector and of Lord Ventry, what education does exist there is owing to the stimulus of the parochial school, before the establishment of which there was no instruction to be had except from a hedge teacher. The ignorance and backwardness of this district, has in by-gone years been deemed to specially fit it for the enterprises of the Irish Society, one of the principles of which is to address the people in their native tongue. The spirit of proselytism seems however to be diminishing. The Irish speaking population.

154. At Ballyferriter, where there is a large National school having considerable local reputation, the teacher expressed his belief that perhaps a third, but certainly not a half of the children of the neighbourhood attend school. Some of them are sent out to service, but more are kept at home either in idleness, or to assist their parents, who are for the most part small farmers or labourers. If the whole year is taken into account, the young children are more regular than their seniors in attendance. School-fees are paid by about a quarter only of those who receive instruction, and if their payment were more stringently enforced, the number of pupils would be immediately reduced.

155. At Vicarstown, situated in the most westerly part as well of Ireland as of Kerry, and which, with the exception of the Blasket Island immediately adjacent, contains the most remote school in that direction in the country,

* See paragraph 115. † See paragraph 116. ‡ See paragraph 116.
§ See paragraph 116. ‖ See paragraph 115.
¶ In Ventry parish the service of the Established Church is said, and the sermon preached in Irish.

the teacher stated that a few children only are neither at school nor at work. All the pupils live near the school, and education is virtually gratuitous, school-fees having amounted in 1867 to 9s. only, which were paid by the children of five farmers. Most of the people are engaged in fishing, and are unable to forego the pittances which their children can earn. Unlike most schools, the average attendance* is slightly higher in the first than in any other quarter of the year, inasmuch as at that period there is least fishing.

Magunihy. 156. *Magunihy.*—In the parochial school at Killarney, the average attendance was represented by the teacher to amount to 19 throughout the year; and this number he considered included all the children (not Roman Catholics) of a class to which the school was adapted. The greater regularity of attendance which is exhibited in this and other Scriptural schools, is due in some measure to the greater prosperity of the persons who send their children there, but still more to the more special and individual attention which the clergy of the Established Church can, if they choose, bestow upon their small flocks than is practicable in the case of the Roman Catholic masses.

157. At the Convent of Mercy in Killarney, notwithstanding that all the pupils are girls, the attendance is found to fluctuate according to the agricultural operations of the season, being lowest at the times of tillage and harvest, and highest in the intermediate summer quarter. If severity of weather in the first quarter of the year is the cause of attendance being lowest at that time, at the Presentation Convent in the same town, the variation in the number of pupils at that school† correspond with those exhibited at the Convent of Mercy. The figures relating to the Presentation Monastery have a not very different aspect, except that in the third quarter of the year the employments of harvest, or of the tourist season, seem to reduce the average of male pupils more than the severity of weather in the first part of the year; and this too, although the monks do not distribute the substantial benefits of clothing and food, which tend to keep up the numbers at the convents during the winter time.‡

158. The teachers of Tiernaboul and Clashnagarrane schools find the regularity of their scholars' attendance is interfered with by the necessities of farming, the children being needed sometimes to sow potatoes, or "save" the hay and other crops; at others to tend the cattle.

159. At Muckross National school§ the attendance appeared from the report book to be generally best in the winter quarter. This exception to the general rule is not explicable in any obvious manner.

Iveragh. 160. *Iveragh.*—The Rev. J. Healy, P.P. of Cahirciveen, attributes the badness of attendance at school in his parish to "the high rate of wages," the industrial occupations being "sowing crops, cutting and saving crops, potatoes, oats, hay, turf." With a slight exception in the case of the convent, the attendance at all the three primary schools in this town, seems to be best from September to Christmas, and worst in the following quarter.‖ Farming operations therefore appear to have less to do with the number of pupils than the character of the weather.

161. At Portmagee,§ Killurly,§ Ballycarbery,§ and Kells§ the attendance is least in the winter quarter. The school at the first of these places, which is held in one of the most utterly wretched sheds I saw connected with the National Board, is, with the exception of hedge schools, the only source of instruction in a wide district, the two nearest schools being one at Cahirciveen, eleven miles off, and another in the mountains at a distance of seven. The people of the town, which has considerable local importance as a fishing station, are all very poor, and their children, for whom they are often unable to provide clothes, are in consequence frequently detained from school. Farming occupations diminish the attendance at Killurley, Ballycarbery, and Kells; and so too at Foilmore,¶ where there are separate male and female schools; the attendance of the elder girls is sensibly diminished in the season for sowing potatoes.

162. The testimony received from other parts of the country round Cahirciveen agrees with the deductions to be drawn from these statistics. The Rev. D. Browne, P.P. of Prior, says—"The reluctance of parents arises from two causes—the distance of school principally in winter and the scarcity of hands for agricultural labour." So Mr. J. F. Fitzgerald (of Kinneigh), J.P., says—"There is no reluctance; however, during the spring and harvest work, parents are compelled to keep their children at home on account of the scarcity of labour."

163. The Rev. T. A. Moriarty, curate in charge of Dromod and Prior, says—"I see no more reluctance in my own people" (he is speaking of members of the Established Church) "than I have seen in others. When home affairs do not intervene, they are sent regularly; but I must say that more anxiety (than there is) could be shown for education in all this place in general, and that the non-valuing of it is the cause."

164. In Valencia, where few causes external to its geographical limits can operate on the attendance of children at school, the figures relating to the two schools** at Knightstown show that the second quarter of the year has with the exception of the winter season the lowest average; and the same is the case at the National school†† situated in the middle of the island. What local cause operates in Valencia to make the attendance in the second quarter lower than in the third or fourth in opposition to the rule prevalent in the rest not only of Iveragh but of all Kerry, I have been unable to determine. Most of the people are engaged in farming, and the children of parents working in the extensive slate quarries in the island, seem subject to the same, but no other influences than those affecting the children of the farming class. The National schools of Valencia are supplemented by a hedge school at Corobeg, at the end of the island farthest from Knightstown. In this school the average attendance is stated to be highest in winter, when the distance of the National schools makes severe weather a more powerful obstacle to children living in its vicinity.

Dunkerron. 165. *Dunkerron, South.*—The testimony of the Rev. D. O'Sullivan, P.P. of Cahirdaniel, is that no reluctance is in general manifested by parents to avail themselves of the existing means of education for their children. If it even does exist, it is due sometimes to the distance of school, sometimes to inability to forego children's

wages. It is never due in his parish, to the amount of school-fees, to want of confidence in the teacher's skill, or to any religious objection. He adds that "children are kept from school often during harvest and on the occasion of collecting seaweeds for manure." In this district, where Irish is still much spoken, the male teacher stated there is a general desire that children should be taught English. Husbands, he said, require a less portion with their wives if they can speak that language. Only a few poor children are kept at home by their parents, and this because of their inability to clothe them with sufficient decency.

166. In the adjoining district of Sneem, the Rev. T. Davis, P.P., gives it as his opinion that "reluctance arises chiefly from the distance of schools, amount of school-fees, and inability to forego children's wages. Agriculture materially affects the attendance in this parish, chiefly during spring and harvest time."

167. The teachers at the National schools in Sneem, and the Scriptural schools in that town and in Templenoe parish all spoke of the influences of weather, distance, and agricultural labour on the attendance at their schools.

168. *Glanarought.*—The Ven. J. O'Sullivan, P.P. of Kenmare and Templenoe, says, "The only reluctance I can observe arises from the distance of the schools. The spring business generally diminishes the attendance for a couple of months." The teacher however of the National male school in Kenmare (of which the parish priest is *not* manager) expressed his belief that many children are kept at home from the mere carelessness of their parents. Glanarought.

169. The Rev. E. J. Wade, rector of Kenmare, writes—"Country schools are affected by the usual agricultural pursuits at certain busy seasons: for this no remedy can be suggested in this county of small farms."

170. The figures relating to Kenmare parochial school,* which has been placed by the present rector under the National Board, confirm what has been previously† noticed in the case of Scriptural schools respecting the high average of attendance of the scholars "on rolls," and its regularity throughout the year.

171. From the adjoining parish of Kilgarvan, Sir R. Orpen writes—"There is no reluctance on behalf of the Roman Catholic parents to avail themselves of the schools under the National Board; but there is on behalf of the Protestant parents an objection to send their children to a school where the Holy Scriptures are systematically and practically excluded. The parochial school contains about thirty children, of whom about half are Roman Catholics. I believe the parents of the poorer classes are generally very anxious for the education of their children, but the boys are often prevented from attending the schools by employment on their fathers' farms. There are no *industrial* occupations in the neighbourhood in the usual acceptation of the word; agricultural employment is the only occupation here. Some years since, my wife, Lady Orpen, established at our expense, a school for teaching various kinds of needlework to girls without religious distinction; it was successful for some time. There was no other instruction of any kind given, but we were, as I understood, publicly denounced by the parish priest, and the school was broken up; for no reason that I could ever discover, unless it was not thought advisable that the poor people should suppose that they derived any benefit from the Protestant gentry. I must however say that I believe the priest acted under *superior* orders and not of his own motion."

172. The parochial schoolmaster of Kilgarvan finds the attendance vary most in spring and autumn, when they children are kept at home to assist their parents in farming operations. Few are kept away by the inability of parents to forego the wages which the children can earn.

173. From Tuosist, on the other side of Kenmare, the Rev. C. M'Carthy, P.P., writes—"Parents have no reluctance to the existing means, if, in their neighbourhood, and if they could afford, as some cannot, to pay the ordinary school fees, I see no other objection on their part. Agricultural occupation interferes considerably with school attendance, owing to the excessively high rate of wages and the general poverty of the people."

174. The teacher of the Lansdowne school (Coornagellough) in this parish, stated that the children of the scattered population in the adjacent mountains do not attend school, and this he attributed to the ignorance and consequent carelessness of their parents. The teacher of Lauragh school (also in the parish of Tuosist) said that most of the children in that district attend school, except a few in the remote glens. Their attendance is, however, very irregular.‡ A great many sheep are fed on the mountains of the neighbourhood. The boys have to look after the lambs, and the girls are made to spin wool. Few of the latter go to school before they have learned to spin.

175. This evidence is tedious from its reiteration of the same or similar particulars, but is valuable on account of the conclusions to which it points. In the first place, it shows that, whatever opinions to the contrary may be entertained in certain quarters, there is no desire on the part of the Roman Catholic clergy to withhold from their people the benefits of education, which, with very few exceptions, all are anxious to obtain. It confirms, too, what has been said in a previous portion of this report on the subject of mixed education. When religious scruples do interfere at all with the attendance of children, they have reference to a system which, notwithstanding that it boasts of its nationality, is, in this part of Ireland, distrusted by the minority, who, in consequence, avail themselves but little of its services. Result of the evidence.

176. A further inference is that the causes which operate throughout Kerry to retard the spread of education, are in the main of a social or economical kind, which lie beyond the province of an educational system to remove or modify. Difficulties arising from the distance of school are being gradually removed by the multiplication of school buildings; and if, after its long ebb, the tide of population were again to flow, this multiplication would be accelerated probably in more than an equal ratio. The concentration of wealth consequent upon increased density of population, would furnish means to supply the demand for school buildings occasioned by that increase. A diminution of distance would deprive severe weather of much of its hardships. Social and economical causes which affect attendance.

177. In the present condition of the country, it seems impossible to reconcile the conflicting claims of farming and education in a manner favourable to the latter. Increase of prosperity alone will put farmers and farm labourers in a position in which they will venture to sacrifice their children's present earnings in order to obtain for them the prospective advantages resulting from education. Without a compulsory system, the hindrances arising from poverty can be but gradually removed.

*The averages in Kenmare parochial school, which has been placed by the present rector under the National Board are as follow:—

Means for Securing Increased and More Regular Attendance.

Plans for increasing attendance.

178. How deeply seated in the social organism of Kerry are the obstacles which impede the progress of education is recognised in the suggestions made for procuring increased and more regular attendance. "Put a stop to emigration," is the advice given by Mr. Fitzgerald, J.P., in order to obtain this end. "Allow subdivision, or prevent consolidation of farms, and thus increase the number of occupiers," says the parish priest of Cahirciveen. "Grant tenant right," is the suggestion of the parish priest of Tarbert.

School premiums.

179. In default of such sweeping measures it is probable that some improvement may be effected by means applicable, under existing circumstances. Premiums for regularity of attendance, or of attendance and attention combined, are the expedients most in favour. The Very Rev. the Dean of Ardfert proposes that "premiums of some kind might be given in the schools; and certificates as to acquirements, attendance, and conduct might be given to pupils leaving school, that would help to obtain advancement for them in afterlife. I would also recommend lending libraries for the use of advanced scholars, and of those who had left, to be attached to each school." So, too, the Rector of Kenmare says—"Premiums should be given in the various schools," and suggests that "these should be contended for by the schools of a district at a central examination. This would excite public interest, which is languid, in the matter of education." The parish priest of Kenmare also is in favour of "premiums for regular attendance, and more schools;" and in like manner the Rev. W. D. Wade, of Milltown, thinks that "the means of education should be brought nearer their homes, and a system of prizes and such like inducements to emulation established." The Rev. E. Wright, of Muckross, also spoke in favour of premiums, purely honorary, being given for diligent attendance.

180. In the schools at Tarbert, and in the male school at Tralee, which are connected with Erasmus Smith's Board, rewards in money are given by the trustees for attention and attendance combined; and it appears by the report of the parochial schools at the latter place for the year ending September 1, 1867, that sums of £2 6*s.* 2*d.*, £1, and £1 6*s.*, were expended in premiums in the girls', boys', and Sunday schools respectively, in addition to the sums furnished by the Board. The total of this expenditure was made out of an aggregate sum from subscriptions and donations during the same period of only £55 18*s.*

181. In the National male school at Kenmare, of which the Marquess of Lansdowne is patron, and Mr. John Townsend Trench manager, prizes in money have been offered for the year 1868, and if the experiment prove successful, will probably be offered again. The letter containing the offer, addressed to the school teacher, is as follows:—

"Kenmare, March 23, 1868.

"Mr. Murphy, Sir,—In order to encourage and promote the education of the children in Kenmare, Lord Lansdowne is prepared to give the following prizes in your school this year:—

Premiums.

One in each class for regular attendance, and two for best answering in Board's Programme.

	Best Answering. 1st.		2nd.		Attendance. 3rd.				
	s.	*d.*	*s.*	*d.*	*s.*	*d.*	£	*s.*	*d.*
5th Class ...	10	0	7	6	5	0	1	2	6

Reasoning ...	5	0	2	6	0	7	6
Money Matters ...	5	0	2	6	0	7	6
Total					£5	0	0

"You will communicate this to the school.

"Your obedient servant,

"John Townsend Trench.

"Mr. Maurice Murphy, Teacher, Kenmare."

Religious pictures and medals.

182. In the convent at Cahirciveen I found it was the practice to give little religious pictures and medals to the most deserving children. As a rule however prizes are unknown, and unless provided out of Government funds, it would probably be hard to keep up a sufficient supply throughout the county. Private benevolence in a matter of this sort is apt to be special or spasmodic, both in time and place.

183. Although in the few instances when money is given as a reward for attendance at school, those who had the distribution of it were unaware of any bad results arising from the form of the gift, it seems probable that in districts where the value of children's wages is the reason of their being kept from school, a comparison would be made of the amounts which they could gain by work or by attending school, and the latter would, without doubt, be found the less attractive.

Compulsory education.

184. With regard to increase of attendance, as on most matters of detail, much variety of opinion is manifested. Only one witness, the Rector of Ballyheigue, referred to a compulsory system, and he is doubtful about its merits. He says:—"It is difficult to say what plans would secure an increased attendance at the primary schools. The objection to a compulsory system is that it would interfere with the liberty of the parent; but on the other hand many think that the liberty of parents, as used in that sense, is 'the liberty,' as John Foster says, 'of bringing up their children a nuisance on the face of the earth.'" Sir R. Orpen thinks "children's attendance is as regular as can be expected under existing circumstances." The Vicar of Listowel says:—"Generally speaking a large attendance is secured when the teacher is efficient. Active superintendence and periodical inspection are likely to produce diligence in the teacher." The Rev. T. A. Moriarty thinks there is "no other plan than demanding or reproving, if necessary, the cause of absence." This plan I found was most energetically carried out in one National school, where the teacher told me he always required a child who had been away from school, on its return to be accompanied by one of its parents, or else to bring a letter explaining its absence. If this were not done, the child was "slapped or confined," as a punishment.*

* There seems to be no regular system of punishment in the schools. In convents and Christian Brothers' schools, admonitions, moral and religious, seem alone to be employed, and, as I was told by the nuns and brothers, with sufficient and excellent effect. In many ordinary National schools the teacher struck refractory or dilatory pupils with a rule or map-pointer. This punishment, which was but slight, was inflicted on girls no less than boys in mixed schools. But this kind of punishment is probably more frequent and more severe when there is no strange presence to control the teacher.

185. In the Christian Brothers' schools at Tralee it is customary, in cases of absence, to appoint one or more pupils present to make inquiry respecting the absentees. Such a practice appears more especially applicable in town schools and to children living near the school. In rural districts, where children reside many miles from school, or are widely scattered, the number of envoys necessary for the purpose would make too great a drain on the scholars in attendance. In these schools a part of the day is specially marked out in the time-table* for investigating cases of absence or want of punctuality. Such an investigation, when carefully and conscientiously carried out by the teacher, must operate as a powerful check on mere truancy and loitering; but it cannot prove a very effective stimulus to negligent parents. If conducted by teachers with less conscientious and affectionate devotion to their work than that of the Christian Brothers, it would degenerate into a farce, at the best performed in a prefunctory and careless manner. The quarterly averages at the Christian Brothers' school† in Tralee do not show that this individual attention has modified in any remarkable degree the agencies which tend to reduce the numbers "present" far below the numbers "on rolls." Practice in Christian Brothers' schools.

186. Two witnesses only thought that attendance at school depends upon school fees. The one has a district entirely rural from which to draw his conclusions; the other is resident in a village or town of considerable size. The Parish Priest of Tuosist says, "I know no plan more effectual for increasing the attendance than to grant such salaries to teachers as would make them independent of school fees, so as to afford gratuitous instruction to the poor." The Parish Priest of Sneem also thinks 'increased attendance would be secured by reducing school fees;" yet it is his opinion that gratuitous education is "not beneficial, except for the very poor classes." It is possible that in Tuosist and Sneem, and in other parts of Kerry also, some children would be sent to school who are now kept away by reason of school fees being chargeable. However, speaking of his whole diocese, the Bishop of Kerry expressed to me his opinion that the amount of school fees is not a practical obstacle to school attendance, because the payment is rarely enforced. This view, which coincides with all that I heard from school teachers throughout the county, is also entertained by Mr. Macnamara, the National Inspector, whose district embraces the southern half of the county. School fees.

Gratuitous Education—Opinions Respecting It.

187. The opinions expressed concerning gratuitous education are, for the most part, unhesitatingly adverse. The Parish Priest of Cahirciveen is almost solitary among his brethren when he says "gratuitous education is productive of much good." The Very Rev. Dean Day says—"Education, when paid for, is more likely to be valued and turned to account; but in the case of very poor persons payment should not be insisted on." The Ven. Archdeacon Denny considers "it would be desirable, as far as practicable, to require a small payment from the parents of the children, as serving to enhance the value of education in their minds." The Rector of Kenmare believes "that gratuitous education should be avoided as much as possible. There must always be some children whose parents cannot pay, but I see no use in asking other persons, managers or others, to pay for them; and I strongly urge that all service or work for the master, in lieu of money payments, should be rigidly forbidden." Sir R. Orpen thinks that "the payment of a small sum, such as a penny a week, by each child, would perhaps secure more punctual attendance, as the parents might not like their children to lose any benefit they paid for." The Rector of Ballyheigue says:—"It is desirable to require the payment of school-fees. Education will be valued more if the parents pay the master a certain fixed sum. It would, in my opinion, be advisable, in the case of labourers, to reduce the fees, or even make a merely nominal charge." Opinions on gratuitous education (1.) of Anglicans.

188. The opinions of the Roman Catholic clergy on this point are coincident with those of their Anglican brethren. The Parish Priest of Tarbert, with forcible brevity, pronounces gratuitous education to be "bad." The Rev. D. O'Sullivan, of Cahirdaniel, says—"We value what we pay for—we *undervalue* what costs us nothing." In like manner the Parish Priest of Prior says—"Gratuitous education is not so much appreciated as that which is more or less paid for." The Ven. J. O'Sullivan, of Kenmare, says it is "decidedly injurious; and I go to great length to induce the poor to pay something, however trifling, to the teacher, to insure his or her care for the children. This does not apply to convents, where the teaching is 'a labour of love.'" The motive suggested to parents for the payment of fees is certainly needful in the case of convents, but the education afforded at them, no less than at other schools, would doubtless be more highly prized if some pecuniary sacrifice were required to obtain it. (2.) Of Roman Catholics.

Age of Children Attending School.

189. The same causes which produce irregularity of attendance, and which, as has been previously pointed out, are chiefly of a social or economical kind, tend also to the final withdrawal of children from school at an early age. The returns furnished by the teachers of National schools, through the Inspectors to the National Board for the use of the present Commission, will enable a comparative estimate to be made whether in different parts of the county, or in different descriptions of schools, any law exists determining the average age at which children first enter or finally leave school, and also the average length of their school course. In numerous instances I procured from National schools of all kinds returns professing to show the average age of the pupils admitted, and of the pupils struck off the rolls during the twelve months preceding my inquiry. In the schools which I examined I also calculated the per-centage of children above twelve years of age to the whole number present on the day of examination; but the results obtained by both these methods are so capricious, and at times are so self-contradictory, that this report would be uselessly lengthened by a statement of them; nevertheless they serve to confirm an opinion which I had previously formed, that the entries in school registers of the ages of pupils are too carelessly made to furnish data for any accurate calculations. Even when teachers are not wilfully or consciously careless in this part of their duties they are unable to make correct entries. In the wilder parts of the county children nine or ten years old, or even older, not unfrequently have no idea of what is meant by "age," and when asked in the idiom of the district "how many years they are," make the wildest answers. The entries made in the school registers on the authority of parents are in many cases, if judged by the appearance of the children to which they refer, erroneous by two or three years. Early removal of children from school.

190. As far, however, as I am able to judge, the average age of children first going to school throughout the county is about six or seven years. Only a comparatively small number is to be found above thirteen. Convent schools are an exception in both directions. The infant schools attached to most of them draw a large number of children of three, four, or five years. At Kenmare I saw one little urchin of eighteen months. They always have a large class of girls, sixteen or seventeen years old, or even nineteen or twenty; but most of them are either monitresses, or are hoping in afterlife to become teachers. Many of the elder girls whom I found in the third class at Kenmare convent, and by no means the most advanced among their class-mates, I Average age of children going to and leaving school.

* *Vide* Time-table of Christian Brothers' schools, paragraph 325.

† *Vide* paragraph 123.

was told had received hardly any schooling, and were sent to the convent, not so much for literary instruction as in order to learn needlework. In the Christian Brothers' school, at Tralee, I also found a large class of youths older than those usually found in National schools; but this school, though classed as primary, can hardly be so regarded in its upper division. At any rate, what secondary instruction is given in Tralee is for the most part imparted there.*

Average age of children in different classes.

191. The following Table exhibits the Average Age of the Pupils whom I found in the several Classes of Schools throughout the country.

Class.	Description of School.				
	National.			Scriptural.	Christian Brothers.
	Male.	Female.	Mixed.		
First, . . .	7.39	6·502	6·75	5·17	7·55
Second, . . .	10·15	9·82	9·51	8·83	11·12
Third, . . .	11·94	11·90	11·25	10·61	12·9
Fourth, . . .	13·07	13·16	13·70	13·22	12·39
Fifth, . . .	15·31	15·98	13·66	14·66	14·09

192. So far as National schools are concerned no material variation is presented by the preceding figures between those in which boys and girls are separate and those in which they are educated together. The low average age of the first class in female schools as compared with that in male, is probably due to the large number of very young children to be found in convents, and does not show that to ordinary National school girls are sent at an earlier age than boys. The only other point in this table to be noticed, respecting National schools, is the lower average age of the fifth class in mixed than in separate schools. It would be wrong to conclude from this that the higher National education is pressed more rapidly in mixed than in separate schools, the fact being that this average has been calculated from a single school. Kenmare parochial school, which, as noticed in other parts of this report, holds a unique position in the county, was the only mixed school connected with the National Board in which I found the nucleus of a fifth class. Children in the fifth class are very rare in Kerry, and in mixed schools more so than in others.

Different standard of classification in Scriptural, Christian Brothers', and National schools.

193. The modes of classification in Scriptural and Christian Brothers' schools, differing as they do from each other and from that in National schools, prevent any accurate conclusion being arrived at in respect of the average proficiency of children of a given age, according to the description of school where they receive their education. In the case of the Christian Brothers, the figures in the preceding table are calculated from the returns of two schools only—those at Tralee and Cahirciveen—too narrow an area on which to raise any weighty superstructure of inference. The figures relating to Scriptural schools have been collected from a wider experience. With the exception of the average age of the fourth class they seem to indicate that a child of a given age in a Scriptural school will be likely to have a higher classification than one of the same age in a National school. If this position is correct it certainly cannot be accounted for by any superiority in the teaching given in Scriptural over that in National schools. The reason appears rather to be a difference of educational standard or greater laxity in its application in Scriptural schools.

Gratuitous Education—Its Extent.

Extent of gratuitous education.

194. It is wholly impossible to determine with certainty the extent to which gratuitous education prevails in Kerry. In conventual and monastic, and for the most part in Scriptural schools, no school-fees or other charges are payable; and in the schools of the Christian Brothers† no payment is received except for such requisites as pens, ink, and pencils, and these are given gratuitously to the poorer children. The numbers of children entered as "free" in the registers of ordinary National schools, afford no criterion for determining the question; for children are only so entered by permission of the manager, who is, generally, the parish priest, and judges from the intimate acquaintance with his people which his position affords him of their pecuniary resources. But many parents who do not receive this "free pass" for their children nevertheless obtain gratuitous education, for their payment of fees is continually evaded or postponed, and the teacher is not unfrequently glad to accept a sum considerably less than what is due according to the scale specified on the time-table. On the one hand the manager limits, as far as possible, the number of those children to whom payment is excused, and thereby endeavours to conciliate the teacher. On the other, the teacher often remits the payment of fees, because he has learnt by experience that if he enforces his legitimate claims, the number of his scholars will be diminished; and their diminution may be followed by a reduction of his salary from the National Board. The most frequent complaints I received from teachers against managers related to fees. In one case a teacher "processed" some debtor parents, *i.e.*, took legal proceedings in the local court for the recovery of fees; but the parish priest, who was school manager, forced him to abandon his action under pain of dismissal from his office. I believe, from inquiries made into this case, that this particular teacher was not wanting in harshness, and, perhaps, not in avarice; but his case illustrates a frequent source of discontent. It is not unusual when money is not forthcoming from the peasantry, among whom a strong tendency to hoard their earnings exists, for the teachers to receive in labour more than an equivalent for what is due in cash. The parents of his pupils will dig his potato garden, or carry turf for him, when they are unwilling to part with the smallest coin in return for his educational services. Among such peasants "Easy Lessons in Money Matters" and the rudiments of political economy have borne little fruit.

Difficulties attending payment of school fees.

195. No detail of National school organization seems more difficult of adjustment than that of school-fees among a people like that of Kerry, who are still battling with poverty, or have not forgotten the traditions of the famine. The very name of National school, I was told more than once, causes the people to retain their savings with a firmer hold. If education is an affair of State, and so much public money is spent in teachers' salaries, the paltry extra sums which the teacher can obtain from school-fees should also, it is thought, be furnished from the

* *Vide* paragraph 326.

† Offertories are given, or collections made, in behalf of the schools of the Christian Brothers and Sisters of Charity. The education given by these communities is, therefore, not absolutely gratuitous, though, owing to the mode of payment it has all the disadvantages which belong to a gratuitous system. *Vide* paragraph 320.

public purse. But this sentiment is entertained only by the poorest and rudest persons. More than one of the better class of shopkeepers in the towns, who, on other grounds, was not averse to sending his children to National schools, told me he hesitated to do so, because his social pride rebelled against their mixing with children who paid nothing.

School-Fees—Their Rate and Amount.

196. In no case did I find the rate of school-fees vary according to the age of pupils. The amount with which they are chargeable, is determined solely by the class of the school in which they are placed. There is no uniform scale prevailing throughout the country, but the variations are but trifling. The sum payable in the first-class is generally from sixpence or a shilling to eighteen pence per quarter; in the second, from a shilling to two shillings; in the third, from eighteen pence to half-a-crown; in the fourth, from eighteen pence to three shillings and six pence; in the fifth, from three to five shillings. If extra subjects* (geometry, algebra, and mensuration) are taught, the pupil learning them pays from half-a-crown to five shillings per quarter. In many schools the rate of fees is the same for the first and second classes, and again for the third and fourth, so that in them there is little chance of a child being promoted into a higher class before it has attained sufficient proficiency, in order to obtain higher fees from the parents, or to induce them to pay more readily on the ground of their children's supposed progress in learning. Rate of school fees.

197. In some cases, where there are separate schools for boys and girls under the same roof, I discovered a tendency to fix a lower rate for girls than for boys; but as the scale for the two schools had not always been regulated at the same time, and the fees marked in the time-table bear the most uncertain and varying ratios to the sums actually received, no definite inferences can be drawn in this way as to the influences of school-fees or gratuitous education on the attendance of boys and girls in comparison with each other. Rate lower in female than in male schools.

198. In like manner, although the amount of fees received by the male teacher not unfrequently exceeds that received by the female in the adjoining school, to an extent more than proportionate to the greater number of male pupils, the excess cannot, without qualification, be relied on to confirm the conclusions previously drawn† as to the greater anxiety displayed for male than for female education. Fees for boys, no less than girls, are frequently in arrear, and are only paid when pressure is exerted. But masters are more urgent than mistresses in demanding payment. In some instances, however, the great inequality between the sums received in male and female schools cannot be understood except as an outward and tangible evidence of a difference of sentiment respecting the education of boys and girls. In Gortmaskehy school (Ballybunion) for example, the male teacher, who had had a struggle with the manager on the subject of fees, received £9 13*s.* 11*d.* from that source during the year 1867; whereas the female teacher, whose school is slightly superior in management and local reputation, and who has a somewhat higher average‡ attendance of pupils, received only £3 during the same period. So, too, at Brosna, the female teacher received only £4 17*s.*, as against £14 5*s.* received in the male school. At Cahirdaniel the male teacher received £7 6*s.*, and the female only £4 7*s.* At Sneem the male teacher received £11 17*s.* 2*d.*, and the female £5 14*s.* 5*d.* In these three schools§ the averages of female pupils are much below those of males; but the difference between them is not proportionate to the difference in the amount of fees. Differences of male and female schools in respect of fees.

199. I am inclined to believe that payment of fees by a very considerable number of parents in Kerry, who are not specially affected by any pecuniary difficulty, depends on the estimate they have formed of the teacher's character and professional skill. If a teacher is above the average in kindness or attention, his superiority in these matters, not unfrequently, has its reward in the amount of fees received by him; whereas if a teacher is unconciliatory in manner or negligent, the non-payment of fees is forthwith made to operate as a fine upon his shortcomings. In one instance only did I find the school-fees paid in 1867 amount in any important degree to a greater sum in the girls' than in the boys' school. At Lauragh the female teacher, notwithstanding her numbers were smaller than those of the male, received £8, while he received £4 10*s.* The neatness of the girls' compared with the dirt of the boys' school, is quite sufficient when taken in connexion with the personal bearing and local reputation of the master, to account for this case. Payment of fees dependent on reputation of teacher.

200. It is not certain that the entries made in the report and other account books of National schools, represent the total amounts of school-fees actually received. The desultory and irregular mode in which many of the teachers say they, from time to time, receive a few pence as instalments of what is due to them, renders it probable that the most scrupulous are sometimes inaccurate. The general discontent respecting the salaries paid by the National Board tends, in the case of the less scrupulous teachers, to make them represent the portion of their professional incomes derived from school fees as less than it really is. Against inaccuracy or wilful misrepresentation of this sort there is no check. Accounts of fees received.

201. Of the schools I visited, the male schools at Listowel and Kenmare showed the largest amount of school-fees during 1867. In Listowel they reached to £22 17*s.* 6*d.*, and in Kenmare to £29. The average numbers‖ are, however, more than 50 per cent. higher at Listowel than those at Kenmare; and in both cases I was informed that about half only of the children "on roll" pay fees. It appears, therefore, that the amount of fees received at Kenmare is, relatively to the number of pupils, considerably greater than its actual excess indicates. In both these schools the head teacher has a high classification, being at Listowel in the second division of the first-class, and at Kenmare in the first division of the same class. At Listowel there is at present a very strong desire on the part of the people to have a Christian Brothers' school established; but this desire is, I believe, due entirely to causes having no reference to the National teacher personally, or which would tend to reduce his fees. Amount of school fees.

202. The larger amount of fees received in these two towns as compared with all others I visited, may possibly be indirectly due to the presence of convent schools. Where these exist, no portion of the funds which parents may be willing to expend on the education of their children is diverted to female schools. In Cahirciveen, the only other town I visited in which there is a National school for boys, and a convent school for girls, I found that the Christian Brothers' school was an injurious rival to that of the National Board, so far as fees were concerned. The National school is very good; but the master, who is in the second division of the first-class, and is thought of very highly, assured me that, owing to the competition of the other school, he was quite powerless to enforce payment.

203. At Blennerville and Mucross National schools I found no fees were paid. The latter is maintained entirely by Mr. Herbert, M.P., who pays the teacher's salary; the school receiving books and inspection only from the Board. The teacher of the former seemed much aggrieved at not receiving fees, and took the opportunity of my visit, to address a remonstrance on the subject to the scholars, to be reported by them to their parents. He National schools without school fees.

* Geometry, algebra, and mensuration, are generally regarded for the purpose of school-fees, as extra subjects. It is doubtful whether such a classification can be justified by the programme for the fifth-class in National male schools.

† *Vide* paragraphs 118–120. ‡ *Vide* paragraph 115. § *Ibid.*

‖ For the averages of Kenmare and Listowel schools, *vide* paragraph 123.

had previously asked me to speak to the children, who, probably, regarded me as a National Inspector, but this I declined to do.

Mode of enforcing payment, and application of school fees.

204. No definite scheme for removing the evils attendant on the present mode of payment of school fees was suggested to me, although quite apart from the question of gratuitous education, the discontent which it breeds is continually forcing its unsatisfactory nature upon public notice. The teachers in the two male schools in Valencia have, as one of them informed me, made an arrangement that neither will receive into his school any child who has previously been attending the other, unless he brings with him a certificate from the master he has left that all fees have been paid. This arrangement checks a practice which occasionally exists of removing children from one school to another as soon as the teacher presses for payment. But the definite limits of an island make it more applicable in Valencia than in an ordinary rural district. The remedial effects of the plan are obviously but superficial.

205. School fees are invariably received and applied by National teachers in Kerry in augmentation of their salaries. It seems worthy of consideration whether they would not be disposed of more advantageously in providing or keeping in repair school apparatus, which now not uncommonly is paid for by the teacher out of his own pocket, or in providing a fund for prizes. In the latter case it is possible that parents would be reluctant to contribute to an object from which their own children would not certainly derive benefit. This objection does apply to the former suggestion; but both plans might possibly increase the amount of gratuitous education, as the teacher would have a less stimulus than now to collect fees.

Comparative Efficiency of Schools aided and unaided by the State.

Comparison of schools aided and unaided by the State.

206. All the testimony I have received on the comparative efficiency of schools, aided and unaided by the State, is, with a single exception, in favour of National schools.* The Rev. T. A. Moriarty, writing of a Scriptural school established eighteen months previously at Waterville, says:—

"All the children who now form our parochial school, and who were formerly taught in National schools, were very materially deficient when we started our present school. Our teacher had been under the National Board as an assistant, and he being a competent judge of their classes and proficiency, was more surprised than I was. They were by no means qualified for the classes they held, and they came immediately from the National school to me."

207. I was prevented by the vacation from examining either the Waterville Scriptural school, or that of the National Board at Spunkane, which nearly all the children of Waterville, who are not at the Scriptural school, attend; I am therefore unable to compare the results of these particular schools, or to say whether that at Waterville is above the ordinary level of Scriptural schools, or that at Spunkane inferior to National schools in general.

General opinion of superiority of aided schools.

208. The view which is generally entertained in the county is, that schools receiving Government aid are more efficient than others. This is continually admitted by those who are opposed on other grounds to the National system. Sir R. Orpen says:—

"The want of sufficient funds for payment of a competent master must impair the efficiency of schools, and practically Protestant schools are excluded from Government aid, but Roman Catholic schools practically are not so."

209. The Very Rev. the Dean of Ardfert says:—

"Generally speaking the secular education imparted in the State schools is more efficient than in the others."

Kenmare parochial school.

210. The Rector of Kenmare (Rev. E. J. Wade), some years back gave most earnest proof of his opinions by placing his parochial school under the National Board, a measure which had no precedent, and remains without imitation in Kerry. He says:—

"I have no hesitation in saying the schools receiving Government aid are very superior to those not so aided. I should say that in this I refer only to 'Church Education schools.' In 1861 I found myself compelled in justice to the children attending either to close the Protestant parochial school in Kenmare, or to place it under the Board of National Education; I adopted the latter course. So far as I am acquainted with them, the unaided schools, from want of systematic inspection and proper apparatus and deficient salaries to teachers, are not only comparatively but absolutely inferior, and Archbishop Whately's words are verified—'The members of our Church are worse educated than the Roman Catholics.' The masters are generally badly trained, and they are not stimulated to improvement by inspection involving any gain or loss. The children do not pay, and consequently are irregular in attendance, and there are not funds to supply deficient apparatus. There is a want of system and discipline."

211. Speaking of Cahirciveen, where there is a Christian Brothers' school in addition to the National male and convent schools, the parish priest says that schools in his parish whether aided by the State or unaided are "much on a par." This view was to a great extent confirmed by my examination. Rivalry in this instance has a beneficial effect, and the Bishop of Kerry, who is a strong supporter of the National system, expressed to me his belief that education would be promoted if rivalry between schools aided and unaided by the State more frequently had scope.

General superiority of National Schools.

212. Of the superiority of aided schools over all others in Kerry, except those of the Christian Brothers, I have not the slightest doubt. The secular education given in Scriptural schools is little better than a farce. Barren of results though hedge schools are, more honest endeavour is not seldom made by their teachers than I could trace in some of the Church Education schools I examined. The general testimony of every class of society is that a great boon has been conferred on Kerry by the introduction of the National system. Rough car-drivers, whose geographical knowledge is wide, if it embraces the highroads in Kerry, Cork, Limerick, and Clare, and whose stock of ideas is little larger than their calling requires, frequently contrast the advantages afforded to their children by National schools with the means of education provided for their own boyhood. Great part of the improvement already made, and still making, as all I spoke to on the subject allowed, is traceable to the spread of education which National schools have caused.

Opinion of the Bishop of Kerry.

213. In reference to the subject matter of instruction in National schools, the Bishop of Kerry expressed an opinion that it would be well if less attention were given to special knowledge and more to good writing and accounts. Writing, he thinks, is generally defective—worse than anything else which is taught, although the writing of the monitresses in convent schools is sometimes very good, and their composition still better. The reading lessons, the Bishop thinks, aim too much at imparting special information. It is impossible to teach botany or political economy to little children. The Bishop, if I understand him rightly, thinks that in face of the difficulties arising from irregular attendance, little more can be efficiently accomplished for the mass of children in the primary schools of Kerry than instructing them thoroughly in reading, writing, and arithmetic; more real good might be done in teaching these almost mechanical branches of education than introducing them to departments of scientific or literary culture, of which their time at school can allow them to obtain only a smattering, and which they will be entirely unable to utilize after leaving school. For the few children

* This comparison does not refer to Christian Brothers schools, which exist only in three towns in Kerry.

who remain a sufficient time to reach the upper classes, and whose abilities and means would enable them to push their way into the learned professions, clerical or lay, he wishes that National schools, at least in the larger towns, provided some classical instruction; and he expressed his pleasure that the Christian Brothers had to some extent relaxed their rule excluding Latin from their schools. The memory of the classical learning of the Kerry peasantry acquired in the old hedge schools still lingers in districts where, under a superior system of education, less assistance is afforded to those who are capable or ambitious of professional careers.

Primary education in relation to commercial life.

214. Mr. Henry Donovan, of Tralee, a member of the largest mercantile firm in Kerry, was of opinion that the education given in the primary schools of the country is generally satisfactory. His opinion was based on the experience he had of clerks and others in his employ. Writing is generally satisfactory, and a month's practice at the desk is sufficient to acquire a good business hand. The same is true of arithmetic. The great want is in power of composition. A year frequently has to be spent in the office before a clerk can write a fair business letter. It is not merely style that is deficient—style is hardly to be looked for—but there is a total absence of power of expressing ideas. Mr. Donovan had had more experience with boys educated by the Christian Brothers than with those from National schools. This arose partly from there being only a school of the former kind in Tralee, and partly because he believed the pupils of the Christian Brothers were superior to others in moral and intellectual tone.

Results of Examination.

Results of examination

215. In the table on the following page is presented a summary of the results of my examination of National and Christian Brothers' schools in reading, writing, spelling from dictation, and arithmetic. As far as possible I took the National Board's programme as my standard, though occasionally, as hereafter mentioned, I found the children in the better schools came up to a higher level in some subjects than the programme prescribed.

216. This dry arithmetical statement of results is insufficient by itself to convey a correct idea of the condition of education in National schools. A qualitative, no less than a quantitative analysis, is requisite. Some remarks are therefore subjoined on the special peculiarities of the reading, writing, and arithmetic, and also of the other subjects of instruction both in National schools and those unaided by the State.

Reading.

Defective style.

217. If excellence in reading is to be looked for in primary schools attended for the most part by the children of a poor peasantry, the expectation will hardly be satisfied in any of the schools of Kerry. The opportunities the children have outside the school-room of hearing anyone read more skilled than themselves, are few. Even the public services of their Church do not for the mass of them afford the means of knowing that reading can be made more expressive and intelligible than that which is tolerated by their teachers, and sometimes deplored by their Inspectors. Although young children would not in many cases be able to appreciate any excellence of style, which such opportunities might put before them, the want can scarcely fail to affect teachers who have passed their whole lives in the country, or whose chances of hearing good reading have been confined to the five months they have been under training in Marlborough-street. One boy in the fifth class in Kenmare National male school I heard read a passage of poetry in a style which rose above mediocrity, and fixed attention by its simple and subdued pathos. But he was a solitary exception.

Classification of scholars according to proficiency in reading.

218. Gradations between the classes in National schools are more clearly marked in reading than in any other subject included in the programme; but this is truer of the lower three classes than of the others. In some of the very few schools which can boast a fifth class, the Fourth Reading Book is the most advanced in use, and at Listowel male school and the Presentation Monastery in Killarney there was some difficulty in finding Fifth Books, in a passage of which I wished to test the boys.

Reading in lower classes.

219. In the second classes, and sometimes even in the third, the children displayed great reluctance against being made to read any passage with which a recent and laborious perusal had not made them acquainted. The Board's programme it is true requires from pupils in the second class that they should read only "the lessons previously learned," but this is to be done "with correct pronunciation, and due attention to the pauses." The numerous mistakes in common words (over and above faults in punctuation) which were made by children who ventured on a passage a few pages in advance of their lesson for the day, seemed to indicate that the reading lesson is in the lower classes allowed too often to degenerate into an affair of memory. Instead of being accustomed to read the same or similar words in new combinations, the child is too often kept to the same lesson until he has almost learned it by heart. This is most frequent, and, perhaps, least deserving of censure in the first class,* but it is too common in the second. Not unfrequently children in the second class who had made numerous mistakes in an unfamiliar lesson of the Second Book, after writing from dictation a sentence in an earlier portion, trusted to their memory, and successfully too, to write down the following words before they had been dictated. In Scriptural schools the gradation of class books and of lessons in the class books is less marked. The few well-worn and tattered volumes which in many schools of the Church Education and Island and Coast Societies form a common stock are used indiscriminately by pupils at the top or the bottom of the school.

Reading in convent schools.

220. The best reading is in general to be met with in convent schools. It is more intelligent, because punctuation is better attended to. At the same time, the superior taste of the teachers has kept it free from the droning monotony which is common in rural districts.

Pronunciation.

221. In a country where the intonation of words almost invariably, and sometimes their accepted pronunciation, sounds strange to English ears, it is hard to speak of the varieties in these respects which exist in schools of different classes. More serious defects undoubtedly prevail in remote rural districts than elsewhere. If the Irish spoken in Corkaguiny and Iveragh is purer, as it certainly is commoner, than that of other baronies, the English of those districts is proportionately less correct. Often I found teachers taking great pains to correct defects in pronunciation; and to complain of hedge schools, because they corrupt the pronunciation of the children attending them, is a complaint which among National teachers seems to be as professional as it is habitual.

Difficulties of pronunciation.

222. The greatest difficulty in the pronunciation of English words which children in Kerry seem to experience is in words ending in "th" immediately following a vowel. The preposition "with" receives a pronunciation only slightly differing from "wid," and which is but imperfectly represented to English ears by some such com-

* In the lower divisions of the first class, the evil is avoided by the use of tablet lessons. The teacher points to single words here and there without reference to the order of their sequence. But this cannot be done with children who can or ought to read continuous sentences.

bination of letters as "widh." In Lohar school, near Waterville, I found the teacher vainly combating with the difficulties his pupils of the second class had to pronounce the word "chicken." They could accomplish nothing more than "shicken." Such peculiarities, it may be said, are national. If this be so, my experience proved that the element of nationality is most marked where education is least efficient.

The letter "h." 224. The difficulties in both these cases arose from particular combinations of the letter "h" with other letters. In contrast with them I was often struck with the ease and purity with which that letter was sounded at the beginning of words. It is a rare thing to hear a child in Kerry drop an initial "h," and the initial combination "wh" in words such as "who," "which," "when," is always sounded with a precision which many educated English people might envy, but which has none of the harshness sometimes observable in its pronunciation by Scotchmen or others from the North of England.

225. The most remarkable difference I noticed between ordinary English and Irish pronunciation is in words such as "*Pa*ris," "*barr*ister," em*barr*ass," in which the vowel "*a*" is followed by a single or double "*r*." The vowel is always sounded very broad, and the "*r*" (single or double, as the case may be) is made the final letter of the syllable. "Paris" is sounded pretty much as though it were spelt "Parr-is." The letter "r," preceded by "a."

Writing.

226. To compare reading and writing, in order to determine in which the greater degree of excellence is attained, is impossible. If a child is unable, on seeing a particular combination of letters, to give intelligible utterance to the sound which they represent, his inability to read is at once determined. All who can accomplish this much in the lesson books appropriate to their class, must in one sense be deemed able to read, however defective their style may be. If the sound uttered is not intelligible to the hearer, the child does not come up to the lowest possible standard. In writing, on the other hand, there is no standard by which to test the formation and junction of letters with the same exactness which the accepted pronunciation of words admits of in reading. Every bad writer can urge a better plea for individuality of style in penmanship, than would be tolerated in the case of mispronunciation of words in reading. Intelligible writing admits of a very much greater variety of modes than intelligible reading. However inartistic, therefore, both the reading and writing of the children in the lower classes may be, and however far both may fall short of the requirements of a programme, it is easy to see that a much larger number may be allowed to pass as able to write than as able to read, although the rudiments of writing can only be taught when some progress has been made in reading. It was on this principle that I endeavoured to ascertain the number of children examined who could "pass" in reading and writing. The results tabulated above* must not be taken as indicating the quality of the results in any of the subjects of instruction to which they belong. Indefiniteness of standard of good writing.

227. If writing in National schools in Kerry is measured by the Board's programme, it must be pronounced deficient. In the majority of schools, on inquiry as to the writing of the first class, I was met with the answer that the children were only just beginning to form the letters. On entering a National school I never found any portion of the first class, and but rarely the second class engaged in writing. Writing, however, in the better schools is commenced by children in the lowest class. A few can write words of three letters—the minimum required by the Board. Deficiency in writing.

228. Writing in the second class is generally best in these schools where, in excess of the National Board's requirements, dictation is substituted for copying sentences already read. The economy of time effected by the combination of the spelling and writing lessons, will account for the practice which is adopted by many of the better teachers. Writing in second class.

229. In the third class a nearer approximation to the requirements of the Board (which in this class is to write small-hand neatly and legibly on paper) is to be met with, than in either of the lower classes; but only in the fourth and fifth classes is the writing as a rule sufficiently good to justify the belief that no further school-training is requisite in this particular branch to satisfy the requirements of commercial life. As labourers or tenants of small farms, and for these careers the majority of the children seem probably destined, they will have small practice in penmanship, and perhaps small use for it; but the writing of the greater part of the children who do not get beyond the third class, that is of the greater part of those who in afterlife will follow agricultural pursuits, would not readily suffice for ordinary epistolary correspondence, and difficulties of composition would diminish the inducements to practice the art. In third class.

230. In general writing on slates is better than that on paper. If this is not the result of some facility for use inherent in the pencil, greater than belongs to the pen, it may arise in part from the poverty of the people. Slates are always at hand; but not unfrequently I found that after a child had finished a copy-book some considerable delay took place before it obtained another. This was sometimes explained by poverty; at other times the teacher had neglected or failed to obtain a supply of books from the Board. Writing on slates.

231. No uniform practice as to the copy-books used exists. In many schools books with lithographed head-lines and in particular Mr. Vere Foster's, are preferred. In others the teacher writes a line at the top of the page for the pupils' guidance. Except when the teacher is a specially good penman, the writing, at least until the hand is fully formed, suffers from this practice; although on the other side greater freedom of style may possibly exist where the pupil is not trained to imitate the unvarying uniformity of the lithographer. Those copy-books in which only a part of a page is devoted to each head-line seem specially liked. In them the child is not wearied by a frequent repetition of Christian names some of which, such as "Bedelia" and "Belinda," he has rarely met with, or of moral sentiments couched in proverbial or epigrammatic language, which on inquiry I invariably found was unintelligible. Copy-books.

232. Although to the writing-master the matter is of no importance in comparison of the form of the thing written, and small though the moral training may be which results from making a child write again and again, that "A bird in the hand is worth two in the bush," still a series of head-lines of which the subject matter has been carefully selected, is not without its importance. In the Convent of Mercy school at Tralee, where the sisters set copies for their scholars, I noticed in more than one instance that the head-lines comprised, along with invocations of or references to the Saints, a statement that "Mary, means Star of the Sea"—a proposition of which the theological bias is more obvious than the etymological truth. It is true that there are rarely any but Roman Catholics in the school: but in drawing a line between religious and secular instruction, the National Board did not intend to include writing in the former. Matter of head-lines.

233. The best writing on the whole which I met with was in the Christian Brothers' schools at Tralee. It was superior to that in their school at Caherciveen. Their school at Dingle was closed for vacation when I visited that town, and I cannot therefore speak of that school. Nevertheless, on the whole I incline to the belief that the writing of the Christian Brothers' schools is superior to any other in the county, although I fully concur with the Bishop of Kerry in his view of the writing of the monitresses in convent schools.† In Christian Brothers' schools ornamental penmanship forms part of the programme; and though its utility may not be immediate, attainment of excellence in it involves special attention to ordinary writing. In these schools, and in some of the better National schools (*e.g.*, the convent school at Kenmare), it is customary for pupils in the higher classes to enter in books the questions and solutions of a part of the arithmetical problems previously worked by them. This exercise which is not referred to in the National Board's programme, tends to secure great neatness of arrangement and style in writing. Writing in Christian Brothers' Schools.

* See paragraph 223.

† *Vide* paragraph 213.

Spelling.

Spelling in Church Education Schools.

234. An impression which, in an early stage of my inquiry, I derived from the examination of some Church Education schools, that in them oral spelling was as a rule, more attended to than in National schools, was entirely obliterated by the experience of other schools of the same society. The greater amount of individual attention which the small number of scholars in Scriptural, as compared with National schools, enables the master to give, may possibly bear more fruit in oral than in written spelling. Errors in dictation are all equally noticed, however large the number of scholars in a class; but when all the members of a large class are made simultaneously to spell aloud, the silence of some is little noticed amid the confusion of voices. In none of the Scriptural schools in Kerry which I visited, are large classes known. But the more special attention to individual pupils which ought to result from this, is not universally observable.

Dictation in second classes of National Schools.

235. In many of the better National schools, spelling from dictation is, as previously noticed,* an ordinary exercise in the second class. In these schools when oral spelling only is practised, the range of words spelt is for the most part limited by the reading lesson of the day.

Words of similar sound with different meanings.

236. In several schools under the National Board, I found that much care had been taken by the teachers to point out the difference in meaning of words having the same sound, but differing in orthography. Such distinctions were quite familiar to children of the second class. Instruction of this sort is however, if judged by its result, sometimes given in too perfunctory a manner. Some degree of negligence on the teacher's part is implied in the answer of a very intelligent child, in the third class of a convent school, who on being asked by me to mention a word of similar sound to "way" and "weigh," answered "whey," but on being asked for its meaning, replied "the serious (*sic.*) part of milk."

Difficulty for the children to understand the English accent.

237. In spelling from dictation, the children were not unfrequently perplexed by my English accent. To this must be attributed the almost universal failure of boys in the two upper classes of the Christian Brothers' schools at Tralee, to spell the word "vehicle," which occurred in the course of an ordinary sentence, slightly altered from one in the National Board's Third Book, which with few exceptions they otherwise spelt correctly.

Fourth class in National Schools.

238. As a rule, I found children in the fourth and fifth classes in National schools were fairly up to the mark in spelling fixed by the programme; they were not, however, beyond it. In several cases after testing them successfully with ordinary sentences from their reading books, I found that a sentence in which the words "harass," "embarrass," "vicissitudes," "innumerable" occurred was beyond the limits of their orthographical powers. This is true of the fifth class, and of the monitresses in Kenmare convent who, on the whole, passed the most creditable examination.

Method of teaching spelling.

239. In respect of the method of spelling two things are to be noted.

Syllabic spelling.

240. First, there is very little syllabic spelling in National schools. Some Inspectors and teachers are in favour of teaching children to spell from recollection of the appearance of a word as a whole, as it stands in a book. If regard be had to the purely arbitrary pronunciation of some English words, and the little relation which exists between the sound of the whole word and of its component letters, an argument may be directed with partial force against syllabic spelling. But if the distinctions of syllables are never pointed out, a frequent aid to the pronunciation of unfamiliar words is lost, and the most perverse anatomy of words exhibited in writing them. Only too often did I meet with mistakes such as the putting of the final letters "nt," of the word "ascent," at the beginning of a line, when the previous line could contain only the letters "asce."

Name of the letter 'a.'

241. The second point is one rather of habit than of principle. It is involved in the question, what is the name to be given to the first letter in the English language? The universal practice in ordinary National schools in Kerry is to give a broad sound to the letter "a," which is indistinguishable from the consonant "r." If a child is spelling orally such a word as "embarrass," in which two "a"s come between two "r"s, the effect is confusing to strange ears. In the rapid naming of the constituent letters, it is hard to count how many times in succession the sound of "r" is uttered. Many teachers, to whom I spoke on the point, said they had themselves been instructed to call the letter by the name familiar to English ears, and would prefer to do so but for the habit of the country. One said he had at one time done so but was obliged to adopt the broader sound, because his pupils, if examined in spelling by the parents, were told by them to use the broader sound, and the teacher's authority was, in consequence, diminished. In the parochial school at Kenmare, which is under the National Board, the usual English sound is given to the name of the letter.

Arithmetic.

Deficiencies in arithmetic.

242. Arithmetic is a subject in which the taste of the pupils has so much to do with success, that it is not strange that greater inequalities of attainment in it should be presented by different children in the same class than in any other subject. But these inequalities, which are perhaps inevitable, cannot be pleaded as an excuse for a lower standard being adopted for a whole class than that prescribed by the National Board. In the first and second classes arithmetic is in general fairly up to the mark; but, in the third class, I often found that the "simple and compound rules," which the programme requires are interpreted so as to exclude compound long division, and sometimes compound long multiplication, and when this was not so, the compound rules were often not applied to weights or measures. In the anxiety of the teacher to advance his pupils in the compound rules, the more difficult parts of the simple ones, such as simple long division, are also sometimes neglected.

Arithmetic of upper classes in National Schools.

243. Arithmetic in the fourth and fifth classes is generally very fair, and by many of the children great aptitude is displayed for it. I was specially pleased with the solutions by most of the girls in the fifth class of the Presentation convent at Killarney of some difficult problems in "partnership," and the other more advanced rules. This was one of the schools first examined by me, but subsequent experience revealed equally good work in some other cases.

Deficient grasp of arithmetical principles.

244. Correct results in many cases are attained without clear understanding† of the processes employed. Often boys who had obtained the right answers to difficult questions in practice, showed a very indistinct acquaintance with the principles of the machinery they had employed. A short experience had taught them that the consistent adoption of the same means, under similar circumstances, would produce the correct result; but, if the circumstances were varied, a difficulty at once arose in modifying the means to be employed. Arithmetic, in short, in

* *Vide* paragraph 228.

† The prevalent combination of the multiplication and pence tables seemed often incompatible with a clear understanding of the tables separately. Many a child, who when asked for the product of five times twelve, answered in one breath, "sixty—five shillings," was quite ignorant that the answer contained more information than was sought.

many instances, appeared mechanical rather than rational. This defective grasp of arithmetical principles was constantly shown by children in the third and fourth classes, who were working simple proportion. One very easy sum in this rule, which it was my habit to give, was wrongly stated by more than 75 per cent. of those to whom it was given. The proportion was inverse, but the children had no sufficient grasp of the principle to enable them to overcome this small but fatal difficulty.

245. The most advanced class of any considerable size, which I met with, was the fifth class in the National male school at Kenmare. Of the thirteen boys in it, ten (of whom two were monitors) worked correctly a sum in evolution of the cube root, and the other three extracted the square root. In no other case did I find a whole class able to extract the square root. But both square and cube root are frequently worked by monitors.

Arithmetic in Christian Brothers' School at Tralee.

246. In the upper school of the Christian Brothers at Tralee, difficult sums in practice were worked with an uniform correctness, which was rarely equalled by boys of a correspondent class in National schools. In the lower part of the same school, a comparison would be less flattering.

In female schools.

247. In female schools the requirements of the National Board in arithmetic are less than in male schools. But not only is less required, but a less approximation to the standard is in general attained. In three or four convents the sisters said they found great distaste for arithmetic manifested by the girls. But my examination of the upper class at Kenmare and Killarney convents showed that such distaste, on the supposition of its being more common with girls than boys, is not incompatible with success. Its cause, perhaps, lies with the teachers themselves.

248. Mental arithmetic calls for little special notice. The answers did not often combine accuracy and rapidity. No "calculating boys" surprised me by the rapidity or ingenuity of their arithmetical gymnastics.

Geography.

Geography in first class.

249. No geography is required from the first class by the programme of the National Board; but a fair acquaintance with the outlines of the map of the world was not unfrequently displayed by children in the upper divisions of that class—quite equal in fact, to what in many other schools was displayed by children in the second. For young children a map exercises some pictorial fascination, which skilful teachers are well able to turn to account.

In second class.

250. In general, children in the second class have a fair acquaintance with the outlines of the map of the world; but by many teachers the term "outlines" has been construed very strictly. Some of the children in the lower divisions of the second class in the convent at Cahirciveen were beyond the standard of the National Board's programme, and were tolerably acquainted with the principle divisions of Europe. The senior division of the same class, which was in another room, was decidedly inferior. The difference was evidently the result of a difference in the teacher's skill.

In other classes.

251. The geography of the other three classes was frequently very fair, although in the fourth class the Board's requirement of a knowledge of the map of the British Isles, was not often satisfied. A want of a map of Great Britain, or at least of Scotland, not unfrequently explained the deficiency.

Defective method of teaching.

252. In schools where the absolute sum of geographical knowledge was considerable, a want of rational instruction was sometimes apparent—still more so, of course, in those where the test of examination yielded an inferior result. If a child was asked to name the principal town of a county, or the chief rivers of a continent, an exhaustive list of all the towns, or all the rivers of the given county or continent was forthwith quoted from the geography-book in a manner which showed that memory was almost the only faculty exercised. Quite consistently with this, it was a rare thing to find more than a minority in a class, who could off-hand give the required answer. Those with the best memories were the most ready. The relative importance or positions of different political or commercial centres is rarely known. Many a child who can state accurately the latitude and longitude of Ireland, however ignorant it may be of the meaning of the terms, has no idea which are the chief sea-ports of Ireland, and, as I sometimes found, supposes Liverpool to be in America, and London to be the capital city of Ireland.

Programme of National Board.

253. In the National Board's programme, the map of the British Isles is placed after that of Europe among the requirements of the fourth class. The result not unfrequently is that the rivers of Russia are more familiarly known than the more important towns of England.

Political and religious aspect of geographical lessons.

254. The most serious blot on geographical instruction in National schools in Kerry has a religious or political character. It was somewhat startling to find children unable in the year 1868 to mention any city in Italy besides Rome, without descending to such petty places as Perugia, Ancona, or Loretto; while at the same time Venice is reckoned among the Austrian possessions, and Naples and Sardinia are regarded as separate kingdoms. An excuse may possibly be urged that the "Introduction to Geography" and the "Geography Generalized,"* which are sanctioned by the Board, treat the recent political changes in Italy as transitional and indeterminate, or recognise them in the obscurity of a foot-note. But though such an excuse may justly inculpate the National Board, it does not exculpate the teachers or the managers. In several schools where the children were utterly ignorant of recent Italian history, they were acquainted with changes much more recent in Germany, and in one or two instances, even with the acquisition of the Russian territories in North America by the United States. Instruction is not always confined within the limits of the text-book.

Christian Brothers' Schools.

255. In schools of the Christian Brothers, geography holds a less prominent place in the lower classes than it does in the National schools, although in the upper classes the drawing and tracing of maps is a regular exercise, and one which if practised among schools under the National Board, is, so far as I observed, practised in convents alone.

Church Education Schools.

256. In Church Education and other Scriptural schools, the want of proper maps is sometimes assigned by the teachers for the backwardness of their pupils in geography—a backwardness, however, which is not more marked in this subject than in arithmetic or grammar.

History.

Want of History in National Schools.

257. One of the misfortunes, which is perhaps inevitable in the National system of education, is the exclusion from its programme of history. As long as a distinct separation of secular and religious instruction is made, a subject which continually involves political considerations, and in which political considerations are often determined by religious bias, can only be treated in the most jejune manner. It may be said that but little history can be learned by children in primary schools, and that the utility of that little is doubtful. But the boys and girls of

* See Sullivan's "Introduction to Geography" (edition of 1868), pp. 31, 39, and note; and "Geography Generalized" (edition of 1867), pp. 70 and 71, and note on page vi.

from fifteen to twenty years of age, who are to be found in the fourth and fifth classes, have for the most part got beyond the drudgery of learning, by a degree of intelligence, which demands food quite as much as exercise; and if primary education is ever to elevate the intellectual level of the mass of the people, it will be by increasing the proportion of those who attain to these classes, and by providing materials to satisfy the mental capacities of which the children in these classes become conscious. History, if not attractive to a greater number of youthful minds than narratives of travel or descriptions of natural phenomena, has enough of adventure and variety to attract many who would have little other inducement to private reading. Its want is deplored by many who take deep interest in the primary education of the people, and, apart from the political or religious objections which the mixed education of the National Board involves, some acquaintance with it would probably be a good substitute for the fables or short stories from the Second and Third Books, which the National programme suggests as subjects for composition in the fifth class. If the teaching of history is incompatible with the maintenance of mixed education, the interest of education in general appear to be higher than those of a particular system.

Historical summaries in books of National Board.

258. It is true that the Fifth Book of the National Board and Professor Sullivan's "Geography Generalized" contain short historical sketches of the world at large and of particular countries; but however high the excellence to be attributed to these summaries, their brevity makes them useless, unless their subject-matter has been studied elsewhere at greater length. In practice they are neglected, because they are never made the subject of examination by the Inspectors.

History in Kenmare Convent.

259. In the convent at Kenmare I found that ancient and modern history, notwithstanding their absence from the Board's programme, formed a special subject of study by the monitresses and the girls of the fifth class, who passed an exceedingly creditable examination in most of the leading events which have marked the progress of the world from the fifth to the eighteenth century. In addition to the meagre summaries in the National Board's books, previously referred to, Fredet's "Ancient and Modern History" was the text-book generally employed. At the male school in the same town, which enjoys a well-deserved reputation of being one of the best schools in the county, the fifth class, excepting one boy, knew nothing of history, and the knowledge of that one boy was derived from private reading. In the Presentation monastery at Killarney, where the fifth class were said to have read some history, equal ignorance was displayed; and although, on their failure in secular, the Superior suggested I should examine them in ecclesiastical history, no better result was obtained.

In Presentation Monastery at Killarney.

In Christian Brothers' School.

260. In the Christian Brothers' schools at Tralee, where history is taught, my examination elicited only a meagre result.

In Church Education Schools.

261. At the parochial school, at Templenoe, in the register of which I noticed a recent entry by the Church Education Society's Inspector, that the children had passed a satisfactory examination according to the programme, I was about, in reliance on that authority, to ask some questions in history when the teacher said he never gave any instruction in it, that no text-books were ever supplied to the school, and that the Inspector never required it. This departure from the Church Education Society's programme is, so far as my experience went, habitual in the schools in Kerry which are connected with that Society or profess to adopt its educational standard.

Grammar.

Importance of grammatical training.

262. Grammar is, in one respect, of greater educational importance than any other subject included in the programme. Reading, which, as it has been previously observed, rarely rises in the National schools of Kerry to be an affair of taste, and sometimes sinks into an affair of mere memory, has small tendency to expand the discursive faculties, although it may be the means in the senior classes of feeding the receptive part of the mind. Geography, again, is, with many children, little more than a feat of memory. History is legitimately an exercise of the same faculty. Writing is a mechanical art; and spelling is not sufficiently phonetic, or sufficiently reducible to rules, to make it altogether or chiefly a rational rather than a mnemonic exercise. But grammar, which, with the subjects just enumerated, excepting history, completes the secular curriculum in most primary schools in Kerry, requires, even in the very earliest rudiments of the study, a constant exercise of the reason. Although a child in the second class, when asked to name a noun or adjective, is apt to give no other instances than those which it remembers are given in the text-book, yet no effort of memory will enable it to distinguish correctly all the nouns and adjectives with which it meets in its reading lessons. For this purpose, reason must be roused; and still greater and greater efforts of reason are required before the ascending series of distinguishing all the parts of speech, of parsing easy sentences, and of analyzing and parsing poetry and prose—the requirements of the National Board's programme in the third, fourth, and fifth classes respectively—can be thoroughly mastered. Viewed in this aspect, grammar is specially important, because success in it furnishes an indirect test of the degree to which the intelligence has been cultivated.

Programme of the National Board.

263. The results of examination in grammar in National schools are, in my opinion, scarcely satisfactory.* The requirements of the programme can hardly be considered too great. Sometimes the teachers have recognised the fact that the programme points out only the minimum to be required. Accordingly, in some schools, (*e.g.*, the Presentation convent at Cahirciveen), some children in the first class were as ready to distinguish nouns, adjectives, and articles, as those of the second class in many other schools. In the more efficient schools, the upper division of the third class attempted not merely to distinguish all the parts of speech but to parse the reading lesson of the day; and in these instances the parsing of the third class would stand comparison with that of many fourth classes in schools where nothing more was attempted than the minimum fixed by the Board.

Construction of sentences.

264. Even in those schools where great fluency and accuracy was exhibited in stating the numbers, persons, and cases of nouns, and the tenses and moods of verbs in simple sentences, little more could be done. The construction of dependent sentences presented great difficulties, and a nominative absolute was known to very few in the fifth class. The favourite expedient for overcoming the obstacle of a nominative so placed was to suggest that some word—generally "to"—was "understood." The device of "understanding" a word is much too frequently resorted to. Few children are taught that the same verb or preposition may govern two nouns.

Conjugation of verbs.

265. The conjugation of verbs as an independent exercise subsidiary to parsing, is in the majority of schools neglected or practised with very little effect. I rarely found any children in National schools able to state off-hand a particular person, number, tense and mood of any given verb, and in accordance with this deficiency, there was a general disposition in parsing compound tenses, to take the auxiliary and principal verbs separately. Better training in this particular was specially noticeable in the Christian Brothers' school at Tralee.

* At the Presentation convent at Tralee (closed for vacation at the time of my visit), one of the sisters told me that the Ursuline nuns, who have a "superior" school at Waterford, had applied to her for the secret of success in teaching grammar. A pupil who had received primary instruction at Tralee, on being removed to the Ursuline convent, showed herself to have been specially well grounded in the subject.

266. The parsing of poetry which contained any but the slightest deviations from prose arrangement, was hardly ever accomplished in a good fifth class. Many of the mistakes made proved that poetry as well as prose, is often read without being understood. Parsing of poetry.

267. While fully recognising the fact that without the opportunity of comparing English grammar with that of some other language, the whole of its educational value cannot be extracted, I believe that a more rational treatment of it would with little further cost of time, do much to cultivate and develop the intelligence of the pupils. More rational teaching requisite.

Geometry, Mensuration, Algebra.

268. These subjects which by many of the National teachers, are regarded as "extra," are only taught in the fifth class, and by no means universally well to all the pupils in it. Geometry is for the most part limited to the first book of Euclid, and Algebra, in which very easy problems in simple equations generally mark the summit of attainment, is a field less often explored than geometry or the mensuration of superficies. Mensuration of solids is, I believe, never taught. Mathematics.

269. The definitions of geometry are generally neglected.

270. Propositions are invariably demonstrated orally, and the use of letters to denote angles and lines seems unknown. The parts of the figure to which reference is necessary, are pointed out by the finger in a way which only a quick-sighted teacher can guard from inaccuracy.

271. The mathematics taught in National schools in Kerry is unimportant. In the Christian Brothers' schools it occupies a more important place. At Cahirciveen a few of the boys demonstrated propositions in the third book of Euclid; and at Tralee, the sixth book had been commenced by some.*

Needlework.

272. How far the acquirements of girls in needlework accord with the standard prescribed by the National Board, I am not skilled to judge. Two or three ladies of whom I made inquiry, were of opinion that the plain sewing was satisfactory in ordinary National schools. The needlework in the parochial school at Kenmare was pronounced by the Inspector of the district to be the best he had met with in a National school. In this case, the work is regularly superintended by the wife of the rector and another lady. But this advantage is not possessed by any other National school. No fancy work is taught, and some parents, I was informed, were inclined in consequence to send their daughters to the convent where fancy work receives great attention. Needlework.

273. At Kenmare Convent lace is made in considerable quantity, and advertised for sale. In many other convents, a case is exhibited in which fancy articles worked in the convent (mostly by the nuns) are exposed for sale. Berlin wool work, embroidery, and crochet, are generally taught in convents in addition to the plainer arts of the needle; but whether or not in any case to an extent to interfere with the more necessary forms of work, I cannot say. In Kenmare, I was told that many of the big girls of the third class were sent to school mainly to learn plain needlework. A great deal of plain work is done at the Presentation Convent at Tralee. Materials are commonly sent to the convents to be made up. One nun told me with a smile, that the "parsons' wives" frequently sent needlework to be executed at the convent, because of the superiority of the work there, over what they could get elsewhere, but that this was done "*sub rosâ.*" Convents.

274. In some mixed schools there is no female teacher or workmistress to teach needlework to the girls. In other schools whether separate or mixed, the absence of a table renders "cutting out" in school almost impossible. An impression was produced on my mind as the result of some inquiries on this head, that the "cutting out" is not practised sufficiently in ordinary schools to come up to the standard of the programme; and that the Inspectors rarely, if ever, insist upon it. No workmistress in some mixed schools.

275. At Listowel alone, among the convents I visited, there is no workmistress.

Music.

276. Singing forms part of the regular instruction of convent schools, and the rendering, sometimes in unison, but more generally in harmony, of Irish melodies by the elder girls is sometimes very pleasing. The sisters take much pride in the performances of their pupils, and attach much importance to the humanizing effects of music. The elder girls and monitresses at Kenmare, form the choir of the church to which the convent is attached, and in other towns where the Mass is chorally celebrated, the vocal portion of the music is contributed in part by convent pupils. Vocal music.

277. In the junior classes of convent schools the children are made to take their places in the school-room to the sound of a lively march played on the harmonium, and accompanied by the voice. Simple descriptive songs are also made the vehicles of instruction to infants.

278. Instrumental music is not so common as vocal. The Kenmare convent, and that of the Sisters of Mercy at Tralee, were the only two where I heard any. In one other convent I was told it had been formerly taught, but that instruction in it had been given up, because of the large demand it made on the sisters' time in proportion to the result achieved. The Sisters of Mercy at Tralee, expressed a wish that premiums should be granted by the National Board for it, as well as for singing. At Kenmare, where a great many teachers have been trained by the nuns, I was told that the school teachers frequently conducted the musical part of religious service in villages, where but for them no music would be heard in the churches. Instrumental music.

279. At Tarmon, the female teacher had a harmonium in her school, and was qualified to teach singing. She was not, however, in the habit of giving lessons in it. In other ordinary National schools music is not a part of the course.

280. In the Christian Brothers' schools vocal music is regularly taught. The effect in the school at Cahirciveen, did not much please me. Christian Brothers' Schools.

Drawing.

281. In convent and Christian Brothers' schools drawing is taught, and with very creditable results. In the former it is chiefly ornamental, in the latter architectural drawing is attended to with a view to its utility in some professions. Some drawings I saw at the Kenmare Convent, and that of the Sisters of Mercy at Tralee, and in the Christian Brothers' school at Cahirciveen, I was much pleased with. Drawing is the luxury of a few, and is the occupation of Saturdays, when the schools are not open for the mass of pupils. It, therefore, does not interfere with more solid and necessary branches of instruction. Drawing.

* In the Presentation Monastery at Killarney, three boys had reached quadratic equations, and the elements of trigonometry. They also received practical instruction in the use of the surveying chain.

General Intelligence of Children.

General mental ability of Irish children.

282. Of the mental capacities of the mass of children, I formed a very high estimate, although, as previously indicated, I am of opinion that the memory is too often cultivated at the expense of the reason. For such deficiency individual teachers must be held mainly responsible.

Comparison of Irish and English children.

283. One of the Christian Brothers at Dingle, who had had great experience in teaching, not only in Ireland, but also in a school of the same community in England, expressed his decided opinion that the average intelligence of Irish boys, up to the age of fourteen, is higher than that of English. At that age he seemed to think progress was arrested in the Irish, whereas mental development in English lads frequently became more perceptible after than before that age. The paucity of intellectual resources open to the children of the peasantry, among whom his experience of teaching in Ireland had chiefly lain, will account for this view. If lending libraries, as more than one person suggested to me, were established in connexion with the schools, to which former scholars might have access, the seeds of mental vigour which, planted in school, too often die upon a child's early removal, would have better chance of cultivation, and might bear fruit.

Intelligence displayed by candidates for Confirmation.

284. One of the best opportunities I had of judging how far the natural intelligence of the children was capable of cultivation was afforded by an examination, by the Bishop of Kerry, of the children at Castlegregory, preparatory to confirmation. The subjects of examination were, of course, of a kind quite distinct from those in which my examinations had tested general attainments. The instruction the candidates had received consisted partly of the ordinary religious instruction of school, partly of the special preparation which they had received in church from their clergy during the two or three weeks immediately preceding the examination. The accurate acquaintance with the text of the Catechism which most displayed, might, perhaps, be ascribed in part to "cram," but the questions put to them elicited, beyond any spasmodic effort of memory, an intelligent comprehension of the elements of dogmatic and moral theology. Cases of conscience propounded by the bishop and his clergy to these young casuists were resolved by them with great readiness. The clergy rely but little, I was informed, on the religious instruction imparted by secular teachers; but their own earnest efforts had, during the brief period of special preparation, produced a result in their own domain, from minds which equally earnest and intelligent teaching might render equally fruitful in secular learning.

Public examinations.

285. In explanation of so satisfactory a result, it is fair to calculate the effect of a stimulus exercised by public examination, at a time of which notice had been given long before. Children in school have few incentives to industry. The inspector makes his visit without previous notice, and records of his praise or blame in the observation book are not revealed to the scholars.

Intelligence not sufficiently cultivated.

286. How little the intelligence of the children is developed by their education is shown by their general inexperience of composition. The simple forms of epistolary correspondence are known by most in the fifth class, but their use is laborious and constrained. In no instance did I meet with a monitor or pupil outside a convent who could apply these forms with moderate ease and success.

English composition.

287. From two schools I received essays, written at my request by the elder pupils, which showed that their writers had been trained to think. The senior class of the Christian Brothers contributed a series of essays on "The Advantages of Reading," which, if not measured by too absolute a standard, were fairly creditable. A collection of essays on miscellaneous subjects, such as Architecture, Painting, War, Chivalry, Resignation, Gratitude, The Advantage of the Study of History, written by the fifth class, and some of the monitresses at Kenmare showed that the girls were able to use the few literary resources with which the reading books of the National Board supplied them. The marginal notes which designated each portion of these essays as "Proposition," "Example," "Proof," "Application," revealed the artificial character of their structure. But, notwithstanding some youthful faults in logic, these essays from the Kenmare Convent would stand favourable comparison with any which the majority of English girls in the upper classes of society could produce.

288. The essays, both from the Christian Brothers' and Kenmare schools, showed a strong impress of the "religious" profession of the teachers. Moral and religious ideas are the most prominent in them. The mind is trained to self-consciousness rather than to external observation. The thought is exclusively subjective; but thought, even if onesided, is refreshing, when among the mass of children, notwithstanding great natural abilities, school teaching does so little to quicken the germs of rational activity.

Religious Instruction.

Subjects of religious instruction in National Schools.

289. No special facts bearing on the religious instruction of children in school were brought before me. The uniform answer I received on asking in National schools what were the subjects of religious instruction, was "Dr. Butler's Catechism,"* the only variations being that larger or smaller editions of it are used according to the age and capacity of the pupils, and that in some parts of Iveragh and Corkaguiny, the native ignorance of the English tongue renders the "Irish Catechism" the only possible means of giving any intelligible instruction to children in religious matters. In Kenmare parochial and Muckross National schools alone, of all the National schools I visited or heard of in Kerry, the masters are members of the Established Church; and in these two schools, the subjects of religious instruction are Bible History, Catechism of the Church of England, and Scriptural repetition, being in fact the same subjects as those prescribed by the programme of the Church Education Society.

In Scriptural schools.

290. In Scriptural schools great pains appear to be taken to make the children learn by heart passages of Scripture; and in the Inspector's reports entered in the school registers, approbation of their proficiency in this branch is frequently expressed in a way which is perhaps intended to soften, although it serves to manifest, disapprobation of their attainments in secular subjects. In no school whether National or Scriptural, did I incur the risk of exciting theological suspicion or antipathy, by examining the children in their religious knowledge, believing that by so doing I should be trespassing beyond the limit of my instructions. In Scriptural schools I was often asked to examine or hear examined the children in these subjects. In National schools a similar request was never made by the teachers, whose ideas of examination were probably limited by their experience of the methods of the National Inspectors.

Sunday schools

291. The clergy of neither the Anglican nor the Roman communions are satisfied with the amount of religious instruction given by lay teachers in ordinary schools. The former supplement it by Sunday schools; and these in Kerry have recently been formed into a diocesan union, and are periodically examined by the Rev. Edward Wright (of Muckross), who is appointed their Honorary Inspector, and who distributes a few prizes among the most proficient scholars. This system of inspection is believed to be productive of very beneficial effects. In the senior class of some Sunday schools, I was told, persons of fifty or sixty years are to be found; but these it may be presumed or hoped, have passed beyond the limits of primary religious instruction.

Preparation of

292. The religious teaching of Roman Catholic children in school is supplemented by their instruction in chapel

* Besides Catechism, Reeve's History of the Bible is used in Killury male school.

during the few weeks preceding confirmation. More than once the small attendance of children on the day of my visit to a particular school was explained by the withdrawal of a portion of the scholars to the neighbouring chapel, in order to receive instruction prior to Confirmation. The power which the clergy have, if they are school managers, of authorizing the withdrawal for this purpose, of pupils belonging to a school under their control, is one of the reasons which make them as a body opposed to having lay managers, albeit of their own communion. In one instance, a school-teacher apologizing on this score, for his school being empty at the time of my visit, intimated his opinion that the powers of clerical managers in withdrawing children for this purpose ought to be controlled: and this view is I think entertained certainly by one National Inspector with whom I talked on the subject. An effort, I was told, is sometimes made to make the school holidays contemporaneous with the period of Confirmation instruction. But this practically destroys the holidays both of the pupils and their teacher, as the teacher is required to assist the clergy in their instruction. One schoolmaster complained to me on this point, that he was obliged to acquiesce in this destruction of his holidays, through fear that, if he did not, he would be dismissed by his manager. The sting of his grievance appeared to be in his having to forego his annual vacation without receiving additional salary for his additional work.

Roman Catholics for Confirmation.

293. In the majority of National schools the time devoted to religious instruction is the last half-hour before closing the school. This arrangement is doubtless convenient in schools where anything like mixed education exists, as it interferes less than any other with the secular instruction of the minority who do not profess the teacher's creed. But it is open to the objection that if religious instruction is to be given in school at all its importance requires that a time should be found for it when the minds of the children are not jaded, and their wandering eyes are not anxiously expecting the time when the clock shall sanction their dismissal. In a few schools (*e.g.* Ballinacartin mixed), half or three-quarters of an hour in the middle of the day is set apart for religious instruction.*

Time of religious instruction in National Schools.

294. In schools of the Presentation Monks at Killarney, and of the Sisters of Mercy at Tralee, I was asked, on the striking of the clock at noon, to pause in my examination in order to allow the repetition of the Angelus and the Acts of Faith, Hope, and Charity. No similar request was made in other schools under the care of religious which were under examination at the same hour: but I noticed in one convent (if I recollect rightly at Kenmare), that on the striking of twelve o'clock several of the sisters left the school-room, apparently for the purpose of their own religious exercises, and the teaching staff was in consequence temporarily diminished.

In schools conducted by "religious."

295. In the schools of the Christian Brothers, where the religious character of the institution is conspicuously exhibited by religious pictures and a large figure of the Blessed Virgin and Infant Saviour, it is usual when the clock strikes for all, teachers and pupils, to make the sign of the Cross and murmur some short ejaculatory prayers. The habit passes frequently into a sort of unconscious instinct, and in one school of this community I was told by one of the brethren, it was not uncommon to find children who, not being Roman Catholics, did not follow the practice, remind a negligent schoolmate that he ought to "bless himself."

Christian Brothers' Schools.

296. This practice is regarded with special favour by all the religious, as tending to foster "self-recollectedness," and its prohibition by the National Board lamented or deprecated. In one convent the sisters told me the practice was so habitual with the pupils, that in order to prevent disobedience of the rule of the National Board, they procured a clock which did not strike during school hours. When school was closed, its warning voice reminded them of a practice which at other times they unwillingly omitted.

The Sign of the Cross.

297. In schools where the religion of all the pupils is the religion of the teacher, as is practically the case not only in conventual, but nearly all other National schools in Kerry, it is not strange that the restraint of rules—imposed for the protection of a possible minority which will probably never have existence—is felt to be galling. In this sense the rules of the National Board relating to religious instruction, are deemed inapplicable to the circumstances of most National schools in Kerry, at least by the Roman Catholic clergy and religious. In no other sense was any statement ever made to me as to their rules being inapplicable to the circumstances of any particular school.

Restrictions of National Board's rules.

298. I never heard any definite charge of violation of the rules relating to religious instruction. One clergyman of the Established Church stated his belief that in convent and monastic schools, religious (*i.e.*, Roman Catholic) pictures and emblems were habitually displayed; but on being pressed for an instance of this, he could only refer to a Christian Brothers' school. I am not sure that I succeeded in uprooting his stubborn conviction that Christian Brothers' schools are not assisted by the National Board—an erroneous belief which more than once I met with, and strove to dispel from the minds of Anglican opponents of the National system. A strong suspicion (or prejudice) certainly prevails among many that the rules of the National Board are not honestly observed by Roman Catholic teachers, and especially by monks and nuns, in regard to religious instruction—a suspicion for which I failed to discover any valid grounds in Kerry, but which may possibly be founded in breaches of those rules in other parts of Ireland, and be unjustly transferred to schools within the limits of my observation and inquiry. The unconscious influence which superior or older minds obtain over the young in secular matters, and which may unintentionally produce an effect in religious matters also, cannot be fairly stigmatized as an infraction of the rules or principles of the National system.†

Rules relating to religious instruction generally obeyed.

299. In one school which I visited in company with a National Inspector, and in which there were a very few Anglican or Presbyterian children, who there was reason to suppose had not been removed during the time set apart for religious instruction, the Inspector inquired for the book of certificates by parents or guardians desiring that a particular child should receive a particular kind of religious instruction. The teacher was reprimanded because the certificates had not been properly made, and cautioned to be more careful for the future. The negligence in this case was clearly due entirely to a teacher who was unsatisfactory both to the Manager and to the Inspector, and did not arise from clerical or any other external influence.

Permission of children to receive particular religious teaching.

300. In the case of two schools in Iveragh (both of them vested in the Commissioners, but one of them too far removed from the residence of the rector to enable him often to visit it), I heard that Anglican children had been annoyed by their school-fellows on account of their religion. The favourite taunt applied in such cases is that of "Palatins," in allusion to certain German Protestants who many years ago were imported from the Palatinate by some of the landholders in Kerry, in order to obtain a tenantry favourable to their own political and religious sentiments, and from whom are sprung many or most of the peasantry who are outside the Roman Catholic pale. The annoyance had become so serious in one of these two cases, as to lead to the recent establishment of a Scriptural school at Waterville, near to which the annoyance had been given. In neither instance was it alleged that the school-teachers had given any countenance to the demonstration of their pupils, or that the rule of the National Board relating to mixed education had been disobeyed.

"Palatins."

* Some schools especially in the neighbourhood of Waterville, I heard, are opened on Saturdays, for religious instruction only. But the practice seems not to be popular with the parents any more than with the children, and the attendance is consequently small.

† *Vide* paragraph 127.

Different Descriptions of Schools.

Different descriptions of schools.

301. The previous pages contain my impressions as to the general character of primary education in Kerry in its several branches. Some further details relating to the different kinds of schools which are the instruments of its promotion, are necessary to complete the picture.

National Schools.

National Schools in general superior to all others.

302. Notwithstanding the defects which mark National schools, I regard them on the whole as the most efficient of any for the purposes of secular education.* Any anticipation of uniformity among them is dispelled by a short experience. Kerry contains both good and bad National schools; but a few have a reputation which lifts them above the rest; and their reputation was fully sustained by my examination. The male schools at Cahirciveen, Kenmare, Sneem, and Listowel, were the best of those I examined in whole or part. Lyssivigeen male school, which I was prevented by vacation from examining, and Cahir mixed school, which was closed for repair, stand well in popular esteem. The best female schools are connected with convents; but Rathmore offers an instance of an efficient separate female school. A teacher of high classification invariably impresses the stamp of his superiority on the school under his charge.

Mixed Schools.

General preference for a male rather than a female teacher in mixed schools.

303. Cahirciveen and Kenmare workhouse schools, were the only mixed schools under the National Board in which I found a female head teacher. Popular feeling in Kerry is in favour of having a male teacher in schools where boys and girls are educated together. The general belief is, that authority is better maintained by a man; but in schools where the numbers are not sufficient to require an assistant, one of the National Inspectors was inclined to prefer a female teacher, as otherwise the girls would have no opportunity of learning needlework.

Feelings in regard to mixed schools.

304. I did not discover any very strong objection to the mixed education of boys and girls. One or two persons expressed an idea, that the girls were more likely to soften the boys than to be hardened themselves. Of positive harm resulting from boys and girls being thus brought together, I never heard any instance, although I made inquiry from many, whose professional pursuits afforded them the best opportunities of hearing of its existence. The balance of feeling is, however, in favour of separate instruction for the two sexes.

Mixture of boys and girls in schools properly separate.

305. In a few schools, which were properly separate, the managers had consented to allow a few girls to attend a male school, or *vice versâ*. Thus, in the Cahirciveen male school there were five girls, of whom three, who were destined for the scholastic profession, were sent there in order to have the special training of a first-class male teacher. The others had been sent there as being related to the assistant teacher. At Sneem, the master's little daughter was a solitary girl in a large school of boys, although a very good separate female school was under the same roof. In this case, a private feud between the schoolmistress and the child's mother had led to its withdrawal. When the enmity had at length appeared to be irreconcilable, the manager gave permission to the master to receive his own daughter into his school. At Cahirdaniel, a few girls and a few boys were on the rolls of the male and female schools respectively. The girls were stated by the male teacher to have been removed to his school, in order to receive special training from him. The account given by the female teacher was, that the three girls were sisters, and relatives of the male teacher; and that they had been removed by their parents from her school, because one of their number had not been appointed monitress. In none of these cases did it appear that the change had been made with any other sanction than that of the manager. The matter, however, appears to come within the spirit, though not within the letter of the rules and regulations of the National Board, which provide (Pt. II., iii. 7) that "where a school has been taken into connexion as a school for males or for females solely, the Commissioners will not sanction the change from a male to a female school, or *vice versâ*, without their permission having previously been obtained."

Convent Schools.

Estimation of convent schools.

306. The general favour in which convent schools are held by the Roman Catholic population, has been previously discussed.† Their differences in educational results and subjects of instruction, have also been noted.‡ A few other particulars may be added to exhibit how completely distinct convent schools are from others.

Superior neatness.

307. The superior cleanliness and neatness of the girls in convents in comparison with those in ordinary National schools, is evident immediately on entering. In many convents it is the rule that all the pupils should wear a white pinafore or check bib. This uniformity is, to a great extent, secured at the cost of the community.

Gentleness of the nuns.

308. The gentleness of the nuns, which forms so large an element in their attractive power is, perhaps, carried to an excess. Greater timidity is shown by the pupils of convents than of all other schools. In the Mercy Convent at Tralee, and the Presentation Convent at Listowel, some of the children in the upper classes burst into tears at the bare notion of an examination, before its test had revealed success or failure. The moral atmosphere of convent schools seems purer than that of others, but it is somewhat relaxing. It is antagonistic to robustness of mind and feeling.

Managers of convent schools.

309. Of the ten convent schools in Kerry, five are under the management of the parish priest, the other five under that of the reverend mother. I failed to notice any difference resulting from this. The sisters who have tried both forms of management, are in favour of the latter, as in case of the parish priest being absent from home much time is lost in obtaining the manager's signature requisite for official correspondence. In one instance, a parish priest intimated his belief that a particular convent had deteriorated since the Mother Superior had replaced him in its management. At Listowel, the Rev. John M'Donnell, on being appointed to the parish, refused to become manager, because he considered that the refusal of the sisters to have a cross removed from the outside of the school-room, was a violation of the National Board's rule. At Kenmare, the Ven. J. O'Sullivan, the manager spends a very large portion of his time in the school. To his constant interest, this school may be indebted for its superiority over all convent schools in Kerry.

Grievances of the "religious."

310. Three grievances against the National Board were laid before me by nuns. One relates to the strict separation of secular and religious instruction;§ the other two are pecuniary. Although none of the religious would be willing to vest their schools in the National Commissioners, they think it hard that they can obtain no assistance towards the repair of buildings, which, from the number of their scholars, are necessarily much more extensive, and involve a greater expense to keep them weather-proof than other schools. The Sisters of Mercy at Killarney, whose school-rooms are at a considerable distance from the convent, and are the worst belonging to a religious community which I saw in Kerry, made a formal complaint, in writing, on this head.

* As to Christian Brothers' schools with which alone a comparison may be instituted, see paragraph 320.
† *Vide* paragraphs 124–139. ‡ *Vide* paragraphs 215–281. § *Vide* paragraphs 292–298.

311. The third grievance (of which the Sisters at Listowel were the chief exponents, and which was also referred to by the Presentation Monks at Killarney, who are on the same footing, in respect of salary, as nuns), relates to the salary allowances made by the National Board. However large the staff of Sisters teaching in the school, the amount of allowance depends on the average number of pupils in attendance. To entitle a convent school to a grant of £20 per annum—the ordinary salary of a female teacher in the first division of the third class—it must have an average daily attendance of a hundred scholars—that is, of nearly three times as many as the minimum number (thirty-five), which is the condition of salary being granted to an ordinary school. Pecuniary grants to convent schools.

312. The efficiency of convent schools depends in great measure on the large staff of Sisters and monitresses who are engaged in the work of education, and a sense of this heightens the grievance. The following table exhibits the number of teachers* and monitresses, the amount of salary granted in 1867 by the National Board, and the average number of pupils in attendance in the third quarter of the same year in each of the convent schools in Kerry. Large staff of teachers in convent schools.

Name of Convent.	Number of Sisters teaching.	Number of Monitresses.	Salary in 1867.	Average Number of Pupils present in 1867.	Remarks.
			£ s. d.		
Listowel,	15	7	71 0 0	377·5	No workmistress; three of the Sisters have been trained.
Tralee, Presentation,	21	10	79 0 0	410·	One Sister trained in Dublin before she entered the convent.
Tralee, Sisters of Mercy,	18	4	—	142·75

Cahirciveen,	10	6	—	225·67	
Kenmare,	18	12 S. 2 J.	80 0 0	346·7	Three Sisters trained. There is also a male infant school.

313. Convents are under the immediate control of the Bishop, no less in matters relating to the school than in others. It was in obedience to episcopal authority, and in opposition to personal choice, that the Sisters of Mercy at Tralee placed their school under the National Board.

314. The greatest readiness was invariably manifested to permit my examination of convent schools, and regret was expressed that I was prevented from examining the Presentation schools at Dingle and Tralee by the vacation, and at Milltown and Castleisland by want of time.

Schools of the Presentation Monks.

315. The male school of the Presentation Order at Killarney is the only one of its class within my district, and consequently the only one which I examined. Another school of the same order is established in Kerry, at Milltown, respecting which I made some inquiries. Presentation monks.

316. The examination of a single school may, perhaps, be insufficient adequately to represent the character of a class of schools. The class, however, is small, comprising, besides the two schools in Kerry, only one other in Munster—namely, at Cork. The general proficiency of the pupils in the lower part of the school at Killarney was fair. The fourth and fifth classes, which (inclusive of six monitors) together comprised only twenty-one boys out of 206 "on roll," were not up to the mark. Taken as a whole, the educational status of the school is inferior to that of the most efficient ordinary National schools. Killarney Monastery.

317. The religious profession of the teachers apparently interferes with school duties more in a monastic school than in any other conducted by religious. The Superior and one of the two Brothers under him were at a requiem Mass in the adjoining cathedral at the time of my visit, and during their absence the greater part of the school was in the charge of monitors. The occasion may have been exceptional; but in the case of an ordinary school teacher such absence would have been noticed with censure in the Inspector's Observation Book. "Religious profession" adverse to education.

318. At Milltown, where the average number of children taught by the monks is about half of those at Killarney, there are four Brothers teaching, one more, that is, than at Killarney. The paid monitors, however, are three, as against six at Killarney. Milltown Monastery.

Christian Brothers' Schools.

319. The Christian Brothers have three establishments in Kerry, namely, at Tralee, Cahirciveen, and Dingle, or four, if separate account be taken of the two school-houses which they have in different parts of the town of Tralee. A different enumeration is made by them, as each apartment having a separate teacher is counted as a school. Accordingly they reckon five schools at Tralee. A gradation of pupils exists in each room or "school," and although pupils reading the same book may be found in different "schools," a gradation may also be traced in the average attainments of the mass of pupils belonging to each. At Cahirciveen there are only two brethren, each of whom has charge of a separate room. Schools of the Christian Brothers.

320. The Christian Brothers are held in high repute at all the places in the county where they are established. Illustrative of this is the general desire which exists in a large section of the people at Listowel to have a Christian Brothers' school there. Something like a feud existed between the parish priest and his people on the subject at the time I was in Listowel, he considering that they had taken undue advantage of his temporary absence from home to revive a scheme which he had previously disapproved. His objection was based on financial grounds. The annual sum which the Brothers would require to have guaranteed to them before settling there was mroe than he thought his people would be able to contribute; but, independent of clerical objections, another obstacle exists. One of the brethren at Tralee, stated more applications for new schools had been made to the community than they were then able to accede to, and, in consequence, the wish of the people of Listowel could not be gratified. Their high reputation.

321. The same brother attributed the anxiety of the people of Listowel to have a Christian Brothers' school not to any dissatisfaction with the National school existing there, but to a feeling that the moral training of the boys under them is more carefully carried out than by ordinary National teachers. The moral and religious care which Christian Brothers bestow on their pupils is clearly one of their special characteristics. Apart from the Their moral and religious tone.

* The number of teachers is exclusive in every case of the workmistress.

prominent position of religious figures and emblems in their school-rooms, the returns annually furnished of each school to the central body in Dublin exhibit this in the enumeration of those who have been confirmed, have made their first communion, or are monthly communicants. The affectionate and religious interest which they take in individual pupils was testified by some parents of the Established Church who, in consequence of their dissatisfaction with the parochial school, had sent their sons to the Christian Brothers, whose watchfulness and moral care, they told me, did not terminate with the removal of the children from school, but were manifested as often as the teachers and pupils met in after-life, whether in Kerry or in the distant parts of Ireland, in which the boys had found occupation. These parents, whose attachment to their own communion was unhesitating, had no apprehension that this personal interest and affection was ever used for the purpose of proselytism. Their confidence was the more remarkable, because although thoroughly aware of the denominational teaching of the Christian Brothers' schools, they were afraid to trust their daughters to the convent in the same town, where they would be under the protection of the National Board's rules relating to religious instruction.

Rivalry of National and Christian Brothers' Schools.

322. Cahirciveen is the only town in Kerry where a National male school is in operation as well as one of the Christian Brothers. Although a warm supporter of National schools, the Bishop of Kerry expressed his wish to see such instances multiplied. Both would be improved, he considered, by a generous rivalry.

Comparison of Christian Brothers' and National Schools.

323. A comparison of the secular teaching of the two systems, of the National Board and the Christian Brothers, is difficult. Whenever a preference is shown towards the Christian Brothers it arises from a belief that the instruction given by them is superior, at least for elder boys. My experience showed that more was accomplished in the upper division of their school at Tralee than is ever attempted for boys in any National school. The lower classes are not so highly trained. The lowness of their standard in the first and second classes was constantly excused by the brothers on account of the extreme youth of the pupils under examination. The pupils are too numerous for the teachers, who cannot devote the minute attention to individuals which young children require. This want is, as far as possible, supplied by the employment as monitors of boys of a higher class; but these monitors have not, as a rule, the same superiority in age and acquirements over their scholars which separates monitors from the mass of pupils in National schools. At Tralee I found boys of the third class engaged in teaching small knots of children in the first and second. Their educational efforts may be conjectured to be more useful to themselves than to their pupils.

Popular preference for the Christian Brothers.

324. The favour which the higher subjects of instruction in Christian Brothers' schools secures for them is exhibited chiefly in the sections of society in which something more than primary education is desired by parents for their children. Schools of this description are, in some measure, secondary as well as primary. The preference which is shown towards them by parents having children for whom they desire secondary instruction, and who have pushed their way in school sufficiently to be capable of it, is imitated by those who have not the same desire, and whose children have not the same capacities. Hence the junior classes of the Christian Brothers are thronged just as much as those of National schools, notwithstanding their comparative inferiority. Primary education, in its stricter sense, is best promoted among younger children in National schools. Its interests therefore suffer, if a good National school is supplanted by one of the Christian Brothers'.

Arrangement of studies.

325. The arrangement of studies in each room depends on the brother who has charge of it, and who settles his own "time-table." There is no time-table or programme common to the whole school. It may be sufficient to quote, as an example, one of the time-tables which I obtained from each of the five "schools" at Tralee.

Time and Order of Exercises.—Fifth School, Edward-street, Tralee.

O'Clock.	
9 0	School opens, monitors say tasks and geometry; juniors at maps.
9 30	Morning prayers—Grammar on the mornings of Mondays, Tuesdays, and Wednesdays; natural philosophy on Thursdays; globes on Fridays. Juniors at grammar on Thursdays; maps on Fridays.
10 0	Tasks.
10 25	Cleanliness inspected—Requisites sold.
10 30	Writing, book-keeping class lectured at this time on Tuesdays and Thursdays.
11 0	Reading Fourth Book, and history class examined on Mondays and Wednesdays; Holy Bible on Tuesdays and Thursdays, and Third Book on Fridays; drawing, for those learning it, at this time, and also from 1 to 2 o'clock.
12 0	Angelus—Religious instruction.
12 30	Acts of Faith, Hope, and Charity, &c.; play-ground.
12 45	Geometry heard; arithmetic, algebra, mensuration.
2 0	Advanced class lectured in mensuration on Mondays and Wednesdays; algebra on Tuesdays and Thursdays; phonography on Fridays. Juniors write.
2 30	Dictation, punctuation, meaning of difficult words and phrases at this time on Fridays; a subject for composition is given to the more advanced boys, and an interesting narrative, on the life of an illustrious person, is read for the juniors. The former bring their essays on Mondays, and the latter also theirs on the same day, in the shape of a letter, addressed to one of their school-fellows.

Secondary instruction in Christian Brothers' Schools.

326. Schools of the Christian Brothers, as has been previously remarked, are in some degree secondary as well as primary. How far they are resorted to by children for whom their parents desire something more than primary education, and who attain positions in life higher than those reached by the mass of pupils in National schools in rural districts, may be estimated from the following particulars of the careers of pupils educated in the Christian Brothers' schools at Tralee, Dingle, and Cahirciveen.

Positions in life of old pupils of the Christian Brothers.

327. The schools at Tralee have been in existence about thirteen years, and during the last ten years of that period, 10 old pupils of the school have taken the diploma of M.D., 8 have taken diplomas as surgeons or apothecaries, and 2 are still preparing; 14 are engaged as regular reporters on the English, Irish, and American newspaper press; 14 are clerks in the customs, excise, or inland revenue; 4 are clerks in banks, 3 are civil engineers, 2 are about to become solicitors, and 3 are military or naval officers. These numbers however constitute only a minority of the old pupils. Artisans are said to be counted by hundreds, whilst there are some farmers, and many soldiers.

328. Of those who have been educated at Dingle in past years, many are now priests, and a very large number are teachers and reporters. Of those who have left the school recently, 6 have become teachers, 4 newspaper reporters, 6 are preparing for the Roman Catholic Church, 1 is at the American bar, 1 is at the "Catholic University," preparing for the Irish bar, 1 is in the civil service, 18 are in the navy, and 3 at least are in the army.

329. Of recent pupils at Cahirciveen, 1 received an appointment as consul, which he relinquished for the study of the law, 2 others are in the civil service.

Short-hand.

330. The number of old pupils of each of these three schools at present engaged as reporters on the newspaper press should be noted. The Christian Brothers pride themselves specially on the teaching of short-hand. One or two witnesses expressed an opinion or fancy that the attention devoted to this art was part of a deep design on their part to fill the chief places in the newspaper offices with their own pupils, and through them to direct or at least influence the political and religious sentiment of the country. The religious creed of these witnesses need not be stated.

Scriptural Schools.*

331. There are 30 schools of the Church Education Society in the diocese of Ardfert and Aghadoe, which corresponds nearly with the county of Kerry, enumerated in the Society's Report for 1867, and of them those at Killorglin and Milltown are outside the limits of my district. Of the other 28, 11 were closed for vacation at the time of my visit to the places where they are situate, namely, the male and female schools at Ballymacelligott and Dingle, the female and infant schools at Tralee, the infant school at Tarbert, and the mixed schools at Blennerville, Cahirciveen, Kilgarvan, and Waterville. The same obstacle to examination was interposed in the case of the male and female schools at Tarbert, and the male school at Tralee, under the Board of Erasmus Smith, and the Island and Coast Society's school in the island of Valencia. The opportunities I had of actually testing the work done in Scriptural schools were consequently few. This is the more unfortunate because the censure deserved by all the Scriptural schools which I examined, might perchance be inapplicable to them. Nothing, however, that I heard from any of the clergy of the Established Church led me to suppose that, with the possible exception of the schools at Tralee and Ballymacelligott, and the female school at Tarbert, any of the Scriptural schools in Kerry are satisfactory, or that the best of them is superior to one of the worst National schools. At Cahirciveen, Ballybunnion, and Listowel, the clergymen of those parishes admitted the great deficiencies of their schools. At Brosna the rector considered my standard of examination too high, but complained of a want of diligence on the part of the teacher. The rector of Valencia writes, that National schools are superior in efficiency to those unaided by the State. Although not an active supporter of National schools, he has nothing to do with the Island and Coast Society's school in his parish. In fact all the pupils there were Roman Catholics, as I was informed on calling at the school-house, and in the Constabulary Returns, of 15 present on June 25, 1868, 14 are returned as of that creed. The degree of efficiency likely to be exhibited by this school may be conjectured from an account furnished by the Rev. E. J. Wade, who had visited it in the course of a ruridecanal tour. Speaking of the general inefficiency of Scriptural compared with National schools, and of their want of system and discipline, he says, "As an example I may instance an Island and Coast Society's school in Valencia. There I found the school-room habitually used as the master's kitchen, and pots and pans of milk, &c., occupying one end, while a large fire (in August) was kept up for cooking. This school was commended in a so-called Inspector's report."

Church Education Society's Schools.

Island and Coast Society's School in Valencia.

332. Sir R. Orpen, one of the chief supporters of the parochial school of Kilgarvan, appears to have no confidence in its efficiency, when in answer to a question on the comparative efficiency of schools aided and unaided by the State, he says, "The want of sufficient funds for payment of a competent master, must impair the efficiency of a school."

Kilgarvan

333. Not dissimilarly, the Rev. J. H. Collins, who is superintendent of the Church Education schools at Ballyheigue and Toherbane, writes in answer to the same question, "I have no data that would enable me to answer the question;" but adds, "It is to be regretted that in our 'Church Education' schools, we are often obliged to give small and very inadequate salaries to our teachers."

Ballyheigue and Toherbane.

334. With the parochial school at Killarney the vicar is well satisfied—a satisfaction which my examination of it would hardly justify, and which was not acquiesced in by the curate of the parish.

335. Of the school at Ballymacelligott the rector (Rev. W. H. Disney) says—"My school, unaided by the State, is efficient."

Ballymacelligott.

336. The committee of the Church Education Society "are satisfied† that, upon a fair comparison, the Church Education schools throughout the kingdom will not be found inferior to those supported by the State, even in the secular branches." My experience on the contrary was, that so far from this estimate being true, education in some of their schools is little better than a farce.

Report of Church Education Society.

337. My visit to Sneem presented a lively picture of school inefficiency. After a drive of seventeen miles from Kenmare, I arrived in the village a few minutes before eleven o'clock in the morning, and having inquired at the post office for my letters, requested the postmaster to direct me to the Church School. He told me he was the teacher and was just going there himself. Crossing the village we reached the school-house,‡ the upper story of which forms the school-room. Access to it is gained up a flight of steps outside the building. The room is about forty feet in length and twelve in breadth. The ceiling is low, the height up to the slant of the roof being not more than seven feet. It was in tolerable repair, but the ventilation was very bad, and the small windows were so close to the floor as to give little light to the upper portion of the room. The desks and other furniture were old and ricketty; and the educational apparatus consisted of three or four small maps, some of which were much weather-stained. On entering the room I was surprised to find that none of the children had assembled. On inquiry I learned that school opened at ten o'clock (it was now eleven); but by way of apology the master urged that he had some turf to draw, and so his boys had got a cart that morning and were drawing it. After waiting a little time, in which I made various inquiries respecting the school, one small scholar put in his head at the door and was instantly despatched to collect his school-mates. His exertions collected three girls and two boys, and this number received an accession of one boy just as I was concluding my examination. These were all that special endeavours could collect out of twenty-three on the school roll. One of the girls, it afterwards appeared, was not a regular scholar, but, happening to be a visitor at the master's house, was brought in to supplement the numbers. Of the other four, who underwent examination, three were children of the master, who has four or five others out of a family of twelve, helping to swell the roll number. The eldest pupil present was a daughter of the master, aged sixteen. She acted as assistant teacher and work-mistress, receiving for her services four out of the twenty-four pounds annually paid to the school by the Island and Coast Society. It was the intention of her father to have her trained hereafter to be a school-mistress. The other children consisted of a son of the master, aged nine; the young envoy, who had collected the family, aged five; a daughter of the master, aged six; and the visitor, aged eleven. The boy, whose late arrival saved him from examination, was twelve years old.

Sneem.

338. The boy, who had collected his fellows, was quite incapable of reading. The reading book, used by the others, was the Third Book of the National Board. The three girls passed in reading, but the boy failed. In an ordinary sentence from the early part of the Third Book, which I dictated, the assistant teacher alone passed in spelling, and the eldest boy alone in writing. All failed in arithmetic; the younger children, in subtraction, and the elder, in practice. The method of practice was unknown to the assistant teacher, who multiplied the price by the number of hundred weight and then took parts of the price for the quarters and pounds. The multiplication was wrong.

* The designations of many schools in the Constabulary Returns as "Parochial," "Church," or the like, are indefinite. Scriptural schools are not always ascribed by the constabulary to their proper societies.

† *Vide* Church Education Society's Report for 1868, p. 8.

‡ A lease of the building had been formerly granted to the Kildare Society (but this had expired) by a predecessor, in title, of Mr. Bland, who now holds the neighbouring land and who defrays the expense of all necessary repairs.

339. In grammar and geography no greater success was attained. Two or three of the pupils were supposed to be able to parse. The attempt had a ridiculous result. Among the mistakes of the assistant teacher, which I noted, were the following—"'Is' is a verb in the plural number;" "'curious' is a noun;" "'everywhere' is a noun, because it is the name of a place." Very little was known by any of the geography of the British islands, or of Ireland in particular, or even the map of the world. The assistant teacher believed Manchester to be one of the chief seaports of England; and the mistake is typical of many others.

340. The master, who had been educated in a country school at Killorglin, had followed the trade of a weaver, and then become steward to a former curate of the parish, who owned land within it, and at a later period had been in the coastguard service. In 1834 he was, without any special training, appointed by the rector and Mr. Bland to the joint offices of schoolmaster and parish clerk; receiving in the former capacity £20 per annum from the Island and Coast Society, and £2 from Mr. Bland, and £10 in the latter. As postmaster he also receives £16 per annum. The lower portion of the school-house, which was intended for the master's residence and is rent-free, is too small for his numerous family, and he has accordingly let it for two shillings a week, and lives at the post office, for which he pays an annual rent of £10.

Brosna. 341. At Brosna, where the Scriptural school is claimed by the Church Education Society, my examination obtained no more brilliant results. At eleven o'clock no pupils had arrived. A messenger procured the attendance of seven, the weekly average attendance in the register being represented as having been ten or eleven for some time past. Of the seven, two were in the fourth class, and justified their classification by failing in the notation of four figures and the short division of money. They were no more successful in dictation. The teacher of this school, who had passed through a training school of the Irish Society, and had been placed in the first class, received for his services a salary, which, inclusive of the annual value of his house and land, was equivalent to £35; and this sum was augmented by £10 for his services as parish clerk, and £5 as "local reader." Of his whole income £15 was contributed by the Irish Society, and the rest by private individuals.

Templenoe. 342. At Templenoe Church Education School I found fourteen children present, of whom six belonged to the teacher's family. Three of them had reached the third class; two, the fourth; and one, the fifth; but their classification was far too high if tested by the Church Education programme. The reading books used were those of the National Board. Eight passed in reading; six, in writing; and two, in spelling from dictation. I examined the second and third classes in simple subtraction; the fourth and fifth classes, in practice and simple proportion. One boy in the fourth class alone obtained the correct answer in one sum; he failed in a second. None passed. The whole school was defective in the simplest elements of grammar and weak in the outlines of geography. This school was certified in the register to have passed a satisfactory examination in accordance with the programme. The master, who had been trained at Kildare-place, and placed in the second class, received a salary of £40, of which £20 was furnished by the Island and Coast Society, £10 by Mr. Mahony of Dromore, and the remaining £10 was given him as parish clerk. His house was rent-free.

Listowel. 343. Listowel presented another pitiable specimen of a Church Education school. Out of a number of children which, during the course of examination, swelled to fifteen, I examined six, who constituted the third class, and one who boasted the honours of the fourth. Of these, three passed in reading, none in writing, none in spelling, none in arithmetic. The dictation on slates was the worst, both in respect of writing and spelling, that I met with in any third class I examined in the county. In arithmetic they multiplied farthings to reduce them to pounds. In grammar they made the wildest errors, considering the words "of" and "especial" as verbs. The one boy of the fourth class was little better. The master, who had been educated in a private school at Cork, and had commenced life as a mechanic, and had never been trained or classified, had held his present appointment since 1833. For his services, and those of his wife as workmistress, he received £30 per annum, with an addition of £10 as parish clerk. The upper part of the school-house was appropriated, rent free, for his residence; but at the time of my visit two persons besides his wife were sitting in the school, one of them engaged in needlework, and showing unmistakably that the room was habitually used as much for domestic as for scholastic purposes. The local subscriptions in support of this school amount to about £40 annually.

Ventry. 344. The largest Scriptural school I visited was at Ventry. Want of punctuality in the pupils' arrival, which appears habitual in Scriptural schools, was exhibited here; but after a time fifteen boys and twenty-three girls were collected, of whom fourteen belonged to the first class, seven to the second, ten to the third, four to the fourth, and two (girls) to the fifth. The average number of girls and boys in attendance during the year ending July 1, 1868, had been thirty. The school-room was one of the best I met with, whether in the case of a National or Scriptural school. It is built on land which was conveyed by the late Lord Ventry to the rector and churchwardens of the parish, in trust, to erect a church and school thereon, the school to be ever maintained as a Scriptural school. The school-room, which is fifty-four feet in length, twenty-four in breadth, and eleven in the perpendicular height of the wall, is well lighted, well ventilated, and in good repair. The furniture is sufficient for school requirements, and the maps are in moderately fair condition. This large room affords ample accommodation for the separate instruction of the boys at one end of it, and of the girls at the other. The school has two teachers, namely, a mistress, who has been trained by the Church Education Society, and placed in the first division of the first class; and a master, who has held his appointment since 1844, previously to which time he had been a hedge teacher. The rector gave him credit for considerable attainments in mathematics, but he was too advanced in life to be a fit instructor of young children, if indeed his abilities had ever been adapted to primary education. The salaries of these two (£24 and £30 respectively) were paid by the Ladies' Irish Association, an auxiliary of the Irish Society.

345. My examination produced the following results. In the first class four passed in reading, one of them reading very fairly. In the second class five passed in reading, the majority failed in the multiplication table, and had a very indifferent acquaintance with the outlines of the map of the world. They could distinguish the parts of speech. In the third class six passed in reading, and four failed, two passed in dictation, three others passing in writing, but not in spelling, and another three in spelling but not in writing. One only succeeded in compound division. In the fourth class, four passed in reading, three in writing, none in spelling, and none in arithmetic. This class had but moderate ideas of parsing. In the fifth class both the girls passed in reading and writing, and could parse fairly; both failed in spelling an ordinarily easy sentence, and one failed in arithmetic. Both the fourth and fifth classes had a moderate acquaintance with the map of Europe, but were ignorant of other maps. Even the best pupils were slow in answering.

Killarney. 346. At Killarney Parochial school twelve children underwent examination, of whom half were in the first division and half in the second. These divisions had no reference to the programme of the Church Education Society, the reading books used being the First and Second of that society in the junior division, and the Third in the senior. The greater part passed in the subjects of examination, but the standard was low, and the want of proper classification rendered comparison with other schools impossible.

347. The teacher of this school had been educated in the Church Education Society's model school at Bandon,

and was in the first class. His salary of £50 (£10 of it being given him as parish clerk) is paid out of private resources by the vicar, who also bears the expense of all necessary repairs of the buildings. He also receives about £4 annually from school fees, but these payments are tolerated rather than sanctioned by the vicar.

Ballybunnion.

348. Ballybunnion presented the only instance of a pupil in a Scriptural school who signalized himself by intelligence and general accuracy. He was good in reading, writing, and arithmetic, though he was unable to spell "traveller." But his success, I learnt from the curate of the parish, was due to his having received the greater part of his education in a National school. The other three children, who alone of the seven present, had made sufficient progress to be fit objects for examination, all failed in reading, spelling, and arithmetic, in the parts of speech, and in elementary geography. Two of them passed in writing. The teacher of this school is in the first division of the second class in the Church Education Society's scale. His salary is £30. As parish clerk he gets £10, and the office of postmaster brings him some small emolument besides. His house is rent free.

Tralee.

349. The vacation prevented my examination of the female and infant schools of the Church Education Society at Tralee. An anonymous Inspector's report, quoted by the rector in his general report of the Tralee parochial schools for 1867 states, in reference to the girls' school, that "the answering of the children in the several subjects prescribed by the Church Education Society's scale of proficiency, is satisfactory. Writing, geography, and English history, is very creditable. I desire to express myself as very much pleased with their answering in the Scriptures. The manner in which they repeated the portions appointed, with the Articles of Religion, deserves marked commendation." The prominence given to religious instruction in this report, deserves attention. The local contributions to the parochial schools at Tralee amounted, in 1867, to £55 18*s.* 0*d.* The expense of their management amounted to £63 15*s.* 8*d.*, of which sum, £53 was paid as salaries and gratuities to the mistresses of the female and infant schools; £4 only out of local funds were spent on the boys' school, the expenses of which (inclusive of the master's annual salary of £40), are borne by the Board of Erasmus Smith. Of this school, the rector of Tralee writes to his parishioners, in the general report previously mentioned—"The Inspector of Erasmus Smith's Board was more pleased than ever with our boys' school." The abilities of the master of this school were mentioned with high compliment by many Anglican clergymen in the county, in contrast with other teachers of Scriptural schools.

Schools of Erasmus Smith.

350. There is, I believe, a general impression in the county, that the schools of Erasmus Smith's Board, are superior in efficiency to those of the Church Education Society. The Inspector's report of an examination held a few days before my visit to Tarbert, was highly complimentary to the female school there. Indeed, its hearty approval might have raised a doubt of the searching character of the test applied to the secular education. The doubt, however, was allayed by the strong condemnation of the boys' school which accompanied it—a condemnation which, I was informed, was about to receive forcible expression in the removal of the master for incompetence.

Waterville.

351. At Waterville, where 20 children were in attendance on June 25, 1868; at Kilgarvan, where 24 were in attendance out of 38 on roll; and at Milltown, where there is an average attendance of 30 out of 49 on rolls, the salaries of the teachers and other expenses have to be defrayed out of local subscriptions, and where, as in the case of Milltown, these run short, out of the rector's pocket. In none of the schools I visited or heard of connected with the Church Education Society, is any aid received from that body. In fact, the connexion of Scriptural schools in Kerry with the Church Education Society, consists in the nominal adoption of its programme, which is not acted upon, and in many schools is hidden away or used as a book-cover; in the occasional use of some of its school-books which, if not paid for out of local funds, were supplied many years ago, and now require renewal; and in inspection by gentlemen appointed by the Dublin Committee, in cases where their expenses can be defrayed by local subscription.

Want of proper Inspection.

352. The want of proper inspection appears to be one of the most glaring evils in the constitution of Scriptural schools. The case has been previously* mentioned of Templenoe school, where an Inspector certified that a satisfactory examination, according to the Church Education programme, had been passed, although it afterwards appeared that no instruction was ever given in one of the subjects required by that programme. In another case, I heard the schoolmaster closed the school for vacation so as to prevent the examination of which the Inspector had given notice. In the opinion of some persons, the Inspectors are chosen with little regard to their capacity for their office. Of one I heard, who managed, on his first appointment, to combine the pleasures of a marriage-tour through the most beautiful scenery in Kerry, with the more responsible duties of school-inspection. More than once I found an annual inspection had been omitted, because there were no local funds to defray its cost. The clergy are fully conscious of this defect, and a special effort to remedy it has been recently resolved on in the diocesan branch of the Church Education Society.

Religious instruction.

353. Often, when the children of a Scriptural school failed on examination in secular subjects, I was asked to test their religious knowledge, in which, it was presumed, they would acquit themselves better. Such an examination I always declined to make, believing it to be beyond my province. Religious instruction occupies too large a share of the secular teacher's attention. Personal piety at the present time protects more than one teacher of a Scriptural school in Kerry, whose incompetence is admitted by his Superintendent. So far as concerns schools receiving aid from the Island and Coast Society, I was informed by one witness, who had every opportunity for being well informed, that success in repetition of a passage of Scripture, is alone needed to secure a grant from that society.

Registers of Church Education Schools.

354. Returns relating to Church Education schools are wanting alike in accuracy and completeness. School registers are carelessly kept, and are never checked by the Inspectors. They are vastly inferior to those used in National schools, and contain much less information.

Hedge Schools.

Hedge schools.

355. The reputation for classical learning which, under the penal laws, hedge schools obtained for the Kerry peasantry, is not likely to be prolonged by their modern representatives, in which the elements of even primary instruction are rather a name than a reality. Such hedge schools as I saw are tokens of the anxiety of parents to have their children instructed, and in some cases of their inability to judge of what elements instruction should consist. They give but poor evidence that parental wishes in this matter are gratified. They are mostly situated in thinly peopled districts remote from the high-roads, or in wild glens which, as the Constabulary stated in the instances of Liss and Graigues, in South Dunkerron, could only be reached with great difficulty, and the assistance of guides well acquainted with the mountain tracks. Having regard to the character of such hedge schools as I visited, I deemed the facts likely to be learnt from others less accessible, not worth the cost of time and labour necessary to obtain them.

* *Vide* paragraph 261.

Coolies.

356. A hedge school at Coolies, a few miles from Killarney, may be taken as representative of its class. To reach it, I had to cross two or three stony fields which lay between it and an unfrequented road. The door so low as to require me to stoop on entering, led into a wretched hovel, in which a little time was necessary to accommodate the eyes to the gloom. The interior was divided into two rooms, one about thirteen feet square, and the other measuring about thirteen feet by eight. The light of the smaller was transmitted to it through an opening which communicated with the principal apartment. Within these narrow limits, thirty-two boys and thirty-seven girls were huddled one upon another on the ground, in such a manner as to make walking dangerous to their safety. The space was still further crowded by the furniture of a blind man who, with his wife and six children, was allowed, by a neighbouring farmer, to be tenant in common with the teacher of the cabin. Examination in such a place was impossible; instruction seemed no less so. The teacher, whose rough exterior scarcely accorded with his former occupation of page in a gentleman's service, suggested that I should have a few of the more advanced pupils brought outside the school. Accordingly, I seated myself on a stone which happened to be lying under a neighbouring tree, using a chair as a desk. Around me was ranged a group of seven children, varying from ten to twelve years of age, whose nervous terror was but partially calmed by their teacher's assurance that I was not the policeman—an officer whose visit, a few days previously for the purpose of enumeration, had not faded from their trembling memories. The lesson of the day was a passage from an old edition of the National Board's Fourth Book, in which they read, not without much stumbling, a description of dicotyledonous plants. Its botanical nomenclature was of course but little more intelligible to the children than to the contiguous bushes. A few easy sums in the simple rules of arithmetic were solved correctly; but the strangeness of an examination rendered the children so nervous, that the inhumanity of any further test, exceeded the usefulness of any results likely to be obtained from it.

357. The teacher, who had followed his present occupation since 1860, reckoned his annual income at £8; but this sum was augmented by the occasional charity or friendship of some of the farmers whose children attended the school. When school was over at four o'clock in the afternoon his interest in the cabin ceased for the day. Killarney, where his family lived, was too far for him to go there, except to spend Sundays or other holidays. At other times he generally went home with some of his pupils, to whom, in return for his lodging, he gave extra tuition. Fifteen or twenty of his pupils did not pay the customary fee of a shilling a quarter, it being his practice to receive three children of the same family on the same terms as two.

Prior.

358. Another hedge-school I visited was in the parish of Prior, one of the wildest districts in Iveragh. The building, rather smaller than that at Coolies, was occupied by about twenty children. It was Saturday, on which day schools in Kerry are, with scarcely an exception, closed, and consequently only about half the ordinary pupils were present; but, notwithstanding the diminished attendance, the stifling atmosphere, sweetened by a calf which habitually shared the apartment with the pupils, made me glad to escape into the cloudless glare of the July sun. The teacher stated the inability of the majority of his pupils to read, and the failure of one or two of the most advanced among them justified his candour. His professional emoluments amounted to about £5 annually, which were contributed in quarterly instalments of a shilling from some of his pupils. This man's honest but fruitless endeavours in the cause of education had attracted pupils from the nearest National school, where the negligence of the teacher had some time since forfeited the confidence of the parents, and more recently cost him his place.

Corobeg.

359. At Corobeg, in Valencia, on the desolate coast between Knightstown and the Atlantic Telegraph Station, a more decent dwelling, of which gratuitous use had been granted by the Knight of Kerry, marked the sympathy felt by him for a youth whom chronic asthma had prevented from attaining the coveted position of a National teacher, but who, in spite of shattered health, struggled to maintain a hedge-school. His education by the Christian Brothers in Cahirciveen had better qualified him than the teachers at either Coolies or Prior for the purposes of an instructor. He had divided his thirty-four pupils into classes, a lad of fifteen or sixteen years being the only one who had got as far as the Third Book of the National Board. This boy's skill in reading could hardly compensate for the trouble he incurred in clambering down from a sort of loft which formed the upper portion of the school-room, in order to undergo my examination. The impossibility of obtaining National school-books at the reduced prices at which they are sold to National teachers, had put the simplest implements of learning beyond the reach of many of the scholars. The want of desks was ill-supplied by a few narrow forms, from which the feet of the listless children dangled, or against which they leaned while learning to write on slates. Each pupil contributed a shilling a quarter, and the master received gratuitously seven infants, whom he did not count among his pupils, but whose inseparable attachment to their elder brothers and sisters was not deemed incompatible with school discipline.

Significance of hedge-schools.

360. Hedge-schools in rural districts imply either an insufficiency of National schools, or a want of confidence in some neighbouring National teacher. A National teacher whose competence is but suspected, is likely to find some of his pupils migrate to a neighbouring hedge-school, where an inferior standard of excellence is applied, if only the teacher exhibits conscientious devotion to work. Hedge-teachers are invariably spoken of by their clergy as moral, hard-working men. Their professional career, it cannot be doubted, depends on clerical toleration. One parish priest, whose National teacher was unsatisfactory to him, spoke well of a hedge-school in a distant portion of his parish. Good account was also given me of a hedge-school near Tarbert, which I was unable to identify with any in the Constabulary returns; but as the teacher had been removed for incompetence from the service of the National Board, the approval was, perhaps, not deserved. This was the only hedge-school in which I heard of a female teacher.

Evening Schools.

Evening schools.

361. The only evening schools in my district returned by the Constabulary are one in Killarney and another at Sneem, both of which are in connexion with the National Board, and the latter of which is held in the ordinary National school-room, under the care of its teacher. To these should also be added night schools at Tarbert, connected with the National Board, and taught by the National teachers of that town.

362. From vacations or other special circumstances I was unable to examine either of these night schools; but as, with the exception of that in Killarney, they are under the care of competent National teachers, the degree of their usefulness may be conjectured.

Sneem.

363. The following particulars, relating to the night school at Sneem, will furnish an idea of the position and work of a night school in a third-rate Kerry town or village, of which the male population in 1861 amounted to 145.* The school, which is supported by a Government grant of £5 per annum, and by local subscriptions, which, in 1867, amounted to £5, has been in operation since November, 1864. It is open from 6.30 to 9, P.M., on Mondays, Wednesdays, and Fridays, throughout the year. The education given is entirely gratuitous, and consists in the second class of reading and writing, and in the third and fourth classes of reading, writing,

* *Vide* Census Returns of Ireland, 1861, Pt. II., Vol. I., pp. 468-9.

arithmetic, and letter-writing. The number of pupils "on rolls" in August, 1868, was thirty-eight. The average number "on rolls" and "present," and also the average age of the pupils in the twelve months ending June 30, 1868, is shown in the following table :—

Period of Year.	Average Number on Rolls.	Average Number Present.	Average Age.
Third quarter, 1867,	20·8	13·5	16·3
Fourth „ „	34·4	17·4	16·4
First „ 1868	40·7	22·	15·7
Second „ „	33·7	11·1	15·5

364. The pupils attending are farmers and labourers, and necessarily live in the town or its immediate neighbourhood, although possibly not within the exact limits of the area assigned to it by the Census Commissioners in 1861. The teacher suggested that a small allowance should be made for candle-light for the use of the school, as he finds it rather difficult to get the pupils to pay for the light. Many of them, he said, are very poor, and though all are admitted free, he believed that the trifling sum charged for light—about twopence or threepence a month—prevents some from attending.

Opinions respecting evening schools.

365. The idea of evening schools seemed unfamiliar to most with whom I conversed respecting them, and this unfamiliarity, probably more than anything else, prevents their increase in the county. Their establishment in rural districts is generally deemed impossible, but in the towns is deemed by most both practicable and desirable. On this subject the Rev. E. J. Wade says :—"In towns there is a decided want of evening schools. They would be well attended. Boys and girls under fifteen should be excluded, unless *bona fide* apprentices or employed for wages by day. There are great difficulties in the way of teaching, and they would require very strict care lest they should degenerate into lounging places, or afford opportunities for treasonable nonsense." Only one Roman Catholic clergyman expressed any objection to evening schools. His fear was lest they might prove dangerous to morals by affording opportunities for young men and women to meet on the way to or from school.

366. Several persons of the class who would be likely to avail themselves of evening schools, if such existed, expressed a strong desire for their establishment. One of the men in charge of the ferry between Valencia and the mainland said he could not afford to hire anyone to assist him in his boat, and so he was obliged to remove his son, who was fourteen years old, from school at an earlier age than he would otherwise have done. He would gladly send him every evening to Cahirciveen (three miles off) if there were an evening school. The face of the boy himself, on my asking him his wishes, brightened up at the mention of an evening school, and he seemed already to anticipate the advantages which it would confer. Many persons in this part of Iveragh were very anxious for the establishment of night schools, and such schools they thought should be open all the year round.

Infant Schools.

Infant schools.

367. Infant schools, as separate institutions, hardly exist in Kerry. An infant school at Tralee, in connexion with the Church Education Society, forms one of the three Scriptural schools there, and is independent in its organization of the male and female departments. Most of the convents have a room specially devoted to infants, but the number of those attending is not reckoned separately from that of the older scholars.

Popular feeling respecting them.

368. Popular feeling in favour of infant schools is incidentally proved by the number of young children who are found in many country schools, in which no provision is made for infant training, having accompanied their elder brothers or sisters from homes in which the occupations of agriculture rendered parental care impossible. In such cases their presence is rather a hindrance than otherwise to the work of the teacher, and the one lesson of compulsory silence which the little creatures learn is probably the worst lesson which could be imparted to infants.

Their moral influences.

369. The moral benefits of infant schools, so far as I was able to estimate them, are greater than their intellectual. The alphabet and first few digits afforded little or no opportunity for examination. What instruction is conveyed is not uncommonly given through the medium of simple songs. Their musical cadences are doubtless more attractive to infant children than the elementary knowledge which they embody; but if for nothing else, they serve for early lessons in articulation. To the habits of order and cleanliness acquired in the infant classes of convent schools is probably due, in some degree, the general superiority of tone observable in their higher classes as compared with ordinary National schools.

Average numbers in infant schools.

370. The following table exhibits the average number of infants on rolls and present in each of the convent schools of Kerry :—

Table exhibiting the Average Number of Infants "on Rolls," and "Present," in Convent Schools in Kerry.

No separate returns of infants.

371. There being no separate return of infants as distinct from other children kept in any of the schools, I do not know by what rule the sisters who furnished me with the returns above tabulated distinguished them, except that in the case of the Presentation Convent at Tralee, the numbers returned are those of children "in First Books," and that at Castleisland the numbers are those of children under nine years of age. In this school there are a few boys of a greater age. In the Mercy Convent at Killarney, and the Poor Clares' Convent at Kenmare, there are no such children except in the infant school. At the former of these two a few little boys are received at the convent itself, which is at some distance from the school, and these are not registered in the school books.

Milltown.

372. The numbers of infants returned from Milltown convent are considerably less than from any other convent. In conformity with this, the Rev. W. D. Wade, the incumbent of the parish, expressed his opinion that an infant school was wanted in Milltown.

Obstacles to infant schools.

373. The difficulty of obtaining teachers with the qualifications of temper and method necessary for infant schools and the conviction (at least of Roman Catholics), that nuns are the persons most competent for their management are the chief causes which prevent those who would like to see them more widely established from grappling with the difficulties which a rural district, such as Kerry, opposes. Their utility is generally admitted. One parish priest writes of them, that "they are a great blessing." Another (the Ven. Archdeacon of Kenmare), says, "Infant schools would prove of immense value, inasmuch as they would give a taste for school. Compulsory education, even on the part of the parents, renders it in most cases distasteful to the children, and when distasteful becomes of very little value."

Ragged Schools.

Ragged schools.

374. It is about equally true and false to affirm that there are no ragged schools in Kerry. In a country like Kerry where women work barefoot in the fields, and in walking to Mass or market carry their boots in their hands, it is difficult for a stranger to estimate poverty by dress. Boys and girls with boots or shoes are very rare in ordinary National schools. In Scriptural schools they are more common, and this is attributed by the clergy of the Established Church to the superior social status of their own flocks. In convent schools the effects of charity are visible in the neatness of dress of most of the girls. Ideas of comfort and neatness in Kerry vary considerably from the English standard; and many children who are covered with very scanty or tattered garments are probably deemed by their parents to be decently clad. The parish priest of Kenmare, says, "I don't understand ragged schools. Many of the children attending our National schools are ragged enough, so much so that clothes cost me £100 every Christmas for the ragged regular attendants." He adds drily, "And very regular it makes them."

Social distinctions.

375. On the one hand I frequently heard that parents kept their children from school because they had no clothes sufficiently good in which to send them. On the other some of the shopkeepers and "merchants," as they style themselves, in the towns hesitate or decline to allow their children to mingle in school with those whose tattered clothes are a sufficient index of their inferior grade. Social pride appears to have wide sway among the agricultural classes of Kerry, who are very precise in their distinction of "strong" and "small" farmers. Nothing, however, was brought before me which showed that any large number of children at either end of the social scale is kept away from school by causes which the establishment of ragged schools in the conventional sense of the term would modify or remove. It is not the province of State education to foster social inequalities, however necessary it may be to calculate and if possible to neutralize their effect should it happen to be antagonistic to the usefulness of schools and the spread of knowledge.

School Teachers.

Status and condition of school teachers.

376. The results of my inquiries into the professional status and condition of National school-teachers will in part appear from the annexed tabular statement. The facts contained in it and which relate only to a portion of the teachers with whom I came in contact, are in substantial accordance with all that I heard from whatever source in relation to this class in general.

Their general character.

377. Teachers of National schools are generally regarded by all classes of society as a hardworking, and well-conducted body of persons, whose conscientious discharge of important and useful duties is most inadequately recompensed. Of their loyalty, at least in Kerry, I never heard a suspicion uttered; and all notion of their political disaffection seems to have died out even amongst the constabulary. Of their moral character favourable reports were continually given by their clergy and others; although occasional, but rare, breaches of social morality bring dishonour upon a class whose superior education and official position tend to lift its members above the grade from which they are mostly sprung. At least one Roman Catholic magistrate mentioned occasional instances of drunkenness among National teachers being brought before the bench, but such instances are confessedly very rare.

Scholastic competence.

378. Of their competence as teachers I am on the whole inclined to have a favourable opinion. Differences of course continually presented themselves, but these differences appeared to be the effects of individual character and natural ability, rather than of general causes underlying the system of their education or appointment.

379. In previous pages I have pointed out what appears to me to be the weakest point in the education given in National schools. If it be true, as I decidedly believe, that in most cases the memory is cultivated at the expense of or in a greater degree than the intelligence, the fault necessarily lies with the teachers, but this fault is not ineradicable, if properly attended to by the ordinary inspectors of schools, and by those who have charge of the special training of teachers. But so long as it remains unremoved, it is reproductive. A teacher's method of instruction is necessarily determined in great measure by his recollection of the method of his own instructors. The experiences of five months' training in Marlborough-street—supposing it to be directed and adapted to the remedy of this defect—are manifestly too brief to overcome the tendencies which the whole period passed as a pupil or monitor has implanted. One parish priest spoke in strong terms of the advantages derivable from the visits of "organizers," and he much regretted the discontinuance or present rarity of such visits. The method of teaching is scarcely distinguished in thought, much less in act, from the subjects to be taught, and most teachers probably deem degrees of professional skill depend upon the relative amount of professional knowledge. This evil requires remedy. How far that remedy is derivable from model schools, and what remedies the model schools of the National Board themselves require in order to bring them into harmony with the opinions of the Roman Catholic clergy, are questions beyond the limits of my appointed sphere, and respecting which, owing to there being no model school within my district, I collected no information to aid in their solution.

380. TABLE exhibiting the Classification, Training, and Condition of National Teachers.

Name of School.	Tenure of School.	Date of Appointment of Principal Teacher.	Classification of Principal Teacher.	Whether Trained or not and when.	Number of Assistant Teachers.	Former Occupation (if any) of Principal Teacher.	Occupation (if any) of Principal Teacher besides Teaching.	Observations.
Listowel, Convent,	N.V.	–	–	–	–	–	None.	Three of the Sisters have been trained.
Listowel, Male,	V.T.	1853	I[2]	–	3	Private tutor in a gentleman's house.	Has a provision shop in town.	
Tarbert, Male,	V.T.	1836	II[1]	–	2	None.	None.	
Tarbert, Female,	V.T.	1863	II[2]	–	1	None.	None.	
Tarmon, Male,	V.T.	1862	III[2]	Not.	0	None.	None.	Twice summoned for training, but prevented by manager.
Tarmon, Female,	V.T.	1868	Not.	Not.	1	None.	None.	
Gortnaskehy, Male,	V.T.	1863	III[1]	Not.	1	None.	Farms an acre of land.	Not trained, owing to opposition of manager.
Gortnaskehy, Female,	V.T.	1862	III[2]	Not.	1	None.	None.	Not trained, owing to opposition of previous manager.
Brosna, Male,	N.V.	1866	II[2]	1867	1	None.	None.	
Brosna, Female,	N.V.	1865	III[1]	Not.	1	None.	None.	
Clogher, Male,	N.V.	1850	II[2]	1856	0	None.	None.	
Clogher, Female,	N.V.	1861	III[1]	Not.	0	None.	None.	
Bally McThomas, Male,	V.T.	1868	III[1]	–	0	None.	Private tutor.	
Bally McThomas, Female,	V.T.	1868	II[2]	Not.	0	None.	None.	
Tralee (Presentation Convent),	N.V.	–	–	Not.	–	–	None.	One of the Sisters has been trained.
Tralee (Convent of Mercy),	N.V.	–	–	Not.	–	–	–	
Ballinacartin, Mixed,	N.V.	1867	III[1]	–	1	None.	None.	
Blennerville, Male,	N.V.	1844	I[2]	–	0	None.	Has flour and meal shop.	
Derry Quay, Mixed,	N.V.	1865	III[1]	Not.	0	None.	None.	
Ardmore, Mixed,	N.V.	1858	III[2]	Not.	1	None.	None.	Not trained, owing to opposition of manager.
Minard, Mixed.	N.V.	1863	III[2]	–	1	None.	None.	
Dingle, Convent,	N.V.	–	–	–	–	–	None.	
Dingle Workhouse, Male,	N.V.	1850	Not.	Not	0	None.	Assists master of workhouse.	
Dingle Workhouse, Female,	N.V.	1855	III[1]	1861	0	None.	Assists matron of workhouse.	
Ventry, Male,	N.V.	1868	III[1]	Not.	0	None.	None.	
Ventry, Female,	N.V.	1868	Not.	Not.	0	None.	None.	
Ferriter, Mixed,	N.V.	1863	III[1]	Not.	2	None.	None.	
Vicarstown, Mixed,	V.T.	1863	III[1]	Not.	1	None.	None.	
Killarney, Monastery,	N.V.	–	–	Not.	–	–	None.	Superior of the Order was formerly a National teacher.
Killarney (Presentation Convent),	N.V.	–	–	Not.	–	–	None.	
Killarney (Mercy Convent),	N.V.	–	–	Not.	–	–	–	
Killarney, Workhouse, Male,	N.V.	1849	II[1]	–	0	Farmer.	None.	Educated with a view to the priesthood.
Tiernaboul, Male,	V.T.	1863	III[1]	Not.	0	None.	None.	Summoned for training within last twelve months, but prevented by Manager.
Tiernaboul, Female,	V.T.	1861	III[1]	1867	0	None.	None.	
Clashnagarrane, Male,	V.T.	1856	III[1]	1858	0	None.	Farms one and a half acre of land.	
Clashnagarrane, Female,	V.T.	1861	II[1]	1860	0	None.	None.	
Muckross, Mixed,	N.V.	1864	III[1]	Not.	0	None.	Postmaster.	Was educated in Kildare-st., and placed in Class I. of Church Education Society.
Gortagullane, Mixed,	V.T.	–	III[1]	–	–	–	None.	Likely to be removed for incompetency.
Glenflesk,	V.C.	1856	II[1]	1852	–	Clerk in a London office.	Postmaster.	
Cahirciveen, Convent,	N.V.	–	–	Not.	–	–	None.	
Cahirciveen, Male,	V.T.	1848	I[2]	1849	1	None.	Has a grocer's shop.	
Cahirciveen, Workhouse, Mixed,	N.V.	1864	III[2]	Not.	0	None.	Assists matron of Workhouse.	Has never been summoned for training.
Foilmore, Female,	V.T.	1867	III[1]	Not.	0	None.	None.	
Killurly, Mixed,	N.V.	1862	III[1]	1857	1	None.	Has farm of about 20 acres.	
Kells, Mixed,	V.C.	1865	III[1]	1867	1	None.	None.	
Ballycarberry, Mixed,	N.V.	1865	III[1]	1865	1	None.	None.	
Portmagee, Mixed,	N.V.	1854	II[2]	Yes.	0	None.	None.	
Valencia, Male,	V.T.	1867	Not.	Not.	0	None.	None.	Has undergone written but not *vivâ voce* examination by Inspector.
Knightstown, Male,	V.C.	1867	I[2]	Yes.	0	None.	None.	Spent two and a half years at National school in Marlborough-street.
Knightstown, Female,	V.C.	1863	II[1]	–	0	None.	Private tuition.	
Lohar (Tour), Mixed,	N.V.	1867	II[2]	1864	0	None.	None.	Trained in Special Class in 1865.
Cahirdaniel, Male,	N.V.	1856	II[2]	–	–	None.	Farmer.	
Cahirdaniel, Female,	N.V.	1854	II[1]	1853	–	None.	None.	
Sneem, Male,	V.C.	1860	I[2]	1864	1	None.	Has a small shop, and farms a little land.	
Sneem, Female,	V.C.	1862	II[1]	–	1	None.	None.	
Kenmare Convent,	N.V.	–	–	–	–	–	None.	ThreeSisters have been trained before taking the veil.
Kenmare, Male,	V.C.	1852	I[1]	1842	2	None.	None.

381. Whether, as a matter of fact, teachers who have been trained in the National school at Marlborough-street, are superior to those who have not been so trained, my inquiries did not enable me to form a definite opinion. The importance of training, however, is highly estimated by the teachers themselves, and by the warmest supporters of education among the Roman Catholic clergy. The Bishop of Kerry gave, I believe, an unwilling

assent to the resolutions of the Episcopal College on the strength of which the greater part of Roman Catholic clerical managers make dismissal the penalty to be suffered by teachers who obey a summons to be trained. A few managers, indeed, argue that those resolutions ought not to be acted upon, insomuch as the Roman Catholic clergy have not themselves established denominational training schools, which were resolved upon by the bishops at the same time. In a few cases, the resolutions are practically disregarded, and teachers are allowed, even by clerical managers, to obey the summons for training. Some witnesses avowed a belief that such practical disregard would not be too curiously inquired into by the chiefs of the hierarchy in the diocese of Kerry, if their sanction were not officially requested.

382. It does not appear that there was any greater deficiency of trained teachers in non-vested than in vested schools.

Desire for training among teachers.

383. The anxiety manifested by most teachers—a few are indifferent—to be trained rests in part on pecuniary grounds. It is commonly believed by them that their chances of being promoted by the Inspectors into a higher class, depend in a great degree on whether they have been trained or not, quite irrespectively of the marks obtained by them in examination. They are consequently anxious to be placed on a vantage ground, in their endeavours to obtain the increased salary of a higher classification.

Classification of teachers.

384. Although the superiority of trained over untrained teachers was not evident, the general superiority of schools under the conduct of a second-class teacher over those in which there was only one of the third class, and the superiority again of those taught by a first-class teacher over all others, was conspicuous, and clearly demonstrated the accuracy and intrinsic excellence of the classification of National teachers. The differences of the divisions in each class are necessarily less obvious, but undoubtedly they are no less accurately drawn.

385. It did not appear that teachers ever teach subjects not generally required, or give too much attention to their more advanced pupils. In one or two schools it is true, and those too in which the teacher had a high classification, I fancied I detected some degree of ignorance in reference to the junior classes of the school on the part of the principal teachers. But the accuracy of such an impression could not be tested by a single visit, and was doubted by the National Inspectors of whom I made inquiries. In these cases, however, the assistant teachers or monitors who had charge of the lower classes, were fully competent for their posts.

Cases of incompetence.

386. Only a few cases of incompetence were mentioned to me by Inspectors of the National Board, and these either were about to be remedied, or had already been remedied by the removal of the teachers. The opinions of the Inspectors on professional fitness or unfitness, seem always to have great weight with the managers of schools.

Salaries of teachers.

387. The salaries of teachers are substantially those only which are granted by the National Board, supplemented in a few instances by good service salary, and in more by gratuities of one kind or another, which necessarily vary in amount from time to time. Very little, as has previously been shown,* is done to comply with the desire expressed by the Commissioners of National Education in their Rules and Regulations (Part IV., iv., 8), that an increase of salary should be secured to the teacher, either by local subscription or school fees. The amounts of them are small and uncertain, but not unfrequently the largest subscriptions and the largest sums in school fees are received by those teachers whose superior abilities or diligence have earned the higher salary of a higher classification, or enable them to obtain additional gratuities by teaching special subjects or training monitors. The scanty amount of teachers' salaries is too often reduced by the expenses they have to bear in providing residences or repairing the school buildings, or even of paying rent for them.

Little difficulty in obtaining teachers.

388. It is a little difficult to determine how it is that, notwithstanding the general opinion of the poverty of remuneration received by National teachers, the position should be so attractive as it is. There seems little difficulty in obtaining a supply of male teachers, and of female teachers there is a surplus; a large number of girls in convent schools acquire a taste for teaching, and are trained for the profession. But the number of convents diminishes the number of positions to be filled by female teachers. Separate female schools (if convents are omitted) are slightly less numerous than separate male, and in mixed schools male teachers are much more common than female. In fact, convent schools diminish the supply of places for which they themselves tend to create a demand. Perhaps inexperience of life and of the expenses of self-support at the time when most young teachers enter on their professional career, will, in part, explain their eagerness to obtain a post which, when once obtained, they all complain is full of hardship. One young teacher who had recently been appointed, stated that his short experience of the difficulty of supporting himself on his scanty salary, could he but have anticipated it, would have prevented him adopting the teachers' profession as his means of livelihood.

Necessity of increasing salaries.

389. One National Inspector stated his belief that the greatest improvement in the existing system which the present Commission of Inquiry could propose would be an increase of the salary of the "poor teachers," and his view was held by other Inspectors. The principle which should govern the application of Government moneys to particular schools seemed to have been very little considered by the majority of witnesses. A combination of payment according to the classification of teachers and of payment "by results," is approved both by Inspectors and teachers; but no detailed suggestions for carrying it into operation were made to me.

A National Teacher's suggestions.

390. One male teacher has forwarded to me, in writing, certain "suggestions for the improvement of National schools," which fairly embody the views entertained by the whole body of National teachers in the country. These "Suggestions" are as follow :—

"*First step* would be to give the teachers a fair salary, for I believe that if a teacher of a school were well paid he would endeavour to have it in an efficient state. A school should be kept constantly supplied with requisites for sale to the pupils, if not, their progress will be slow.

"*Condition of Teachers.*—The general condition of the great majority of the teachers is one of extreme privation. And how can it be otherwise? How can it be possible for a teacher who has a wife and often a large family (I myself have eight children) to support himself and keep himself and family decently clad on £24 or even £33 a year? Why the commonest labourers are better paid than a large number of National teachers.

"It would be well on the part of the State to pay the National teachers liberally, for I see no class of men who have it in their power to render more important services to the country in the way of inculcating loyalty and obedience to the laws, &c., than the National teachers.

"With regard to the mode of paying teachers, I think it would be a mistake to do away with 'classification,' and substitute 'payment by results.' The effect of this would be, that the teachers would become more and more illiterate, as there would be no motive for study.

"I should have no objection to see 'payment by results' introduced as *supplemental to class salary*.

"In conclusion, I would suggest an increase in the present salaries and a retiring ANNUAL PENSION, when a teacher becomes, through age, &c., unfit for his office. Also, that a teacher should not be dismissed from his office without a previous investigation by the Inspector into the charges brought against him, as is the case in other public departments."

Political influence of teachers.

391. One other teacher, in a different part of the country, urged the political importance of securing the loyalty of the teachers by an increase of their salaries. He said that some of his elder pupils had been singing seditious songs and had written in their copy-books "God bl–st the Queen," instead of "God bless the Queen." The songs he had restrained, and the obnoxious copies he had destroyed to prevent them coming under the eyes of

* *Vide* paragraph 42, and paragraphs 196–205.

the manager or inspector. He thought that by increasing the salaries of teachers the State would secure a useful body of servants to check Fenianism.

Teachers' unions.

392. The teachers appear to be closely united by means of teachers' unions, which have recently been formed, and of which the "*Teachers' Journal*" is the accredited organ. They are all expecting considerable improvement in their position to result from the present Commission of Inquiry. They have four chief grievances, to a statement of which I soon became so accustomed that when anxious to learn anything about the special condition or wants of a teacher, I found it was necessary to preface my inquiry by saying I assumed that he wanted an increase of salary, a pension, a residence, and a diminution of the powers of managers over teachers.

393. Of these four grievances, that relating to salary is the heaviest. Its mitigation, indeed, would, to some extent silence the clamour for pensions and residences. All the teachers feel that, with their present salaries, they are unable to lay by anything to meet the contingencies of sickness or the feebleness of old age. The difficulty is increased by early marriages, and none of the teachers to whom I spoke on this point seemed to think it right that prudence in this matter should be compulsory, owing to the salaries of teachers not being calculated for the support of their wives and families in addition. Several said that if the choice of increased salaries or pensions was offered them they would prefer the latter, or that if their salaries were increased they would willingly pay something in aid of the establishment of a pension-fund. One teacher on the other hand said "he would prefer an increase of salaries to the grant of retiring pensions, because," he added, "when the teachers had got the former they could then combine to agitate for the latter." In the general desire to obtain as many improvements in their position as possible, it is probable that a comparison between the relative values of the different improvements desired has not often been made.

Residences.

394. The feelings and wishes of teachers in respect of residences are various. Many would like to have residences attached to the school, and complain much of the hardships which they undergo by having to walk many miles to school in bad weather and then being forced to remain in their damp clothes, there being no private apartment in which to change them, during school hours. Others again who have small plots of land, prefer having their houses adjoining their holdings, and would consider compulsory residence in a house annexed to the school to be a harsh interference with their liberty. One or two witnesses (including a National Inspector) expressed an opinion that residences should be provided, but that they should be about half a mile from the school. In some cases where teachers had residences adjoining the school the contiguity of their houses frequently tempted them to leave the school-room.

Powers of managers.

395. The teachers, as a class, are very desirous that the arbitrary powers of managers over them should be diminished or controlled. With the exception of the refusal of clerical managers to allow teachers to go up for training, I could only learn a few instances in which the existing staff of teachers in Kerry had any ground of complaint against their own managers for an unfair exercise of their powers. When urged to mention instances of oppression by managers, they could only mention instances in other parts of the country, of which they had read in the *Teacher's Journal*. As a rule the relations of managers and teachers in the county appeared to be amicable. A few teachers complained that their managers would not suffer them to enforce the payment of school-fees.* A few others complained of capricious removal from one school to another under the same manager. In one case a teacher stated he had been forced to go, much against his will, from the school at which I found him teaching to another several miles off under the same manager, and then, soon after he had fairly settled down in his new quarters, he was compelled, also against his will, to return to his original post. In this case the teacher, whom on each removal he succeeded, was appointed to the school he left. The object of this double interchange of teachers he was unable to explain.

Cases of dismissal.

396. Very few cases of arbitrary exercise of managers' powers in the matter of dismissal were alleged to me. Such allegations as came within my knowledge are reported below.

397. The teachers are not alone in desiring a check on the powers of managers. One National Inspector considered there should be greater control over them. The control he desired, not for the sake of the teachers, but in order to secure greater independence for the parents. The managers, he said, are too often clergymen, having power over the religious lives as well as the education of their people. Himself a Roman Catholic, he nevertheless approved of mixed education; but this it was in the power of a clerical manager entirely to prevent by forbidding the children of his flock to attend a particular school. By such an exercise of power a school might in some instances be practically closed.

Appointment of National Teachers.

Practice relating to appointment of National Teachers.

398. The practice that has prevailed during the last three† years, as to the appointment of teachers, seems almost invariably to have been for the manager of a school to apply to the Inspector to recommend a teacher, and the Inspector's recommendation has been generally acted upon. Such as have been appointed had been either monitors or assistant teachers in other schools within the district of the Inspector. They had mostly only recently entered the service of the National Board, and had not been trained at the time of their appointment. Whether they have been trained or not afterwards has depended on the will of the manager.‡

399. It does not appear that those teachers whose appointment has been made within the last three years differ in respect of competence from those who had been appointed at an earlier period, except so far as classification, may be deemed a test of competence. Only one teacher in the table (p. 479, *ante*) who has been appointed within that period, has a classification higher than second of second. The others have been for the most part in the third class. The one exception is the male teacher at Knightstown—a school vested in the Commissioners, and of which the manager is a lay member of the Established Church.

Dismissal of National Teachers.

Cases of dismissal.

400. The only cases of dismissal of National teachers, within the last three years, which came within my knowledge are the following. I suppress the names of all the parties, as a statement of them cannot, in my judgment, be of the slightest service to Her Majesty's Commissioners:—

401. I. The female teacher of a school vested in trustees was dismissed by the manager (who was the parish priest) on the recommendation of the Inspector. In his judgment the efficiency of the school had been declining gradually for several years, and he had found it necessary to degrade the teacher. The teacher, whom I saw, represented that she had been the victim of personal dislike, and that the Inspector had, for a series of years, done all in his power to injure her. "He was a sultan." The manager, she considered, had been a party with the Inspector in a conspiracy to damage her. The manner of this witness convinced me that her own declension

* *Vide* paragraph 194.
† *Vide* Instructions to Assistant Commissioners.
‡ *Vide* paragraph 193.

as a teacher was the sole cause of her removal. I afterwards saw the manager, who said that he had acted in the matter solely on the advice of the Inspector. At a later date I saw the Inspector, of whom I inquired the particulars. He stated that the teacher had once been very efficient, but had gradually declined, and at last to such a degree that her removal became absolutely necessary. A month's notice to leave was accordingly given her by the manager; but upon the receipt of this she at once closed the school, removing from it the report, register, and other books. He attributed her declension as a teacher to mental causes, for which a probable reason was assigned.

402. II. The master of a non-vested school was removed, at the instigation of the Inspector, because, notwithstanding repeated warnings, he continued negligent in the discharge of his duties, and on one occasion the inspector found the school closed at the time of his visit, although it was not a proper holiday or within the vacation. From inquiry of persons living in the neighbourhood of the school, I learned that this teacher's negligence had caused the withdrawal by their parents of many of his pupils. The same witnesses attributed his negligence in part to his attention being diverted by a small shop which he kept. The Inspector did not attach much weight to this, and he seemed to think that the teacher, if re-appointed in another part of the country would be likely to do very well.

403. III. In another case the teacher of a non-vested school had been dismissed by the manager, because of his refusal to state to him who it was who had fired a gun at one of the Constabulary out of a house in which it was alleged the teacher was at the time. This was about the time of the Fenian rising. The teacher denied that he knew anything about the matter, and the manager had no proof that the teacher was in the house at the time. The teacher was thereupon appointed, through the intervention of the Inspector, to another school, and his place was taken by the teacher whom he succeeded.

404. IV. The teachers of separate male and female schools in the same building were removed by the manager. They were husband and wife, and certain conjugal jealousies or suspicions had interfered with the efficiency of the school.

405. V. The master and mistress of two separate male and female schools under the same roof, were husband and wife, and lived in a house adjoining the school. The manager charged them with negligence, stating that they were continually going in and out of the schoolrooms to their own house. They were removed, and a near relative of the manager was appointed mistress. The current belief in the neighbourhood was that they were removed to make room for the priest's niece. One witness, in speaking of this case, stated, as a coincidence, to which he seemed doubtful whether or not to attach a mysterious import, that the priest (the manager) and his curate had both died shortly after the dismissal of the teachers. The Inspector seemed to think that the desire to make way for the manager's niece (who was quite competent for the post, and had for some time past acted as assistant teacher, but not very harmoniously, with the principal teacher) had probably something to do with the removal of the husband and wife, and that the alleged negligence was trifling. Both of them are now appointed to a neighbouring school, where they give satisfaction.

Teachers of Scriptural Schools.

Teachers of Scriptural schools.

406. The picture previously presented of the inefficiency of Scriptural schools,* renders any detailed report of the capabilities of their teachers unnecessary. Nearly every clergyman of the Established Church, notwithstanding he might be a stanch supporter of the Church Education Society against the National Board, admitted their general inefficiency, and excused it by the want of local funds to pay more competent persons. The rector of Cahirciveen stated that the incompetence of his teacher had completely lost the confidence of his parishioners, who hesitated to send their children to the parochial school. This witness, however, considered that teachers of Church Education schools are in general satisfactory, and that on an average they are superior to National teachers—certainly to National teachers in outlying districts. It must be recollected that Kerry contains many "outlying districts," and that its wilder portions offer few inducements to high-class teachers. The standard of classification appears much lower with the Church Education Society than with the National Board. The teacher of Kenmare parochial school was classified by the National Board as III^{1}., and by the Church Education Society as I. This was also the case with the teacher of the National school at Muckross.

407. If diligence is an element of scholastic competence, the only teacher of a Scriptural school which I examined, to whom I would give the praise of efficiency, was the mistress at Ventry. The mistresses of the female and infant schools at Tralee, under the Church Education Society, and of the female school of Erasmus Smith at Tarbert, were also stated by their respective clergy to be fully competent. The master of Erasmus Smith's school, Tralee, was also very highly praised. Indeed his reputation has spread through the county, and was frequently mentioned to me by clergymen who apparently wished to screen the inefficiency of the teachers of Scriptural schools under his good name. Unfortunately I was prevented by vacation from examining either of the four last named schools.

Their salaries.

408. The position of the teachers of Scriptural schools, notwithstanding an opinion to the contrary commonly expressed, appeared to me to be better than that of the great majority of National teachers. The worst paid of them get £30 per annum, and a house rent free, and to this is generally added the office of parish clerk, with an annual addition of £5 or £10. The teachers of Scriptural school were in general somewhat better dressed than those of National schools, although there was little to complain of on the score of want of neatness on their part, and a few of the younger female teachers of National schools were by no means ignorant or negligent of the claims of fashion. The large families of several Church Education masters almost justified the sarcastic induction of one clergyman of the Established Church who thought that Scriptural schools were often only kept open for the sake of the masters' families.

Monitors of National Schools.

Small difficulty in obtaining monitors.

409. In hardly any instance could I hear of actual difficulty in obtaining monitors or monitresses. At the Presentation Convent at Tralee, and in one or two other instances, I heard there had within the last three years been occasional difficulty in filling up vacancies in the monitorial staff, owing to the disinclination of parents to allow their children to commence a professional career which from the rarity of appointments to head teacherships afforded little hope of future prosperity. But testimony in general ran the other way, and it appeared that the Inspectors occasionally put a check on parental ambition in this matter. One or two teachers stated that they had no difficulty in obtaining monitors *except* such as the Inspectors interposed. The same facts would not improbably be explained by the Inspectors, either by the incompetence of the candidates, or the inability of the principal teachers to train them. The latter cause was alleged to me by an Inspector against one convent school in his district.

* *Vide* paragraphs 331–354.

National Board not sufficiently liberal in appointment of monitors.

410. A few of the teachers were desirous that paid monitors should be more readily allowed by the National Board, and, in like manner, the Rev. E. J. Wade says, "To small schools more liberality should be shown in providing monitors. The diversity of ages, classes, and work, make it impossible for one teacher to do justice to twenty children. Wherever the average attendance is large enough to entitle the school to a salary, *at least one monitor* should be paid." In only one instance did I meet with absolute aversion on the part of teachers to have monitors under them, although indifference on the subject was often manifested. In this one instance the teacher who was in the first class, said he did not like the responsibility of a monitor's education. His own high classification may have given him a higher ideal of the proper training of a monitor who is to become an efficient teacher, than is generally prevalent among his professional brethren in Kerry.

Monitresses more numerous than monitors.

411. Monitresses appear to be more numerous, because more easily obtainable, than monitors. The position of a National teacher is more attractive to girls than it is to boys, who have wider fields of occupation open for them both abroad and at home. The convents also have a staff—generally a large staff—of monitresses attached to them, and no similar staff is to be found in any male school, except that of the Presentation Monks at Killarney. I always found that nuns were desirous of having a large body of monitresses to aid in school work. Probably the extra labour of training them is found a cheap price to pay for the great increase of pupils which their assistance renders possible.

General competence of monitors and monitresses.

412. Both monitors and monitresses, I consider, are for the most part fairly competent, if judged by their examination in common with the head class in the school—whether fourth or fifth—with which they were in the habit of being taught. Except in two or three cases the monitors showed themselves as the most advanced pupils in the school. At Tarbert, for example, the monitor was decidedly inferior to all the boys of the fifth class—an inferiority of which the teacher was quite aware. Again, in the Convent of Mercy at Tralee, the monitresses, and particularly one of the junior monitresses, did not exceed, if indeed they did not fall below the standard of their class-mates of the fourth class. In the Presentation Monastery at Killarney the standard of the monitors was lower than in some ordinary National schools.

413. Of the efficiency of monitors as shown, not by examination, but by the character of the schools in which they teach, a single visit could scarcely afford an adequate test. It is impossible to discriminate how far the success of pupils is due to the teaching of monitors, and how far to the general supervision of the principal teacher. The classification of the principal teacher is, as previously observed, a generally fair index of the efficiency of the school, and, therefore, of the monitors or monitresses who in their relations to the principal teachers are to be viewed rather as his best scholars than as his assistants.

Monitresses in convent schools.

414. Not only is the monitorial staff of convents larger than in ordinary National schools, it is also in general more efficient. With the monitresses in Killarney Presentation convent I was very well satisfied; and the great excellence of those in the Kenmare convent is one of the chief component elements of the high reputation which that school deservedly enjoys.

English composition.

415. Of the English composition of the monitresses in Kenmare convent mention has been already made.* Those in the Presentation convent at Killarney wrote some very fair letters. With these exceptions, none of the numerous letters which I made monitors and monitresses in other schools write to me either on their daily duties or on some event of local interest were satisfactory. Out of convents, the effort at composition was always so laborious as to betray the rarity of the exercise. Supposing the principal teachers to be capable of examining and correcting original composition, I am convinced that the exercise would be of great service to monitors. The subjects should not be far remote from matters within the sphere of their duties as teachers. The increased concentration of thought upon these matters which such composition would necessitate, would, I feel sure, give great additional facility to monitors when imparting instruction to younger children.

Method of appointment.

416. The principles which in practice determine the appointment of monitors, as far as I could ascertain, are success in a special examination by the Inspector, and the chances of the candidate adopting the scholastic profession as his or her future and permanent occupation. Poverty not unfrequently causes its victim to adopt the teacher's calling, and where two candidates for the post of monitor are in other respects equal, would most commonly throw its weight into the scale.

Instances of recent appointment.

417. Only two instances of appointment of monitors were brought specially under my notice. In one of these the personal wishes of the school-teacher were strongly in favour of one of the two candidates. His aversion to the other sprang out of a personal quarrel with the boy's mother. I was present at the examination by the Inspector. The favoured candidate was certainly inferior to his rival, although up to the standard of sufficiency. The Inspector made his report to the manager, and the manager decided to appoint the boy who had passed the better examination, notwithstanding the ill-will of the schoolmaster. In the second instance, a statement was made to me a day or two before the expected examination by the Inspector, that a landowner living in the neighbourhood of the school, who was a personal friend of the Inspector, was likely to use his influence with the latter in behalf of one of the candidates, whose father was one of his tenants. This boy, it was stated, was not likely to adopt teaching as his future calling. The other candidate was the son of poor parents, was anxious to become a school teacher, and was the favourite of the master. The examination was afterwards held, and the latter was selected by the Inspector as the more competent. This instance is only valuable as illustrating a popular belief that the appointment of monitors is a bit of patronage in the hands either of managers or Inspectors, and that an impartial selection is consequently not always made. No actual abuse of this right of patronage was ever distinctly alleged to me.

418. No instances of dismissal of monitors came within my notice.

Conclusion.

General conclusion.

419. It will be perhaps useful to sum up briefly the general conclusions to be gathered from the preceding pages. To suggest the form of improvement, where improvement is necessary, would be beyond the sphere of my duties, even were it practicable, for one whose investigations have been almost confined to a rural district and a Roman Catholic population. The opinions formed under such conditions would undoubtedly be modified by the experiences of large towns, or of parts of Ireland where the professors of antagonistic creeds are more evenly balanced in number. But the solution of the problem of primary education in Ireland can only be possible if the difficulties of the several and diverse parts of the country be comprehended and provided for.

420. The results of my inquiries in the county of Kerry may be stated as follows:—

Numbers of school-houses.

421. I. School-houses are nearly as numerous as may, from the topographical features of the county and the sparseness of population in some parts of it, be reasonably expected. Any deficiencies in this particular are being gradually supplied.

Character of buildings.

422. II. Non-vested school-buildings in general (other than those belonging to convents and workhouses) are wholly unsuited to their purpose. Buildings vested in trustees are not properly maintained in repair. The

* *Vide* paragraphs 287, 288.

organization of the Board of Works, so far as it relates to school-buildings, is unsatisfactory. Private munificence in the grant, either of land or money for the purposes of education, is capricious and therefore insufficient. Local resources, without compulsory powers for obtaining them, are an inadequate supplement to State aid.

Education generally attainable.

423. III. Education is within reach of all, and is obtained in some measure by most. Parental indifference is rare. The hindrances to the spread of instruction are mainly economical.

State aid necessary.

424. IV. Without State aid, primary education, in general, cannot be satisfactory. The general disinclination of the Anglican clergy to accept the National system has deprived the majority of children of their own communion of all adequate means of education.

Mixed education impracticable

425. V. Mixed education, unless compulsory, is impracticable. Theological opponents are unanimous only in condemning it. The National system has failed to effect its purpose, because the Anglican minority does not and will not mingle with the Roman Catholic majority. Restrictions on freedom in religious teaching are galling to all, and none the less so because they are rarely broken.

Difficulties relating to secular, denominational, and mixed education.

426. VI. Secular education if enforced, would be unpopular with all the Roman Catholic and most of the Anglican clergy. Most Anglican children would be excluded from the benefits of a denominational system, unless the minimum average attendance of pupils, entitling a school to State aid, were fixed as low as ten or fifteen, if not a less number. Perfect freedom in religious teaching in all schools aided by the State would be desirable wherever the whole population professes the same creed, or wherever the number of adherents to any particular creed is sufficiently large to maintain a school. Unless the number of schools receiving State aid were unlimited, the presence of a few Anglicans amid a large Roman Catholic population would make some modification of a positively denominational system necessary; but the protection to individual conviction or prejudice, afforded by a conscience clause, would be unsuitable to a country where the mutual distrust of rival Churches is so intense. The necessary precision of such a clause would excite the same suspicions which the rules of the National Board have been unable to repress. The difficulties which rival religions oppose to a system of State education can only be surmounted by allowing perfect freedom in religious teaching and the abrogation of all rules relating to the number of schools in a single district and the number of pupils in a single school. To such a scheme the increase of pecuniary outlay is in theory a less forcible objection than the waste of educational power, which is inevitable in a very small school. But if the pecuniary outlay is to be made by the State it would be unfair for a school attended by a small knot of children to receive the same amount of aid as one attended by a larger number. The pecuniary conditions of educational efficiency seem incompatible with maxims of economy. Ideal perfection in an educational system is impossible amid the contentions and anomalies of actual social existence. Under any circumstances the Anglican minority is likely, in the matter of education, and so far as State aid is concerned, to be at some disadvantage with the members of the popular creed.

Position of National Teachers.

427. VII. The position of National school teachers is highly unsatisfactory, and unworthy of their office and merits. The smallness of their salaries, and the want of residences attached to the schools, are their greatest grievances. Satisfactory working of a public system of education in Ireland is impossible without an increase of its present cost.

Disestablishment of Irish Church.

428. No reference has been made in any part of this report to impending changes in the ecclesiastical constitution of Ireland. The exact bearing of such changes on the educational system of the country seemed hardly to have been contemplated by any with whom I came in contact. Education, not improbably, may urge a strong claim to share in funds which will be set free from their present mode of appropriation. If the claim is successfully urged, some—but not the most weighty—of the difficulties, relating to primary education in Ireland, will receive their solution.

429. Finally, I must not close this report without expressing the grateful sense I have of the general courtesy and frequent hospitality which were shown me, an entire stranger in the country, by all—both clergy and laity, both Anglicans and Roman Catholics—with whom I was brought into communication during the progress of my inquiry.

I have the honour to be, my Lords and Gentlemen, your faithful servant,

JOHN PERCIVAL BALMER, M.A., B.C.L.,
Assistant Commissioner.

3, New Square, Lincoln's-inn,
January 7, 1869.

ANALYSIS OF MR. HARVEY'S REPORT.

	Paragraph
Preliminary,	1
District assigned for examination, Parsonstown,	2, 3
Character of district,	4
Rural and agricultural,	4
Large *preponderance* of *Roman Catholics*,	5
Number of schools and scholars,	6
Division of subject,	6
Method of investigation,	7
Opinions of clergymen, schoolmasters, and others on question of *primary education*,	7
CHAPTER I.—NATIONAL SCHOOLS.	
National schools of three kinds, viz., ordinary, convent, and workhouse,	8
SECTION I.	
Ordinary National schools, *vested* and *non-vested*,	9
Management—Essentially the same. But they differ in the *aid* they get from the *State*,	10
And in the rules for *religious instruction*,	11
Schools all *non-vested* except twenty, and *managers* generally Roman Catholic *priests*,	12
Distribution of Schools,	13
Schools *sufficiently* numerous and well *distributed*,	13
Instances where *children had to walk a distance of* 3 or 4 miles to school,	13
Schools sometimes *too near* one another,	14
Buildings,	15
Accommodation good with few exceptions, one being a school vested in trustees,	15
Difference between vested and non-vested not great,	15
Instances of good buildings of both classes,	15
Outbuildings,	16
School furniture, &c., in half the schools good; in as many bad,	17
Female departments in double schools *more tidy* than boys',	17
Playgrounds,	17
Dwelling-houses provided for about half of the teachers,	18
Character of the accommodation,	18
Instance of *miserable dwelling-house*,	18
Amount of *rent* paid by those not provided with dwellings,	19
Repairs—By whom made,	20
TEACHERS—*Trained* and *untrained*. Difference in their *qualifications*,	21
Subdivision of grades and classes,	21
Income of teachers from—	
(1) Salary,	22
(2) Fees,	23
(3) Local aid,	24
Inadequate from all sources,	25
Plans to *improve* their condition,	26
Little help to be expected from Government aid,	26
Nor from fees,	26
Causes of this—	26
1. The *poverty of parents* and their reluctance to pay,	26
2. The *unwillingness* of *managers* to insist on fees,	27
3. *Competition* and the example of free schools,	28
Local rate the most feasible scheme for increasing emoluments,	29
Grievances of teachers,	30
1. Insufficiency of income,	30
2. *Insecurity of tenure*,	30, 31
3. Want of a *retiring allowance*,	32
SCHOLARS,	33
Mostly children of the independent *poor*,	33
Case of Roscrea school exceptional,	33
Boys and girls usually taught *apart*,	34
Length of school life,	35
Variation in *attendance* at different seasons of the year,	36
Attendance *worst* in spring and harvest,	36
But *not so good* at any time as it should be,	36
Affected by the most *trifling* causes; a market day, a regatta, or a circus,	36
Free children least regular in attendance,	37
Means for *improving* the attendance,	37
Example of *Roscrea* with an attendance of 76 per cent.,	38
Attendance of 50 per cent. as compared with the roll above the average,	38, 39
SUBJECTS AND QUALITY OF INSTRUCTION,	40, 41
Reading,	41
Writing,	41
Arithmetic,	41
Higher branches,	42
Contrast of schools under trained and untrained teachers,	43
Religious instruction,	44
Hour set apart for it generally before or after school work,	44
Exception to this rule in Diocese of Ardagh,	44
SECTION II. CONVENT SCHOOLS.	
CONVENT SCHOOLS *connected with the Board*,	45
Subject to rules of non-vested schools,	45
General description,	46
SCHOLARS—Their *condition*, *age*—Fees,	47–49
"*Presentation*" *Nuns* bound to teach *gratuitously*,	49
Practice of *all* the orders much the same,	49
Attendance more regular than in ordinary National schools,	50
Causes of this: instance of Roscrea,	50, 51
Children neat and tidy,	52
Subjects of instruction,	53
Religious character of instruction,	53
Quality of instruction,	54
Not equal to the *best ordinary* National schools,	55
Infant Schools—The good they do. Description of one,	56, 57
Age when boys leave the infant school,	58
Case of convent school at which boys remained after six or seven,	59
SECTION III. WORKHOUSE SCHOOLS.	
Workhouse Schools,	60
Subject to rules of non-vested schools,	60
Buildings and general character,	60
Girls' school near Parsonstown,	61, 62
Religious instruction,	63
Quality of secular education high,	63
Causes of this,	63
Infant schools,	63
Number of absentees from illness,	63
CHAPTER II.—CHURCH EDUCATION SOCIETY SCHOOLS AND SCHOOLS CONNECTED WITH THE BOARD OF ERASMUS SMITH, CHRISTIAN BROTHERS' SCHOOLS, PRIVATE AND MISCELLANEOUS SCHOOLS.	
CHURCH EDUCATION SOCIETY AND ERASMUS SMITH'S SCHOOLS,	64
Extent of their operations,	64
Principles on which they are conducted,	65, 66
TEACHERS, their position and emoluments,	67
SCHOLARS,	68
Quality of instruction,	69
Schools with too few scholars *worthless*,	69
Good schools,	70
General character,	70
Causes of their *inferiority*,	70
CHRISTIAN BROTHERS' SCHOOLS.	
CHRISTIAN BROTHERS' SCHOOLS essentially Roman Catholic,	71
Founder of the Institute,	71
TEACHERS, their training, mode of life,	72, 73
The *extent* of the *operations* of the Institute,	74

	Paragraph
Scholars,	74
The *classes* to which they belong,	74
The *subjects* they learn,	74
The *books* they use,	74
Christian Brothers' school at *Mullingar*,	75
Endowment—Buildings, furniture, playground, and outhouses,	75–77
First, or lowest room—Second room,	78–82
Division of scholars on leaving the second room,	83
Advantages and disadvantages of this division,	83–85
Fourth, or highest room,	86, 87
School at Tullamore,	88
First, or lower room—Upper room,	88, 89
School at Maryborough,	90
Lower room—Upper room,	91
General conclusion in regard to Christian Brothers' schools,	92
Comparison with National schools,	92
Nature and extent of the religious teaching,	93
Result of this that the *scholars* are all *Roman Catholics*,	93
Exceptions to this rule,	93
Private Schools.	
Private Schools,	94
(1.) Roman Catholic colleges,	95
Comparison with English boarding schools,	95
(2.) Protestant schools of the same kind,	96
The "Ranelagh" at Athlone,	96
Teachers,	96
Scholars,	97
(1.) Boarders on the foundation,	97
Qualification for admission to the schools of the *"Incorporated Society,"*	97
(2.) Boarders not on the foundation,	98
(3.) Day scholars,	98
Hedge Schools.	
Not permanent institutions,	99
Accommodation bad,	99
Teachers *untrained* and bad,	99
Exceptional case,	99
Description of one hedge school,	99
The teacher,	100
The *scholars*,	100
The text books,	101
The *quality of the education*,	102
Chapter III.—Mixed Education; Summary of Results.	
Mixed Education,	103
Its *extent* in Parsonstown,	104, 105
In Roscrea,	106, 107
In Mountmellick,	108–110
In Maryborough,	111, 112
In Tullamore,	113, 114
In Ferbane,	115, 116
In Athlone,	117, 118
In Mullingar,	119, 120
In Longford,	121
Summary of its extent in the district,	122
Success of National schools in promoting it *small*,	123
Explanation of this (1) in towns,	124–126
(2) in country districts,	127
Effect of mixed education,	128
Undesirable in schools avowedly sectarian,	128, 129
Undesirable in convent schools,	130, 131
Beneficial in ordinary National schools,	132
Opinion of teachers,	132
Objection of clergymen to mixed education,	132
The *want of religious teaching* in the schools,	132
The *remedy* proposed is denominational education,	133
Injustice of this remedy to the minority,	133
Summary of results,	134
Comparison of schools,	134
First-class—National, with trained teachers,	135
Second—Christian Brothers' schools,	135
Third—Convent, many National, and some Church Education Society's schools,	135
Fourth—National schools with untrained teachers, and Church Education Society's schools,	135
Last—Private adventure,	135
Accommodation—attendance,	136
Condition of school furniture, buildings, &c.,	137
Master's houses,	138
People not indifferent to education,	139
Industrial occupations,	140
Local aid required,	141, 142
Subjects of instruction *suitable* for the class of children,	143
Religious instruction,	144
Income of teachers,	145–147
Trained and untrained teachers,	148
Monitors and pupil teachers,	148
Appointment of teachers within the last three or four years,	149
Concluding suggestions,	150
Anomalies in the National system—	150
(1) The existence of non-vested schools,	150
(2) The character of the management,	151
(3) The support of the schools falling entirely on the State,	152
(4) The appointment of untrained teachers,	153, 154

Report of Thomas Harvey, Esq., m.a. Assistant Commissioner.

My Lords and Gentlemen,—

Preliminary.

1. On the 18th of June I received notice of my appointment as Assistant Commissioner on Primary Education in Ireland. This notice was accompanied with printed instructions for my guidance. In substance they defined my duty to be to conduct a thorough investigation into all the circumstances of primary education, within a fixed boundary, and to report upon them to the Royal Commission. The time for completing these duties was limited to three months—the Commissioners considering that ten or eleven weeks should be devoted to local examination, and two or three weeks to the preparation of a report. I was further directed to open my inquiry about the 24th of June, and to present my report in the course of October.

District assigned for examination, Parsonstown.

2. The district assigned to me was entitled "The Central," occupying the middle of Ireland, and having Parsonstown for a quasi-centre. It contained altogether nine departments, namely, Roscrea, Parsonstown, Tullamore, Mountmellick, Maryborough, Ferbane, Mullingar, Longford and Athlone. These departments corresponded to the Constabulary districts of the same names. This division had the advantage of enabling the Commissioners to avail themselves of the local knowledge of the constabulary, in obtaining accurate returns of the number of schools in the district. Each Constabulary district was composed of a number of parishes, and the total population of these was supplied by the Census tables for 1861, so that the ratio of scholars to population could be calculated without any difficulty. The table at the foot of the page shows the result.* If it is kept in mind that the children in attendance any day are only half of those on the rolls for the quarter, the result is not so bad as at first sight it may seem. But it contrasts unfavourably with the ratio of scholars to population in England and Scotland, where it is about 1 in 8.

3. On my arrival in Dublin on the 23rd of June I was supplied with a list of all the primary schools, and their position in my district. I was also furnished with a letter from the Inspector General of Constabulary, recommending me to the care of all his officers and men, and directing them to assist me wherever I went in my search after schools. In these respects they were of great use, and saved me much trouble by suggesting the proper order in which to group my schools together, and on more than one occasion supplying me with an itinerary illustrated by pen and ink sketch of the routes that I ought to follow from day to day.

Character of district.

4. My district may be described as one in the centre of Ireland. It included portions of six counties, King's, Queen's, Roscommon, Westmeath, Longford and Tipperary, and extended as far west as the River Shannon. It was certainly not a beautiful or picturesque region, but it was of easy access, as I could reach all the chief towns except Ferbane and Mountmellick by rail, and from the chief towns again as centres, I was within a few hours' drive of the furthest limit of the different departments. The general character of the whole district was rural and agricultural, with scarcely a trace of manufacturing or other industrial occupation. It had the reputation in some of its borders of being a disturbed and lawless country. But in my experience I found nothing to justify this estimate, and in the whole of my ten weeks' tour, I never heard a rude word or met with the least discourtesy.

Rural and agricultural.

Large preponderance of Roman Catholics.

5. In the towns there was a large admixture of a Protestant population, but in the country the people were almost all Roman Catholics. Between town and country together, the minority seemed to be about one-sixth of the whole.

Number of schools and scholars.

6. I began my work in Parsonstown or Birr, on the 24th of June, with the Convent school, under the charge of the Sisters of Mercy, and I ended it in Maryborough on the 5th of September, with the Christian Brothers' school in that town. My instructions were that from first to last I should examine at least 100 schools, selecting such as would illustrate every variety within my district. The whole number of schools of all classes in the list furnished was 227, of which 140 were described as National, 36 as connected with the Church Education Society, 2 as Nuns' schools, 3 as those of the Christian Brothers', 9 as endowed, 31 private, and 6 miscellaneous. Altogether these schools had an average daily attendance in round numbers of 10,200 scholars. I visited 99 schools with an average daily attendance of 5,000 scholars. All of these schools I examined more or less carefully; and, in most cases, I examined each child separately. In laying the result of my inquiries before the Commissioners, I propose to divide what I have got to say into three chapters. The first will contain an account of the ordinary National schools, the Convent schools, and the Workhouse schools. The second will describe the schools connected with the Church Education Society, and the Board of Erasmus Smith, those of the Christian Brothers, and others of a miscellaneous character. The third will discuss the question of mixed or united education in my district, and will end with a general summary of results.

Division of subject.

Method of investigation.

7. In conducting my inquiries, my method of investigation was as follows:—In each department of my district I put myself in communication with the National School Inspector, and availed myself, within the limits of my instructions, of his local knowledge. I called for the most part on the patrons and managers of the schools. These, except in the case of private schools, were either the Established Church rector of the parish, or the Roman Catholic priest. I visited also those of the people whose opinions I was advised by competent authorities to regard, and, generally speaking, as a preliminary to my examination of schools, and, indeed, during the course of my tour, I tried, both by conversation and by a paper of printed questions, to elicit the different

* Table.

views of sensible, or of educated men on the subjects which I was directed to keep in view—namely, the state of primary education in Ireland, the practical working of the system of National education, and the measures to be adopted for extending more generally to the people the benefits of education. I was more fortunate in getting a full and frank expression of their views in conversation than in answer to my printed questions. Whether they were too formal and minute, or not formal and minute enough, I cannot say; but neither to the general circular with which I was provided by the Commissioners, nor to a fuller paper of my own, though widely enough distributed, did I get many answers. On the other hand, I had many and interesting conversations with men of all creeds and opinions, and found no reluctance on the part of anyone to give utterance in this form to his convictions. The Established Church clergymen, with few exceptions, I found opposed to the National schools, and inclined to support schools of their own;—the Roman Catholic priests strongly in favour of the substitution of a denominational for a National system;—the National schoolmasters deprecating any such change, and regarding it as the certain ruin and degradation of their class;—laymen, Protestant and Roman Catholic, whose opinion was worth having, divided on the subject, while the great mass of the people seemed to me indifferent, and ready to acquiesce in the views of their clergymen, and to select the schools that were sanctioned by them. When I had ascertained the views of the clergymen of different denominations, of laymen, of schoolmasters, and of the parents of the children, the main part of the work remained to be done, namely, the examination of the schools. In conducting the examination, I was sensibly influenced by my acquaintance with the schools of my own country; and in the estimate that I formed of those in Ireland, I had constantly before me schools of a similar kind in Scotland. I have not thought it necessary to institute any formal comparison between the two countries, and the condition of their primary education; but the epithets that I apply "good," "bad," or "indifferent," are those that I should use in a report on Scotch education, and indicate just the same amount of "goodness," "badness," and "indifference," as I should find in a parochial, sessional, or other school at home. To all varieties of schools I was admitted freely, and in almost all I was allowed to conduct the examination of the scholars in any way I pleased. To the teachers, therefore, in an especial degree, my thanks are due, for making my work pleasant and interesting; and I beg that all of them, whether teachers of National schools, or of Church Education Society's schools, or the teachers in convents, the Christian Brothers, and all others, will accept them. To clergymen of every denomination, and especially to the Roman Catholic priests, because I came most in contact with them, I beg also to tender my thanks; and, lastly, it would be unpardonable if I did not acknowledge the assistance of every kind that I received from school inspectors, among whom I may be allowed to mention by name my friends Dr. Brown, in Parsonstown, and Mr. Graham, in Portartlington.

Opinions of clergymen, schoolmasters, and others, on questions of primary education.

Chapter I.—National Schools.

National schools of three kinds—viz., ordinary, convent, and workhouse.

8. I begin, of course, with an account of the National schools, which are by far the most numerous and important class. In my district there were altogether 140 of these, with an average daily attendance of about 7,500 scholars. They were of three kinds—ordinary National schools, convent schools, and workhouse schools, and these I shall take in the order in which they have been mentioned:—

I. Ordinary National schools, vested and non-vested.

9. 1. The ordinary National schools are of two kinds, vested and non-vested; and as these terms will be of frequent occurrence in my narrative, it may be necessary to give a word or two in explanation of them. The object of both vested and non-vested schools is the same—to afford combined secular and separate religious instruction to children of all persuasions; and their fundamental principle is this, that no attempt be made to interfere with the peculiar religious tenets of any description of pupils. As the name implies, the vested schools are held either by the Commissioners or by trustees, for the purpose of being maintained as National schools, while the non-vested schools are the property of private individuals. In this there consists a very important difference. At any moment the connexion between non-vested schools and the State may come to an end, at the will of the individual whose property they are. The school may be closed, the schoolmaster dismissed, and the buildings may either cease to be used for school purposes, or they may be placed under some other organization altogether.

Management. Essentially the same, but they differ in the aid they get from the State,

10. To vested schools the State gives aid not only in the way of salary and inspection, but towards the erection, and, where the Commissioners are the trustees, towards the maintenance of the school buildings. In non-vested schools the State aid is limited to salary and inspection. Both kinds of schools are under the charge of local patrons or managers, and these play a most important part in the direction and control of the schools. Each school, it must be borne in mind, has one man and one man only as its local manager. The only exception that I can remember to this rule in my district was a school in Tullamore, where there was a board of ten or twelve managers. The manager's powers are mainly three-fold. He regulates the quality of the religious instruction to be given in his school (that is to say, he decides whether it shall be Protestant or Roman Catholic). He appoints the teachers, subject to little control, and he has the right to dismiss the teachers without appeal.

and in the rules for religious instruction.

11. In regard to religious instruction there is a difference, however, between vested and non-vested schools. In the former, the parents or guardians of the minority may insist on the admission of some properly qualified person, at suitable hours, for the purpose of giving religious instruction *in the school*;—whereas, in non-vested schools, the manager may refuse this privilege; and, in that case, the children whose parents desire it, have liberty to leave the school at certain reasonable times, to receive religious instruction *elsewhere*.

12. As a matter of fact, however, as far as my experience goes, the minority do not avail themselves of their privileges either in vested or non-vested schools, and in both the only religious instruction given is that appointed by the local manager. During the time of religious instruction, however, all those of a different faith from that which is being taught *must* leave the school. The original rule of the Board was that they *might* leave it if they chose; but this has been altered, and without the express and definite wish of its parent or its guardian expressed in writing no child is permitted to remain. There is, therefore, not only a conscience clause, but a compulsory conscience clause in all the schools. In my district the schools were non-vested with the exception of twenty, and the managers in nearly every one of them were the Roman Catholic priests. At Mountmellick and Mullingar there were schools under the management of clergymen of the Established Church. The Presbyterian minister of Parsonstown was manager of a mixed school for boys and girls, and the Wesleyan minister was the local representative of a school in Tullamore. In two or three other schools the patron was a layman; but even then the actual and active manager was usually the parish priest. As a general rule the managers were zealous in the interests of the schools, and I found that they visited them frequently and

Schools all non-vested except twenty, and managers generally Roman Catholic priests.

encouraged both the teachers and the scholars in their work. They seemed to be jealous, as was natural, of any interference in regard to the exercise of their powers, and to think that the privileges they enjoyed particularly those of appointing and dismissing the teachers were both reasonable and necessary.

Distribution of schools.

13. The schools in the district were well distributed throughout the different departments, and from the testimony of the people themselves, who were the best and the most interested judges, I am inclined to think that there was little or no reason to complain on the score either of their insufficient number or the distance that the children had to go in order to reach a National school. In my own experience I can remember very few cases in which either of these complaints could reasonably be made. At Clonaslee, in Queen's county, there was an excellent National school well organized and well taught, but I was astonished at seeing a number of the girls come to school about eleven o'clock, and on inquiry, I was told that they had to walk every day a distance of three or four miles from the small hill farms in the country. At Clonfad, in Roscommon, there was only a hedge school, which met in the chapel, and was taught by a poor old man with one arm, and attended by about fifty or sixty children. Some of the children had to come a couple of miles to this school, and if they had attended a National school they must have gone two miles further. But about quarter of a mile from Clonfad a very neat building was pointed out to me which had been erected for a National school, but in consequence of some difference about the management it had not been devoted to its original purpose, and was used as a dwelling-house. These two cases were all that came under my own notice. But in the list of schools with which I was furnished there was a third instance mentioned—where the two nearest National schools were eight miles from one another, so that at the furthest some children had to choose between a walk of four miles to Philipstown or four miles to Durrow, both in King's county. Altogether, I did not sympathise with any complaints on this score, as I had been accustomed to hear of much greater distances between schools in the highlands of Scotland, and knew from experience that there must always be cases of individual hardship which the mere planting of schools would not remove at all or at too great a cost.

Schools sufficiently numerous and well distributed

Instances where children had to walk three or four miles to school.

Schools sometimes too near one another.

14. On the other hand, I was disposed sometimes to think that National schools were set down too close together. The consequence was, that schoolmasters in order to secure a sufficient number of scholars were obliged to undersell one another, and even to take children without any fee at all. In some places I was told that on the slightest cause of offence scholars were withdrawn and sent to other schools in the neighbourhood. In a non-vested school in the department of Athlone, the facilities for removal to another of the same kind were urged as the main reason why an average roll of 85 boys yielded only £1 a year of fees, and at a very wretched school on the borders of Westmeath and King's county the same reason was given for the miserable return of 30*s.* from an average roll of 150 boys and girls. They had a choice I was told of seven schools at no great distance from one another.* The school in question might have been sacrificed without any loss to the public service, and I looked on its existence as a case in which the National schools were too numerous, considering the cost thrown upon the Government. In this particular instance, although the numbers on the roll were 150, the attendance was only 52.

Buildings. Accommodation good, with few exceptions, one being a school vested in Trustees.

15. In regard to the size and suitableness of the buildings themselves I had no fault to find. Their accommodation was with very rare exceptions sufficient and more than sufficient for the numbers in attendance. Had all on the roll been present there would frequently have been overcrowding, but there was no great danger of this coming to pass for some time at least. In the matter of ventilation and lighting there was some diversity, and a few schools were low in the ceiling and had damp earthen floors. These were mostly non-vested schools, although one very flagrant case of a poor building was that of a school vested in Trustees, near the town of Longford. There was this excuse for its condition, that the Trustees seemed all to be dead or to have disappeared, and the lease of the school which had passed into strange hands was within a year of expiring. Without any fear of contradiction it may be said that the schools in point of size, accommodation, and other essentials to health were much better than the dwellings of the people. The difference between those that were vested and those that were non-vested was not so marked as I expected to find it. The worst certainly as a class were the non-vested schools in country districts, but on the other hand, some of the very best in point of accommodation, convenience of arrangements without and within were also non-vested schools. If I were asked to select two specimens of the best schools, I should probably fix upon Geashill and Longford—both non-vested. The former is a model of elegance, and the latter, although it has no great beauty, has the characteristic massiveness and solidity of the edifices of the town. Alongside of these and in the same class I might mention the vested schools of Roscrea, Faltea, Edgeworthstown, and Clonaslee.

Difference between vested and non-vested not great. Instances of good buildings of both classes.

Outbuildings.

16. I am sorry to say that the offices and outbuildings were generally very wretched, even in schools otherwise excellent.

School furniture, &c., in half the schools good: in as many bad. Female departments in double schools more tidy than boys. Play-grounds.

17. In about half of the schools the furniture, the apparatus, in the shape of maps and diagrams, and the supply of books, were good; but in as many more there was room for improvement in one or other, and not unfrequently in all these respects. It struck me, as a general rule, that in second rate schools, where there was no great amount of funds applicable to supply such wants, the girls' department, under a mistress, where there was a double school, was more tidy and made a better show (very often with the same materials) than the boys' school under a master. One want that caused me great annoyance in my examination was the want of books. Not unfrequently four or five children in a class of ten or twelve had to depend on their neighbours, instead of each having a book for himself. Perhaps, however, the condition of the maps in bad and indifferent schools was the most universally worthy of blame. A great many of the schools had play-grounds of small size, separate for boys and girls, and in most cases in country districts the want of play-grounds was not felt, as the schools were on the roadside, and the roads were quiet and suitable for play.

Dwelling-houses provided for about half of the teachers. Character of the accommodation. Instance of miserable dwelling-house.

18. I was disappointed at the provision made for the teachers themselves in the way of dwelling-houses. In a list of forty ordinary National schools I find exactly twenty with dwelling-houses and twenty without them. Where they were provided there was also not unfrequently a small piece of land for a garden or for potato ground, from a few roods to two or three acres. The accommodation of the houses themselves was in some cases good, but it was also not unfrequently inadequate, and seemed devised on the idea that a schoolmaster's wants could not possibly extend beyond a room and a kitchen. In one case, but this was exceptionally bad, the dwelling provided for the master was simply disgraceful. I copy from notes made on the spot, which give a faint idea of the school and dwelling-house in question:—"The building is of two stories, one for the boys the other for the girls. A portion of the upper flat is used as a dwelling-house by the teacher and his wife, who has charge of the girls' school. The dwelling-house consists of one room, in which husband, wife, and family (I believe of eight children) live together, and which serves as bedroom and kitchen. This wretched dwelling is on one side of the passage, by which you enter the girls' school. No words can picture the utter unfitness of such an abode for human beings. Attached to the school are outhouses in a very filthy and

* These were Moate, Tubber, Streamstown, Horseleap, Rosemount, Kilbeggan, and Clara.

horrible condition. They are common to the children and to a cow, the property of the master. There is also a field of an acre and three roods connected with the school, for which, and the school buildings, the teacher pays an annul rent of £4 to the agent who manages the property."

Amount of rent paid by those not provided with dwellings.

19. Those teachers who have no dwelling-houses have to provide for themselves. In two instances, at an out-of-the-way village in Roscommon, where there was an abundant supply of stones, and at a most flourishing school in Rosenallis, the teachers had built themselves houses close to the school. Others again had friends or relations in the neighbourhood, with whom they lived rent free; but generally house rent cost them from £2 to £3 a year. It cost some schoolmasters a great deal more, but the ordinary rate was what I have mentioned. Nor was it a small tax on the income of the teacher. I have before me a list of seven schoolmasters without dwelling-houses.* The highest income amongst them from all sources was £29, the lowest £15, and the average of their emoluments £20 4*s.* I could not help thinking that it would be an excellent rule if the Board would sanction no school, either vested or non-vested, that had not a dwelling-house for the teacher. I am sure that it would add very little to the cost of the school, and it would add most materially to the comfort of the schoolmaster.

Repairs.

By whom made.

20. For the necessary repairs of the school buildings, the managers generally, in the case of non-vested schools, are responsible for the more important matters—the annual whitewashing, the provision of new furniture, and the like; to meet this outlay there is sometimes a collection made in the chapel. In vested schools the cost of the greater repairs is defrayed by the Trustees or the Commissioners, who, in schools which they hold, give two-thirds of the sum required. In both vested and non-vested schools the teachers themselves defray small expenses out of their own pockets.

Teachers. Trained and untrained; difference in their qualifications.

21. Passing from external details, I come next to the teachers and scholars in ordinary National schools. The teachers may be divided into two groups—trained and untrained. Were I called upon to characterize these two groups, I should describe the trained teachers as good, and the untrained as indifferent, and sometimes bad. It would hardly be fair, however, to speak in this way without reservation. Amongst the trained teachers I met several whom I could not rank above fair, and among the untrained there were some who by natural aptitude were good. In my district the numbers in the two classes were nearly equally divided. In a list of forty-three, whose schools I examined, there were nineteen who had been six months or more in the Dublin Normal Institution, and twenty-four who had had no such intermediate training. Of these, half a dozen or more had enjoyed the benefit of district or minor model schools; but in order to avoid unnecessary and minute sub-divisions, I shall confine the designation of trained teachers to those who had been educated in Dublin. Without reference to their training, but solely by examination, and under regulations of the Board as to the numbers of their scholars and other matters, the teachers were arranged in three classes—first, second, and third. These again were subdivided into grades, so that altogether there were seven steps from the highest to the lowest—the highest being a teacher of the first division of the first class, and the lowest a probationer. Of the nineteen trained teachers mentioned above, five were in the first class, eight in the second, and six in the third; and of the twenty-four untrained, there was no one in the first class, eleven in the second, ten in the third, and three were probationers. Of the whole number I met only one who had attained the highest possible rank, whose name and school, *honoris causâ*, I may be allowed to mention—Mr. M'Goey, of Longford.

Sub-division of grades and classes.

Income of teachers from (1) Salary.

22. The income of the teachers was derived from three sources—salary, fees, and local aid. The salary was regulated by the class or grade to which they had attained. The highest salary for a master is £52, and for a mistress £42; and the salary for probationers is £15 and £14 respectively. Besides these salaries the Commissioners grant premiums from £13 a year at the highest, after seventeen years' good service, to £3 at the lowest, after eight years' good service. The rates for female teachers are a little lower than for masters. There are also gratuities for order, neatness, and cleanliness, and allowances for teaching vocal music, drawing, and navigation, and for instructing paid and unpaid monitors. The highest sum to which I found a teacher entitled under all these heads was £70, and the next £55. But the cases in which gratuities and premiums were awarded were comparatively rare, and the teachers' emoluments from Government aid were, as a rule, the amount of his salary.

(2) Fees.

23. I was amazed at the miserable amount that the teachers derived from fees. In the schools under trained teachers the highest sum was £45. This was in a school with an average daily attendance of 150 children. Next to this came a school with £22 of fees, and an average daily attendance of 199 children, and the third yielded £15 of fees on an average attendance of 100 scholars. These three schools were favourably situated in towns. The sixteen others under trained teachers, produced but £70 in all, with an average daily attendance of 700 scholars. But the case of schools with untrained teachers was even worse. I have already mentioned two instances, one where an average roll of 85 yielded £1 of fees, and the other where the teacher got £1 10*s.* from an average roll of 150 scholars. To these I might add half a dozen others not a whit better, but it is enough to say that in the 24 schools of this class, the total amount of fees was £90, with an average daily attendance of above 1,000 scholars.

(3) Local aid.

24. Nor in point of local aid from chapel collections, from endowments fixed or removable, and all other sources, were the circumstances of the schoolmasters much mended. According to the best calculation that I could make, the local aid for the 19 schools under trained teachers was £150, and for the 24 schools under untrained teachers it was £26. Altogether the average emoluments of the trained teachers from all sources were £48 16*s.* 10*d.* and the average emoluments of the untrained teachers were £27 0*s.* 6*d.*

Inadequate from all sources.

25. With these facts before us it can hardly be said that the income of the teacher is satisfactory. He has to maintain at all events a decent position in society, midway between the priest and the people. He ought to be respectably clothed, and to present generally a respectable appearance. His dwelling-house should be comfortable, and his food should be healthy and abundant, to keep up the strength and vigour that are indispensably requisite for maintaining order and discipline, and for the actual work of teaching. He has no facilities for eking out his income, without degrading his profession. If he combine some other work with that of teaching—if he keep a shop—or if he take a small farm or field in the way of con acre, he is sure to neglect his proper work, and I am bound to say it to the honour of the class, hard pushed though they must have been, and on the verge of starvation, that in only a solitary case or two did I find them resorting to any occupation besides teaching.

Plans to improve their condition.

Little help to be expected from Government aid,

26. Various plans were suggested for improving their pecuniary and so their social position. The shortest cut and the one most usually taken by the teachers themselves, was the road that led to the public purse, or Government aid. If we look however at the amount already given from this source, and at the large additional amount that Government is prepared to give if teachers by training will qualify themselves for the higher grades of their profession, and if we compare the grants with those given in England and Scotland, it does not seem a feasible way out of the difficulty, or one that any Government would sanction. The two sources from which additional help must really be looked for are the fees of the scholars, and local aid. Something might

* The schools were Clonaghard, Crinkle, Castle Cuff, Tubber, Boher, Castlesampson, Dundonnel.

be done in the towns especially, and by co-operation among the teachers in regard to the fees, but I fear it would be inadequate by itself. The people are poor, and they are reluctant to part with any of the little that they have. They have not been accustomed as in Scotland to pay for their children's education, and rightly or wrongly they have got the notion that where the State affords aid, there is no call on them to supplement it. I found this curiously illustrated in the case of private or hedge schools. In these all the children without exception were required to pay, and I was assured by those acquainted with them better than my opportunities enabled me to be, that 3*d.*, 4*d.*, and 6*d.* would be freely given to a hedge schoolmaster by parents who would grudge a penny to a National teacher, or even think that it was a favour to allow their children to attend his school at all.

nor from fees.

Causes of this.
1. The poverty of parents and their reluctance to pay.

27. Clergymen also of the Established Church and of the Roman Catholic Church, did not strike me as very anxious to increase the emoluments of the master from this source. They rather encouraged their teachers to take all who came without much question on this subject. This at least was the impression that I formed, and on the whole I did not think they were inclined to enter very cordially into any scheme for improving the pecuniary position of the schoolmaster. He had enough to live upon (they seemed to think) and that was all he required. More might make him too independent. They themselves in many cases had but a bare competency obtained from the people and an appeal for increased or more generally paid school fees would so far affect the stock from which their own supplies were drawn. In this point of view, therefore, the interests of the Roman Catholic clergymen particularly, and of the schoolmaster were by no means identical. Something of this sort certainly passed through my mind from time to time in my conversations with the people, the schoolmasters and the priests, but I very likely may be mistaken. In several places, and I may specify Roscrea, I found the priest very energetic and useful in impressing on parents the propriety of all paying for their children's education; and elsewhere I found collections made annually in the chapel in aid of the school funds, and for the express purpose, in part at least, of supplementing the teacher's salary.

2. The unwillingness of managers to insist on fees.

28. The competition of schools among themselves for pupils is a serious difficulty in the way of a rigid exaction of fees, and the example set in the convent schools, and those connected with the Christian Brothers' has familiarized the people with the principle or idea of gratuitous education. On all these grounds therefore the poverty, namely, and the habits of the people, the want of cordiality on the part of the clergy in reference to the matter, the necessity of schools maintaining certain numbers in order to secure the teacher's salary—and the example of other schools, I think that no great addition is likely to be made from fees to the masters' emoluments.

3. Competition and the example of free schools.

29. If the Government then cannot be looked to (and it has a strong argument against giving additional aid in the case of untrained teachers at all events, inasmuch as they do not take advantage of the opportunities they have for helping themselves by rising in their profession to a higher grade and a better salary), and if fees are not available to any great additional extent, there remains only local aid—and it is to this source that most of the intelligent teachers look; it was the one also that was most frequently suggested by clergymen and laymen outside of the profession. The plan suggested was in effect that a small addition should be made to the rates in each district, that this small additional rate should be collected by the present machinery of the Poor Law Board along with the rest of the poor rates; that it should be dealt with, however, as a fund to supplement the teachers' salary. It was further suggested that the Inspectors of schools, on each of the occasions when they visited the schools, should certify that the teachers were entitled to receive their share of the fund, and that the money should be paid them by the nearest Poor Law authorities, on the presentation of an order from the Inspector. I confess that this scheme recommended itself to my mind as feasible and just.

Local rate the most feasible scheme for increasing emoluments.

30. As it was I found the schoolmasters as a body discontented with their position, and their grievances were more especially these three—the insufficiency of their emoluments, the insecurity of their tenure of office, and the want of a retiring allowance. I was assured by them that the dissatisfaction arising from these causes was injuriously affecting the future prospects of education, and that good teachers were reluctant either to enter the profession or to remain in it, who could find any other opening elsewhere. As to the first of their grievances, the facts that I have mentioned afford sufficient means of judging whether it be just or not. In respect to the second grievance, the insecurity of their tenure, very opposite views were held by the managers and by the schoolmasters; the former were of opinion that as they were the most interested in the prosperity of the school, they were the natural persons to appoint and dismiss the masters, while the teachers were unanimous in wishing that the power of dismissal should be tempered by a right of appeal on their part to some impartial tribunal. The power which the managers have of appointing the teachers was one that neither side questioned. As a matter of fact the appointments made were generally, if not always, the best that could be made under the circumstances; the choice, however, from causes well known, was limited in my district to untrained masters, and all the appointments that had been recently made by Roman Catholic priests, who were the managers of schools, were from this class. It is not for me to enter upon the field of discussion that this opens up, but to record the fact that the appointments were consequently not so good as they might have been, and my conviction, which I share in common with all competent judges, that a supply of trained teachers is an absolute necessity in any system that aims at excellence and efficiency. On the whole I thought the young untrained teachers an inferior lot, and not calculated to maintain, much less to elevate the character of the education in the country. Whereas I should select at the most five of the whole number even for the second rank, and none at all for the first, I should place the great majority of the trained teachers above the second rank; and if I were to take the five or six best teachers whom I saw in Ireland they should all be from the division of trained men. Such efficiency as the untrained teachers had was mainly due to the school Inspector. His examination was actually a lesson to them in the art of teaching, and he was to them in the place of a model schoolmaster. But his instructions are necessarily few and far between, and can never wholly compensate for the regular drill, and for the precision of a normal school.

Grievances of teachers.
1. Insufficiency of income.
2. Insecurity of tenure.

31. So much for the appointment of the masters, and the exercise of the manager's power in this way. I am bound to say, in addition, that I heard no well authenticated instances of arbitrary dismissal of teachers. Various rumours and reports came to my ears;—of a teacher dismissed on a moment's notice, because he had declined to perform some chapel work; of another subjected to the same prompt treatment because he was unwilling to construe certain friendly attentions to a neighbouring schoolmistress into an offer of marriage as the manager wished he should do; of a third, a female teacher, who was dismissed for encouraging the addresses of a country constable. But such instances hardly amount, each by itself, to a well-established case of injustice; some of them probably might be found acts of real justice. But the grievance of the schoolmasters was not so much in the abuse of power on the part of the managers, as in their mere possession of it.

32. Their third grievance was one that will be generally allowed to be reasonable. I was told of cases in which the retiring grant of the Board, after long service, had barely sufficed to keep its recipient in life for a few years, and that his final refuge had been the workhouse. The emoluments of the schoolmasters are

3. Want of a retiring allowance.

not such as to enable them to make a provision for old age, and it is not too much to require of the State, in whose service they have spent their lives, that it should supply an adequate maintenance when they are unable any longer to perform their work. It is a question of detail from what source this should come, without unduly burdening the Government; but the same local rate that was suggested as a means of supplementing the teachers' salary might be employed in paying his retiring allowance. Even if two-thirds of his salary were secured to him, it would impose no great burden either on the State or the local rates.

Scholars.

Mostly children of the independent poor.

33. The scholars were of the usual classes for which the National schools were intended. From the nature of my district, the children of day labourers were the most numerous of all. On the school registers "farmers" were largely represented; but, like "crofter" in Scotland, "farmer" in Ireland generally means a man with a small bit of land which he cultivates himself, with the help of his family. His holding is from one or two acres up to fifteen or twenty at the most. The number of these small holdings in some portions of the country that I visited, explained the vast array of dykes and ditches with which the fields were cut up into fragments. In some of the schools, especially the good schools in town, there was a considerable infusion of the middle classes. In Roscrea, for example, the children of labourers, farmers, both large and small, of shopkeepers, and even of professional men, were all sitting on the same benches. In this respect it reminded me very much of a parish school in Scotland, with the difference that the scholars were all boys, with no admixture of girls. In another mixed school for boys and girls, under Wesleyan management, the children were almost all of a better class socially than those in an ordinary National school; but such cases were exceptional, and the schools were emphatically the schools of the independent poor.

Case of Roscrea school exceptional.

Boys and girls usually taught apart.

34. Boys and girls, in some of the poorer country districts, and in schools under Protestant management in towns, were occasionally taught together; but the general feeling and practice were in favour of "unmixed" education, and in twenty-six schools out of forty-four, the boys and girls were taught separately.

Length of school life.

35. I found it very difficult to form an estimate of the actual length of the school life. The average age on coming to school seemed to be about five or six; but many of the boys had previously spent two years in an infant convent school. The average age on leaving it, was about eleven or twelve. In Roscrea or Longford there were many boys above those ages. In the former, for example, out of 170 boys present on the day of my examination, there were 53 above eleven, 27 above twelve, and 14 above thirteen. But in another school, in the Athlone district, with an average attendance of 70, there was only one boy over eleven years of age; and taking fifteen specimen schools, with an average daily attendance of 620, I found 133 children above eleven, 76 above twelve, and 22 above thirteen. Altogether the school life, according to the best judgment that I was able to form, extended over a period of eight years from the scholar's first entrance to his last winter session. But the actual length of the school life was much less than eight years, in consequence of irregular attendance. With regular attendance, I was assured that a boy or girl, in five years at the most, at an ordinary National school, ought to be able thoroughly to read, write, and cipher. Six months, it was said, were sufficient for the first book; a year for the second; eighteen months for the third; and the same length of time for the fourth. But, as a matter of fact, a much longer time was spent on the average in each class, and after six or seven years' nominal attendance, comparatively few got beyond the third reading book.

Variation in attendance at different seasons of the year. Attendance worst in spring and harvest;

but not so good at any time as it should be.

36. The variation in the attendance was very remarkable at different seasons of the year. My district was exclusively rural, and the causes of the variation were not far to seek. Turf driving alone accounted for a large number of absentees, and I daily saw scores of boys in charge of donkey-carts laden with peats, or returning empty from market, whom I might have expected to find at school. Every variety of field work called for the services of the older boys, so that the upper classes were thinned and almost destroyed in spring and harvest. In Derrylahan, for example, the attendance on the day of my visit was 17, and not a child was above eleven. In the month of June preceding the average attendance had been 39, and of these nearly a dozen were eleven years of age. In Dundonnel, in like manner, there were 56 children attending daily in June, and only 34 in the month of August. In Cloonakilla I found 18 boys and 13 girls, where there were usually 30 boys and 28 girls; and in one school with a flourishing roll of above 100 children, the doors were prematurely closed for the vacation, and master and scholars all gone to assist in reaping the corn. But, apart from the variation at different seasons of the year, there was at all times an unreasonable amount of irregularity. I do not believe that there was any great number of children who did not attend school at all, nor any general unwillingness on the part of parents to avail themselves of the existing schools; but there was a greater degree of indifference about the matter than I had found in the same circumstances in Scotland; and on the slightest pretext—a neighbouring fair, for instance, or a market-day—the classes were seriously affected. At the time of my visit to Athlone, I was assured that I need hardly visit the schools in town during the continuance of the regatta; and even for some miles round, the schools in the country districts were much worse filled than usual as long as the races on the river lasted. So also in Mountmellick, all the schools in town were more than decimated of their attendance by the superior attractions of an itinerant circus.

Affected by the most trifling causes: a market-day, a regatta, or a circus.

Free children least regular in attendance.

37. A great cause of the irregularity was the gratuitous education. *One reason no doubt why the children who

* In many of the schools I examined the books in order to test the comparative regularity of those who paid fees with those who were taught gratuitously. Longford may be taken as a fair illustration of my experience. I took the names of 32 children on the roll, 16 of whom were free, and 16 of whom paid fees. The names were those that came first on the roll, and gave a fair representation of the whole. The total number of days in the quarter on which they would have been present was 54.

The average attendance of the paying scholars was 51 days, and of the non-paying it was 41.

PAYING SCHOLARS.			NON-PAYING SCHOLARS.

paid no fees were the least regular, was this, that they were also the poorest, and their parents were therefore the least able to forego their wages; but another reason was also that they valued education less, simply because they did not pay for it. A small fee, therefore, even a penny a week, if it could be exacted, would help to improve the attendance. As it is, more than half of the children in my experience paid no fee at all. If, in addition, the fee were made payable in advance, the attendance, and the roll, the masters seemed to think, would nearly coincide.

Means for improving the attendance.

38. In different schools there was much diversity in the regularity of the attendance, and it showed the discrimination of the parents, and perhaps of the children, that very much in proportion to the merits of the master, the attendance at each school was more or less regular. In Roscrea, to which I have already referred more than once, there were 320 children on the roll, and 170, or 76 per cent., in attendance. Something was also due in this case to the intelligent interest that the manager showed in the school, to his daily visits to it and to the exhortations and arguments with which he plied his parishioners. In another school, at no great distance from Roscrea, the roll was 50, and the attendance 23, and altogether when a school was in full operation, and not affected at the time by any special circumstance, an attendance of 50 per cent. as compared with the roll or the names on the books for the current quarter, was rather above than below the average.

Example of Roscrea, with an attendance of 76 per cent.

Attendance of 50 per cent., as compared with the roll, above the average.

39. I do not believe that compulsory education would be acceptable, or would suit the circumstances of my district; but besides the means that I have indicated for improving the attendance, the exaction, namely, of fees, the co-operation of the manager, especially if he be a parish priest, and the careful selection of good teachers, whom the parents and children appreciate, I think something might be done by evening schools. On this subject, however, I do not purpose to enlarge, but am content to say merely, that many of the best schoolmasters and others with whom I spoke on the subject, shared in my opinion.

40. The subject matter of instruction was substantially the same in all the schools, and consisted in the main of reading, writing, and arithmetic. Grammar and geography were taught in the more advanced classes, and algebra and geometry, in some of the best schools, to scholars who had time and aptitude for these studies. Wherever the higher branches were taught, I examined the scholars who professed to know them, but most of my attention was given to the ordinary subjects. There were usually four classes in each school. In my examination of these classes, I began with the lowest, and taking for my guidance the instructions issued by the National Board, I endeavoured also to test the general intelligence of the scholars.

Subjects and

41. The quality of the instruction varied very much in different schools. Reading, in so far as the mere understanding of the words was concerned, was well taught, and a large per-centage of the children passed in this subject. In very good schools it was clear, distinct, and intelligent, so that I could follow the children easily without a book. But in more cases, there did not seem to me to be sufficient attention paid to correcting errors of accent and pronunciation, and the children were allowed to read in a somewhat slovenly way. I had constant difficulty in getting them to read loudly and distinctly enough to be heard or understood a few feet off. There was therefore great room for improvement in this branch of education in some of its most important details, and on the whole, while the reading was *passable*, it could hardly be called *good*. But I believe that the children did justice neither to their teachers nor to themselves, on account of their modesty and diffidence, and that they fell short of a high standard rather from want of style and expression, than from want of knowledge; for their spelling, both orally and in dictation, was very satisfactory. The *writing* was almost always good. In the table at the foot of page 496, it will be seen that a smaller per-centage passed in this subject than in reading, but it is to be borne in mind that the per-centages are calculated on the whole number of scholars in the school, and not on the number of those who were learning a particular branch. As all were learning reading, the proportion of passes is of course greatest in that subject. But, apart from this, the mere quality or excellence was higher in writing than in reading, and this cannot be estimated in figures. In most of the schools the copy-books used were those published by Mr. Vere Foster, and the masters themselves attributed much of the good progress made to the excellence of these books. I cannot say as to this, but one thing I know, that they were a marvel of cheapness. The *arithmetic* was generally well taught, much better in boys' than in girls' schools, and in mixed schools of boys and girls, the boys were the superiors of the girls in this branch. *Notation* was a test under which the children frequently broke down, but on the whole, it also was carefully taught and well mastered by the children.

quality of instruction.

Reading.

Writing.

Arithmetic

42. In many of the schools children were taught *singing*, but I cannot say that I thought highly of their attainments in this respect. I found *drawing* also as an accomplishment in several schools, of which I may mention Geashill as exhibiting perhaps the most successful results. In all the better schools, and in some where I hardly expected it, the most advanced boys were taught *algebra* and *geometry*, and in some cases mensuration. In contrast with the parish schools of Scotland, the study of classics was quite ignored. In one school, indeed, the master was reading Horace and Homer for his own improvement, and when his ordinary work was over for the day, he had a small class of two boys (who intended ultimately to go to Maynooth) to whom he taught the elements of Greek and Latin. I took the liberty of testing his acquirements, and found that he was no pretender. He knew his Greek grammar uncommonly well, and quoted, scanned, and parsed the first lines of the Iliad and of the Odes of Horace with the greatest accuracy. I should mention also that in one flourishing school in a country town, the head master had specially engaged a classical teacher to supply the felt wants of the middle classes in the neighbourhood, but it remained to be seen how the experiment would succeed. But after all, it would have been rather absurd had the teachers, as a general rule, been found teaching classics. It would have been sheer waste of time; and the subjects taught, if less ambitious than Latin, Greek, and the higher mathematics, were infinitely more useful for the children who filled the schools, and were quite what they wanted.

Higher branches.

43. Altogether, with the results as a whole, I was extremely well pleased. In most of the schools, from the lowest to the highest class, there was evidence of thorough and effective teaching. Nothing desultory and capricious, but everything systematic and progressive. In some of the schools indeed, I thought that the pressure upon the younger children was almost too great. But while the general verdict is thus favourable, I am bound to repeat what I have already mentioned, in speaking of the masters, that the quality of the instruction was not nearly so good in schools under untrained as in those under trained teachers. It is due to the untrained teachers to say that, without exception, they expressed their regret that they were not at liberty to avail themselves of the training institution. The quality of the instruction in schools under untrained masters was worse than when mistresses were the teachers. The natural superiority of the latter in manners, deportment, and tact was apparent in the greater order, cleanliness, and culture of their scholars. The difference between the really good school under a trained teacher and another under an indifferent or bad one, who was untrained, was marked almost before you entered the door. In the one case everything was neat and orderly—in the other the children were loitering about the entrance, and there were marks of untidiness all around. Within doors the children in the one school were punctual in their attendance, while in the other they dropped in as they pleased. The difference culminated in the order and organization of the

Contrast of schools under trained and untrained teachers.

classes. In the one there was quiet and system, without apparent effort—in the other much bustling to and fro, interminable confusion and intricacy of classes out of which there was no way.* I should add also that the number of children above thirteen in the one case was nearly 8 per cent., and in the other it was less than 4; and that not unfrequently in the schools taught by untrained teachers, there were no children above the third class, whereas with the trained teacher there was usually a fourth class consisting of 12 or 14 per cent. of the whole number of scholars.

Religious instruction.

44. The religious instruction depended of course on the manager. In my district, as the great majority of the schools were Roman Catholic in their character, the manager being the priest, and the teacher and scholars of the same faith, it was the catechism of the Roman Catholic Church that was taught. The religious instruction (which was given by the teacher) was limited to this and the saying of prayers, as far as I remember. But at certain times of the year the children of proper age were specially prepared by the priests for confirmation. I did not find the Douay version of the Holy Scriptures read or taught in any of the schools.

Hour set apart for it generally before or after school work. Exception to this rule in diocese of Ardagh.

The hour for religious instruction was generally before or after the ordinary secular work; but in the schools in one Roman Catholic diocese, that of Ardagh, the invariable rule was to have it in the middle of the day. The reason assigned for this was that the bishop conceived that the children were more likely to profit by the instruction then than at any other time. If it were before the regular school work began, the children were apt to be irregular and unpunctual in their attendance; if it were after school work, they were fagged and listless. Whatever force there may be in these arguments, there is no doubt that the noonday hour is singularly inconvenient for any Protestant children who attend the school. There is often no place of shelter for them, and they must necessarily be exposed to cold and wet weather, whilst their fellows are engaged in religious instruction within doors. I cannot imagine that either they or their parents will like this arrangement, and I can easily believe that it may sometimes be sufficient to deter them altogether from the school, or to cause their removal. It is, however, consistent with the rules of the Board. I found that the teachers themselves disapproved of it, and that the Inspector of schools had in one case at least suggested an alteration in the hour of religious instruction, on the ground that it was a hardship to the minority to have it at twelve o'clock.

II. Convent Schools.

Convent schools connected with the Board. Subject to rules of non-vested schools.

45. II. *The Convent Schools* in my district were all connected with the National Board. They were subject in virtue of this connexion to the rules applicable to non-vested schools, and the aid that they received from the State was limited to salary and inspection. The salary was dependent on the number of the children, and not on the classification of the teachers. Monitors, however, employed by the religious community were paid in the usual way by the State. There were altogether in my district eleven convent schools. Of these I visited seven with an attendance of 1,456, or rather more than 200 children in each. They were connected with different orders—Sisters of Mercy in Parsonstown, Longford, and Tullamore; Presentation Nuns in Maryborough and Mullingar; Nuns of the Sacred Heart in Roscrea, and Sisters of "La Sainte Union" in Banagher.

General description.

46. The orders differed among themselves in various particulars. The Presentation Nuns, for example, devoting themselves exclusively to the gratuitous education of the poor, and the Sisters of Mercy combining with this the duty of visiting the sick; but the work common to them all was the work of teaching, and in their manner of performing this there was no distinction or difference amongst them. It was probably their poverty rather than their inclination that had led them to connect themselves with the State, but whatever their original motive, they had been so connected from the first, and their union had been of great advantage to the schools. It had supplied them with the necessary funds, had enabled them to employ a sufficient staff of assistants and monitors, and had secured to them the inestimable gain of inspection, and examination by well qualified and impartial men.

47. The convents, including the schools, were generally, if not always the property of the community. Most of them were situated in pleasant places in and about towns or districts sufficiently well inhabited to furnish an abundant supply of scholars. The convent of "La Sainte Union" in Banagher was an exception. The order is of French origin, I believe, and has only recently established itself in Ireland. It seemed to me to have selected an unpromising quarter and circumstances in which to settle. Banagher is an uninviting looking town, with one long precipitous street of thatched houses. Twenty years ago it had a population of 3,000 which has now dwindled down to little more than 1,000. The convent is in the centre of the town. Its situation at the foot of the hill did not seem very healthy. At the time of my visit the head of the community was just recovering from fever. Add to this that some of the nuns hardly knew the language, and few, if any of them, knew the ways and usages of the people, and you have rather an unfavourable picture, but with all these things against them they seemed hopeful and contented. Some of the convent buildings were exceedingly handsome, and each with its quiet garden and general air of seclusion, aided as it was by the ways and manners of the nuns themselves must have exercised a strong indirect influence on the children, and could not fail to give them an impression of peace and separation from the world. The rooms devoted to the school work with all their furniture and equipments were always good and satisfactory. The school was usually part of the convent. In Longford, however, the nuns had to walk daily a distance of a quarter of a mile from the convent, but this was exceptional, and was likely to be only a temporary arrangement.

Scholars. Their condition. Their age.

48. The children were of the ordinary classes, including, however, an admixture of the middle ranks. Sometimes, but not always, there were separate schools for the latter, apart altogether from the National Board, and taught by the nuns. I was struck with the early age of many of the children. A number were mere infants,

* In illustration of the contrast between the two classes of National schools, I have compared nine under trained teachers with six under untrained teachers. I have added also six schools connected with the Church Education Society and the Board of Erasmus Smith, in order to show what position these schools, of which I speak afterwards, occupy relatively to the National schools, so far as this can be shown by such a table:—

—	No. of Schools.	No. of Scholars.	Passed in					
			Reading.	Per-centage.	Writing.	Per-centage.	Arithmetic.	Per-centage.
I. National schools with trained teachers, .	9	460	380	82·6	199	43·2	193	42·0
II. National schools under untrained teachers, .	6	154	97	63·0	42	27·2	51	33·1
III. Church Education Society schools, . .	6	126	75	59·5	53	42·0	42	33·3
Total, . .	21	740	552	74·6	294	39·7	286	38·6

two or three years old and upwards. There was, therefore, always an infant school attached to the convent. In this department the children remained three or four years, until they had begun or even passed through the first reading book, when they were transferred about the age of six or seven to the upper school. In the infant school there were boys as well as girls, in the upper school there were girls only.

Fees. "Presentation" nuns bound to teach gratuitously.

49. The fees paid were merely nominal. I have already mentioned that the nuns of the Presentation order are bound by their rules to teach the poor gratuitously. Apparently this rule admits of certain modifications; for in one convent of this order there was a "benefit school," as it was called, for children of a rather better social grade than the rest, and these paid a fee. This department was connected with the National Board, and was in fact a part of the National school. It seemed to me to introduce an undesirable distinction of ranks. The fees, however, were not appropriated to the use of the community, but were spent entirely in helping to clothe and feed the more necessitous children. In the only other Presentation convent that I visited, the only remuneration that the nuns received was a few pounds a year from the trustees of an educational bequest, to pay the rent of the school buildings. But the other orders also, whatever their rules might be, were in practice much the same, and no children were excluded from them on the score of poverty, or inability to pay school fees. The highest sum collected in this way in the year 1867 was in Parsonstown, and amounted to £18 16*s.* on an average roll of 300, and an average daily attendance of 200 children. In Tullamore convent with as many children, the fees for the same year were only £3 12*s.* 11*d.*, and this is a more common case than the other.

Practice of all the orders much the same.

Attendance more regular than in ordinary National schools.

Causes of this.

Instance of Roscrea.

50. The attendance of the children was more regular than the average attendance in ordinary schools. For this there were various causes. The situation of the convents themselves was generally favourable, and the children coming as they did mostly from towns, were not apt to be taken away by such a variety of causes as affect them in the rural districts. As a general rule also, the priests worked very cordially with the nuns, and did their best to secure for them a good and regular attendance. Roscrea may be taken as a favourable average of the attendance at convent schools from these and other reasons. Here the roll was 326, and the numbers present on the day of my visit were 242, or above 74 per cent. In this school the nuns required when a child had been absent that the mother or guardian should come with her when she returned to school. Without this the child was not re-admitted. This at first sight might seem likely to deter children from returning to school at all, but here the priest's influence came into play, and his visits to the houses of the people, and his injunctions from the altar had the effect of inducing the parents to send their children to the school. The children also were tempted to regular attendance by various temporal advantages. The poorer sort received good food and clothing. The nuns were enabled to afford them these advantages in consequence of their having a large boarding-school. The girls in it paid a considerable sum for their living and education, and their cast-off clothes and the food that they left were made useful for the day school.

51. In several of the convents as well as Roscrea there was a day and boarding-school apart from the ordinary school, and not connected with the National system, for girls of the upper and middle classes. These schools, however, I did not examine, except in one or two cases, and in a very cursory way. Their chief distinction from the others seemed to consist in their being separate from the State, and in the books that they used, which were those of the Christian Brothers. I need hardly say that the teaching in them was more pervaded by religious observances than the rules of the National system would tolerate.

Children neat and tidy.

52. Before passing from the children, I should mention in favour of the convent schools that the scholars presented a particularly neat and tidy appearance. The nuns insisted on their coming to school with hands and face well washed, hair carefully brushed, and dress, as far as possible scrupulously clean.

Subjects of instruction.

53. The subject matter of instruction was reading, writing, and arithmetic, with sewing. To these were added occasionally as accomplishments, music and drawing. The religious instruction was always, I think, in the middle of the day. A few minutes before the regular work began and a few minutes after it was done were also set apart for prayer and other devotional exercises. A religious tone and character necessarily pervaded the schools more or less during the whole day, but except at the time set apart for teaching the Catechism, saying the Hail Mary, and attending to their other religious duties, the rule was as absolute and I believe as well obeyed in convent as in other schools in regard to the separation of religious and secular instruction. In some cases the children wore badges as a distinction for good conduct, regular attendance, and soforth; but I suppose that if any of these were in any sense religious emblems or symbols, they were worn only at the proper time. There were a few Protestant girls in the convent schools, and I was told that the rules applicable to them were strictly observed.

Religious character of instruction.

Quality of instruction.

54. The teaching seemed to me very good on the whole. It was, however, very unequal in different schools, and often in different parts of the same school. This was to be expected in the nature of things, as the members of each community all more or less took part in the teaching, for which, of course, they had very different degrees of aptitude. In some cases I found a great deal of zeal without much knowledge, and the principal defect, where there was a defect, arose from the want of special training. Only in one convent school, however, could I call the teaching really indifferent throughout. Generally speaking, the upper part of the school was best taught. Here was the class of paid and unpaid monitors, partly teachers and partly pupils. Here also the school was under the immediate charge, not necessarily of the head of the convent, but of that member of the community who was supposed to have the greatest talents for teaching. Under her the rest of the nuns and a large staff of monitors were distributed throughout the different classes. The lay assistants and monitors I found a very valuable part of the teaching staff. In all the schools they did a great deal of the drudgery connected with the classes, and in one case they were the only efficient teachers in the school. It is from them that the female teachers in the ordinary National schools are largely recruited, and therefore the efficiency of the highest class and of the monitors in convent schools is a matter of great importance. In the list presented to me by one convent school I found the names of twenty-seven girls who had been educated in it, and were at the time of my inquiry engaged in teaching in England, Ireland, and the colonies.

Not equal to the best ordinary National schools.

55. Reading was the strong point in the convent schools, and the least satisfactory was arithmetic. In all the usual subjects, however, the teaching and the results generally were good. I should not be inclined to place the schools, in quality of education, on the same level with the very best of the ordinary National schools—Roscrea, for instance, or Geashill, or Longford—but below these they occupied a high place. Of one part of the education I can hardly estimate the effect, namely, of the personal character and example of the nuns on their pupils. But this should certainly be taken into account; and my own feeling was that it would be hard to exaggerate its benefit to the children in afterlife. There seemed to exist a great degree of cordiality between the teachers and the girls.

Infant Schools.

56. In the infant schools there were, as I have said, both boys and girls between three and seven years old. In some convents they were taught separately. These schools served very much as day nurseries to relieve the parents

The good they do.

of the charge of their children. Even in this respect they were most valuable institutions, as they kept the infants out of harm's way, and secured for them an amount of attention, cleanliness, and comfort which they could hardly expect at home. But they were much more than nurseries; they were actually seminaries in which the children without effort learned habits of obedience and discipline, and in which they insensibly acquired a great deal of actual knowledge. My notes of one school will give a general idea of all. "In this infant school there were 82 children, of whom 13 were two years old; 11, three; 14, four; 11, five; 19, six; 12, seven; and 2 were eight. They were grouped in two main divisions, of whom 48 were learning letters and 34 were in the First Book. These main divisions were each drilled in three separate drafts, each draft being taught by a monitor, paid or unpaid, and the whole being under the charge of one of the nuns. The organization was admirable. One of the monitors played the harmonium when the children of the six drafts were being arranged under their different teachers. According to the usual fashion of infant schools, they moved for some time in a circle round and round the room, and when the music had brought them into time and order they filed off in their several detachments, and took their station with books in their hands or in front of the frames with words or letters written on them, according to their several stages of advancement. Everything was done well and quietly. The whole of the 82 children in the course of two or three minutes were brought from the gallery, and without confusion or clashing together were neatly arranged in little groups, each with its monitor, and all overlooked by the sister in charge. The teaching was good, and suited to the tender years of the children. The lessons were not continued too long, and were varied by singing and other contrivances to keep the children from feeling tired or disgusted with school. They all were evidently happy and contented, with one exception—an infant of two or three years who had come for the first time to school, and was not yet reconciled to the place."

Description of one.

57. The gallery was the principal scene of operations in an infant school. Here they were all ranged together, row above row, with the teacher standing in front, and endeavouring as well as she could to entertain and instruct her restless charges. It seemed to me that some of the nuns in charge were particularly fitted for this peculiar duty. I was told by one of the Inspectors of schools that it was the department which he found the most difficult to fill, and the one in which he had to suggest the most frequent changes of teachers before he found the particular person in the community whose *forte* lay in this direction.

Age when boys leave the infant school.

58. I have already mentioned that the children stay in the infant school till they have gone some length in the first reading book, and are about six or seven years old. The girls are then drafted into the upper department, and the boys leave the convent for some other school under a master. The infant school, therefore, includes not only the infant school properly so called, but also what would be reckoned the first class in an ordinary National school. In consequence of this the upper school, being relieved of beginners, presented at first sight a favourable contrast with other schools. All the children could read, and most of them were beginning to write; and the number of children, therefore, who could pass in these two branches, seemed proportionately higher than in the ordinary National schools. Those who could not pass were in the infant school.

Case of convent school at which boys remained after six or seven.

59. I have said that the boys leave the infant school about six or seven. In one case, however, I found boys of eight, nine, ten, eleven, and even twelve. In this school the boys were taught apart from the girls, but even thus the matter required some explanation. The National schools in the town, for some reason or other, were not popular with a portion of the community; and although they were three in number—a model school, a school under Presbyterian management, and a school under the management of the Roman Catholic parish priest—they were all thought unsuitable, and the boys were encouraged to remain long after the usual age. In this case, the Commissioners of National Education seemed actually to be supplying funds for their own discomfiture; for they were starving their own ordinary National schools, and depriving them of their natural supply. I was informed that there was a proposal on foot among the Roman Catholics of the town to introduce the Christian Brothers, and as soon as their school was established, the boys were to be removed from the convent. It is right also to add that the head of the convent school assured me that, whether this were the case or not, the boys above seven would as soon as possible be drafted away.

III. Workhouse Schools.

Workhouse schools.

60. III. There is yet one other class of schools connected with the National Board, which deserve a few words of notice. These are *the workhouse schools*. By the rules of the Board they "are received into connexion, and grants of books made to them on condition that they shall be subject to inspection by the Commissioners or their officers, and that all the rules of the Board applicable to non-vested schools be faithfully observed." Of these schools I visited three, one in Parsonstown, a second in Roscrea, and a third in Tullamore. There is something very depressing in a visit to a workhouse, and although the schools are the least depressing sight you see in them, even they are not cheerful. All the workhouses that I saw in Ireland were imposing looking erections, with a strong family resemblance, so that having once seen one of them, I was at no loss to recognise the rest. I was very much struck with the excellence of the education in those that came under my notice. In my visits to poorhouses in Scotland, I had not been favourably impressed, and therefore I was not prepared for the orderly and efficient teaching that I saw in Ireland, nor for the progress that I found among the children. In each workhouse there was a separate department for boys and girls, the girls of course with a mistress, and the boys with a master. The teachers were all resident, and their salaries, besides board and lodging, were £25 for males, and £20 for females.

Subject to rules of non-vested schools.

Buildings and general character.

Girls' school near Parsonstown.

61. The first school that I visited was in the vicinity of Parsonstown. The class rooms were spacious and well ventilated, 45 feet long by 30 wide, and they opened on a gravel play-ground of moderate size. In the girls' room there were three classes, 12 children from six to eight in the first reading book, 13 children from seven to ten in the second reading book, and 5 girls from ten to fourteen in the third or highest class. The teacher, a young woman of eighteen or nineteen, had been trained in the convent school, and had held her situation for about two years. She expressed herself well satisfied with the conduct of the girls, and they not only made a good appearance in all the usual branches, reading especially, but seemed well behaved and obedient, and showed a fair amount of intelligence. On the day of my visit, one of the older girls was leaving the workhouse, having been chosen as a servant by a person in the neighbourhood; and I was glad to find that the school was visited regularly by a number of ladies in and about Parsonstown. The regular religious instruction of the children was conducted by the teacher, and in addition, one of the Roman Catholic priests superintended the girls of his own faith, while the rector of the parish was equally attentive to the few Protestant children in the establishment.

62. The teacher of the boys' school was a young certificated master, who had been trained in the district model school, and for one session or part of it in the central training school. He was well qualified for his work, and meant to qualify himself still further as a teacher, by spending a second session in the training school in

Dublin. With this object in view, he was prepared to risk the loss of his position in the workhouse, and to take the chance of being appointed to an ordinary National school.

63. In the two other schools which I visited, I saw equally good work. The female teachers had come from convent schools, and the male teachers from district model schools. One of them had a salary of about £80, besides his board and lodging. This master, however, had charge also of a small, but very productive and remunerative farm, on which the boys worked under his direction. The religious instruction was conducted in the two last schools almost entirely by the teachers, but the priests also visited the schools from time to time, and taught the children who were preparing for confirmation. On the whole, the impression that I formed of these schools was very favourable, and although a certain diseased and unhealthy look impressed me, and made my visit somewhat uncomfortable, part of this was probably due to fancy, and as the result of the whole, I should place the schools among the list of good ordinary National schools, and above the average. There were no doubt causes favourable to the progress of the children. They were by the circumstances of their case regular in attendance, and entirely at the disposal of those placed in charge of them. School work was the main business of the day, and they had nothing to distract their attention. Apparently also the services of good men and women could be secured, for what at first sight seems a most unattractive sphere of usefulness, and I am bound to say of the female teachers especially, that they seemed thoroughly interested in their work. In each of the workhouses there was an infant school for boys and girls under the female teacher. It was conducted on the same principles, and with much the same measure of educational success as the convent schools. I was struck with the number of absentees, especially among the youngest children. In one case twelve were in hospital out of a roll of fifty-one, mostly with sore eyes, and in another, there were eighteen boys and girls absent from three classes, with whooping-cough, on a roll of forty-four. The majority of the children were orphans, or deserted by their parents. The numbers in the workhouses, more particularly in Tullamore, varied according to the season of the year. There was a marked decrease in harvest time, but in winter the ranks were once more filled.

Religious instruction.

Quality of secular education high.

Causes of this.

Infant schools.

Number of absentees from illness.

Chapter II.—Church Education Society Schools and Schools Connected with the Board of Erasmus Smith, Christian Brothers' Schools, Private and Miscellaneous Schools.

64. Next to the National schools, those connected with the Church Education Society and the Board of Erasmus Smith were the most numerous in my district. They may be taken together, as the principles on which they are conducted are the same. They are essentially Protestant schools, and antagonistic, on the Protestant side, just as the Christian Brothers' schools are on the Roman Catholic side to the National system. It cannot be said, however, that they were created to oppose it, as they were in existence long before it came into operation. The Erasmus Smith schools were first established in the reign of Charles II. The original endowment was devoted exclusively for the support of grammar schools, of which four or five are in operation; but from time to time the scope of the foundation has been extended. Grants have been made from the funds for other purposes connected with education, as, for instance, towards the buildings of Trinity College, Dublin, and for the endowment of scholarships and fellowships in that institution. It is long since the application of its surplus funds to primary English schools has been legalized and sanctioned. Up to 1812, however, there were only half a dozen of these in existence; but between that date and 1842 a very large number of English schools were built from the funds of Erasmus Smith, and a great portion of the income of the endowment was expended on their support. Altogether not less than £40,000 has been devoted to the erection of such schools, and I find it mentioned in the report on endowed schools in 1857 that the income available for the maintenance of these schools was then between £2,000 and £3,000 a year; that the number of the schools was 119, and that they educated 5,380 children.

Church Education Society and Erasmus Smith Schools.

Extent of their operations.

65. The operations of the Church Education Society are much more extensive. It has in direct connexion with it 1,500 schools, with 67,000 children on the rolls, and supported at an annual cost of about £45,000. The distinctive principles of both these sets of schools is that instruction in the Bible must necessarily form a part of the daily exercises of all the pupils. Among the printed rules drawn up for the government of the schools of Erasmus Smith these are the most prominent:—

Principles on which they are conducted.

"Every day all children who have attained a suitable proficiency shall read to the teachers a chapter in the Bible. The teacher shall examine the children as to their understanding what they have read, explaining the sense in plain language, without entering into controversial or abstruse matters. The Bible shall be used for religious instruction only, and not for the purpose of teaching to spell and to read. The children whose parents are members of the Church shall be instructed at least one day every week in the Catechism of the Church of England, and no other catechism shall be taught or admitted into the school. The attendance of the children of other denominations on this occasion shall be as their parents may direct."

66. The local managers and patrons of these schools are the clergymen of the Established Church. The books used in them are those published by the Society for the Promotion of Christian Knowledge. The teachers are all members of the Established Church, and have almost all been trained in the normal school connected with the Church Education Society. The masters generally combine with their office that of parish clerk. Most of the scholars also are Protestants and Episcopalians, and the schools themselves are often called the parochial schools attached to the Established Church. They are regularly inspected once a year by an official from the Board of Erasmus Smith or the Church Education Society.

67. There were in my district thirty-six schools of the Church Education Society, each with an average daily attendance of seventeen scholars, and seven schools connected with the Board of Erasmus Smith, with an average daily attendance of twenty-four in each school. I visited in all nineteen schools of both classes. In some there was only a female teacher, in others only a master for boys and girls together; but in most either a separate male and female teacher for boys and girls, or a mixed school under a master, with a female assistant, usually his wife, to teach the girls sewing. There was almost always a house provided rent free, and in regard to personal comforts and emoluments, the teachers were certainly in as good a position as the National schoolmasters. Their average income was £35; but in the case of the Church Education Society, this sum included the emoluments both of the master and the assistant when these were husband and wife. The emoluments were made up partly by endowment, £10 or £15 being granted by the Board of Erasmus Smith to their schools, and a smaller sum generally by the Church Education Society to theirs—partly by local subscription, to which the clergyman himself was the chief contributor, and partly by school fees, and the master's grant as parish clerk.

Teachers: their position and emoluments.

68. The children were quite of the poorer classes, and the fees that they paid little, if at all, higher than those in ordinary schools.

Scholars.

69. In the character of the education itself, there was the greatest possible difference—some of the schools were

Quality of instruction.

really good; some of them utterly worthless. The utterly worthless were composed of those with an average daily attendance of less than fourteen scholars. In my district there were seventeen such, of which I visited five, with three, eight, nine, twelve, and thirteen scholars respectively. It is needless to say that there was no scope for the teachers themselves, with such a handful of children. The worst case that I encountered was a school with three scholars. It was under the charge of a respectable woman—the wife of a sergeant of police. She taught her scholars a little reading, a little writing, and a very little arithmetic, and a great deal, comparatively, of the Church Catechism, the Collects, and texts from the Bible, together with sewing and knitting. The Catechism and the Bible texts were imperfectly committed to memory, and were not in the least understood by the children. The teacher had no great heart in her work, and no assistance or sympathy from without. She sent her own children who were able to walk the distance to a Model school in the district. Altogether, in an educational point of view, the school was a mockery. Within little more than a stone's cast of it was a very good National school, under Roman Catholic management and a Roman Catholic master. I was told that the teacher, besides her house, received a salary of £6 for her services, partly, I suppose, from the Church Education Society.

Schools with too few scholars worthless.

Good schools.

70. As a contrast to this school I may mention that connected with the Board of Erasmus Smith in Longford and the parochial school at Coolbanagher. The latter was described as a Protestant school, and differed in some respects from any that I had seen of the same kind. Its teacher had been trained at the National normal school in Dublin. The school books used were those sanctioned by the National Board, and the school itself had the advantage of being examined by one of Her Majesty's Inspectors. But the general system and character of the school were essentially those of the Church Education Society. The children were all Protestants and Episcopalians. The religious teaching consisted in reading the Bible and learning the Church Catechism. On certain days of the week it was conducted by the rector of the parish. Once a week also the children attended service in the church. Music was particularly well taught, and besides daily lessons in this subject from the rector, seconded by the master, the children had regular practice of singing and music in the church. The reading in this school was excellent, and the manners of the children remarkably good. On the whole, I should place it in the first rank as compared with National schools. The Erasmus Smith school in Longford was nearly as good; but after due allowance has been made for these and other cases of superior schools, the fact remains that on the whole there was a want of system and vigour in the teaching, and a corresponding want of exactness and intelligence in the children beyond what I found in ordinary National schools. The subdivision of classes was unnecessarily minute and perplexing. Not unfrequently I found twenty children arranged in six classes, although, to do the masters justice, they usually grouped two or even three of these together in their lessons, in order to save time and to prevent the waste of teaching power. I thought the local supervision almost overdone, and that the teacher was not left sufficiently to the freedom of his own will, but was circumscribed by his position and circumstances. Mainly, however, the inferiority of these schools was due to the cause already mentioned—the small number of the scholars.

General character.

Causes of their inferiority.

Christian Brothers' Schools.

Christian Brothers' Schools essentially Roman Catholic.

71. I come next to a very different class of schools, namely, those of the Christian Brothers. As the Church Education Society is exclusively and essentially Protestant, so the institute of the Christian Brothers is exclusively and essentially Roman Catholic. It was first established in Ireland in 1802, by a merchant of the city of Waterford. This gentleman, a Mr. Rice, having retired from business determined to devote his time and his wealth to some religious and useful purpose. After deliberation he resolved on founding the institute of the Christian Brothers, for the gratuitous education of boys, according to the principles of the Roman Catholic religion.

Founder of the institute.

Teachers. Their training.

72. The teachers themselves are members of the order, and are specially trained and set apart for their work. The head-quarters of the institute are in Dublin, where it has a normal or training institution, and large and flourishing model schools. By the kindness of Mr. Grace, the head of this establishment, I was able to see all the internal arrangements, and found them complete and admirable even to the minutest details. The novice who wishes to enter the order has to spend two years in the training school, learning his profession. He is afterwards sent to one of the branch establishments in Dublin itself it may be, or the provinces. Here he lives a community life with one, two, or more Brothers, as the case may be, and according as the circumstances of the school may require, or can support a larger or smaller staff of teachers. He does not, however, at once become a life member of the institute, but has to spend a long probation of eleven years. During that term he is at liberty to leave the society, or to attach himself to any other towards which he feels himself drawn. At the close of his probation having now learned and practised all that is required of him, he is finally admitted, after examination, as a life member of the institute.

Their mode of life.

73. Although not an ecclesiastical corporation the institute is after the strictest sort a religious society. Its members live an ascetic life, spending most of the time that is not occupied with teaching, in silence, prayer, and fasting. They wear a particular dress, and are bound by vows of celibacy. Teaching, however, is their profession, and through it they seek to promote the interests of their Church and their own welfare. They entertain ennobled and lofty ideas of the vocation to which they have been called. It is the highest exercise of Christian charity. They who give their lives to it are engaged in employments of which the holiest men might be emulous. There is nothing so excellent as this function of charity, nothing so meritorious, nothing which can lead to more exalted piety. It is no wonder that with such ideas as these, they are possessed with a burning zeal in the profession which they have adopted. I mention these things because they help to give an idea of the nature of the society, and of its peculiarly denominational as well as its essentially religious character.

The extent of the operations of the institute.

74. The Christian Brothers are to be found everywhere throughout Ireland. They have about sixty establishments, with 20,000 children in round numbers, taught by 335 masters, and an innumerable army of monitors chosen from the scholars themselves. There is a constant demand for new schools connected with the order, and at present there are applications from a score of places in Ireland, besides others from England, Australia, and the United States for branch establishments. Wherever they are set down they are at once filled to overflowing, and the schools round about are drained of the Roman Catholic children. They are especially favoured by the priests, and I am bound to say also that the parents have much the same preference for them over other schools for their boys as for the convent schools for their girls. The children who attend them are not exclusively of the poorer sort, but represent also the middle, and "well to do" classes of the community. In one school I found not only the sons of labourers, but of wealthy shopkeepers, and even professional men. In the way of secular instruction they learn everything from the letters up to natural philosophy. The books in use in the schools are drawn up and published by the society. Those for reading and history are full of religious teaching of a special character. They struck me also as pervaded by a certain fervid nationality, with a tendency to

Scholars. The classes to which they belong.

The subjects they learn.

The books they use.

make the children ardent lovers of their own country, well acquainted with its traditions and the history of its sufferings. In one of the schools that I visited some allusion to English history occurred in a passage selected for their reading lesson: but the easy questions suggested thereby were not answered even by the best boys. The master told me that if I asked questions on Irish history I should receive more satisfactory answers. In my district I found three establishments connected with the institute, all of which I visited and examined with as much care as my time would permit. One in Mullingar, with 5 teachers and 300 children in attendance; a second in Tullamore, with 2 teachers and 235 children; and a third in Maryborough, with 2 teachers and 160 children. Altogether in the three there were 9 teachers and in round numbers 700 scholars, or nearly 80 for each master.

Christian Brothers' school at Mullingar.

75. The first school that I visited was that of Mullingar. Unlike most of the Christian Brothers' schools, which are entirely dependent on the voluntary contributions of the locality in which they are placed, this school was erected and is maintained by an endowment. It owes its endowment to a Mr. Hevey, of Mullingar, who died in the year 1837. By his will he left to trustees certain lands, the rents and profits of which were to be applied to the support, maintenance, and education of poor children in Mullingar. Very full powers were given to the trustees, the only limitation being that no difference of religion should be the ground for excluding any child from the benefit of the bequest. In the year 1854, seventeen years after the death of the testator, the trustees, of whom the chief was Cardinal Cullen, then Archbishop Cullen, resolved that a "college" should be built, consisting of two departments—a classical school for Latin and Greek, and a general school for an English education; and that the latter, the general school, should be intrusted to the Christian Brothers as teachers, and to their management and immediate government. By this arrangement the school was made exclusively a Roman Catholic seminary, and so far, therefore, the intentions of the testator seem hardly to have been carried out in their full extent.

Endowment.

Buildings.

76. The school buildings cost £5,000. They are, I think, the most striking and handsome of all the schools that I saw anywhere in my district of whatever kind. Their internal arrangements also are in keeping with their general appearance. The largest portion of the building is assigned to the general school under the Christian Brothers. They have five "cells" (good bedrooms), an oratory and reception room, a refectory and kitchen for themselves, and for the boys there are four main rooms, which are described as distinct schools. Speaking more strictly, however, there are four separate departments, arranged according to the boys' proficiency. Each of these rooms is forty feet long, twenty-four feet broad, and the height from floor to ceiling is fifteen feet. Altogether there is accommodation in each of them for 120 boys.

Furniture, playground, and outhouses.

77. In respect to furniture, apparatus and books the institution is complete. It has also a large playground in which the different schools have portions allotted for their games, and where under certain restrictions they have full scope for their energies in play time. I ought to mention that the offices and outbuildings here and in one of the two other Christian Brothers' schools that I visited were of a very superior character to those in the National schools. Here as in other details, such as the selection of the site in a quiet locality, removed from thoroughfares, bustle and other such causes of distraction, in the requisites of good air and good light, in cleanliness and ventilation, the Mullingar school was quite the ideal of what a Christian Brothers' school should be.

First or lowest room.

78. In the first room there were in round numbers 100 boys, all under one master. Twenty of the best boys acted as monitors. The arrangement of the room was simple and good. At the upper end were the teacher's desk and platform. Occupying the main portion of the area of the room there was a sufficient number of well arranged desks and forms. The three or four nearest the teacher were filled by the monitors. The first or alphabet class was at the lower end, and the other classes ascended progressively towards the master's platform. There was a distance of about nine feet from the upper or master's end of the school to the first desk, and passages of the same width between the desks and the wall all round three of the sides—so that there was ample room for the formation of the small sections under the monitors and for the movements of the children.

79. The monitors were divided into three groups, each of which took a share in the teaching, and together they formed what might be called the master's class. He had not much time to devote to any of the other classes, and they accordingly enjoyed the benefits of his teaching in a great measure at second hand. In point of years the monitors were little above their fellows. Seven of them were eight years old and only one was twelve.

80. I examined first the twenty monitors as one class. They were reading in the Second Book of Lessons and passed creditably both in reading and in oral spelling. They were not accustomed to write from dictation, but were practised in copying from their reading book upon slates. In arithmetic nearly all of them were correct in notation and the simple rules. As the teachers of the junior classes I examined the monitors minutely, and my impression was that they had been carefully and judiciously selected for their work, and I found them performing it with commendable gravity, and a due sense of the importance that attached to their office. Their teaching, however, was only moderately effective and very unequal. It was confined to reading. Of the rest of the boys, who were divided into nine groups, about twenty were in the First Book and read creditably. Beyond this their knowledge did not go, as writing and ciphering were not taught to the juniors till they had passed through the first reading book. The others were reading short sentences or single words and the letters of the alphabet. The result of the whole examination showed forty-three boys out of a hundred able to read—eleven able also to write, and twelve able to do the simple rules in arithmetic.

81. The order was fair, and the master was undoubtedly a capable teacher, both interested and skilled in his work. By means of his signal he was able at any moment to command attention. All the evolutions of the classes were performed by the means of this instrument, and the master rarely or never used his voice. Considering that the classes were thrown out of their usual order by my examination, and that the monitors and himself were withdrawn from their ordinary work, I should perhaps use a stronger word than fair in describing the discipline.

Second room.

82. The arrangements of the second room (to which boys are transferred after they have passed through the first reading book) were on much the same principle as in the lowest school. There was the same use of the signal, the same arrangement of the desks and furniture, and the children, as before, were mainly taught by monitors. The boys here formed the second class, and besides reading, writing, and the simple rules of arithmetic were also taught to all the boys.

Division of scholars on leaving the second room.

83. On leaving the second room the boys seemed to me to be divided into two sections. One of these was drafted by itself into the third school, whilst the other was carried at once into the highest room of all. So that there were in reality two third classes. The principle on which the division was made seemed to be this: the boys from the country, those who were least regular in their attendance, those who were least likely to continue long at school, or who had made the least satisfactory progress, in a word, those who were least likely to do credit to the school, were consigned to the third room, and the others promoted to the fourth. This arrangement has its advantages. In every large school there is a considerable number of boys who at a certain period

Advantages

of their course seem to stick fast. This period corresponds to that represented by the third class, or the third reading book in an ordinary school. Whether it is laziness, or irregular attendance, or natural inaptitude, or dislike to mental labour, there they remain and act as a drag on the rest of the class. Their companions leave them, or sometimes they themselves are put to work for which they are unfit and which they never comprehend. It is not, therefore, an unwise plan to put this section by itself where it can do no harm to any one else.

and disadvantages of this division.

84. But on the other hand it may very well happen that a really good boy, who is merely slow in development, may be inadvertently put into this division, and in that case his chances of advancement are small. It is also discouraging work for a master to have to teach a class composed altogether, or nearly so, of hopeless materials. It was probably a mere accident, but as a matter of fact the master himself in this school was not equal to the others, and was not likely to detect or encourage superior industry or ability, and to transfer its possessor to the highest room. It was probable, therefore, that the education of the boys whom I saw here would not go beyond the barest elements. Reading was fair, almost good, but in arithmetic, even the simplest examples, the boys without exception broke down, and I had to give up the examination which I had begun on this subject.

85. There seemed to me also to be another drawback in the arrangement—namely, the creation of a social distinction in the school. All the boys in the two first rooms were mixed together whatever their circumstances might be, and the poorer children, judging by their appearance and dress, were seated side by side with those of a higher class. But here they were all of the poorer sort. If I am right in my idea of the principle on which the division at the end of the second year was made this is what we would naturally expect, for it is just the children of the poorest parents who, from one or other of the causes already mentioned—irregular attendance, natural inaptitude for mental work, want of time, assistance, or encouragement—naturally fall into a class by themselves.

Fourth or highest room.

86. In the fourth or highest room there were seventy-two boys, who may be described as the picked scholars of the whole school. Their social position also seemed better, or at least they were less mixed than in the lower rooms; all were well dressed, and they looked like the children in a middle class or burgh school in Scotland. The aid of monitors here seemed to be very much dispensed with, although the senior boys were employed to some extent in teaching the junior. But the work mainly fell on the shoulders of the master, and considering the varied number of subjects, and the advanced nature of many of them, I was amazed at what was achieved by the energy, skill, and zeal of one man. The highest class of all, composed of twenty-one boys, from eleven to seventeen years of age, read not only accurately but in good style. Errors in accent or pronunciation were corrected by the master without producing anything either unreal or affected, and the tone and emphasis of the boys showed that the meaning of the author was thoroughly appreciated. The parsing and analysis of sentences were by no means perfect. But in a passage set for dictation both the writing and the spelling were well done. In a mixed paper of arithmetic, with questions in practice, proportion, interest, and fractions, vulgar and decimal, the answers were remarkably well, and in most cases very neatly, done. In geometry the master himself examined a select class. The teaching seemed to me very good, and the answering and intelligence of the class were quite equal to what one would find in a Scotch burgh school of the first rank.

87. In the way of accomplishments I should here mention that the drawings of some of the boys, the illuminated texts and specimens of penmanship with which the walls were really ornamented, were worthy of the highest praise, while the singing was better than I had ever heard in any school.

School at Tullamore.

88. The next school that I visited and examined was in Tullamore. It was originally connected with the National Board, but was transferred to the Christian Brothers a few years ago. There were here two teachers with 235 children between them. On the day of my visit there were present in one room no fewer than 165 children. Many of these were mere infants, and there was a most bewildering variety in their attainments. The numbers I believe were greater than usual, as the adjoining convent school happened to be closed for the holidays, and the male infants of that establishment had been transferred to the charge of the Christian Brothers. This was an arrangement suited very well for the parents, but it was hardly fair to the already overtasked teacher, that he should be burdened with sixty or seventy boys under six years of age. The monitors and the upper division did very fairly such work as they professed, which was confined almost exclusively to reading. It could not be said, however, that the great majority of the children were learning very much, nor was it indeed possible that they would make much progress. They were kept out of mischief, acquiring some notion of discipline, kindly dealt with, and they were being carefully trained in the duties of their religion. As an instrument of punishment, the master here, as in other schools of the institute, had a small leathern strap to help him to enforce order. The signal also was much in requisition; but with all the apparatus at his command, the noise and hubbub were very great, and made an examination of the children extremely laborious and unsatisfactory. On the whole the educational results were meagre. I am bound to say that they were as great as could reasonably be looked for with 165 boys under one master aided though he was by 20 monitors, mere children themselves.

First or lower room.

Upper room.

89. The upper room was efficiently taught; in it there were only 70 children, and although even this number was too great for one man, they were so grouped that with a little assistance from his monitors he could keep them all busily and quietly engaged. The teacher here was the local superior of the community. He had joined the institute, I believe, somewhat later in life than the usual age, and had brought to his new profession great earnestness of purpose, and a knowledge especially of arithmetic and mathematics. The general appearance of the boys was greatly superior to that of those in the lower room. Many more in proportion were respectably dressed, and seemed from their manners and air to belong to a higher class of the community. There was to a certain extent the same kind of selection in this school as in Mullingar. Only in Tullamore, the irregular and backward detachment continued in the lower room instead of being sent to an intermediate state of indefinite continuance, and the regular and better boys were promoted at once to the higher room. The progress of the boys in the upper room was fair in every subject, and the highest class seemed to me particularly well taught in mathematics and in mensuration.

School at Maryborough.

90. It is unnecessary to say much of the school at Maryborough. It was originally connected with the National Board, but ceased to be so in 1847, when it passed into the hands of the Christian Brothers. It was built and endowed by a former parish priest, the Very Rev. Nicholas O'Connor. The buildings cost about £500, and the endowment consisted of a sum of £1,140 invested in railway shares. This yielded more than £50 a year for a time, but of late the annual income has not amounted to half that sum. The residue required for the maintenance of the Brothers is obtained by means of a sermon and collection at the Roman Catholic chapel. The school buildings are very fair, and the Brothers have a good dwelling-house and garden.

91. On the day of my visit I found 160 children under the charge of two Brothers, with the usual staff of moni-

tors. In the junior room, with 80 scholars, the organization was good and the results fair. Nearly half of the whole number, including monitors, passed in reading. Seven boys wrote an easy passage from dictation. In writing, 11 of the 20 monitors did creditably; but none of the others were sufficiently advanced to be reckoned able to write. Arithmetic, also, was confined to the monitors, whom I examined in notation and the simple rules. In the second room there were also 80 children, of whom 12 were monitors. Before proceeding to examine the boys myself, I asked the Brother in charge to give a lesson in his ordinary manner. I was very much struck with the excellence of his teaching. All the boys who were able to follow the lesson (nearly the whole number present) were arranged round the room, each section under its monitor. The teacher himself stood in front of his desk, in such a position as to be heard and seen by all. I selected a lesson in poetry, which he read, stanza by stanza, in the manner and tone which he wished the children to follow. After each stanza had been read by himself, a monitor was called upon to read it also aloud; and, lastly, the whole of the boys standing on the floor read the lines together. I am not much in favour of the simultaneous system, but here it was employed with good results; and, considering the limited teaching staff, it was clearly the best, if not the only way to produce a good uniform style and manner of reading throughout the school. When this exercise was finished, the monitors were called upon to parse and analyse the sentences that had been read. This was done particularly well; their writing, also, and their arithmetic, as far as practice and proportion, were equally creditable. Their ages were from twelve to fourteen. Altogether they were quite on an equality with the highest class in a good National school. The classes below them, and taught by them, passed a fair examination in reading and in writing, but they were not strong in arithmetic; and towards the lower end of the school they did not know much about it.

Lower room.

Upper room.

92. I do not think it necessary to dwell very long on the excellences or defects of the Christian Brothers' schools which I visited. If I have given a fair account of them, these will naturally occur to anyone who reads it. The defects all arise from the insufficient staff of masters, and are most prominent and marked in the younger classes; there a large proportion of the children learn very little indeed, and that little not particularly well. The monitors' class is exceptional, and is composed of children well advanced; but the others have to scramble through the elements of education as best they may. In the upper classes, by a judicious system of selection, you find not only good teaching (for that you find throughout the school, as far as the master himself is concerned), but good results. I cannot say that the backward boys are sacrificed to the cleverer sort, but it is only the latter who stand a fair chance of getting out of the lower departments and enjoying the benefits of the highest class. Those who do are admirably taught. The main difference between a good National school of the first rank and a school of the Christian Brothers, consists in this: in a National school all the boys are well drilled and well taught. In a Christian Brothers' school only the highest class shows perfectly satisfactory results. In the one case there is thorough and successful work in all the ordinary branches, reading, writing, and arithmetic; whereas in the other all that can be done in the earliest years of the course, in the way of secular education, is to teach the boys reading. In the National schools the advancement is regular and even; in those of the Christian Brothers' it is partial and unequal. In a word, judged by the highest class alone, the teaching and results are excellent; judged by the whole school, the system breaks down for want of teaching power. You may take a good National school anywhere with the certainty of finding a satisfactory amount of attainments; you must take a Christian Brothers' only at the end of the course, or be contented in the earlier stages with very limited acquirements.

General conclusion in regard to Christian Brothers' schools.

Comparison with National schools.

93. The remedy for this state of things is, of course, to increase the teaching staff. But moderate though the expenses of the institute, and each of its establishments are, they are much as can be borne either by the society itself or by the voluntary contributions of the people. Nor could the increase possibly come through funds provided by the State, for the whole system is so strictly denominational, not to say sectarian, and so entirely ignores the educational wants of Protestants, that no State with a mixed population like ours could possibly be justified in supplying funds for such a purpose. Nor is it conceivable that the Christian Brothers could consent to meet the Government half way, and so to modify their system as to have respect to the consciences of those who think differently on religious matters from themselves. To do so would be to give up their distinctive principles. It is as religious teachers that they exist as a community or brotherhood; to exclude religious teaching, therefore, from any part or period of their day's work, would be to give up that which they hold to be their main duty, namely, at all times and by all means so to leaven secular instruction with religious teaching that the one shall not possibly be capable of separation from the other. I have purposely said nothing about the religious teaching in the preceding account of my visits to the schools. But nothing impressed me more deeply than the religious element which pervaded them. It was not so much in any one particular, such as teaching the catechism, or saying prayers, or preparing children expressly for communion, confession, and other religious duties, but it was in each and all of these together, and in a general tone and character that I cannot hope to describe. The emblems and figures hanging on the walls, the flowers adorning the teacher's pulpit, the religious profession and dress of the teachers themselves, the observances required of the boys, as for example the making the sign of the cross every hour, as the clock struck, and the frequent repetition aloud of the Hail Mary by the boys in the junior school, and its inward repetition by the senior boys (an observance even more marked from the silence and the sudden pause in all the ordinary school-work that attend it);—all these separated the schools from ordinary schools, and made them peculiarly and essentially Roman Catholic. In one school, for example, I noticed two death-bed scenes—one depicting the departure of a good man, and the other that of a sinner. They were sufficiently graphic, and calculated to affect the lively imagination of youth. In one, evil spirits and faces recalling to his remembrance the scenes of an ill-spent life tormented the wretched man before his time; and in the other, saints and angels hovering about his bed seemed to beckon the dying Christian to happiness. As a natural consequence of the system, I need hardly say that the schools were attended exclusively by Roman Catholic children. In one school, indeed, I was told that there had been, and I think were still at the time of my visit, two or three Protestant children on the roll. They were not, however, present on the day of my examination. I was further told that the parents of these boys knew exactly what the system was, and that they made no objection to it on the score of the doctrines inculcated. The Brothers themselves, however, had put in practice a modified conscience clause in favour of the Protestant children, and dispensed with their attendance at the special time of religious instruction. But this only meant the hour or half hour set apart for the catechism and prayers. To meet their case fully, it would have been necessary to warn them out of the school every time the clock struck, or was about to strike; and had this been practicable and possible, they would still have been liable to witness and to hear teaching, at any time of the day, of a kind inconsistent, to say the least of it, with the practices in which they had presumably been trained. And, in a word, I cannot conceive, whatever they may have been when they first entered the school, that they could possibly leave it Protestants. The objection that conscientious Roman Catholics would have against their children attending a school of the Church Education Society might all be urged with tenfold effect against a Protestant

Nature and extent of the religious teaching.

Result of this that the scholars are all Roman Catholics.

Exceptions to this rule.

child attending a school of the Christian Brothers. Nor, as I have already said, is it to be supposed that any modification of the system is likely which should adapt it for mixed education, or render it a fit recipient for National aid. Such a modification would be a sacrifice of all the principles on which the institute is based.

Private Schools.

Private Schools.

94. Besides the classes of schools already noticed, namely, the National schools of all kinds, the Church schools and those of the Christian Brothers, I found a number on my list grouped together as private schools. Thirty-one in all were included under this general title, but they were in reality of a very miscellaneous character, and differed as much among themselves as those that I have described in the preceding pages of my report. Some were Roman Catholic colleges, some were Protestant schools with permanent endowments, and both of these were for secondary rather than primary education. Others again were private adventure schools in towns, for children of professional men, shopkeepers, and others, for whom the National schools were not suited nor intended; and last of all, there was a number of hedge schools scattered throughout both the town and rural districts. Strictly speaking only the last were those with which I had to do. For the two first classes were excluded to some extent both by the character of the education, and the age and social position of the scholars, and the same may be said of the private adventure schools for children of the middle classes. But I may be allowed to mention very briefly what came under my own observation, although I pass a little beyond the limit of primary education for the children of the poor.

(1.) Roman Catholic Colleges.

95. The Roman Catholic colleges, if we regard the age of the pupils and the subjects of instruction, were very much the same as boarding-schools or grammar schools in England. The boys were from eight to fourteen years of age, and the subjects taught were English classics, arithmetic, and mathematics, with a certain amount of modern languages. The management was ecclesiastical, and nearly all the teachers or professors, as they were called, were either priests or connected with some religious order. Some of the schools were taught by Jesuits, and others by clergymen of the diocese under the bishop. It is unnecessary to say that the schools were therefore in their essence religious seminaries, and as compared with English schools of the same class the boys were under much more constant supervision in their studies, their playground, and their dormitories. There was no liberty out of bounds, nor at any time as far as I could gather, were the scholars without the presence of a master. Cricket, football, and gymnastic exercises seemed to be encouraged, and due provision made for them in sufficiently large fields and yards; but all these amusements and games were subject, I was told, to the same constant superintendence. The masters or professors, as in the French Lycées, seemed to me to make themselves personally responsible for their pupils, whereas in England, the practice is for the schoolmaster to divest himself of responsibility when he thinks that he safely can, and to leave as much as possible to the honour of the boys. Probably both systems have their advantages. The internal arrangements, if I may judge by a college in the neighbourhood of Athlone, were good and careful. The class-rooms were large and well ventilated—the dining-hall was clean and commodious. If any exception could be taken in this case, it was that the dormitories were somewhat over-crowded, and had not a very comfortable look. But this latter is a peculiarity common to all dormitories that I have ever seen. Of the quality of the education given I can say nothing for certain, but the staff of masters as far as I could learn, was sufficiently strong, and if one might judge by programmes and prospectuses, and by the information that I gathered from different sources, the course of instruction was sound and sensible. In regard to expense the colleges contrasted favourably with English boarding-schools of the better sort.

Comparison with English boarding schools.

(2.) Protestant schools of the same kind.

96. Of the Protestant schools of the same kind as the above, there were altogether four or five on my list. They were supported in part or in whole by endowments. In some cases they were for boarders alone, in others for boarders and day scholars conjoined. The "Ranelagh," at Athlone, may be taken as a representative of the class. It supplies an education in English, mathematics, French, drawing, and a little classics. The estate which supports this institution for boys, and another for girls in Roscommon, was left by a Lord Ranelagh, in 1708. It was bequeathed to the Incorporated Society in Dublin (a society for promoting English Protestant schools in Ireland), for educational purposes, and came into their possession in 1760. In 1853 the net income of the estate was £1,100. I found the buildings of the Ranelagh good, and even handsome. There was an excellent dining-hall for the boarders. The dormitories were remarkably clean and well kept, but too small for the numbers in the institution. There was apparently only one class-room in which all the scholars were taught together in their different studies. It had accommodation for about 130 boys. The lavatories and other internal arrangements were moderately good. There was an excellent playground, and the situation of the school on the banks of the Shannon was pleasant and cheerful. Both within and without it was evident that attention was paid to the wants and comforts of the boarders and other scholars. The Protestant character of the institution may be gathered from the terms of the original deed. By this it was directed that "the schoolmaster should be always an Englishman, or of English extraction, and a Protestant, and in holy orders." The restriction of the office to a Protestant is still in force, but I do not know whether the other regulations are acted upon or not. The head master, when I visited it, was a clergyman, and he was assisted by two ushers, who had been educated partly at the Ranelagh itself, and one of them at least afterwards at Trinity College, Dublin. Neither of these teachers I think was in orders.

The "Ranelagh" at Athlone.

Teachers.

Scholars.

(1.) Boarders on the foundation.

97. The scholars in the school were of three kinds: first, boarders on the foundation; second, boarders not on the foundation; third, day scholars. The boys on the foundation got board and education free. Five are elected every year, and they remain on the foundation four years, so that the whole number of this class was twenty boys. To be eligible for admission, a candidate must bring a certificate from the Established clergyman of his parish, that he has attended a "Scriptural school" for at least twelve months; and the choice is further limited to boys from the towns of Athlone and Roscommon, and the counties of Roscommon and Galway. From the former of these restrictions it follows that the boys on the foundation are all of the poorer, or at least of the lower middle classes, for it is from them that the "Scriptural schools," that is to say, the schools of the Church Education Society, and those of Erasmus Smith draw their supply of scholars. At the end of the four years' course it was the custom formerly to select the two best boys, and send them to the training school of the Incorporated Society at Santry, near Dublin, for an additional period of three years. But there is now a competitive examination among all the "outgoing" boys of the five schools of the society. These are the Dundalk Institution, for the counties of Louth and Armagh; the Pococke Institution, near Kilkenny, for the counties of Kilkenny and Waterford, and the parish of Durrow, in Queen's county; the Farra Institution, near Mullingar, for the counties of Westmeath and Meath; the Primrose Grange Institution, near Sligo, for the town and county of Sligo, and a number of detached parishes elsewhere; and the Ranelagh itself, of which I am now speaking.

Qualifications for admission to the schools of the "Incorporated Society."

98. The second class of boys were the boarders not on the foundation. There was of course no restriction either as to the place of their previous education, or as to their social grade. On the day of my visit to the school there were in all forty-four of these on the roll. They each paid an annual board of £20, with an additional charge of £4 for classics, and £2 for French and drawing. There were besides these seven day scholars, who paid 10*s.* each a quarter, and who came from the town of Athlone. The local superintendent and paid visitor of the school, was the incumbent of the parish or his curate. I was told that he instructed the scholars once a week in the catechism. Of the quality of the education I must acknowledge my ignorance. The school was just meeting after the holidays on the day of my visit, and I found only two or three boys under the assistant masters in the school-room. I was inclined to think, however, that the boys were getting a useful and sound course of instruction. I have dwelt somewhat longer on this school than may seem probably to be necessary, but I have done so because it represents a considerable class, and because it is an intermediate school between the primary parish schools of the Established Church and the training school at Santry, which, although not the recognised training school for teachers, does in fact supply a certain number of them, and it is at all events an institution which carries on the education of Protestant boys of the lower classes to the highest point short of Trinity College, Dublin, or the Queen's Colleges, to which few of them comparatively speaking go. (2.) Boarders not on the foundation. (3.) Day scholars.

99. The third class of schools described in my list as "private" consisted of about a dozen adventure schools in towns for the primary education of children of the upper and middle classes. They were mostly conducted by ladies, and were not of a kind into which I thought it necessary to inquire. Last of all were the hedge schools exclusively for children of the poor. In all there were ten or eleven of these, of which I visited half a dozen, and I should have liked if possible to see them all, but I found it somewhat difficult, even with the aid of my list, to discover them. Three had disappeared altogether in the few weeks that intervened between the time when I began my inquiries, and my search for them. Two others were closed in consequence of harvest work, and I was assured that altogether the teachers and scholars in such places were of a very migratory description, and that in fact they were rapidly disappearing before the National schools. Those that I examined were of the most wretched description. The accommodation that they provided for the children was generally most inadequate. They were mere hovels or smoky rooms. The teachers were untrained and ignorant men. In one case only did I find a person of some ability engaged in the occupation of a hedge schoolmaster. His specialty was mathematics and more particlarly mensuration. His scholars (of whom he had five) were all at different stages of advancement, and although apparently taught in a haphazard desultory manner, the result somehow was creditable. The scholars had each a different book, and formed each a separate class, but they answered questions on their different subjects with great readiness, and showed an amount of general intelligence for which I was not prepared. Something of this was due to the fact that they were lads in decided earnest and ambitious to fit themselves for a particular kind of work, as land stewards or surveyors, either at home or abroad; but something must also be attributed to the old soldier who conducted the establishment. The children in the other hedge schools that I visited were generally very young boys and girls. In one case, which I may describe as a favourable specimen, there was a large attendance of forty such children. They were assembled in one end of an outlying Roman Catholic chapel, or mission station house. It was the humblest erection of the kind that I saw in Ireland. The roof was of turf, the floor was of clay. At one end was the altar, in the other end, but not separated by any division or partition, was the school. Two or three benches and a table composed the school furniture. There were no maps of any kind, but those scholars who were learning geography had in some cases small plates taken out of school atlases for the purpose. Hedge schools. Not permanent institutions. Accommodation bad. Teachers untrained and bad. Exceptional case. Description of one hedge school.

100. The teacher was an old man with one arm, who had been engaged in his profession since 1830. He had a small farm six miles from the school, but this he left to be cultivated by his wife and children, and went home only at the end of each week. The scholars were of course Roman Catholics. They were mostly from four to seven years old, and only two were above nine. They came in and out very much as they pleased, and when they were not actually engaged in repeating their lessons, they generally sallied forth for play. The weather it should be mentioned was exceedingly warm, and the door stood invitingly open, and naturally tempted them out into the sunshine. The teacher. The scholars.

101. The books used were of a very quaint and old fashioned sort. There was a Catechism in Irish and English, entitled "the Christian Doctrine completed according to the resolution of the Archbishop of Tuam." The reading book of the first class was the "Improved Royal Primer." "Reading Made-Easy," was used in the second class, together with the "Universal Spelling Book by Daniel Fenning." In the highest class there was a second part of "Reading Made-Easy," containing the "Principles of Politeness" (Lord Chesterfield's Letters to his Son), and the "Economy of Human Life, written by an ancient Brahmin." The copy-books were of all sorts, but a few of the children had those of "Vere Foster," and others used in the National schools. The text-books.

102. The teaching was on a par with the other arrangements. It was desultory and without system. The results were very meagre. The children were quite happy, as they could hardly fail to be, under a kind master, as the old man evidently was, and with abundance of liberty and ease; but they knew nothing except a little reading, and the veriest elements of writing and arithmetic. One boy of fourteen was exceptionally good. He formed a class by himself and was well advanced in all the ordinary subjects. He used the National school books, and I found on inquiry that he was attending the "chapel school" because his own school was closed for the holidays. Altogether the school was rather an infant school for the younger children of the neighbourhood than a real place of education, and yet it was perhaps the best of the ordinary hedge schools. In another part of my report I have mentioned that the fees paid in these schools are higher and more willingly paid than in the ordinary National schools. The old man however in that which I have just described complained that there was often a good deal of money owing to him, and that he had to abide the convenience of parents. On the whole it is very much to be wished that such schools may entirely disappear and this is a consummation that appears highly probable within the next few years. The quality of the education.

Chapter III.—Mixed Education—Summary of Results.

103. In dealing with the different classes of schools, I have reserved to the end the subject of mixed education. My instructions on this point were (1), "to verify the statements as to the extent to which mixed education prevails; and (2), to report any facts which bear on the question, whether the effect of mixed education is beneficial or not?" Mixed education.

104. The best answer that I can give to the first part of these instructions is to state what I actually found existing in the part of the country assigned to me, and at the risk of being tedious I will take the different departments or divisions of my district in their order. Its extent.

105. *Parsonstown.*—In Parsonstown or Birr, there were altogether on my list 28 schools, with 1,003 scholars, of whom 200 were Protestants and 803 Roman Catholics. Of the schools, 12 were mixed and 16 unmixed. Of the In Parsonstown.

mixed schools 1 was the Model school, with 91 Protestants and 39 Roman Catholics; 2 others were workhouse schools with 4 Protestants and 74 Roman Catholics, and a fourth was a military school which was closed at the time of my visit. Exclusive of these there were 8 mixed schools, in which there were 71 Protestants and 138 Roman Catholics; 6 of the 8 were National schools, 1 a private adventure school, and 1 was connected with the Church Education Society. The proportion was as follows:—1 Protestant to 16 Roman Catholics in the first National school, 2 to 16 in the second, 3 to 30 in the third, and 2 to 26 in the fourth. These were under Roman Catholic teachers and management. In the 2 other mixed National schools, under Protestant management and Protestant teachers, there were in the one 30 Protestants to 26 Roman Catholics, and in the other 17 Protestants to 7 Roman Catholics. In the mixed private school the numbers were 10 Protestants to 3 Roman Catholics, and in the Church Education Society school there were 6 Protestants and 14 Roman Catholics.

106. Of the unmixed schools 7 were National (namely, 3 convent and 4 ordinary schools), 7 were private adventure, and 2 were connected with the Church Education Society or the Board of Erasmus Smith.

In Roscrea.

107. *Roscrea.*—In Roscrea there were 18 schools on my list with 915 scholars, of whom 137 were Protestants and 778 Roman Catholics. Of these schools 9 were mixed and 9 unmixed; of the mixed schools 2 were those connected with the workhouse, with 2 Protestants and 34 Roman Catholics. Exclusive of these there were 7 mixed schools, with 29 Protestants and 375 Roman Catholics. Four of the 7 were National schools, all under Roman Catholic managers and teachers, and the proportion was as follows:—8 Protestants to 161 Roman Catholics in the first, 5 to 63 in the second, 2 to 35 in the third, and 1 to 73 in the fourth. Two of the mixed schools were private adventure; in the one of these there were 2 Protestants to 15 Roman Catholics, and in the other 7 Protestants to 26 Roman Catholics. The only other mixed school was connected with the Church Education Society, with 4 Protestants and 2 Roman Catholics.

108. Of the unmixed schools 4 were National (namely, 1 convent and 4 ordinary schools), 2 were private adventure and 3 were connected with the Church Education Society, or the Board of Erasmus Smith.

In Mountmellick.

109. *Mountmellick.*—In Mountmellick there were 19 schools on my list with 746 scholars, of whom 182 were Protestants and 564 Roman Catholics. Of these schools 3 were mixed and 16 unmixed; all the mixed schools were National, under Roman Catholic teachers and management, and the proportion was as follows:—5 Protestants to 29 Roman Catholics in the first school, 4 to 47 in the second, and 5 to 33 in third—altogether 14 of the one denomination and 109 of the other.

110. Of the unmixed schools 9 were National (namely, 1 convent and 8 ordinary National schools); 3 were private adventure, and 4 were connected with the Church Education Society.

In Maryborough.

111. *Maryborough.*—In Maryborough there were 19 schools on my list with 972 scholars, of whom 161 were Protestants and 811 Roman Catholics. Of these schools 5 were mixed and 14 unmixed, with 93 Protestants and 258 Roman Catholics; of the mixed schools 2 were National, namely, a convent school with 5 Protestants to 213 Roman Catholics, and an ordinary school under Roman Catholic teachers and management with 2 Protestants to 39 Roman Catholics. Of the other mixed schools 1 was Wesleyan, with 20 Protestants and 3 Roman Catholics, and 2 were connected with the Church Education Society, with 18 Protestants to 2 Roman Catholics, in the one case, and 48 to 1 in the other.

112. Of the unmixed schools 9 were ordinary National, 4 were miscellaneous, namely, 2 "private"—1 a "Christian Brothers'" school, 1 described as "Protestant," and 1 connected with the Church Education Society.

In Tullamore.

113. *Tullamore.*—In Tullamore there were 36 schools on my list with 1,608 scholars, of whom 173 were Protestants and 1,435 Roman Catholics. Of these schools 9 were mixed and 27 unmixed; 2 of the mixed schools were connected with the workhouse, the 7 others were all ordinary National schools, under Roman Catholic teachers and management, with 27 scholars of the one denomination and 254 of the other. The proportion was as follows:—3 Protestants to 51 Roman Catholics in the first, 11 to 30 in the second, 2 to 24 in the third, 3 to 53 in the fourth, 3 to 33 in the fifth, 4 to 29 in the sixth, and 1 to 34 in the seventh.

114. Of the unmixed schools 15 were National (namely, 4 convent and 11 ordinary), 1 was connected with the Christian Brothers, 2 were private adventure, 9 were under the Church Education Society or the Board of Erasmus Smith.

In Ferbane.

115. *Ferbane.*—In Ferbane there were 18 schools on my list with 682 scholars, of whom 55 were Protestants and 627 Roman Catholics. Of the schools 10 were mixed and 8 unmixed; in the mixed schools there were 38 children of the one denomination and 421 of the other. Eight of the schools were ordinary National, under Roman Catholic managers and teachers, and the proportion of the denominations was as follows:—2 Protestants to 108 Roman Catholics in the first, 2 to 37 in the second, 2 to 52 in the third, 2 to 47 in the fourth, 4 to 38 in the fifth, 1 to 45 in the sixth, and 3 to 44 in each of the others. Two were Church Education schools with 4 Protestants and 4 Roman Catholics in the one case, and 15 Protestants and 2 Roman Catholics in the other.

116. Of the unmixed schools 3 were National, 3 hedge schools, and 2 connected with the Church Education Society.

In Athlone.

117. *Athlone.*—In Athlone there were 32 schools, with 1,656 scholars, of whom 121 were Protestants and 1,535 were Roman Catholics; of the schools 6 were mixed and 26 unmixed. In the mixed schools there were 50 Protestants to 274 Roman Catholics. Five of these schools were ordinary National, under Roman Catholic teachers and management, and the proportion of the minority to the majority was as follows:—5 Protestants to 116 Roman Catholics in the first school, 6 to 34 in the second, 6 to 41 in the third, 2 to 41 in the fourth, and 3 to 36 in the fifth. One mixed school, with 28 Protestants and 6 Roman Catholics was connected with the Church Education Society.

118. Of the unmixed schools 20 were National (namely, 1 convent and 19 ordinary); 1 was entered as Protestant, 4 were private, and 1 was connected with the Church Education Society.

In Mullingar.

119. *Mullingar.*—In Mullingar there were 24 schools, with 1485 scholars, of whom 247 were Protestants and 1,238 Roman Catholics. Of the schools 2 were mixed and 22 unmixed. Of the mixed schools 1 was National, with 1 Protestant scholar to 35 Roman Catholics, and one was private with 14 Protestants and 2 Roman Catholics.

120. Of the unmixed 13 were National, 5 private, 1 a hospital for Protestants, and 1 a Christian Brothers' school, 2 others were connected with the Church Education Society.

In Longford.

121. *Longford.*—In Longford there were 33 schools, with 1,195 scholars, of whom 245 were Protestants and 950 Roman Catholics. Of the schools 6 were mixed and 27 unmixed. Of the mixed 2 were National, 3 connected with the Church Education Society, and 1 was a private school. Altogether in the mixed schools there were 67 children of the one denomination and 102 of the other, and the proportion in each was as follows:—1 Protestant to 73 Roman Catholics in the first National school, and 3 to 21 in the second. In the Church Education Society schools 16 Protestants to 2 Roman Catholics in the first school, 20 to 2 in the second, and 11 to 2 in the third; and in the private school there were 16 Protestants and 2 Roman Catholics. Of the

unmixed schools 17 were National (namely, 1 convent and 16 ordinary), and two were private. Eight were connected with the Board of Erasmus Smith or the Church Education Society.

Summary of its extent in the district.

122. Altogether then there were in my district 227 schools, with an average daily attendance in round numbers of 10,200 children, of whom (also in round numbers) 1,500 were Protestants and 8,700 Roman Catholics. Of the Protestants a third or 500, and of the Roman Catholics nearly a fourth or 2,100 were in mixed schools. Of the National schools 43 were mixed, 97 unmixed. Of the Church Education Society and Erasmus Smith's schools 10 were mixed and 32 unmixed, and of miscellaneous schools of all other classes 6 were mixed and 39 unmixed.

Success of National schools in promoting it small.

123. Such are the facts of the case, and the conclusions to be drawn from them will depend very much on the point of view from which they are contemplated. They seem to prove generally, however, that the success which has attended the National schools in my district in promoting mixed education has not been great, and that, in point of fact, most of the schools of all kinds are denominational. But it by no means follows from this, as I have frequently heard it urged, either that the *ordinary* National schools are to blame for the result or that the people object to mixed education. Much less does it follow that a solution of the difficulty is to be found in making the schools legally, and by enactment denominational, on the ground that they are actually so. It would be quite as reasonable to argue that they are a great deal too denominational already, and that measures should be taken to make them less so. The undeniable fact of denominationalism admits, however, of various explanations which seem to me fully to account for it.

Explanation of this. (1) in towns;

124. Whether schools are mixed or unmixed depends in great measure on the character of the locality in which they are situated. In the towns of my district the population, although in the main Roman Catholic, contained also a large Protestant minority. In the towns, therefore, there was room for more schools than one, and the principle of the National system I found was to encourage any number of non-vested schools. The Commissioners, to use their own words, having "always given the most liberal interpretation to their rules in favour of any small minority desirous of establishing a school for themselves." Naturally, therefore, when the parents had a choice they preferred the school managed by persons of their own faith; but more than this, the people themselves scarcely had a choice in the matter at all, for the clergy of the different denominations were the patrons and managers of rival schools, and the weight of their influence left very little freedom of will to the members of their flocks. If the rival schools were National, the character of the management and of the teachers at once settled the question whether they were Protestant or Roman Catholic. But it much more frequently happened that some of the rival schools were not National at all, but, on the contrary, professedly denominational or sectarian.

125. A brief reference to the towns in my district will illustrate this. In Tullamore, with a mixed population of different denominations, there were five schools altogether. One was taught by the Christian Brothers, two were connected with the Board of Erasmus Smith, and two only made a pretence of being National; but one of these was the convent school next door to the Christian Brothers, and the other was under the management of the Wesleyans. In this case, therefore, the lines were so marked in the schools themselves that it would have been preposterous to look for anything like united education. A Protestant parent could hardly be so indifferent about his faith as to select the convent or the Christian Brothers' school, nor a Roman Catholic so independent as to prefer to either of them that connected with the Board of Erasmus Smith. In Maryborough in like manner the only National school was that for girls under the charge of the Presentation Nuns. There was a boys' school in the hands of the Christian Brothers. I found a few Protestant children in the former of these schools. The rest had to choose between a private school conducted by a Wesleyan and the parish schools connected with the Church Education Society. It was much the same also in Portarlington, where the only National school was connected with the convent; while the schools of the Christian Brothers and Church Education Society monopolised each the children of its own denomination. It was the same also in Mullingar, with this important difference, that instead of a Church school there was an excellent National school under the auspices of the rector, the Rev. Dr. Reichel. Again, in Roscrea and Longford, where there existed no organization like that of the Christian Brothers, and where there were admirable National schools for boys under Roman Catholic managers and teachers, clerical influence was too strong to permit any great infusion of the children of the minority, and schools of a sectarian character were maintained for their behoof.

126. In the towns, therefore, I was not surprised to find comparatively little united education, and considering the influence at work, I think there was quite as much as could reasonably be expected. In Parsonstown, for example, exclusive of the model school, there was a National school with 30 Protestants and 26 Roman Catholics. In Roscrea there was a National school with 8 Protestants and 161 Roman Catholics, and that, too, although there was a sectarian school for the former on the opposite side of the road, and in Longford there was a score of Protestant children whose names still lingered on the roll of the National school. They had all been withdrawn shortly before my visit, and transferred to the parish school under the management of the rector, but the fact that they had been there so recently incontestably showed that if left to the freedom of their own will, the parents were not ill-disposed to a system of united education, and that all the opposition to it might be traced to clerical influence, and represented clerical rather than National feeling.

(2) in country districts.

127. In the country districts the circumstances of the case were materially different. In a few parts the population was exclusively Roman Catholic, and consequently there could be no united education. But, generally speaking, there was a small minority of Protestants, not large enough to justify the maintenance of a separate National school. There were also comparatively few convent schools with denominational written as it were on their faces, and therefore, from their very nature apt to frighten away Protestant parents, and to incite them to set up schools of their own. There were no Christian Brothers' schools—and everywhere there was, as it seemed to me, an adequate supply of ordinary National schools. Here then the circumstances so far were favourable to united education, and wherever there was no influence from without exerted against it, I found a reasonable measure of success. Two causes tend greatly to explain why that success was not greater. These two causes are closely connected with one another. They are the nature of the schools themselves, and the opposition of the Protestant clergymen. Nearly all the National schools in the country districts were of the kind called non-vested, and were managed by Roman Catholic priests exclusively. From these schools, therefore, the clergyman of the Established Church was shut out. He could not so much as give religious instruction in them to any children of his own faith; he might enter them as an ordinary casual visitor, but he had no voice in them and no control over them. This partly, at least excused, and, it may almost be said, justified the number of Church Education Society schools that I found in country places, with an attendance of less than twenty children, and it led me very seriously to inquire whether the system of local management sanctioned by the Commissioners themselves was not at the root of the comparative failure of united education in the rural districts. It is too much to ask of human nature that the rector should be cordial in support of schools where he holds a subordinate part, and in which he is not even the equal of the priest. As usual, however, in matters of this kind, it is not only nor mainly the belligerents that suffer, but the schoolmasters

also, and above all the children are the victims. And this brings me to a very brief consideration of the second clause of my instructions, namely, "to report any facts which bear on the question, whether the effect of mixed education is beneficial or not."

Effect of mixed education.

128. In answering this question it will be necessary to keep in mind the very simple distinction of schools into National and non-National. In both there was a certain measure of united education in the district assigned to me, but the circumstances under which the children were taught together were very different. The non-National schools were avowedly sectarian, and their principle was that the religious creed and doctrines of a particular Church should pervade the whole teaching. As a general rule no doubt, regard was paid to the conscientious scruples of children and parents, whose religious faith differed from that of the teachers and managers, but the arrangements for this purpose were far from satisfactory. Take for instance either the schools of the Church Education Society, or those of the Christian Brothers. In the former all the children were obliged by the rules of the school to read the Protestant version of the Bible, and although the Roman Catholic children were not required to learn the Church Catechism, they were present in the schools while their class-fellows repeated it, and at all hours of the day, should any circumstances suggest it, the teacher was in the habit of enforcing his ordinary lessons by reference or appeals to religion. Nor was the rule in regard to the Church Catechism universally observed; unless special objection was made by the parents, the teacher himself was not very particular in insisting on the exemption of Roman Catholics from this part of the work.

Undesirable in schools avowedly sectarian.

129. Much the same may be said also of the Christian Brothers' schools. It is true that in the course of my visits to them, I found no Protestant children present, but on the rolls of one of them were the names of three or four such children. I have already noticed their case in speaking of the Christian Brothers' schools, and have pointed out some of the difficulties in the way of carrying into effect such a conscience clause as would respect their religious convictions.

Undesirable in Convent schools.

130. In one class of the National schools, also it seemed to me that mixed education did not work well, and was not in fact either desirable or beneficial; I mean the convent schools. Although every precaution is used by the Inspectors, and there is every intention to act fairly on the part of the nuns themselves, and although the school books used are unobjectionable, there are yet fatal objections to a mixed system of education being worked by persons professedly religious. The associations connected with the teachers and the place, the solemnity with which the ordinary school work is interrupted at the hour of noon, and the care with which the handful of Protestant children are warned to withdraw, are calculated to invest the proceedings with a kind of mystery, and as a natural result to make the children who are excluded desire to participate in the services of the others.

131. It is probably owing to this very danger, and because the parents fear it for their children, that there are comparatively few convent schools in which united education prevails and that they are in fact denominational.

Beneficial in ordinary National schools.

132. In the ordinary National schools, however, there was as we have seen a considerable amount of mixed education, and as far as I could judge, the result of it was beneficial. In the first place there was not, and there could not be any tampering with the faith of the children on the part either of the teacher or the manager. I never heard any one suggest even a doubt of the perfect security that the National schools afforded in this respect. I found also perfect good will and kindly feeling existing amongst the children of different denominations, and the masters almost universally expressed themselves in favour of united education. I have before me the answer to an inquiry of mine on this matter, from one of the most intelligent men and teachers whom I met in Ireland. It is significant in more ways than one. "*An experience*," he says "*of over twelve years would warrant me in speaking favourably of the mixed system, but I feel bound to defer to the judgment of my ecclesiastical superiors on the subject.*" Others expressed themselves more unreservedly, and all agreed that the objection to the system did not originate within but outside of the schools. The difficulties and disagreements apt to arise between children of different denominations, and to lead to serious quarrels, were treated by teachers as purely imaginary. But clergymen on the other hand, and more especially the Roman Catholic priests were decidedly at variance with the teachers on this question. The chief objection that was urged by them against the system of united education was that under it the religious teaching was of the most meagre kind, and that for the minority there was no religious teaching at all provided in the schools. As a matter of fact, however, there are three times in the day which may be set apart for religious instruction in every National school, and many people will probably think that this is enough, and that the regulations against its introduction at other times are wise and salutary. In regard, however, to the objection that the minority receive no religious instruction at all, its truth so far as my district is concerned cannot be denied. But the remedy is very much in the hands of the clergymen and of the Commissioners. The latter might make some modification in their rules regarding non-vested schools as well as vested schools, by which they should be thrown open for religious instruction at proper times and under proper restrictions, and the Protestant clergymen might even in the present circumstances make provision for the oversight of the religious education of the children of their flocks.

Opinion of teachers.

Objection of clergymen to mixed education, viz., the want of religious teaching in the schools.

The remedy proposed is denominational education.

133. The remedy proposed by those who objected to mixed education, was to make the schools denominational, and to allow each sect the full exercise of religious teaching. In regard to the minority it was urged that they could either have schools for themselves, or that if no special provision were made for them by the State, they would be no worse off than at present, but would be educated in schools supported by themselves, or if they chose in the National schools of other denominations. It is, however, useless to talk of their having schools for themselves. In many parts of my district Protestants were too few in number to have a good school exclusively for their children, who could get the benefits of a sound education only in mixed schools. If the proposed changes were made they might indeed be sent to the National schools, managed and taught by Roman Catholics, but altered as these would be if the free exercise of religious teaching were allowed at all times, they would be no fit places for mixed education, and the same arguments would apply against them as mixed schools which now apply against the schools of the Church Education Society, and the Christian Brothers. It is not true, therefore, that the minority would be no worse off than they are at present. They would be limited to a choice between a bad school and a proselytizing school.

Injustice of this remedy to the minority.

Summary of results. Comparison of schools.

134. Altogether then the conclusions to which I came from the consideration of the circumstances in my district were that mixed education was not beneficial in sectarian schools, but beneficial in National schools, and that the latter should either be continued as they are or with such modifications as should make them if possible even safer than they are at present.

First-class, National with trained teachers.

Second, Christian Brothers' schools.

135. I have thus briefly gone over the different subjects suggested by my instructions. It only remains, in a single page or two, to summarize the result of my investigation, and this can best be done by answering categorically and nearly in their order each of the questions proposed. The state of primary education I found on the whole satisfactory. The best schools were the ordinary National schools under trained masters. In some respects those of the Christian Brothers were equally efficient, and the skill and zeal of the teachers were worthy of all praise; but the schools were under-mastered, and the consequence was that in excellence from beginning to end, in thorough work from the lowest class to the highest, the first rank of ordinary National

schools stood alone. Next to these two groups came the Convent schools, the good, but not the best, ordinary National schools under trained masters, and a few of the Church Education Society schools. In the next rank came the National schools under untrained teachers, and the great majority of the schools connected with the Church Education Society, but with this difference, that in the one case the inferiority of the schools was the result of having inferior masters, while in the other it was due to the small numbers in the classes. I have said of the Christian Brothers' schools that they were under-mastered. If I might use the expression, the Church Education Society's schools were ruined by being under-scholared. The worst schools of all were the private adventure, or hedge schools. On those for the upper and middle classes I formed no settled opinion, and therefore I offer none, but I may mention that I heard frequent complaints on all sides of the want of good schools for those classes in the towns. The consequence of this want was that parents had either to be satisfied with some inferior and desultory kind of education for their children at home, or had to send them away to Dublin or elsewhere at a great expense.

Third, Convent, many National, and some Church Education Society schools. *Fourth*, National schools with untrained teachers, and Ch. Ed. Soc. schools. *Last*, Private adventure.

136. I found the accommodation in the schools adequate in almost every case for the numbers in attendance. Irregularity of attendance was one of the most striking evils. In my district the variation in the attendance was due mainly to one cause, the inability of parents to forego their children's wages or do without their services at home, and the schools were worst filled in spring and harvest time, when the children were needed for out-door work. But at all times the irregularity seemed unreasonably great. The most obvious means of improving the attendance are—first, the payment of fees, if possible, in advance; second, the co-operation of the parish priest or the local manager with the schoolmaster; and third, to have efficient and trained teachers.

Accommodation. Attendance.

137. As to size, condition, ventilation, and lighting of the schools, there was generally no fault to find; but there was frequent room for improvement in the desks and apparatus, and in the supply of books; and the condition of the outbuildings was very often as bad as bad could be. From this charge I must except the schools of the Christian Brothers. Both their model school in Dublin, and, with one exception, the provincial schools that I visited, were remarkable for the attention paid to cleanliness and decency.

Condition of school, furniture, buildings, &c.

138. The want of residences for the teachers in National schools struck me very much, and the cost entailed upon them in consequence was felt to be, and was, a great grievance. In this respect the schoolmasters connected with the Church Education Society and the Board of Erasmus Smith were advantageously situated as compared with those under Government.

Masters' houses.

139. There was, so far as I could see, no general indifference on the part of the people beyond that indicated in the irregularity of the children's attendance to avail themselves of the means of education, nor did I find them reluctant to use the schools supported by Government or other bodies.

People not indifferent to education.

140. Except farming, there were no industrial occupations of any importance or to any large extent involving children's labour in my district. The average period of attendance varied in different schools. Just in proportion as the school was a good or a bad one, that is to say, under a good or an inferior teacher, were the regularity and length of attendance greater or less.

Industrial occupations.

141. Local aid seemed to be required partly for providing and maintaining proper and efficient schools, but even more for supplementing the salaries of the teachers.

Local aid required.

142. On the efficiency of the schools unaided by the State as compared with the Government schools I have given my opinion already in the first paragraph of this general summary. No statement was made to me of misapplication of Government aid, unless the complaint can be so called which was occasionally made that convent schools, from their peculiar character, were not the proper recipients of assistance from national funds.

143. Reading, writing, and arithmetic were the staple subjects of examination, and on the whole the children were well taught and in accordance with their ages, and were characterized both by their modesty and their intelligence. The character of the education was suitable for the class of children for whom it was intended. In the higher subjects there were generally a few scholars in the ordinary National schools, and a certain amount of "accomplishments," especially in convent schools; but on the whole, in the highest branches, I consider a few of the National schools under trained teachers of the first class, and the Christian Brothers' schools to be the best.

Subjects of instruction suitable for the class of children.

144. In reference to religious instruction, there seemed to be a strict compliance (of course I speak here of the National schools alone) with the rules of the Board. Nor were any statements made to me of their being inapplicable to the circumstances of particular schools—except by the teachers in convents who were of opinion that the rules should not be enforced in their case. The arrangements in some of the National schools for having religious instruction in the middle of the day, instead of before or after the ordinary hours for secular education seemed inconvenient and unfair towards the minority. I found mixed education quite as general as could be expected. Usually where there was a mixture of children of different creeds the minority consisted of not more than five or six children. I heard of no evil effects from united education in the National schools, but on the contrary only of those that were beneficial. In connexion with this subject I may be allowed to state that in towns where the line of separation between the different sects was very marked, where Protestants were all taught in one school by themselves, and Roman Catholics in seminaries of their own, instances of bitterness of feeling on the part of mere children towards persons of a different faith were brought under my notice. If this was due to the fact of their separation in schools it is indirectly a strong argument against denominational and in favour of united education. The latter, it would appear, may soften, or at least restrain animosities; the former can only intensify and exasperate feelings already sufficiently strong.

Religious instruction.

145. The teachers' incomes were quite inadequate. The school fees were unquestionably too low, and were often remitted altogether. In many of the convent schools there were no fees paid by the scholars, and nowhere did I find children excluded from any school in consequence of the inability or the reluctance of their parents to pay fees. Where fees were regularly paid a difference was generally made according to the age, and sometimes according to the known circumstances of the parents. The usual fee was from one penny to threepence a week. From this source the schoolmasters derived little benefit. I found those children who were taught gratuitously least regular in their attendance.

Income of teachers.

146. Local subscriptions existed to a miserably small extent in the case of the National schools. In many of them the whole burden of their support was thrown on the State, without any corresponding payment from the people themselves, and the salary of the master represented his income.

147. On the tenure of the school-houses in connexion with the National Board my time did not allow me to prosecute my inquiries so minutely as to ascertain whether any change had been made in the case of each school after it was taken into connexion, nor the character of the change.

148. Between vested and non-vested schools there was no great difference in the state of repairs. If anything, it was in favour of the former class. As to the comparative efficiency of the teachers in the vested and non-vested schools, I have already expressed my opinion pretty strongly. I may repeat that the best teachers were those who had been trained, and of these again the most efficient were those who had the highest class. The three best-taught schools amongst all that I examined were conducted by masters of the first class. The

Trained and untrained teachers.

Monitors and pupil teachers.

teachers had almost all been such from the beginning and had not begun life in some other calling. The monitors and pupil teachers in convent schools struck me as particularly good. The others as a class were more or less efficient according to the efficiency of the head master. In some cases, as for instance, Longford and Roscrea, the monitors were receiving as good a training as they could possibly receive in a model school, but, as a rule, I did not think that the monitors were likely to be efficient teachers without some special training. This is the more important, as the future supply of schoolmasters depends mainly on them, and they are more and more being promoted to schools without any such intermediate preparation. Generally speaking, there seemed to be no great difficulty in obtaining monitors, but I was assured on all hands that there was great difficulty in retaining their services, and that whenever an opening in some other way of life was presented to them they availed themselves of it. This does not apply to females who, I was told, generally prosecuted the profession of teaching till they were married. In schools attended by children of both sexes the popular feeling was decidedly in favour of the head teacher being a master rather than a mistress.

Appointment of teachers within the last three or four years.

149 In regard to the appointment of teachers, I found that within the last three or four years untrained men and women had, as a rule, been selected in then on-vested schools under the local management of the Roman Catholic priests. In those under lay management, or patrons of other denominations, this was not the case. As to dismissal of teachers, I found no well authenticated case of hardship or injustice; but the mere fact of the patrons possessing the power of arbitrary dismissal rather than its capricious exercise was felt to be a grievance, especially by the best and the most independent of the teachers themselves.

Concluding suggestions.

150. As my instructions conclude with a general notice that they do not limit my inquiries in any way, I may perhaps be permitted under shelter of this clause to end with a few remarks on the subject of primary education in Ireland. With the National system as a whole I was in some respects amazed. The very name of "National," from a very early period of my inquiry, struck me as a misnomer. Were I asked, indeed, to characterize the system, I should call it not national at all, but denominational, with a conscience clause. Nothing, therefore, surprised me more than the desire that I heard expressed to make it more denominational than it was. I could not conceive how this could be done except by denationalizing it altogether, and I ultimately gathered that this was actually the result contemplated and desired. To me, on the contrary, it seemed that the aim and effort of all connected with it should be entirely in the opposite direction, and that if the system which had confessedly done so much for Ireland in the past were to continue to do so in the future every means should be taken to diminish its denominationalism. But this could not be done without putting an end to non-vested schools. All schools should be so connected with the Commissioners of National Education that they could not at any moment be withdrawn from their control, and it cannot but appear a strange thing that the very institutions for which the State has been paying, and which it has been fostering, should be the chief source of its weakness and a standing threat and danger within the whole body of the National schools. Numerous facts in my own limited experience proved, however, that this was no imaginary danger. Schools that had been kept in existence for years by the State, their masters salaried and themselves inspected, had on the first favourable opportunity been withdrawn and transferred to a different and an antagonistic organization.

Anomalies in the National system.

(1.) The existence of non-vested schools.

(2.) The character of the management.

151. Again as to the management, I have already indicated that I consider it mainly to blame for the small measure of success that has comparatively speaking attended the efforts of the Commissioners in their object of promoting mixed education. As long as the management of the school is intrusted to individuals with irresponsible power in determining the character of the religious education, in the selection and dismissal of masters, the system does not deserve to be called National, nor is it conceivable that any one except the manager himself can be satisfied with it. The teachers can hardly like it, and must necessarily be discontented when they hold their office by so insecure and capricious a tenure as the will of one man. Persons again of a different religious persuasion from that of the local manager, especially if he be a clergyman, and they also be clergymen, can hardly regard such a state of things with favour. A Board of local managers seems to be required in order to constitute a National system.

(3.) The support of the schools falling entirely on the State.

152. Again it seems an anomaly that in administering the system such as it is, the Commissioners should have contented themselves with the present arrangements for the pecuniary support of the schools. In my district at least, there was no yearly offset or equivalent on the part of the public or more properly speaking on the part of the local manager for the yearly benefits conferred and paid for by the State. The advantages were all on one side, salary and inspection were counterbalanced by no return. On the contrary, as if these were not enough, the manager of a non-vested school held in his hand not only its patronage, such as it was, but its very existence.

(4.) The appointment of untrained teachers.

153. But perhaps the anomaly that most impressed me, and that seemed most likely to hurt the National system was the liberty given to patrons to elect untrained men and women to the office of teacher. I have already said that the best National schools are above all others in Ireland in point of general excellence. It is scarcely too much to say that the worst National schools in my experience, enjoy also their bad pre-eminence above all others (except hedge schools) and that they are conducted by untrained and often incompetent masters. It is not for me to say how this is to be remedied, but it is my duty to mention the fact that the continued appointment of untrained masters threatens the usefulness, if not the existence of the National schools. The excellent men who have given the system its reputation, I mean the trained teachers in the ordinary National schools, will be replaced if things go on much longer as at present, by very inferior substitutes. Even as it is, I found the complaint rife on every hand, that it was hard to get competent men to devote themselves to teaching, and that the class who formerly adopted the profession were looking out for different pursuits, so that the office of schoolmaster was rapidly falling into the hands of an inferior set of men. Partly also no doubt this result is brought about by other causes, the insecurity of tenure and the insufficiency of income.

154. To one admirable feature in the National system I have had occasion often to refer in the course of my report. I will conclude with mentioning it once more; I mean the inspection. Comparing it with what I have seen in Scotland, I could not but give the preference to the thoroughness of the Irish work. I cannot imagine anything more efficient, and I attribute not a little of the success of the schools to the Inspectors.

I have the honour to be, my Lords and Gentlemen, your obedient servant,

THOMAS HARVEY.
